"As your stump is so short and the condition of your other leg is not too satisfactory, it is felt that the fitting of your artificial limb should be done under medical supervision.

"Several attempts were made to contact you by telephone, but there appears to be no answer at the number given. It is suggested that you contact the undersigned by telephone if you have any questions regarding the above matters." (Signed by Wilfred G. Holsberg, chief, prosthetic and sensory aids unit.)

Mr. Willis came into the Boston office of the VA on January 10. This was his first visit to the office since December 10. At this time he stated that they had been unable to reach him, because he had gone home to Dallas, Tex., for the Christmas holidays and had just returned.

As the amputation clinic was meeting the next day, January 11, it was suggested that he attend the clinic for examination and discussion of the desirability of the leg he had selected. This he did. (See remarks under "General.")

On January 21, 1949, the veteran was authorized to be measured for the limb he had selected. The veteran had full knowledge that these legs are all built to the specifications and measurements of the individual who is to wear it and that it requires from 6 weeks to 2 months for the construction and final completion of the leg.

The delay of 10 days, from January 11 when Mr. Willis visited the clinic until January 21 when the leg was authorized, was necessary, because the VA contract with the manufacturer had run out, and a new contract had to be made.

In conversation with the Veterans' Administration on March 14, Mr. Willis stated that the manufacturer had advised him that the leg would be ready for final fitting and delivery within the next 2 or 3 days. The leg was completed and delivered to Mr. Willis on March 18.

To summarize the above, the original request for the artificial leg was made by Mr. Willis on December 10. From December 10 to January 10, one full month, Mr. Willis could not be contacted by the Veterans' Administration. On January 11, he was measured for the leg. Because of contract expiration, VA lost 10 days in authorizing procurement of the leg. The leg was delivered on March 18, 67 days after he visited the clinic.

This is not an abnormal length of time to secure a leg made to order.

Facts About Federal Education

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. PLUMLEY. Mr. Speaker, during the recent unpleasantness incident to the political campaign, I stated that I favored necessary Federal aid to education so long as any and all money apportioned to the States was distributed by the States without Federal interference as to the manner of distribution and with no attempt to control the educational policies of the States.

Recently, I have received a letter referring to my statements and asking me to insert in the RECORD the statement made by Clarke Daniel, first vice president of the Home Builders Association of Metropolitan Washington, which statement indirectly attacks my position.

Under permission heretofore granted, I am, in all fairness, inserting the statement, Facts About Federal Education, which follows:

FACTS ABOUT FEDERAL EDUCATION
(By Clarke Daniel)

Ask the average man on the street if he believes the Federal Government should contribute money to the States in order to help them improve their school systems. The chances are that he will say yes.

A further inquiry as to why he favors Federal aid to education will probably bring an explanation that teachers are underpaid, present facilities are inadequate and the States cannot afford to appropriate additional funds for the schools.

The argument sounds reasonable. It is shared by many prominent educators and national leaders in addition to Mr. Average Citizen. The advocates of Federal education can paint a picture which is highly pleasing to many. Frequently the impression is created that an exceedingly difficult problem can be completely solved without hurting anyone and costing the individual taxpayer very little.

A thorough study of the question of Federal aid to education shows that it involves a great deal more than is usually recognized and indicates that its proponents are guilty of surface thinking rather than genuine rationalization.

The proposal is basically that the Federal Government would contribute money to the States to enable them to improve and more efficiently operate their educational systems under State control. In other words, the Federal Government which has some $252,000,000,000 less than nothing is to contribute money to the States most of whom have money in their treasuries. This indicates the folly of the entire proposal.

Now let's assume that the situation is just reversed; that is that the Federal Government has a surplus and the States all have a huge debt. Irrespective of whether the money is collected by the Federal Government or the States, the same people (the taxpayers) have to do the paying. If it is collected locally and spent locally the entire operation is simplified. On the other hand, if it is collected throughout the United States, sent to Washington, and then spent under the direction of a huge Government agency the cost of administration is magnified many times. Actually only a fraction of the money raised for education could be spent for the purpose for which it was intended because a substantial amount would, of necessity, be required to maintain a Federal bureau. If assessed at the State and county level, almost the entire amount goes for education.

A large number of the readers of the Home Builders Monthly are residents of the State of Maryland. Would you Maryland citizens favor your State agreeing to pay $5,349,000 yearly with 2½ percent interest to the United States, if the Federal Government would in turn give Maryland $2,135,000? The latter figure is what the State would receive if S. 246 became law. The former amount is what the State would be required to assume on the national debt.

A similar situation would exist in many States. The State of Florida would in effect be borrowing $4,288,000 with interest at 2½ percent annually in order to receive $2,260,000. California would be agreeing to pay the United States $25,230,000 every year, with interest at 2½ percent annually in order to receive $7,260,000.

One of the arguments advanced by the proponents is that certain States, particularly Southern States, are in poor financial condition and that even if the net result is that some of the wealthier States pay more in taxes than they receive proportionately for education, the program nevertheless, would be in the interest of the Nation as a whole.

Federal aid to education would eventually mean Federal control of education. Most of the Senators and Representatives supporting pending legislation firmly believe that the control would remain with the States. However, when you have Federal money involved the danger of Federal control is paramount. The inroad would not be immediate. But perhaps in two or three years certain Members of Congress would decide that a few strings should be attached to the grants. Once the States became accustomed to receiving Federal aid it would become a crutch which could not be easily abandoned. If one State did decide to reassert its independence and not accept Federal aid it would still have to carry its share of tax burden for that purpose. The provision in S. 246 which is designed to guarantee against Federal control could be repealed after the law had been in force for a year or two. Then an amendment could be very easily inserted in future appropriation bills requiring the performance or nonperformance of certain conditions by the States before the money would be made available. For instance the amendment might read, "None of the money herein authorized to be appropriated shall be available to any State which does (or does not) do so and so." Such an amendment could be as broad as your imagination.

Now we have the best educational system in the world. We want to improve it even more. However, let's just improve the present system and not develop an entirely new one. Federal aid to education would eventually mean the establishment of a different system. The present superior system of education in the United States is largely responsible for our economic, political, and social development beyond that of practically every other country.

Federal aid to education, Federal medicine, public housing, Government regimentation of private property, and threats to nationalize the steel industry are all designed from the same pattern. This seemingly innocuous legislation has roots which reach into soil far beyond its announced purposes and probably beyond the intentions of its sponsors.

The Possibility of a New or a Divided National Capital

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. PATMAN. Mr. Speaker, is the Federal Government like the old woman in the shoe who had so many children she did not know what to do? A column by Mr. Jerry Kluttz in the Washington Post for Friday, March 25, 1949, seems to indicate that the answer is "Yes." It is stated that Federal employment here is increasing at a rate of 1,000 a month with no office space available in which the new employees can work. Mr. Kluttz

cites the case of the Census Bureau, which must expand from 2,500 to 13,500 employees to handle the 1950 general census. The Senate Appropriations Committee has rejected a request for an additional building at Suitland, Md., to house the increased activities, and there is no other space available in Washington. Mr. W. E. Reynolds, Commissioner of Public Buildings, is quoted by Mr. Kluttz as stating:

I am hopeful that we can catch up by moving some people out of Washington. I think they are getting too highly concentrated.

These facts support the idea that consideration should be given by the members to the possibility of moving all or some of the activities of the Federal Government to another locality. On January 25, 1949, I inserted in the CONGRESSIONAL RECORD a letter which I had received suggesting that the National Capital be moved to the eastern Rocky Mountain region, in the vicinity of Denver. Some of the reasons given in that letter for the feasibility of investigating this idea were: first, the crowded and obsolete condition of many of the Washington Buildings; second, the vulnerability of Washington to attack; third, the climate of Washington; fourth, traffic conditions; fifth, the move westward of the center of population in the United States.

I have had the Library of Congress prepare for me a memorandum concerning divided or duplicate capitals in foreign countries. Double capitals are to be found in the Netherlands, Bolivia, the Union of South Africa, and India. The facts about these capitals are as follows:

THE NETHERLANDS

In the Netherlands, Amsterdam is the formal capital, but The Hague is the traditional seat of the Government. The Hague is the residence of the court, of Parliament, and of the diplomatic bodies, and the seat of the states-general, the high council of the Netherlands, the council of state, the chamber of accounts and the governor of the province. The following paragraph describes in outline the functions which Amsterdam discharges in its role of capital city:

Only with the establishment of the United Kingdom of the Netherlands in 1814 was Amsterdam designated as the country's capital; the jealousy of the other large cities had prevented such action previously. Actually, however, Amsterdam discharges the ostensible functions of a capital rather seldom. Coronations have taken place there, and the royal family used to make a visit of several days to Amsterdam every year; the largest public building, the former Town Hall, built in 1648, was used as a royal palace from 1814. But the royal residence was fixed at The Hague for the winter and the castle of The Loo in Guelderland for the summer. Though neither the royal residence nor the seat of government, Amsterdam was truly the capital, the very heart of the country. The constitution gave it the title; the size of its population, greater than that of any other Netherlands city, substantiated it, as well as the city's preponderance in the national life.

BOLIVIA

Bolivia has two capitals, Sucre, which has been the de jure capital of Bolivia since its establishment as an independent nation, and La Paz, the de facto capital since 1898 when a revolution confirmed its claim to that status.

The Pan American Union's pamphlet on "La Paz" draws an interesting parallel between the two cities:

We speak of La Paz as being the capital of Bolivia and thereby confuse the minds of those not fully acquainted with the facts. Sucre, formerly called Charcas, is the legal capital of the Republic, and it was there that the victor of the battle of Ayacucho, Gen. Antonio Jose de Sucre, exercised his functions as the first President of the Republic of Bolivia. The seat of the Government was maintained there for many years, but principally on account of accessibility and growing commercial importance La Paz became the actual seat of government several decades ago. In the latter city the President and his official advisers reside, the nation's congress meets there, and it is the residence of the foreign diplomats accredited to Bolivia, but the supreme court of the country still holds it sessions at Sucre. The distance between the two cities is about 300 miles, but the more rapid growth of La Paz, especially since the completion of the three rail routes to the Pacific, seems to accentuate the desirability of La Paz over Sucre as the capital of the nation.

UNION OF SOUTH AFRICA

In the Union of South Africa, the seat of administration is in Pretoria, but the legislature meets in Capetown. This division dates back to the establishment of the Union in May 1910 when the question of the location of the capital threatened to split the delegates which had met to draw up a constitution. A compromise was reached with a division of government functions between Pretoria and Capetown and the designation of centrally located Bloemfontein as the seat of the judiciary.

The following paragraph relates how the two capitals were established:

Under the South Africa Act, 1909, it is laid down (sec. 18) that Pretoria shall be the seat of government and (sec. 23) Capetown the seat of the legislature of the Union, thus practically establishing a system of two capitals, though the act does not describe either city under that term. Under this arrangement the headquarters of the various departments of state with their staffs are placed in Pretoria; while the Houses of Parliament and the parliamentary establishment are situated in Capetown.

INDIA

Before World War II the supreme government in India and its staff used to work at New Delhi during the cool months of the year from October to April and move to Simla in the Punjab, which has an elevation of from 6,600 to 8,000 feet above sea-level, during the remaining hot months. After 1942, all the essential government departments remained in Delhi and those of lesser importance were established in Simla. The new government of the Dominion of India does not follow the old custom of seasonal shifts in the seat of government.

In the instances described it will be noted that in the Netherlands, The Hague retained the functions of government while Amsterdam gained the formal title of capital; in Bolvia La Paz became the functional capital while Sucre retained the legal title; and in the Union of South Africa, the functions of government themselves were divided between a northern and a southwestern city.

Revision of the Labor Laws

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. AUCHINCLOSS. Mr. Speaker, in the CONGRESSIONAL RECORD of February 21, the gentleman from Indiana [Mr. JACOBS] inserted in the Appendix of the RECORD—page A925—a letter he had addressed to Mr. Charles E. Wilson, president of the General Electric Co., concerning a questionnaire entitled "How Would You Revise Our Labor Laws?" In his letter Mr. JACOBS answered in detail the questionnaire which he stated was being disseminated all over the United States by the General Electric Co., propounded some questions of his own, and requested that Mr. Wilson "give me the benefit of your considered judgment upon these several matters." Mr. Wilson answered Mr. JACOBS in a letter dated March 10 and as it has not yet been made available to the Members of the House of Representatives by publication in the CONGRESSIONAL RECORD I have made this request to have it printed.

Mr. Charles E. Wilson is one of America's leading industrialists and heads the General Electric Co., recognized the world over as one of the greatest organizations of its kind. Under the enlightening leadership of Mr. Wilson and his distinguished predecessors in office, Mr. Gerald Swope and Mr. Owen D. Young, this company has made many extraordinary contributions to the industrial development of our country and the progress of mankind in general, and his views on the important questions of the day are eagerly sought and are always welcome. I hope my colleagues will read Mr. Wilson's letter because I am sure they will be interested in his views on the current discussion about the revision of labor legislation.

MARCH 10, 1949.

Hon. ANDREW JACOBS,
House Office Building,
Washington, D. C.

MY DEAR MR. JACOBS: A little over a week ago I wrote informing you that your letters of February 9 and 15 in comment in our labor-law questionnaire had just come to my attention and that I would furnish you our views as soon as possible. We have taken the liberty of setting forth at some length our opinions, as you have requested, which I hope are responsive to your very thoughtful and stimulating letter.

In view of the considerable thought you had obviously put into your letters and the importance of the issues and questions you discussed, I wanted our comments thereon to represent not only my own general opinion, reached after fuller consideration of your views and questions, but also the views of my associates who are more intimately familiar than I am with both the practical or operating aspects of these questions and with the technical aspects of the law. Accordingly, I am setting forth in this letter more or less briefly some views on each of the subjects covered in your letters and in our questionnaire, and I am then enclosing a more detailed discussion of the issues involved and the questions you have raised which has been

prepared by the staff of Mr. L. R. Boulware, vice president in charge of employee relations.

It appears from your letter that we are more or less in accord as to objectives, that what we both seek in common with all good Americans are laws which will adequately protect the paramount interest of the public and are fair to the employees, unions, and employers. As you point out in your letter, "We can use all the help and wisdom available to enact a fair labor law."

Accordingly I was somewhat disappointed when I realized that in reading our General Electric questionnaire, "How Would You Revise Our Labor Laws?" you assumed that our questionnaire was devised to sustain the Taft-Hartley Act as such. I get this impression from most of your questions. Such an assumption is entirely unwarranted.

On the contrary, I agree fully—and, in fact, this was the very reason that prompted our questionnaire—with your suggestion for the need of an "objective approach to these important problems." I would like to suggest that you again read the introduction, conclusion, and suggestions contained in the box at the end of our questionnaire. An employer is rarely credited with objectivity in as emotional a field as employee relations presents, but I can certainly assure you we used our best efforts to state these questions objectively and fairly. We supplied this questionnaire to each of our employees (including more than 125,000 members of our many unions) and to many of their neighbors. We hoped to encourage them to give thoughtful consideration to the individual ingredients making up the issues involved as distinguished from the too-prevalent emotional assertions.

You must, of course, be familiar with the ridiculous characterizations of the present law which have appeared in many union publications. I am sure that you do not feel that we, or anyone else, should not suggest that employees and their neighbors consider the basic questions involved. By our questionnaire we simply hoped to initiate some objective thinking which, if continued, would gradually make our employees and their neighbors proof against such obvious untruths, intemperate emotional appeals, and encouragement of class hatred as have continued to appear in the union press.

We are all human. The learned psychologists who have studied human beings quite accurately tell us that, despite our best intentions, we are often more persuaded by emotional factors than we are by our God-given reason. I believe that this present controversy about the Taft-Hartley law is a perfect example of that. Discussion of the Taft-Hartley law has tended too much to be in the area of sheer emotion. Too much significance has been attached to labels and too many epithets have been used, such as the slave labor law or the tough heartless act or—on the other side of the fence—the save labor act or the labor emancipation act. Too little calm and intelligent consideration has been given to this highly controversial measure by too many of us.

It seemed to us that the only intelligent thing for people to do was to forget the epithets, for the proposals to go back to some former and abuse-strewn phase of our labor legislation, and instead turn our attention to a fresh attempt to create a more nearly perfect law in the public interest, based of course upon the experience we have had under present and past legislation and the evidence as to how well or how badly those laws have worked.

Accordingly, our aim in devising the questionnaire was in getting away so far as possible from the emotional influences and stigmas attached to either the Taft-Hartley label on one side or the Wagner Act label on the other. We believed, just as we continue to believe, that it would be very helpful for all of us if we could reexamine the fundamental laws regulating the relations of employees, unions, and management with each other and the public in the absence of emotional entanglements and solely on the basis of the really pertinent issues involved.

Accordingly, we selected what we thought were 18 of the more important questions that had been raised in the current discussions of the law up to the time the questionnaire was issued. We put considerable effort on preparing a questionnaire which would be as objective and impartial as possible and yet would be susceptible to a "yes" or "no" answer. Our best advice had been that it was necessary to have this simple question-and-answer type in order to get interest and response.

In this complicated field it would be difficult to devise a series of questions that would adequately cover all of the aspects of the problem in detail. We make no pretense of having done anything more than attempt to initiate some interest and then get public reaction on a few of the important issues under consideration.

You have suggested that the questions involved cannot be completely answered by a "Yes" or "No" answer. Your feeling that categorical answers to our questions are difficult to make without qualification would be equally true no matter how the questions had been framed and equally true of any equally complex subject. I think the presentation of issues in such a simplified way for public expression lies at the very root of our democratic system, otherwise no one but experts would ever be allowed to vote. After all, there is no greater simplification—I might say over-simplification—than that which is basic to our American Government itself: The act whereby the people in the solitude of the voting booth resolve all the different issues pro and con into a choice between two candidates for President—or even for Congress.

In preparing our questionnaire, we were entirely mindful of the value of comments. It was for these reasons that we suggested that people add any comments they might have on our questions and any others they might have. I agree with you that good logical letters, outlining facts, and pointing to specific and fair remedies would in many cases help all of us, in and out of Congress, more than mere "Yes" and "No" answers to any questions. Fortunately, a great many people have, I understand, made ample comments on the questionnaire itself and many, many more have written letters prompted by the questionnaire.

Your first answer in your letter to me illustrates a common difficulty with comments where it quotes a previous statement of yours in response to a labor questionnaire as being applicable to our questions one and two. You then say that this response illustrates how it categorically would not clearly disclose one's opinion to a single question. I respectfully suggest that if you reexamine these questions it is quite clear that the questions as phrased are clearly capable—and fairly so—of "Yes" or "No" answers. Possibly it would be desirable—but not necessary—for an unusually informed person to expand his answers and to go into the ramifications of the issue. But after reading your expanded answer, I confess I do not clearly understand your position.

Nevertheless you will note that we asked people to add their comments and further questions, so that any persons interested in amplifying his "Yes" and "No" answers were clearly encouraged to do so. However, it seemed to us that the expression of a view as to the principles involved was the important starting points and accordingly we attempted to encourage and stimulate public interest in those principles.

The average individual naturally feels that the intricacies and the technical involvement in constructing legislation must be worked out by the Members of Congress. Few ordinary individuals could be expected to have the necessary background, knowledge, or experience to be able to make any worthwhile contribution to some of the more complex aspects of the issues that must be considered in drafting the actual legislation. But certainly that is no reason a citizen should be deprived of an opportunity to express his opinion.

I hope that more of your associates in Congress, as well as all people out of Congress irrespective of their present opinions, will give these important questions greater consideration. If our questionnaire helps to encourage any of your associates in Congress and some other citizens to give as extensive and thoughtful expressions to their Congressional representatives as your letter to me on these important issues, we have exceeded our greatest hopes of encouraging consideration of these matters in the public interest.

I will now try to set forth briefly our views on the 18 individual questions inasmuch as our questionnaire made no attempt to disclose them and your letter indicates you would like to have them.

I will mark the answer boxes as you did in your letter, and indicate thereunder my understandings of your views on the basic issues involved, as expressed in your letter, and the areas of apparent agreement, of disagreement or of my uncertainty as to your views on such principal issues. In the attached staff memorandum your comments and questions will be considered in very much more detail.

1. Do you believe that labor laws should, in general preserve the employee's right to strike? Yes ☒. No ☐.

We have always believed and, of course, still do, that the right of the working man to strike should be jealously guarded—and that it should be curtailed only where the consequences of a strike to the many are out of all proportion to the issues involved for the few. Accordingly, we check "Yes" here.

You also agree that the labor laws should, in general, preserve the employee's right to strike. But you would apparently limit the right to strike much more severely than does the Taft-Hartley law, as you apparently suggest an exception to this general right in any case of industry-wide strikes.

2. Do you believe labor laws should give the President of the United States the right to seek, through courts of law, to delay a strike that would cause a national emergency endangering the health and safety of the entire country?

Yes ☒. No ☐.

I believe what present power the President has to protect the Nation from strikes that threaten the national health and safety must not be weakened. Since General Electric operates the great plutonium plant for the AEC at Hanford, it naturally watched with concern during the atomic energy labor dispute at Oak Ridge last year, in which the President felt he needed all the teeth in the present law and used all six steps the law contemplates. Not only for atomic energy, but in other vital industries, the public interest must have effective protection.

It has been proposed, I believe, in the bill which you are now considering as a committee member that the Nation's labor law contain no provisions to delay or stop national emergency strikes other than a Presidential remonstrance or proclamation begging the cooperation of the disputants in refraining from a work stoppage as affecting the Nation's welfare.

There is nothing in this proposal to make the disputants accede to the President's request or to accept the investigating board's subsequent solution. I believe there is no

way set forth in the proposed bill to obtain through the courts an injunction to block the strike, and I understand it is all too doubtful if the President possesses any powers of enforcement. In short, the proposal is that public opinion will be able to stop or defer a national emergency strike.

Under the Railway Labor Act, this sort of public-opinion provision has been in existence for several years. According to the latest report of the National Mediation Board (New York World-Telegram, January 31, 1949) which administers this act, it is close to a break-down. In the opinion of the Board's members, it has become weak and ineffective.

This experience demonstrates that any effective labor law must contain adequate specific means—through the judicial process—for enjoining promptly any national emergency strikes. Such a vital point should not be left in the realm of speculation. The labor law should clearly embody proper specific powers for the Chief Executive to use when the power of public opinion shall have failed along with any other means available. Doubt should be dissipated.

So, to the second question, "Should the labor laws give the President of the United States the right to seek, through courts of law, to delay a strike that would cause a national emergency," the answer is "Yes."

We believe firmly with you in the considerations you set forth in your own answer regarding the limitations necessary in special emergency situations to avoid destruction of our free economy. We are particularly pleased that you see so clearly what many do not see, that "a controlled economy inevitably results in socialism, communism, fascism, or some form of state monopoly * * * (with eventual) forfeiture of personal liberty to entrenched officials." We are against compulsory settlements, as we assume you to be from the tenor of your questions. We hold to no particular program for protecting the public in such emergencies, except that adequate compulsory delay should be promptly available and legally effective. Along these lines, we do not feel that the present powers of the President to protect the public should be weakened, since in the past he has felt he needed at least these and has used them all.

I don't believe you stated your views as to whether or not the President should have such a right to delay national emergency strikes. We can conceive of industry-wide strikes that might not be of real national emergency proportions and, on the other hand, a national emergency strike need not be an industry-wide one. In view of this and in view of the present controversy about his power, I believe the President should have a clearly defined statutory right subject to appropriate statutory limitation, to seek any necessary court action to delay national emergency strikes that would otherwise endanger the health and safety of the country.

3. When two or more unions are fighting each other over who shall do a job or who shall represent the employees, and a strike is called to compel an employer to give to the members of one union the work or recognition being given to the other union—that is a jurisdictional strike. Should labor laws prohibit such strikes? Yes ☒. No ☐.

You agree that jurisdictional strikes should be prohibited where the employer is taking no sides in the primary dispute. In the case of "different work of an intermittent nature for the same employer, as in craft trades and particularly in construction," you seem to assume that a given self-ordained group has somehow got a clear, inherent, exclusive right to do certain types of work. Do you really believe this? Remember, you have got immediately to face the fact that such a given group has not been able, despite constant effort over a great period of years, to establish that right with others—establish it even with other sister unions or with any top tribunal over this group of unions.

You say you appreciate the plight of the employer who wants to complete his work without getting caught in the crossfire of two competing unions, but shrug off this whole consideration with some situations defy remedy. Does not the innocent bystander deserve protection? In this case it is not the employer, but ultimately the public that must pay and should be protected.

It is true that employers and labor have changed their constitutional philosophy on the desirable degree of Federal intervention, depending on the matter at hand. So have all other groups of Americans, including Congressmen of all persuasions. Yet in this matter you yourself agree on Federal intervention, admitting that what you support is not a complete remedy. Our difference here is not over the desirability of Federal action against jurisdictional strikes, to which you agree, but simply that we want that intervention promptly while there is yet time and that we advocate protection for the innocent bystander, which you apparently would not provide.

I see no justification for an employer becoming involved in the primary dispute between the disputing unions if there is an effective and adequate prohibition and legal remedy against jurisdictional strikes. I do not seek to have the employer be the arbiter between the two unions. I only want some place the employer can go and find a qualified and disinterested Government representative who can come and settle the dispute equitably as between the parties and in the public interest. This settlement is usually not really hard to achieve, and it can usually be effected a week or a month ahead of the need for the actual work being done. Such government aid in settlement need be sought, of course, only after any voluntary or interunion procedures fail.

Apparently we agree that the answer to this question should be "Yes."

4. Should labor laws prohibit secondary boycotts—that is, prevent an employer and his employees, where there is no labor dispute, from being damaged by a union seeking to coerce another employer having a labor dispute? Yes ☒. No ☐.

You state that secondary boycotts should be prohibited where the second employer is not participating in the primary dispute. We agree.

We also agree that where there is a community of interest in the question at issue, clearly demonstrated, for instance, by an employer taking over work from another's struck plant in obvious effort to assist the struck employer to fight his battle with the union, a strike or boycott against such work should not be prohibited. Incidentally we don't believe this is properly to be called a secondary boycott at all, but a primary boycott.

I understand that the present law has been so interpreted as to treat a case, where the second employer is participating in the primary dispute, as a primary strike rather than a secondary boycott. I believe this is proper. Apparently we agree that the answer to this question should be "Yes."

5. Should labor laws provide that an employer cannot deduct union dues or assessments from wages unless the employee gives his personal O. K.? Yes ☒. No ☐.

There seems to be little quarrel with the proposition that a man's take-home pay should not be expended in whole or in part for him unless the wage earner authorizes such an expenditure of his money. There do not seem to be any serious complaints by employers or unions as to continuation of the voluntary check-off.

I don't believe you express any opinion in your comments as to whether or not an employer should be prohibited from deducting union dues or assessments from the wages of his employees without the employee's consent and authorization. In your comments on this question, and particularly in your comments on question 10, you indicate that you are fully cognizant of the abuses that sometimes occur in the handling of union funds, amounting in some cases to outright embezzlement and failure, in the one case you mention, to account for more than $1,000,000. I believe it is better to let an employee decide for himself—on the basis of how he feels the union is handling its funds—whether or not he wants deductions made from his wages and paid into such funds, particularly in the light of your rather shocking revelations of the misuse thereof. What we want is good unions, and this hold by its members on a union's purse strings tends to make the union officials responsive to the members' will. I feel that the proper answer to this question is "Yes."

6. Do you believe labor laws should see to it that both employers and unions be required to bargain in good faith? Yes ☒. No ☐.

I am pleased to see that you feel that both employers and unions should be required to bargain in good faith, particularly since I understand that neither the Thomas bill (S–249) now under consideration in the Senate, nor H. R. 2032 introduced by the chairman of your committee, and on which hearings are being held, nor the Wagner Act contain any requirement that the union bargain in good faith. I certainly agree with your answer of "Yes." I am told that you have voted twice in favor of a resolution to restore the Wagner Act without change and only thereafter to hold hearings on Wagner Act amendments consistent with the proposal made by the President. I hope your letter indicates that you are going to reconsider your earlier position.

7. Should labor laws give to both employees and employers the freedom to express their own points of view on employee-relations problems—provided such views, or arguments, or opinions do not promise bribes or threaten reprisals? Yes ☒. No ☐.

Since you state that no law ever denied free speech to the employer, and since your further comments appear to be concerned with the conditions under which some or all of any statements are allowed as evidence, I gather that you are in favor of the law giving both employees and employers clearly the freedom to express their own points of view, as asked by this question. Apparently we agree that there should be no material denial of the right to such expressions and that the answer to this question shou'd be "Yes."

It would seem that there could be no other answer to this question than one which strongly confirms the right of both employers and unions to speak freely on all subjects to anyone who is willing to hear them, provided that no promises of benefit in the form of bribes or other inducements nor any threats of reprisals are made.

8. Should labor laws protect the employee against unfair practices by unions and management? Yes ☒. No ☐.

Regardless of whether abuses are from the employer's side or from the union's side, the employee must be protected. There should be no quarrel on this score.

You state that "of course" the labor laws should protect the employee against unfair practices by unions and management, but that we must, as reasonable men, agree upon what should be unfair labor practices, and be fair in that determination. We agree, The answer to this question should be "Yes."

9. Do you believe that labor laws should require both union officials and company officials to swear they are not Communists or Fascists or members of any party or organization which plans to overthrow the Government of the United States by force and violence? Yes ☒. No ☐.

Not only as a private employer, but as a contractor for the Atomic Energy Commission, we believe the labor law should require affidavits of both company and union officials and bargaining representatives that they do not belong to the Communist Party or to any party which plans, teaches, or advocates the use of force or violence to overthrow the Government of the United States. One would have to be naive indeed to think the affidavit could solve the Communist problem some unions apparently have. But we believe we see, at various places, some examples of members in unions having been aided—by the non-Communist affidavit requirement—in making progress toward purging their unions of Communist leadership.

Certainly, the very wonder by union members at some officials' refusal to sign has led to a great deal of new local consideration of the national problem. In a great many cases they have elected new officers where the determining factor seemed to be the belief of the membership that it would be getting new leadership with less Communist taint or certainly with less public suspicion of that taint.

You state that you desire to cleanse and preserve, not destroy unions. I certainly agree. I go further, and have so testified before the Senate committee, and recommend that this provision be extended and made applicable to all officers and bargaining representatives of both labor organizations and management. Apparently, while you are in favor of cleansing the unions, you do not approve of the effect under present laws of failure to file the so-called non-Communist affidavit. We think the affidavit is helping to cleanse unions.

Secretary of Labor Tobin has testified in the Senate hearings that he believes a law should be passed, making it a crime for a union official to be a Communist. This is a drastic suggestion. But there are those who are more violently shocked by a simple provision obligating union leaders to swear they are not Communists if they are to have access to NLRB.

I would not favor the elimination of the present remedial provision unless and until some other at least equally appropriate method of dealing with this problem is enacted. I feel this question should be answered "Yes."

10. Do you believe labor laws should require unions to make appropriate reports to members and government as to handling of funds—just as companies are required to make appropriate reports to owners and government? Yes ☒. No ☐.

Filing with the Government and their members information as to manner of operation, income, and expenditure—cannot but be an aid toward healthier self-government by unions and instill a sense of responsibility.

You mention that this question is dear to your heart and you describe your unsuccessful efforts to get the Seventy-ninth and Eightieth Congresses to sponsor such legislation. I agree fully with you as to the desirability of such legislation and am curious as to whether you or any other Member of the Eighty-first Congress has offered a bill or an amendment to H. R. 2032, to accomplish this. I also agree with your suggestion that the present law does not go far enough and provide for inspection of books, etc., but I don't understand why you have voted to eliminate even the first step taken in the present law unless you are intending to offer a stronger substitute. We agree that this question should be answered "Yes."

11. Should labor laws make it clear that a collective-bargaining contract must be honored by both parties? And that each has an equal right to sue the other for breaking the contract? Yes ☒. No. ☐.

As President Truman said in November 1945, "If we expect confidence in agreements made, there must be a responsibility and integrity on both sides in carrying them out."

Those who object to such a provision seem mainly concerned as to whether the Federal or State courts are the proper forum. Actual practice, under the present law which has such a provision for suits in it, has shown, according to the watchdog committee, that there have been only 56 actions of this nature, and to date, not one has gone to judgment. Like so many other provisions of the labor law, it may seldom or never have to be utilized, but there is assurance in its existence

You assert that unions have always been suable. Yet you must recognize the legal impracticability of suits in many States, although you have stressed the inadequacy of present legal remedies in the case of members seeking protection against their unions. If unions have always been suable, why not state so clearly in the law and make the remedy prompt and practical?

We agree with you and Mr. Swigert that a lot of nonsense has been written about this point, and I fear about many others in the present law. I am unable to determine from your comments whether or not you feel both parties to a contract should be required to live up to it and that each should have a remedy for breach thereof. I infer that you favor the provision in the present law insulating union members from suit but making union assets liable to suit if there has been a breach of contract. If so, I agree. I feel that this question should be answered "Yes."

12. Do you believe labor laws could make it unlawful for a union to compel an employer to engage in featherbedding; that is, to pay money for work which hasn't been done or won't be done? Yes☒. No ☐.

I am glad you oppose featherbedding. I agree. But I cannot go along with you in your opposition to a law forbidding what you admit is wrong. In view of our own experience and in the absence of any convincing explanation of your position, I feel that this question should be answered "Yes."

Let me briefly tell you of an experience of ours. In the fall of 1947 when General Electric was installing a turbine for the Consolidated Edison Co. at the Sherman Creek station, the local union of steamfitters and plumbers claimed that certain piping which had been done by the factory was a part of their work. The union took the position that this piping work should have been removed by them and then reinstalled by them at regular rates, or the company would have to make a payment of approximately $700 which represented the amount of wages in question. The General Electric Co. wanted to make an issue of this matter but the customer felt it unwise to do so. Faced with the threat that work on the project would have been stopped, thereby causing great loss and inconvenience to the public and to the Edison Co., because of the serious need of this turbine, it was decided to pay the amount in question and not risk a work stoppage.

The whole secret of our ever-higher American standard of living is in production. To the degree that we restrict or limit real production with "made" work we restrict and limit and lower that standard of living.

Featherbedding is morally bad and economically feeble-minded. The reason it needs to be prohibited by law is because the employer and union at the bargaining table are so frequently far from being equally matched.

13. Should labor laws permit the forcing of an employer to hire only workers who belong to a given union? Yes ☐. No ☒.

This question brings us to the broad topic of compulsory unionism, and specifically to the problem of the closed shop.

The present Federal law prohibits the closed shop. I am told that 21 States have declared the closed shop and various forms of compulsory unionism to be against public policy. Only severe abuses under closed-shop practices could have brought about all this legislation.

The closed shop is a denial of basic human rights. It is necessary to hear only one of the many stories of wrongs done to individuals to illustrate the point that the closed shop is contrary to our basic American concept of freedom and protection of the individual right of personal choice.

The closed shop can mean expulsion from a given skilled trade and extended permanent loss of livelihood for an individual who happens to be out of sympathy or out of step with the majority or perhaps just the ruling clique in his union. The argument, "Doesn't the closed shop seem justified in order to preserve union solidarity?" overlooks the fact that, both under the Wagner Act and the present law, the union is the "exclusive bargaining representative" when selected by only a mere majority of those voting in a representative election.

To the question, Should there be a closed shop? my answer is "No."

I wish you had expressed your opinion on this important question of the closed shop. I had rather assumed from your comments on question 8 that no combination should be permitted to crush the individual; your comments on questions 1 and 2, indicating that you disfavor Government control over wages and prices; your comments on question 17, indicating that combinations of men, whether corporate or union, spell power, and the need for fair regulation of unions as well as of corporations, that you would not favor legalizing the return of this restrictive type of organization.

Your comments on this question, although not stating your position specifically with respect thereto, seem to indicate that you favor the closed shop, with proper regulation, but not the closed union. The papers reported that a witness for one of the oldest and most traditional closed-shop unions in the country, in testifying recently before the Senate Labor Committee, indicated how effectively the closed shop is used to affect prices and regulate commerce in the industry in which they work. I judge that if you should favor legalizing the closed shop you would insist on close regulation to prevent the abuses to which it is subject—abuses not only restrictive of the freedom of individuals, but also abuses through restrictions on competition and price. I oppose removing the prohibition on the closed shop for the very reasons, among others, you have seemed to indicate in your comments on other questions. I infer that we probably do not agree as to the answer to this question, although you do not state your views specifically.

The closed shop begins by being wrong in its power over the individual employee and the employer. But that soon fades into insignificance as the power increases over a trade or a community or a city government or an industry.

14. Do you believe it should be unlawful for an employee to be prevented from working by the use of violence, force, or intimidation? Yes ☒. No ☐.

I am glad to see that you feel it should be unlawful for an employee to be prevented from working by the use of violence, force, or intimidation. We agree the answer to this question is "Yes."

General Electric has had experience in this area.

In Schenectady, in 1946, salaried workers, not members of the union on strike and not even included in the bargaining unit, were forcibly prevented from going to work by means of picketing and violence, in defiance of a court order which the Schenectady police force said they could not enforce.

It seems to me, on the evidence, that the labor law should contain provisions that will quickly and effectively stop such violence,

which has not been a General Electric experience alone. The Allis-Chalmers strike is of too recent and painful memory. In the past, this kind of violence has continued until it has either gained its point or been eradicated by counterviolence or other measures. Invariably, however, the Federal Government's prohibition against it comes at a time when it is only a memory. The labor law should provide the Labor Board with power to take quick and incisive action where warranted.

15. Do you believe foremen and other supervisors could properly perform their management duties of serving the balanced best interests of employees, customers, and owners alike, if bargaining for supervisors by unions should be included in the labor laws? Yes ☐. No ☒.

Supervisors are management. If they are unionized their unions are likely—as shown in the congressional hearings conducted a couple of years ago and in the Senate hearings 2 weeks ago—to become associated with, collaborate with, and even be dominated by unions representing the working force that they are supposed to lead and manage. The spirit and effectiveness of management goes, and the foremen are no longer useful to the employees and to others as management.

You state that you feel that foremen should not be permitted to belong to the production workers' union. I agree. You apparently have some question, without expressing your opinion, as to foremen's unions, provided they are not a part of the production workers' unions. Whatever may be the theoretical attractions of independent foremen's unions with compulsory bargaining powers, I believe that, once in such unions, the foremen will then almost surely begin to be brought under the dominance of the much more powerful unions of the people they are supposed to supervise. I feel this question should be answer "No."

16. Do you believe labor laws should protect individual workers in the right to join or not to join a union—to remain or not to remain members—just as they individually wish? Yes ☒. No ☐.

First of all, General Electric believes the individual should be protected in his right to join or not join a union. Secondly, he should be protected—if so-called union security clauses are to be permitted—in having at reasonable intervals, the opportunity to implement his decision to remain or not to remain a member. Above all, the individual should be protected against excessive admission or dues requirements or expulsion for any reason other than nonpayment of dues.

I do not believe you answered the question as to whether or not you feel the law should protect an individual worker's right to join or not to join a union, or to remain, or not to remain, a member, although you indicate you do not agree with the prohibition in the present law against the closed shop with respect to which I have already expressed my views under question 13. You indicate that you do not favor the union-shop-election provision of the present law. I agree. I certainly commend you upon your decision not to support the request made on you by a large union to support compulsory union shop. I believe this freedom to join or not join—remain or not remain—is one of the best ways of insuring a strong union, and strong for good reasons, because of the responsiveness of the officers to the membership. I feel this question should be answered "Yes."

On the question of a compulsory union shop I question whether it is fair to keep a man from earning a living at a particular plant because he disagrees with the majority as to a union. Here again I believe the presence or possibility of free riders is worth all the lack of dues costs the other members, because the union management will be so much more responsive to the membership. Nor do I understand the fear that individual voluntary assignment of dues will not be made by union members. The question seems to assume that unions should be strong at any cost, whether they are good or bad in the opinion of their members. We would assume that a union its members thought good would get its dues by voluntary assignments, while a union its members thought bad would have to mend its ways. My observations lead me to believe members will support their union even when they have considerable doubt as to the probity of what's going on.

17. Should labor laws make clear that both unions and employers can now so affect the public for good or ill that the labor-management relations of both should be regulated equally by law? Yes ☒. No ☐.

It is conceivable that several years ago the answer to this question might have been "No". It is an indication of our progress that today almost everyone would be likely to answer "Yes".

You state combinations of men, whether corporate or union spell power. You also indicate that it is Government's primary duty to protect the citizens from the unwarranted exercise of power from within or without its borders and that unions as well as corporations should be fairly regulated. Apparently we agree.

18. Should labor laws provide that a striker who has been replaced in the course of an economic strike—not involving any unfair labor practice—be permitted to vote in an election to choose a bargaining agent at the conclusion of the strike? Yes ☐. No ☒.

I have understood that the principle involved here originated under the Wagner Act and was continued under the Taft-Hartley Act, namely, that a purely economic striker, once he has been permanently replaced in the absence of any unfair employer practice, is no longer entitled to reinstatement. Hence as a logical result, the present law provides that he is not entitled to vote in an election to determine who shall represent those who are the employees.

You suggest that this rule, developed under present and past laws as indicated, may unduly curtail the right to strike. I can't believe that any such combination of circumstances, as you have assumed in your hypothetical case, could ever result in the possibilities you indicate. Needless to say, an employer should not be—and I am informed under the present law he is not—permitted to take advantage of anything in this provision by inviting a rival union into the plant or by manipulating the decertification of a union or by engaging in any other unfair practice to defeat the right of his employees to freely choose their representatives. Those who are more able to weigh all these possibilities discuss your fears more completely in the attached staff report. After weighing what seems to me the practical considerations and the equities involved in this question, I believe the fair answer to be "No."

I think the current reexamination of the present laws regulating the relations of employees, unions, and management with each other in the public interest is an extremely desirable thing. Calm and deliberate reexamination of any law at any time based on factual experience rather than emotional assertions is always a good thing and is always in the public interest. I am particularly in favor of public reexamination of the present law, however, because I think that any intelligent and calm examination of the issues involved will have a tremendously beneficial effect in achieving better understanding by individual members of the public with respect to the elements in that law.

I again wish to emphasize that the purpose in issuing our questionnaire was to encourage people to take a fresh look at some of the issues involved in any revision of our present labor laws.

As I stated before the Senate Committee on Labor and Public Welfare, we believe an objective fresh appraisal of each of the ingredients of the present Labor-Management Relations Act will indicate that, although it is a good law and contains a great many important advances in the public interest which need to be retained, there may very well be need for two types of revision:

First of all, careful attention should be given to any specific instances in which the law is claimed to have actually operated unfairly against unions, employees, employers, or the public.

Secondly, careful attention should be given to those instances in which the law needs to be strengthened in order to prevent certain abuses which still are prevalent and which are not adequately provided for under the present law. The law should provide better protection against violent and coercive mass picketing, for example, against featherbedding practices and especially against restrictive practices such as have been effectuated through the use of secondary boycotts, closed shops, jurisdictional strikes, and the like. We have already testified before the Senate Committee on Labor and Public Welfare as to some of our own direct experiences with such abuses, and we will be glad, at your pleasure, to discuss them further with you.

In closing, I want to say that I was rather interested after rereading your letter several times to note how really close we apparently were in our thinking on even the specific issues involved, as well as the objectives. I have appreciated the very stimulating letter which you have written, and I am glad that you had it reprinted in the CONGRESSIONAL RECORD, since any intelligent expression of views should be welcomed by all of us, whether or not we are in full agreement with the views expressed, as an aid to better understanding, which in turn is bound to result in a drawing together ultimately of the thinking of all sincere students of these problems.

I shall regard it as a pleasure to see you shortly in our proposed appearance before the House Committee on Education and Labor.

Very truly yours,

C. E. WILSON.

Alabama Coal Mine Burns in Underground Gas Test

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. RAINS. Mr. Speaker, in a recent issue of the Christian Science Monitor there appeared a very interesting article entitled "Alabama Coal Mine Burns in Underground Gas Test." This outstanding experiment will be the means of utilizing millions of tons of thin-seam soft coal at a cost which is not prohibitive. The article is as follows:

ALABAMA COAL MINE BURNS IN UNDERGROUND GAS TEST

GORGAS, ALA.—Can coal burning underground, right in the mine, be converted into heating gas?

The second underground coal gasification experiment conducted jointly by the United States Bureau of Mines and the Alabama

Power Co. at the company's Gorgas mine, 55 miles northwest of Birmingham, Ala., began a few days ago. Results will help to determine whether coal burned underground can produce a gas which can be utilized for heating and for conversion to gasoline and Diesel oil.

The coal was set ablaze by explosion of a thermite fire bomb.

Thomas W. Martin, president of the Alabama Power Co., pulled a pin from a thermite fire bomb at 3 p. m., March 18. A. E. Sands, chemical engineer for United States Bureau of Mines, lowered the bomb into a shaft leading to a coal seam 160 feet below the surface. An elastic band held the handle of the bomb in place until it reached 100 feet. It was then dropped the remaining 60 feet and exploded.

FIFTY TONS BURNED DAILY

Lighted in an area comprising some 500,000 tons of coal, the underground blaze conceivably could burn for 3 to 4 years. Milton H. Fies, coal operations manager for Alabama Power, said some 50 tons of coal will be burned daily. He expects the experiment to continue at least a year, maybe longer.

Temperatures now have reached 900 degrees Fahrenheit underground. This will be increased to around 3,000 degrees during the next 30 days by introducing varying amounts of steam and oxygen and by use of an air blast.

Officials now are intent upon producing gas consistently. Its B. t. u. content is not expected to be measured for 2 or 3 weeks. In about 30 days, experiment leaders expect to produce a gas with a heating content of around 125 B. t. u.'s a cubic centimeter.

FLUE GAS USED

The gas now being produced is described as "flue gas," or the same as boiler smoke. This will be increased gradually, it is expected, during the ensuing months to produce a gas with a heating content of perhaps 900 to 1,000 B. t. u.'s by varying use of steam and oxygen.

"Right now we're just warming up the mine," explained James Elder, the Bureau of Mines' supervising engineer for the project. "We should know something in about 6 weeks as to whether this experiment can be termed successful or not."

Cost of the experiment is estimated at about $500,000. The Alabama Power Co. is donating the 500,000 tons of coal to be burned and technical aid.

Mr. Fies emphasized that America would need all the synthetic fuel it could get if there were another war. Ironically, in use in the experiment are a huge compressor and gas turbine, which were destined for shipment to Russia a year ago. The Bureau of Mines stopped the shipment and diverted the equipment to Alabama.

GREAT SAVING SEEN

If successful, the experiment means that millions of tons of thin-seam soft coal could be utilized without prohibitive costs. It is believed that the technique of gasification could be applied to rich, thick seams also.

The fire was lighted at borehole 1. Air was admitted into that shaft, and product gases were removed from borehold 2, 300 feet away. The other three outlets are sealed off at present. Temperatures are being controlled by use of a water spray. Fire passage will be increased as the experiment progresses, by using boreholes 3, 4, and 5—each 300 feet apart.

When operations are ended, the mine will be flooded to cool the residue for gathering information. Entries will be driven into the mine to determine whether coke in large quantities has been left underground and to determine effects of the combustion on strata overlying the burned coal bed. Flooding will prevent the blaze from spreading into adjacent coal areas.

Veterans' Pension Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following article which appeared in the Philadelphia Daily News on March 25, 1949:

INSIDE THE DOME

The two Philadelphia Congressmen whose votes stopped the controversial Rankin veterans' pension bill in the House Thursday said today that they voted to send the measure back to committee because, as it stood, it would not give a square deal to the veteran of the First World War.

The vote in the House which ended 3 days of stormy debate was 208 to 207, the closest in the history of the Eighty-first Congress. As the roll call was completed, it looked as though the Rankin bill had weathered the storm with two votes to spare, but Representatives WILLIAM A. BARRETT, Democrat, of Philadelphia's First Congressional District, and Representative WILLIAM T. GRANAHAN, Democrat of the Second District came into the well of the House and announced that their votes should be recorded as "yea" rather than "nay." The House roared and the Speaker ordered a recapitulation, but the end result was 208 to 207, a defeat for the Rankin bill.

Two other solons changed their votes. Representative ROBERT F. RICH, Republican, of Woolrich, outspoken advocate of economy, apparently decided at the last moment that the Rankin bill was just too much. He changed his vote, on recommitting, from "no" to "yes" as did BARRETT and GRANAHAN, but he was negated by Representative AUGUST H. ANDRESEN, of Minnesota, another Republican, who switched in the opposite direction.

"I felt all the way through that all this pulling and hauling was an inappropriate way to formulate legislation," said BARRETT, after casting his vote. "When it was pointed out to me that the Jacobs amendment in it would bring the average pension for a World War I veteran down to only $13 a month, I decided that it was best to send it back to the committee for reconsideration."

BARRETT referred to the amendment offered by Representative ANDREW JACOBS, Democrat, of Indiana which provided for pensions based on length of service and on time spent overseas. His formula would give veterans at 65 $10 a month, plus $1 for each month of service in this country, and $3 for each month spent abroad in an actual theater of war.

"After 2 days of consistent confusion," added BARRETT, "with many overlapping amendments, I deemed the bill a harmful one to veterans of both wars."

Representative GRANAHAN indicated that the same reasoning motivated his action. When he saw that pensions for World War I veterans might be as low as $10 a month instead of the $90 originally proposed, he considered it a sell-out to vote for the emasculated bill, and instead changed his vote to send it back for redrafting.

Blame for defeat of the bill was placed squarely on the shoulders of Chairman JOHN E. RANKIN of Mississippi by Representative WILLIAM J. GREEN, JR., Democrat, of Philadelphia's Fifth District.

"The situation was very confusing," said GREEN, "because RANKIN was so dictatorial in committee that he forced several members to leave in protest and then reported out a bill that had to be amended and rewritten on the floor. Writing a bill on the floor is always bad and in the end, the bill was so confusing that the majority of Members didn't know what it contained and it seemed best to send it back to the committee."

GREEN had a heated exchange Wednesday with RANKIN during debate.

Representative EARL CHUDOFF, Democrat, of Philadelphia's Fourth District, who serves on the Veterans' Committee and who opposed the Rankin bill from the beginning, said that "if the chairman will stop being a demagogue we will now be able to get down to work and write some good veterans' legislation. We will not only work on a reasonable pension bill but on such matters as the cutbacks on veterans' hospitals, GI insurance, and other things that have just been left lie while we fought about this bill."

When the chips were down, Representative HARDIE SCOTT, Republican, of the Third District, was the only Philadelphian to vote in favor of the Rankin bill. SCOTT wired all veterans' organizations in his district last night that while he was critical of many features of the bill "when Representative RANKIN announced that a vote to recommit would kill the pension bill, I felt obliged to vote against recommitting it."

Representative HUGH D. SCOTT, JR., Republican, of the Sixth District, stuck by his guns in opposing the measure. SCOTT was absent filling a speaking engagement at Ohio Wesleyan University, but was paired with another absent member who favored the Rankin bill.

SCOTT was the only Republican leader to oppose the measure. About two-thirds of the House Republicans followed the lead of Representative JOSEPH W. MARTIN, JR., of Massachusetts and CHARLES HALLECK, of Indiana, in voting for the Rankin bill in the thinly disguised hope that to do so would put President Truman on the spot by forcing him to veto it.

They also took glee in the fact that the pension bill debate made the Eighty-first "Truman" Congress look a good bit more inept than the late lamented Eightieth Congress.

HUGH SCOTT, however, would have none of such strategy. A veteran himself, he denounced the cost of the Rankin bill and took a firm stand against it. In the end, by the margin of BARRETT'S and GRANAHAN'S votes, the strategy failed and the bill went back.

Jobless Claimants in Connecticut Rise to 62,537

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, it is my purpose today to bring to the notice of the Members of the House the latest statement of the employment security division, Department of Labor, State of Connecticut.

This report on jobless claimants in Connecticut, dated March 22, 1949, indicates an increase from 61,804 for the week ended March 12 to 62,537 during the week ended March 19. The continuing increase in lay-offs, week after week since October 1948, is giving very

serious concern to the persons being taken off the employment rolls, their families, their employers, their unions, welfare departments, veterans' organizations, businessmen, and those who continue to be employed on shorter hours in many instances.

Should there be no leveling off in the very near future, there will appear to be more to this proposition than obtaining necessary funds from the Federal Government to provide the required personnel to process the claims for unemployment benefits, though such funds are of primary import, in order that there be no long wait for the initial unemployment checks which are due them.

Eliminating the details as applicable to each unemployment office in the "Constitution State," the report is as follows:

4. JOBLESS CLAIMANTS IN CONNECTICUT RISE TO 62,537

The number of jobless claimants for unemployment-insurance benefits in Connecticut rose to 62,537 during the week ended March 19, from 61,804 for the previous week. The total was 151 percent higher than the 24,888 who filed a year ago. Benefits paid out last week amounted to $821,848.

Initial claims, which start a new claims series, declined to 7,241 from 7,959 for the previous week.

Bridgeport led the State in the number of jobless claimants with 10,147 followed by New Haven 8,749, Hartford 7,316, and Waterbury 7,307. The other 15 offices were each under 3,200.

A steel and wire products firm laid off 300, a brass company 150, a watch factory 150, and a chain manufacturer 110 with lack of work the reason in each instance. Other lack-of-work lay-offs totaling 425 in the bearings industry, 250 in metal products, 90 in ordnance, 85 in hats, and 90 in textiles were reported. A razor manufacturer rehired 30.

Blow-by-Blow Account of the Veterans' Pension Battle

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. VAN ZANDT. Mr. Speaker, while I am not a member of the House Committee on Veterans' Affairs, I feel the time has come to review the action of the House with respect to the so-called Rankin pension bill. Briefly, here are the facts and a blow-by-blow account of round No. 1 of the veterans' pension battle:

First. Since the Eighty-first Congress convened, the following pension bills were introduced for veterans of World War I and World War II on the same or similar bases as the veterans of the War with Spain: H. R. 8, H. R. 897, H. R. 1693, H. R. 2068, and other related pension bills.

Second. Hearings on pension legislation for veterans of World War I and World War II were held by the House Committee on Veterans' Affairs on January 27, February 1, 2, 3, 8, and ended on February 9. During these hearings representatives of the Veterans' Administration, the American Legion, Veterans Committee presented testimony. States, AMVETS, and American Veterans' Committee presented testimony.

Third. In a statement made on the floor of the House and contained in the CONGRESSIONAL RECORD Monday, February 7, Chairman JOHN E. RANKIN of the House Committee on Veterans' Affairs invited Members of Congress to testify before that Committee. Chairman RANKIN'S invitation was accepted by six Members of Congress.

Fourth. On February 16 the House Committee on Veterans' Affairs reported H. R. 2681 by majority vote. This bill, known as the committee bill and introduced by Chairman RANKIN, contained selected provisions from other bills pending before the committee at that time.

Fifth. Printed hearings of the testimony given before the House Committee on Veterans' Affairs by all witnesses were distributed to each Member of Congress about March 1. These printed hearings contained factual and statistical information on the veterans' pension in general, including the number of veterans affected and the estimated cost. From time to time additional information was received from the Veterans' Administration and other sources. This information was inserted in the CONGRESSIONAL RECORD for the benefit of Members of Congress.

Sixth. On March 9, Chairman RANKIN announced that he would call up the veterans' pension bill, H. R. 2681, on Tuesday, March 22, under the rules of the House giving soldiers' pension legislation priority. He announced that there would be 3 hours of general debate after which the bill would then be read for amendments.

Seventh. When the provisions of H. R. 2681 became known, there was launched immediately one of the most bitter attacks ever directed against veterans' pension legislation. False and misleading propaganda was employed by opponents of the bill. The veteran was portrayed as a Treasury raider. For the first time in the history of Congress, the cost of legislation was projected far into the future, as a carefully planned design to mislead the American people.

Eighth. Among the real opponents of the so-called Rankin pension bill were the social planners who, through their spokesmen on the floor of the House, revealed the desire to submerge veterans' benefits by consolidating the Veterans' Administration with the Social Security Administration. This same group also has plans to merge Veterans' Administration hospitals with other Federal hospitals under the proposed Department of Public Welfare, thus destroying the identity of the veterans' hospitals. They also are working in the direction of abolishing veterans' preference for employment with the Federal Government.

Ninth. What position did the major veterans' organizations take with respect to the pension question?

(a) Both the American Legion with its 3,500,000 members and the Veterans of Foreign Wars of the United States with 1,500,000 members vigorously supported the pension question. The American Legion accepted the Rankin bill as reported by the House Committee on Veterans' Affairs. The Veterans of Foreign Wars favored the Rankin bill with amendments.

(b) The AMVETS with a membership of 160,000 and the American Veterans Committee with a membership of 40,000 united in opposing the pension question. Both these organizations indicated that benefits for the veteran should be in the form of social security.

Tenth. When it became apparent on February 7 that the benefits provided by the Rankin bill were highly controversial and were being referred to as too costly, I introduced at the request of the Veterans of Foreign Wars a compromise bill known as H. R. 2379. On February 8, I was called before the House Committee on Veterans' Affairs and for nearly an hour discussed the provisions of my compromise bill, H. R. 2379. My testimony was supported by not only factual information but an estimate of the cost of the compromise bill. The discussion between members of the House Committee on Veterans' Affairs and myself is part of the printed hearings on the so-called Rankin bill and may be found on pages 149 to 159, inclusive.

Briefly, the compromise bill provided that a veteran of World War I and World War II holding an honorable discharge and with at least 90 days of service would receive a pension of $90 monthly upon reaching the age of 65 years, provided his income did not exceed $2,000 annually if he was single, and $3,000 annually if married. In addition, an eligible veteran if disabled, mentally ill, or blind and requiring the constant aid of an attendant, would be entitled to $120 monthly regardless of age. If such a veteran is not in need of an attendant but is permanently and totally disabled, he would receive $90 a month regardless of age; if 75 percent disabled, $75 monthly; and if 50 percent disabled, $50 monthly.

In the case of widows of World War I veterans receiving non-service-connected pension benefits, the present income limitation of $1,000 without children and $2,500 with children would be increased to $2,000 and $3,000, respectively. In determining income, the proceeds of life-insurance policies from any source would not be considered as income. By reason of the income limitations or so-called needs clause, the cost of the original Rankin bill before amendment would be greatly reduced. It is estimated that the reduction in cost would be approximately 70 percent.

Eleventh. On March 22 Chairman RANKIN called up H. R. 2681 for consideration on the floor of the House for 3 hours of general debate. Before the debate it was mutually agreed by Chairman RANKIN, the American Legion, Veterans of Foreign Wars, and myself, and other Members of Congress that the Rankin pension bill would probably pass the House this session of Congress if it were amended along the lines of my compromise bill, H. R. 2379. Publicity concerning the amendments was given in the newspapers, the CONGRESSIONAL RECORD, and over the radio. In general, Members

of the House were fully familiar with the series of amendments to be offered to perfect the Rankin bill so as to conform to the provisions of H. R. 2379. It was further agreed that in perfecting the Rankin bill the veteran of World War II should be excluded, except the permanent and totally disabled veteran of World War II regardless of age and who is in need of an attendant.

Twelfth. As the debate on the Rankin bill got underway, it became apparent that the House membership opposing the bill was divided into the following groups:

1. Administration supporters.
2. Social planners.
3. Those who were confused by misleading propaganda and false statements.

Group No. 2 comprised of social planners, while giving lip service to a pension bill for veterans, revealed themselves on repeated occasions as masters in the art of creating confusion. One moment they appeared to be for the bill and the next moment they were voting to kill the bill. Several spokesmen for the social planners revealed their true objective during the general debate when they spoke in glowing terms of the day when social-security benefits would take care of all veterans. Many members who took part in the debate made fine contributions to the pension cause. Some were opposed yet were sincere. But through all the debate, the social planners revealed themselves in their true light as disciples of confusion. Their sole objective was to create doubt in the minds of Members of Congress in the hope of recommitting the bill and thus killing it.

Thirteenth. When general debate ended and the Rankin bill was ordered read for amendments, the true friends of the veteran in Congress were not hard to find. The first parliamentary action taken was a motion to kill the Rankin bill by returning it to the House Committee on Veterans' Affairs. This motion was defeated but not before two roll calls were taken—roll calls No. 40 and 41, pages 2963–2964, CONGRESSIONAL RECORD, March 22, 1949. This motion if it had carried would not only have denied the friends of the veterans in Congress the opportunity to amend the Rankin bill but it was also designed to kill the legislation.

With the social-planners amendment defeated, the real friends of the veteran in Congress launched the effort to perfect the Rankin bill in the following manner:

(a) An amendment was offered to clarify the eligibility requirements so as to make mandatory an honorable discharge with 90 or more days' service. This amendment removed 46,951 dishonorably or otherwse discharged veterans from under the provisions of the bill.

(b) To remove the veterans of World War II from the bill an amendment was offered and after much debate the amendment was defeated. The strength of the opposition to this amendment was represented by the social planners who were content to let the Social Security Act take care of the veteran when he reaches the age of 65.

If the amendment excluding World War II veterans were approved, some 16,000,000 veterans of World War II would be ineligible for benefits under the Rankin bill. Thus the cost of the legislation would have been greatly reduced. It was pointed out during the debate on this amendment that those veterans of World War II who are now permanently and totally disabled or 65 years of age or over with a 10-percent disability can now draw benefits under part III, extension 5, of existing Veterans' Regulations. Thus the disabled and aged veterans of World War II are eligible for benefits under existing law.

(c) Realizing that an income limitation was necessary, the House approved an amendment to the eligibility requirements to the effect that the income of an eligible veteran if single, should not exceed $2,000 annually and if married, $3,000 annually.

Before this amendment was approved, it was pointed out that an income limitation represents a radical departure from the traditional pension policy of our Government. It was recalled, however, that a precedent was established when Congress voted non-service-connected disability benefits to the veteran of World War I and his widow. The amendment was approved and as a result the cost of the Rankin bill was reduced by 70 percent.

(d) Several amendments, to provide a schedule of benefits for those veterans partially disabled, were defeated. By the defeat of these amendments, another saving was made in the cost of the bill.

(e) An amendment reducing the amount of the pension from $90 to $72 monthly was adopted, and a further saving in the cost of the bill was effected.

(f) An amendment striking out the $72 monthly benefit and providing a schedule of benefits on length and type of service was adopted. This amendment was never considered in committee and no one had any idea of its cost. While the sponsor of the amendment was undoubtedly sincere, the social planners had a field day when it was adopted for it created real confusion.

Fourteenth. On Thursday, March 24, without the House having an opportunity to further perfect the bill, the social planners aided by the administration supporters offered a motion to send the bill back to the House Committee on World War Veterans' Affairs. Only 10 minutes of debate was allowed on this motion. On a roll call the motion carried by a vote 208 to 207, or by a margin of 1 vote. Thus the social planners were victorious in their program to scuttle the so-called Rankin bill.

Fifteenth. If the Rankin bill had not been returned to committee, the opportunity would have been afforded to the true friends of the veterans to further amend the bill by offering the following three amendments:

(a) Remove widows of World War II from the bill.

(b) Increase income limitations for veterans of World War I and World War II and the widows of veterans of World War I now receiving benefits under existing law.

(c) An amendment to correct the title of the bill.

Sixteenth. If the Rankin bill had been amended along the lines of the compromise bill, H. R. 2379, and in compliance with the wishes of the true friends of the veteran in Congress, the bill would be as follows:

(a) Honorably discharged veterans of World War I would receive at the age of 65 a pension of $72 monthly. If the veteran is permanently and totally disabled and in need of attendant, he would receive $120 monthly regardless of age.

(b) The World War I veteran receiving benefits under this bill would be ineligible for benefits if his income exceeded $2,000 annually if single and $3,000 annually if married.

(c) The veteran of World War I and World War II and the widow of the World War I veteran receiving benefits under existing law would have their income limitation increased.

Seventeenth. The cost of the amended Rankin bill as outlined in paragraph 16 would approximate $50,000,000 in 1950 the first year, and reach a peak in 1963 of $1,500,000,000. The cost would begin to decline after 1963 due to the death rate of World War I veterans.

Eighteenth. It is estimated that the last veteran of World War I will die by 1995. Thus, the total over-all cost of the Rankin bill as it was sought to be amended would not exceed the total cost of $15,000,000,000 during the life of the law. In other words, this pension for World War I veterans would not have cost as much as the Marshall plan to aid foreign nations.

Nineteenth. The two largest veteran organizations as the result of the debate and the defeat of the Rankin bill recognize two important developments as far as veterans' benefits are concerned. These developments are as follows:

(a) A determined effort on the part of social planners to destroy the traditional policy of recognizing the veteran and his dependents as a special group.

(b) To have all veterans' benefits absorbed by an expanded social-security program which would include merging Veterans' Administration hospitals with Public Health hospitals thus destroying the identity of the Veterans' Administration hospitals.

(c) Lastly, to abolish civil-service preference for veterans when applying for employment with the Federal Government.

Twentieth. The two largest veteran organizations accept roll call No. 44, page 3115 of the March 24, 1949, CONGRESSIONAL RECORD as a challenge which demands their best efforts in combating antiveteran influences. They recognize that a vote to recommit the Rankin bill as recorded in roll call No. 44 was a vote to kill the bill and against the best interests of the veterans of this country.

Twenty-first. The real issue behind the scenes is whether the social planners can attain their objective of having the Social Security Administration absorb the Veterans' Administration. Organized veterandom is prepared to meet this challenge in the coming months when all true friends of the veteran will have to stand up and be counted.

Three Great Spanish Intellectuals

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I ask permission to quote the following explanation made by my good friend, Dr. Joseph F. Thorning, associate editor of The Americas and World Affairs:

This clear, correct elucidation of facts was published on the editorial page of the New York Times on February 26, 1949. Dr. Thorning's exposition should be considered in connection with some of the misrepresentations made about intellectual life in Spain which appeared recently. (Mr. Ernest O. Hauser, the Saturday Evening Post, Feb. 26, 1949, and Mr. Homer Bigart, correspondent for the New York Herald Tribune, in the Washington Post, Feb. 27, 1949.) Both Mr. Hauser and Mr. Bigart claimed, in general terms, that the Government has waged a quiet, all-out campaign against Spain's intellectuals or that in the matter of personal liberty, Spain is about on a par with Hungary—that is, Hungary up to the start of the present Communist campaign against the Catholic opposition.

This attempt to place on a par the Soviet satellite states, behind the iron curtain, and Spain, where the three founders of the republic are working for peace and unity, although free to express their opinions as they see fit, is typical of left-wing propaganda against Spain. The secularists of the left, realizing that a majority of the states in the United Nations favor rescinding the obsolete 1946 resolution recommending the withdrawal of chiefs of diplomatic mission from Madrid, are engaged in a tremendous campaign of vilification and misrepresentation in order to stave off defeat.

This explains why Mr. Marvin Tonkin, acting chief of the Associated Press in Chicago, could accept, uncritically, the handout sent to his bureau and allow the lead to describe the famous Spanish scholar, Don José Ortega y Gasset, as an anti-Franco oppositionist, without any hint in this part of the propaganda press release that the gifted gentleman was not only residing peacefully in Spain, but also perfectly free to speak his mind as well as to leave the country at will, something that would scarcely have been true in Sovietized Hungary from the moment the Soviet Gauleiter, Matyas Rakosi (trained by the Leftists in the Spanish civil war) took charge with a real totalitarian program. Red fascism is something quite different from the type of militaristic dictatorship which exists in the Iberian Peninsula.

Can anyone imagine the Soviet Gauleiter of Czechoslovakia, Klement Gottwald, permitting a group of intellectuals like Prof. Ortega y Gasset, Dr. Gregorio Marañon, and Don Ramón Pérez de Ayala, to speak, write, and circulate, freely? It is opportune that slanderous comparisons cease and I believe that Dr. Thorning's elucidation of this subject will contribute to that end.

In an Associated Press dispatch from Chicago which was published in the New York Times of February 17 it was announced that three European scholars had accepted invitations to attend the International Goethe Convocation at Aspen, Colo., this summer.

Excellent as the news is, it was marred, in my estimation, by the misleading description of Prof. José Ortega y Gasset, admittedly one of Spain's most gifted sons, as a voluntary exile since the Franco regime came to power * * * and professor of philosophy and literature at the University of Madrid before 1931.

Would any readers of the New York Times, or others in the United States who saw this Associated Press story, have gained the impression of the truth, the whole truth and nothing but the truth? This question is relevant because the fact is, as every European intellectual knows, that Don José Ortega y Gasset is no longer in exile, either self-imposed or compulsory. Best of all, for the sake of philosophy and letters, he is giving regular lectures in the famous Ateneo de Madrid, where prior to 1931 he led the movement for the republic, with the cooperation of two other world-famous scholars, Dr. Gregorio Marañon and Don Ramón Pérez de Ayala.

In view of widespread misapprehensions in the United States this is an opportune moment to note that these three founders of the Spanish Republic, which might have fulfilled a glorious destiny, are now working for peace and unity among the people of Spain.

Dr. Marañon, whose achievements in biology are widely recognized, is practicing his profession of medicine in Madrid. Furthermore, he is an honored member of all the scientific academies connected with his area of specialization, laboring for the good of humanity among his own people and with the blessing of the present Spanish Government. This is the more significant because, in other days, Prof. Ortega y Gasset, Dr. Marañon and Don Ramón were the most enthusiastic and influential leaders of the organization known as Al Servicio de la Republica (in the Service of the Republic).

DR. JOSEPH F. THORNING,
Associate editor of The Americas and World Affairs.

Taxes Go Up, Up, and Up

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. ALLEN of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial carried by the San Francisco News on a speech made on the floor of the House on March 14 by our colleague, Representative RUSSELL V. MACK, of Washington, on the subject of taxes go up, up and up.

In that speech Congressman MACK told members that whereas our Federal Government collected only $4,418,913 in taxes during the first 3 years of the George Washington administration, it collected $44,745,542,076 in taxes during 1948. Representative MACK pointed out that—

The amount of money our Federal Government collected in taxes in a single day in the fiscal year 1948 was sufficient to have operated the Federal Government for more than 100 years at the George Washington rate of spending.

The editorial from the San Francisco News follows:

JUST HOW HIGH IS PUBLIC DEBT?

The other day someone told Representative RUSSELL V. MACK, of Washington State, that the Federal taxes paid by the American people in a year would equal a stack of $1,000 bills as high as New York's 1,250-foot Empire State Building.

Mr. MACK was skeptical. He consulted a banker. The banker sent for a thousand new $1 bills, each the same thickness as a $1,000 bill. The thousand bills made a 4-inch pile. Mr. MACK and the banker then did some figuring, as follows:

A million-dollar stack (1,000 $1,000 bills) would be 4 inches high.

A billion-dollar stack (1,000,000 $1,000 bills) would be 4,000 inches, or about 333 feet.

President Truman's budget message calls for some $44,000,000,000 in Federal taxes for next fiscal year. That would be 44,000,000 $1,000 bills, which would make a 14,625-foot stack.

Quite a stack. It would be nearly 12 times as tall as the Empire State Building, more than 26 times as tall as the Washington Monument, and a couple of hundred feet higher than the loftiest mountain in the United States.

Congressman MACK and his banker friend sharpened their pencils and went to work on the $252,000,000,000 national debt. That, they calculated, would equal a stack of $1,000 bills towering almost 16 miles into the sky.

"We Americans have a long way to climb if we're ever going to get the Government out of debt," Mr. MACK told the House. "Congress had better start pruning extravagance and waste."

Politics From the Inside

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley, at St. Mary of the Springs College, Columbus, Ohio, on March 13, 1949:

Politics is at once the most hazardous and the most noble worldly career open to man. It is hazardous because it is beset by temptations even more seductive than the song of the sirens. He who yields may not only lose respect, personal liberty and his immortal soul, but may also work irreparable harm in the community, the nation and the world. It is a noble career because nowhere else can man expect to render so much service to his fellow man.

This week marks the birthdays of two great American politicians whose good deeds have won for them immortality. Tuesday is the anniversary of Andrew Jackson, soldier-statesman, an embodiment of Americanism, and Friday marks the birth of Grover Cleveland, for whom public office was a public trust. Both were supermen by reason of clear thinking, great courage and a large sense of public duty. By reason of these qualities they became great leaders, and as they led wisely their fame has endured. We honor their memories because of the stones they laid in the great edifice of progress and civilization.

Next month marks the deaths of two men who became intoxicated rather than tempered by power. Both aspired to be supermen but became arch fiends through the debasing alchemy of yielding to temptation. Adolf Hitler died by his own hand, beneath the rubble of Berlin, and Benito Mussolini, riddled with bullets, was hanged by his feet by an infuriated Milanese mob. Degrada-

tion is the inevitable end of those who betray their trust. I speak of the final judgment of history rather than the violence of the mob, for the verdict of time may revise the passions and prejudices of the moment, although hardly in the case of the two men of infamy whose careers will serve as an object lesson for all time.

There is one among the living today who can profit most by their ignominious fate. His hands are steeped in blood and their smoking red shadow hovers over us now, the most frightful menace to peace in a world of war and hate. I speak of Josef Stalin, the man of dark and bloody designs and frightful ambition, the sin of the angels. There is yet time for this man to repent and renounce slavery, torture, terror, and other instruments of darkness to accept justice and liberty for all, as the guiding light of leadership.

Those who rule by fear live in fear. Why else does Stalin, who gives mouth honor to peace, refuse to come to this country to make peace? The chief function of the police in a police state is to protect the chief of state. Certainly reign of terror is not calculated to protect Stalin from the love and affection of the Russian people, but to protect him from his fears of the Russian people, however real these may be. Stalin is aware that man abhors tyranny and will cheerfully brave death to end it for his fellows.

The vicious persecutions of Cardinal Mindszenty in Hungary and the 15 Protestant clergymen in Bulgaria demonstrate that the fear of the word of God is greater than the brutality of anti-Christ dictatorship. Their power by terror cannot survive in the light of the Prince of Peace. We know, and dictators know, that freedom of conscience is the first essential of human liberty. We would fight for freedom of conscience and they resort to torture, threats, and terror in their efforts to kill or silence conscience. In the end the dictators must be defeated and, again, there is profit in examples of Stalin.

World peace can be achieved in our time if the gag were removed from the Russian mouths, censorship were lifted from the Russian mind and religion were allowed to glow in the Russian heart. Freedom of speech, freedom of thought, and freedom of religion are the great cornerstone of our civilization. These were won for us in slow stages by political leaders from the dawn of man. They are yet to be won in the darkness behind the iron curtain. Without them this would have been a different America. Perhaps it would not have been America at all. As we enjoy them, let us not forget they were brought to us by political leaders.

I stand before you today because I spent 35 years in active political life in the community, State, and Nation. For the past 5 years I have been in business, on the sidelines, yet an interested observer of the political scene. I am proud of having been a politician. I hope that in my years in this career I was of some service to my town, county, State, and country. I am equally proud that I am a businessman. I also hope that I am rendering service to my fellow citizens in my present role.

Politicians stand more abuse, year in and year out, than perhaps any other class of citizens. And yet the success of our form of government, in large measure, is entrusted to their care. Public opinion in our country must find an outlet. We have grown too large for the town meeting with its individual participation. Orderly and effective expression now comes through political parties. The organizing of political parties and employing them to express the will of the people is the work of the politician. The political leaders must harmonize conflicting points of view, reach compromises which pave the path of political progress and chart the course of the ship of state. When politicians fail, the country fails. The last two decades have given us ample evidence of this fact.

Politics may be as pure or impure as the people themselves determine. If there is no public conscience why should there be complaint that none speaks in the politician's breast. Often have I heard eminent and successful businessmen announce they are in business, not in politics. It has always seemed to me that this is a confession of neglected duty, rather than the boast of superiority which is intended. If the wrong kind of politician gets control and uses his office for his own advantage or that of his organization, it is frequently the fault of those who conceive themselves to be too busy to be interested in their own Government, except when the Government adopts a policy which they deem harmful to their own personal interests or withdraws a privilege they have enjoyed.

Unhappily, the politician is no better and no worse than his fellow men. If our political leaders could all be Washingtons, Jeffersons, and Lincolns, our problems, which seem to become more complicated each year, might not loom so large on our daily horizon. Then, maybe we could sit back, without a worry or care, and let the leaders hew at the Gordian knots.

Politics has its share of conscientious, high-minded, incorruptible men. And it has its share of scoundrels. I like to think the proportion of the latter is small to that of the former. However, I will content myself by saying that the number of honest politicians is no more or less than we deserve and greater than we think. I have known men of both types and I must say there was more good in the worst of the political scoundrels than there was in prototypes I have known in other walks of life.

My 35 years in politics were among the most turbulent years in national and world history. It has been my good fortune to know, on rather intimate terms, the leaders of almost every country. Those years brought me some personal triumphs, troops of friends, thousands of memories, and a million laughs against a share of defeats, a few heartaches, and many disappointments. All in all, I have no searing regrets and I can truthfully say I hate no man. Politics has brought me honors, but more important it has brought me the good will of my fellow men, for which I am deeply and humbly grateful.

My boyhood and my entrance into politics in Rockland County, N. Y., was not unusual. I suppose that most men of my age had a similar boyhood and I am certain that those who chose a political career traveled the broad highway of public life much as I did. I was born a Democrat. I expect to die a Democrat, but I am as confirmed a believer in the two-party system, as this broad land of ours knows. I do not believe that party interest should supersede the national interest and I am aware there are many good men in the Republican Party, whose counsels help guide the national way, even if I do feel that the country prospers best under Democratic control.

If I cite my own career, it is not through any sense of self-importance, but because I can best point the inside of politics from my own experience. And, also, because I wish to emphasize the importance of participation in local politics. Politics in the village and politics in the national capital are played by the same rules. The proper study of the politicians is his fellow man. We are prone to think of politics in terms of campaigns and elections and to neglect the human element. Ambition, love, jealousy, hate and the other emotions affect the course of the Nation just as much as they affect the course of the village and county and State. Often the emotions play a more important part than principles or events. If you know the politics of your community you know the politics of the Nation and the world.

Before I was old enough to vote, I ran errands for party leaders. I rang doorbells and banged knockers and helped get the vote out in behalf of Democratic candidates. In the Taft-Bryan campaign of 1908, the Democratic committeeman of my district was taken ill before the election and from his sickbed charged me to take over his duties. After his death I was elected a member of the Democratic town committee, Peter Mundeville was elected in the first district and Pat Caffrey was the choice in the second district. Neither of them could see the other as town chairman so they ended by electing me. Too often have I seen this curious quirk in human nature operate in politics since that day, and I invariably think of those two stubborn men when I see some one slaking injured pride by drinking what little solace there can be in depriving another of a position at the expense of losing it himself. I have seen it up to nomination for the Presidency itself.

This taste of politics whetted my appetite for public office, which again is a most common reaction. In those days the highest office I could see on my political horizon was the New York Senate, but I did not expect to reach that in one leap. My first objective was the post of town clerk. I confided my ambitions to Pat Morrissey, proprietor of a village store, who sought to dissuade me, warning that men are inclined to neglect everything else for politics and apt to become embittered when political success eludes them. I can hear his final words, even now: "However, no matter what advice I am giving you, if you have made up your mind that you want to run, then run you will and nothing can be done about it. So run and get it out of your system. If you win good luck to you. If you lose, may you profit by the experience."

Not bad advice to this day. Politics was in my blood and I ran. The difficulties ahead of me were considerable. In the first place, the office had been filled by men of stature in the community. I was a stripling and it would be regarded as unseemly of me to reach out for a position of no little influence and dignity. Then, too, the community was normally Republican. The nomination was not difficult to secure because it usually went abegging for someone willing to take it on the chin for the party. My worthy and distinguished Republican opponent waited for the post to fall into his lap. My opponent's example seems to have survived in the Republican Party, if I may only for a moment recall the last presidential campaign.

I upset the law of political gravity in my community by starting out to meet every voter in Stony Point Township. I was helped by the fact that my semiprofessional ball playing made me known to most of my fellow men. This may seem far from addressing every whistle stop along presidential campaign routes, but the difference is chiefly one of size. The American people love a fighter and they have a wealth of sympathy for the underdog. On the other hand, they resent superiority, dislike smugness, and they have little use for the man who runs away from a battle. To borrow a figure of speech from my days as a politician-ballplayer, the American people do not love a candidate who waits for a base on balls.

My first campaign, which, incidentally, was successful, gave me the background for running other campaigns. Running for the humblest or the highest office is not so different as it may seem at first blush. The problems are much the same. You can speak too often or not enough. You can begin talking too soon or too late. You can say too much or too little. You can be too

polite or not polite enough. You can be too friendly or not friendly enough. Your accents may be too perfect or not perfect enough. You can be too immaculate or not immaculate enough. You can be too wise or not wise enough. And if there be anyone who thinks I refer to the recent campaign I hope he will profit from my words.

However, I prefer to remark that at any given time any of these extremes may prove fatal. Public sentiment is difficult to measure at any time. What may be good in June can be disastrous in December. You are called on to make split decisions, which may be fatal. An ill-chosen quip may bowl over the immediate audience but have quite the opposite effect with the vast multitude of voters. Finally, many a political career has been blasted because the feelings of some party leaders may be wounded. The slight may be unintentional but not the less deadly.

Politics, then, is the great American game. Party conventions have all the color and pageantry of sport spectacles. The politician must be able to hit like a tackle, roll with the punch like a fighter, parry like a fencer, show the change of pace of a pitcher, have the endurance of a distance runner, the grace of a diver, and the form of a tennis champion, to say nothing of the social grace of a ballroom dancer, and the intuition for precedence of a social dowager.

But politics is more than a game. It can be a career of honored service. Good politics can and should be good government. I learned this from my first days in the office of town clerk. I made it a point, as many others have, to do everything possible to carry out my duties efficiently, thoughtfully, and courteously. I have found that men in politics are longer at their desks, as a rule, than others. They are, and this may come as a surprise, more thoughtful and courteous as a class than any other group of men and women. I say this advisedly. The politician is not so brusk or domineering in his treatment of those who work under him or those who come to see him as are men of business, for example.

Politicians, as a class, like people. They delight in serving people. Of course they hope to gain advancement by this. But I can testify there is a genuine satisfaction in being of service to your fellow men. To this day, I am warmed when someone clasps my hand to give thanks for a favor rendered long ago. I may have long since forgotten the favor but it is good to find gratitude living on. It may have helped a man to a small job; it may have been only a kind word at a political rally; it may have been only a letter of introduction; it may have been a big boost up the political ladder, or it may have been a part played in legislation.

In rendering service, the politician has nothing to offer, in the final analysis, but his own word. If he tells the truth and keeps his word he gains the devotion of his friends and the respect of his enemies. Honest men can and do have honest differences. More often than not there is something to be said on both sides of a public question. Most legislation is the result of compromise in committees, on the floor of the House, the floor of the Senate, and in conference of House and Senate conferees. Compromise does not mean the surrender of principles or ideals but is the leveling influence of tolerance and understanding.

There is a gap as wide as that between honor and dishonor between compromise and surrender. Surrender is an abject and cowardly sacrifice of principles and ideals. It is a departure from the truth. This involves many fine questions as to how much personal principles and ideals may be sacrificed to the welfare of the party. While I am no moral philosopher I can answer that both parties have men of widely divergent views on some issues, who can remain in the party fold and freely express their positions, no matter how strong they clash with the party's position. Differences within the party are healthful. When the party thinks as one man, freedom has been exiled as it is in the Soviet Union.

The man who does not tell the truth and keep his word is distrusted and shunned. My mother taught me that truth should be told for its own sake and the conscience's sake. Most successful men in politics find it to be the easier as well as the most respected course. In rare instances where one cannot tell the truth, because he is bound by his word not to reveal party plans prematurely, it is not necessary to weave entangling webs of falsehoods. The best method is to say that you are sorry but you just cannot be questioned on that particular subject. The giving of one's word in politics is the execution of a solemn bond, not unlike the execution of a business contract.

Let me return to myself to illustrate this point. I was and still am opposed to a third term. In that position I opposed the majority of my party. However, that did not make me opposed to the party. I participated in the national convention that voted the third-term nomination. I registered my opposition by allowing my name to be presented for the nomination when no one was more aware than I that I did not have the slightest chance of winning that nomination. By my participation I bound myself to accept the will of the majority, but I did not bind myself to break with the party because I was in the minority. To this day some good people cannot understand that because I was overwhelmingly voted down on a test I sought, I did not leave the party and become a member of the Republican Party, merely because it was against a third term. They were not aware that the Republican Party would have, and properly, too, oppcsed even one term for me had I been the party's nominee. The Republicans were against Franklin D. Roosevelt because he was a strong nominee, as much as they were against the third term in principle, as the 1912 Progressive ticket demonstrated.

For the scoundrel in politics I feel nothing but pity. The corrupt and dishonest are revealed sooner or later. Disgrace comes at the hands of the party, the opposition, or the people. The man who has betrayed his trust stands revealed as a weakling, unworthy of the loyalty of his friends and the confidence of the people. He drags down not only himself but his family and his friends. The Judas agony of these unfortunates has always moved me to compassion. I abhor their crime but I have no hate for the broken weaklings. Let us not torture them with vengeance, but rather give them opportunity to make their peace against the day of judgment.

Politics is no place for the coward or the grumbler. The man who will not fight fearlessly for what he believes is doomed to anonymity. Discontent is more common. Discontent's invasion of the pride is a common disease of humanity, but in the politician it sears the soul and dries public progress. There is no shame in losing a fight, as there is in running away from a contest of principle. Sometimes brooding over defeat is difficult to bear because it involves ostracism. The fighter is passed by, by those he regarded as friends, even those for whom he did most. Men have gone from such discontent to cynicism and bitterness. Time always vindicates the honest fighter although it may not approve his cause. Defeat can be, and frequently is, more glorious than victory. The man who can accept both gracefully never lacks friends and his influence is ever felt in public affairs.

Politics is no place for the sluggard. Probably no man works longer or harder than the successful politician. Duties of office are exacting enough, but he must make himself accessible to all people at all times. If you win or would remain you must circulate freely among people. During the humble days as town clerk I was at my desk every night, although the post carried no pay except fees of office, most of which I waived in the interests of serving my Stony Point fellow townsmen. I was at my desk, although I put in long and strenuous days in earning my livelihood in New York City.

Let me note here parenthetically that public service makes heavy inroads on family life. The man who likes people finds that the hours he can give to his family become fewer and fewer, but are the more precious. Time after time I have been struck by the fact that where there is a man successful in public life there is a patient, charming and noble woman at his side. I do not know why politicians, as a class, have such fine wives. It must be because there are so many wise, understanding and beautiful women, although I like to think, in my own case, that politicians are excellent pickers.

Lest I be misunderstood, I do not consider politics as an exclusive masculine domain. I use the term "man" as distinct from "beast" although I am aware that Aristotle identified man as a political animal and that at times some political leaders would shame beasts. I have worked with men and women in politics and find women as capable of public service as men.

It was my aim when I first took office to render some attention or service to everyone in Stony Point. I did the same as a State legislator. I conceived the practice of writing every voter in the community, a practice which was to stand me in good stead in the national scene. I tried to take each voter into partnership in the performance of my duties. I took note of births, deaths, and anniversaries in personal letters and found when I entered the Cabinet that these attentions were appreciated no less on a national scale than they were in the community. It has been said my letter writing had much to do with the building of the Democratic machine which has remained in power for 16 years. I like to think so, although I realize that one must discount friendly exaggeration.

In this connection let me dwell on one popular myth. It has been said of me that I know more people than any man in the country. In all modesty, I must confess there is considerable truth in this statement. But it is also said that I know every one of these people by name. If that were true, I should be detailed to stand beside the judgment seat and identify my American contemporaries at that great hour. I have no desire to judge my fellow man now or hereafter, but earnestly pray that I can so conduct myself, and it takes a great deal of my time, that I will be dealt with kindly in that hour myself. One of the things that will go harsh with me in that hour are my thoughts of those people who approach me after one casual meeting, even one of years back, to say, "I want to test you; who am I?" or "You don't really remember me; what's my name?" My memory is better than average, and I have cultivated it, as everyone in politics should, but it doesn't approach what my irritating challengers expect.

If I have emphasized personal and individual phases of politics too much, it is not because I am not aware of the importance of politics from the viewpoint of groups of individuals or parties. It is altcgether fitting and proper that we should be governed by political parties. This has been so from the dawn of self-government in Greece; that parties struggle for management of the government.

More often than not parties take color and appeal, or the opposite, from their leadership. This is as it should be. Yet, it must not be forgotten that parties have certain fundamental principles which differ sharply, even though these fundamentals are being

constantly revised and attain varying degrees of emphasis by the play of social and economic forces and by the interplay of events and personalities in the party, in the nation, and in the world.

In our own country we have two parties with more or less fixed ranks of party faithful and a large body of independent voters who cast their votes for this party or that. The cleavage between the parties is not distinct, just as the division between night and day is not sharply defined. There is a twilight zone, and a good thing, too, for it enables men of both parties to support good measures each develops without breaking with their own party. Records of Congress offer ample evidence that certain fundamental principles or policies are above and beyond partisanship.

As a life-long Democrat, I am a firm believer in the two-party system and believe it would be a tragedy if the Democratic or Republican Party were to pass from the scene. I am sure that if all the Democrats would be stricken at one fell swoop, the Republicans would carry on the Government with conscientious regard for the principles of Jefferson, just as the Democrats would, I am certain, give consideration to the principles of Lincoln, if all Republicans were suddenly stricken. In fact, I believe that all Americans, regardless of birth, race, creed, or color, would keep the fire of liberty alight on their hearthstones if accident were to befall their fellow countrymen of other color, other creed, and foreign birth.

Americans look out upon a world torn by strife and discord. We have not contented ourselves with compassion, but have given freely of our resources to help other nations to liberty and plenty. America is leading the other nations through dangers and vicissitudes toward liberty and abundance. We have seen and are seeing dictators come to power and rise to authority because people had lost their faith in democratic processes. There is nothing that will undermine American institutions more rapidly or more dangerously than poor and inefficient government. At this time in the history of the world it is of utmost importance that each citizen do his part in providing an honest, able, and sincere administration of public affairs from the community to the National Capital.

Freedom has been tortured and outraged for almost two generations. She shrieks each time a free government falls. These cries should warn us to protect our liberties at home and strengthen our resolve to help every free people combat tyranny in any form anywhere in the world. America is the Greatheart of the nations, helping others out of our resources and wisdom, out of pits of want, fear, and hate toward the horizon of liberty and justice and peace.

Air Power

EXTENSION OF REMARKS
OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered over radio station KWKH at Shreveport, La., on March 26, 1940. Congressman OVERTON BROOKS, of Louisiana, on subject Air Power:

Ladies and gentlemen, recently the President nominated Louis Johnson, attorney of West Virginia, to fill the extremely important position of Secretary of National Defense, succeeding James Forrestal. His nomination is now in the Senate and he will undoubtedly be confirmed within the very near future. Louis Johnson will be remembered by veterans everywhere as having been a former national commander and leader of the American Legion. He will be remembered by Americans, generally, as having been Assistant Secretary of War immediately before the outbreak of World War II. The return of Secretary Johnson to Washington will have a marked effect upon all defense legislation. More than anything else, I believe it will mean a tendency to quicken the unification of the three great branches of the armed services, namely, the Army, Navy, and Air. A start has already been made in this direction but until unification is complete, our people will not reap the tremendous benefit in efficiency and in savings which is possible by pushing unification to a conclusion. It is thought that as much as $2,000,000,000 per annum might be saved by completing our unification program, and Louis Johnson, with a wealth of background, experience, and tremendous prestige, will bring to the defense establishment something which it has needed very badly during the last few years.

This new appointment to the Cabinet has accentuated the struggle to increase our military air power. This struggle is becoming increasingly intense as men of vision and patriotism demand a proper place in our defense establishment for the Air Force. During the early part of this week the House of Representatives, responding to the intense interest of the Nation, by a vote of 395 to 4, passed a bill to further expand our Air Force.

The passage of this bill marks a historic milestone along the pathway leading toward the full development of the military air power in the United States of America. To this extent, it is therefore deeply significant.

The passage of this bill by the House of Representatives does not, in any sense, signify the end of our fight to obtain adequate recognition for air power in our defense system. On the contrary, even though the present act sets a goal of 70 air groups for our Air Force, our battle must still go on to obtain money to implement this measure when it becomes law.

The struggle for air power in the United States has been a long and bitter one. The record begins in 1908 when the General Staff of the Army yielded to what was popularly termed the air craze, and ordered the construction of our first airplane. It cost the Government $30,000. The Army felt that the expenditure was so great for a new and freakish invention that it went to the trouble of issuing a special explanation so that our people would accept this vast expenditure of money for our first plane.

Initially, our infant air force was placed in the Signal Corps. It remained there for many years and long after the First World War, the chief signal officer of the Army testified in Congress that "the future of aeronautics in the United States Army rests with the Signal Corps. Aviation in military affairs," he said, "is merely an added means of communication, observation, and reconnaissance." There were, however, men and women in this country with vision who did not agree with him, men and women who could see ahead and understand the desperate need for further air expansion. Many of these men and women felt that our Air Force should no longer remain tied down to the Signal Corps but that air development had fully justified an expansion of this arm into a separate corps.

In fact, some air enthusiasts had the temerity to even boast that the day might come when an airplane could sink a mighty battleship. To a few of the old-line Navy officers, this was regarded as rank heresy. Brig. Gen. Billy Mitchell, who served in the First World War as one of our early aviators, began to insist that a test should be made, predicting in advance that such a test would show that air power could sink battleships. He was rebuffed by the die-hard Army and Navy men, and appealed to Congress. In due course, over the objections of a substantial number in old-line services, Congress did authorize a test between air power and naval power to take place 50 miles off the Virginia Coast. In this test, the former German battleship, the *Ostfriesland*, was bombed with a 2,000-pound bomb and sank in 25 minutes.

General Mitchell was carried on the shoulders of his men in triumph the day after the bombing, but this did not silence the opposition to the development of American military air power. On the contrary, in due course a few of those officers in high authority in the old-line services began to gun for Gen. Billy Mitchell. Eventually, he was tried by court martial and convicted and thrown out of the service. It was one of the most shameful cases on record in the annals of our service. It was the case of one of our younger officers with vision being court martialed for his belief in the ultimate importance of military air power. Only after General Mitchell's death did a grateful Congress appreciate the service which he had rendered in his conviction and presented to his widow a special gold medal of honor in appreciation for what he had meant to the Nation.

And a few of our leaders in the past have been men with limited vision. They have resisted the development of air power to the point of actually endangering the security of our country. The First World War found the Nation, which had invented the airplane, bereft of aircraft and forced to purchase 5,000 airplanes from England, France and other countries in order to establish any type of air force. The Second World War found us with only one long-range B-17 bomber when Hitler's invasion of Poland awakened a sleeping America, and then President Roosevelt called for an air force of 150,000 planes.

In recent years there has been a tendency to permit the Air Force to slip back to its prewar condition with a starvation diet. In fact, the Bureau of the Budget this year approved less than sufficient money. If Congress appropriates no more than the amount suggested by the Budget Bureau, our Air Force will actually be reduced from the 58-group Air Force which we have today to 48 groups—a net reduction of 10 air groups at a time when the cold war is at its height—and this in the face of the repeated warnings of our experts.

It is true, the increase of our Air Force from its present strength of 58 groups to 70 groups, as stipulated this week in the bill which passed the House, will take money. It will take much money. Our experts tell us by the year 1953 the amount needed may reach six and one-half to seven billion dollars per year for this purpose. On the other hand, those with vision who appreciate what is going on in far-away Russia behind the iron curtain, know that we must have an invincible Air Force as our first line of defense.

Without increasing the amount of the budget estimate, we can transpose the sum of $800,000,000 from another item and use it for aircraft, and I believe both Congress and the country want this action taken.

So aware are the people in this country of the potency of air power that your Congress has recently been moved to set up, at heavy expense, a radar screen for this country. There is much military secrecy surrounding such a defense action. On the other hand, the fundamental principles are well known. Our radars developed in the last war can detect hostile aircraft as much as 150

miles distant, and it is planned to locate at strategic points along the coast lines radar-control stations for this purpose. With fast-moving airplanes this means that detection precedes the actual appearance of the plane only by 15 or 20 minutes. In other words, our warning, even by use of radar, will be a very short period of time but, with proper communications, even such a brief time will be of tremendous importance to our defenses. It will at least give our aircraft time to get off the ground and, in many cases, to intercept and attack hostile planes approaching our coast. Already the Congress has passed, and the President signed, a bill which the Armed Services Committee has prepared to give our country this important radar protection.

Only about 2 weeks ago I personally handled a bill which bears my name, to create a base for long-range guided missiles. It has now become a matter of common knowledge that our scientists have developed these unmanned missiles which fly through the sky at supersonic speeds for distances exceeding 500 miles. It is planned in this legislation to have a guided missiles base for these new instruments of the air with ranges up to 3,000 miles or more. Did you ever stop to think of what that means for the future? It means, in the event of further trouble, perhaps our guns and artillery will be outmoded and outdated. It means that men may perhaps be able to stand on the shores of this country and send missiles of destruction into the mobilization camp of an attacking enemy in Europe or Asia. It may revolutionize completely our method of defense and may result in making urgently necessary some means of periodically checking to prevent the nations of the world from secretly building this and other types of death-dealing weapons.

The money which your Congress has appropriated and is now appropriating for laboratory use and development is paying huge dividends. It has made possible the development of the guided missile and the development of many other worth-while projects for our defense. It has developed planes which are, "out of this world", so to speak, and which it is hard for us to fully comprehend ever when we see them. The flying wing and faster jet planes are some that I have in mind.

The other day I was asked to attend an exhibit of our military airplanes at Andrews Field just outside of Washington. It was a startling demonstration of air power. A man at the microphone explained events as they happened. He especially explained the speeds of some of these supersonic airplanes. On the microphone, he began by asking everyone to look quickly to the left, saying, "the next plane will come down the airway in front of the grandstand from the south". He said, "It is only 10 miles below the grandstand and unless you look quickly you may miss it". Hardly had we turned our heads to the South before the plane zoomed by the grandstand at a supersonic speed—such are our newly developed airplanes.

This morning, as I was coming down to the office, I noticed the clouds hung low in the sky. In fact, as I looked up toward the Capitol, I noticed, for the first time I had seen it, that the dome was completely concealed by some of these low-hanging clouds. As I walked along I thought how this symbolized the world situation. In an international sense, not only do the clouds of trouble surround the dome of our Capitol but they likewise hang heavy over many of the capitals of the nations of the earth. Great troubles emanating from the Second World War harass peoples of the world. The struggle between two types of government—democracy on the one hand and communism on the other hand—goes on with unabated zeal. The march of communism is causing great concern here and elsewhere in the world.

The thinking peoples of the world established the United Nations, and it is a functioning organization today. It does not, however, have the power and the effectiveness which we first thought would be possible from such an organization. Because of this fact, the United States Government has felt it necessary to back up the United Nations Organization with treaties and with a strong defense.

The Atlantic Pact has just been submitted to the Senate for confirmation. It marks the greatest departure in our foreign policy since the days of the Monroe Doctrine. It means from now on this country acknowledges the necessity of assuming from the start responsibility for the consequences of events wherever they may occur, and, in effect, it says this country must be prepared to fight if any of these Atlantic powers are attacked.

Our idea now is to prevent a third world war. I am satisfied that either World War I or World War II—perhaps both—might have been prevented had this country been fully prepared to defend itself and had it let the aggressors know at the start of our intention to enter the struggle. If we are to keep a cold war from getting hot, we must have proper development of our air power. No other action will deter another Hitler as much as the impressiveness of our developed military air power. It is vital; it is fundamental if we are to maintain the peace of the world.

Government Expense Allowance

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

TRAVELING IS EXPENSIVE

Hearings before the House Committee on Executive Expenditures have produced some convincing testimony in favor of a larger expense allowance for Government employees whose duties require them to travel. The testimony of Dr. George Manov of the Atomic Energy Commission is indicative of how unfair the present $6-a-day allowance is in these days of high lodging and eating costs.

Dr. Manov had been a chemist with the Bureau of Standards for a good many years before he was transferred to the Atomic Energy Commission. Having never been on a traveling assignment for the Bureau of Standards, he did not know what he was letting himself in for when he undertook his AEC task of visiting half a hundred scientific laboratories in scattered parts of the country. Dr. Manov told the committee he had to cover more than 14,000 miles and stay in 36 cities and towns before he had completed his official tour. He had not traveled very far before he saw that his $6 daily allowance would fall far short of paying for his hotel room, meals, taxicab fares, tips, and incidentals. He began hunting for second- and third-rate hotels and restaurants and figuring ways to save on food and other costs. Despite all his thrift, including lugging his own baggage, avoiding tipping when possible, and resorting to other ways of reducing expenses, he found at the end that the trip had cost him $273 out of his own pocket.

Similar experiences have been detailed to the committee by Chief Postal Inspector James J. Doran, B. F. Sheehy, budget director for the Labor Department, and other Federal officials. All witnesses agreed that $6 a day is totally inadequate to pay for good hotel accommodations, meals, and other necessary expenses. A bill now pending before the House would increase the allowance to $10 a day. The bill deserves to be passed.

Our State Department Ought To Give Serious Consideration to Where the American Dollars Taken From the Taxpayers of America Are Going Under the Marshall Plan and Other Aids to Europe

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. GOLDEN. Mr. Speaker, in the various countries of Europe when a close analysis is made to determine just what uses our American dollars are being put to abroad and what countries we are really helping, in many respects the money which the American people are sending abroad at great sacrifice to themselves are ultimately winding up in the pockets of the dictators of Russia. It appears to me that our State Department and American officials that administer these huge funds that are taken from the taxpayers of America are doing a poor job. We either ought to have better supervision of these funds to guarantee that they do not reach Russia and enable her to become stronger so as to spread communism or we ought to cut a large part of these funds out.

A concrete and true illustration of what is happening to the taxpayers' dollars that go abroad, is shown in an editorial appearing Sunday, March 27, 1949, in the Washington Star. This article shows that America is spending $4,000,000 a week in Austria and that a large part of this money finally goes into Russia. I am incorporating this article herein so that you may have an accurate analysis of what is happening to the money that we are sending to Austria.

UNITED STATES REPORTED PAYING EXPENSES OF THREE OTHER ARMIES IN AUSTRIA

(By George Weller)

VIENNA, AUSTRIA, March 26.—When if ever you, as an American taxpayer, get a chance to look at your bill for holding Austria, a light like an atomic bomb may dazzle your brain.

No, it's not the size of the bill. It's the items on it that are fantastic.

You have been paying for the upkeep of the American forces in Austria, though the peace treaties do not oblige you to do so.

"All right I like and want to help Austria," you say.

Wait. Here are some more items:

1. You are paying for the British forces here.

2. You are paying for the French upkeep here.

9. You are paying for the Russian Army here.

4. In the case of the Russians, you are paying for the red-starred army not once, but twice. Your Soviet bill is half again more than the other two.

AUSTRIA IS BRIDGEHEAD

Austria is an invaluable bridgehead to the West, weaker but more necessary than

Czechoslovakia to the Communist East. To keep its economy alive you, the American taxpayer, spend $4,000,000 a week.

One of the reasons is that you are acting as host for three armies, none of them your own.

The American Army pays is own bills for its Austrian household. The British, French, and Russian armies live off the Austrian economy.

And the Austrian economy lives off the American taxpayer.

The Russians, under the smartest little blackmail system west of the iron curtain, collect everything with an extra dividend.

The vexed question of how much the Americans, through the Austrian Government, should pay to support everybody else here is almost constantly under discussion between the generals representing the four powers.

COSTS OFTEN DISCUSSED

Sometimes one of the western generals will try to introduce the idea of "occupation costs."

But Col. Gen. L. V. Kurasov shies away. If you start pinning down where American aid, going into Austria, is going, the Russian racket of extra collection for extra troops sticks up like a mountain.

Nearly 3 years ago a low-level committee struggled to hog-tie "occupation costs" into a fixed formula to include wages of soldiers and Austrian workers, rentals for premises, and goods supplied by Austria. But when the four-power board tried to outlaw special Soviet charges for running Russian business enterprises, transport and administration, the board itself disappeared in a puff of polemics.

GENERALS QUIT ARGUING

So now the four generals have given up arguing why the American money is being collected. They just bargain about the amount.

Lt. Gen. Geoffrey Keyes, the American, holds out for the lowest amount possible—usually around 8 percent of the Austrian budget. Colonel General Kurasov wants 12 percent or so. The Briton, Lt. Gen. Alexander Galloway, and the Frenchman, Lt. Gen. M. E. Bethousart, usually hover around 9 percent.

Last year they compromised on 10½ percent. For 1949 they may go down another point.

METHOD CALLED BLACKMAIL

Why do the Americans keep on paying Russian bills?

Well, at least one American official here has an answer.

"We're scared of the Russians," says he. "It's blackmail, but we pay and keep on paying to avoid trouble."

Riding the American gravy train, the Soviets here in Austria up to January 1 had taken 1,956,000,000 schillings (about $200,000,000) through the ever-abnormal Austrian budget.

The French and British had taken about $64,000,000 each. But 20 months ago, when the United States stopped accepting anything more from Austria, the Americans had received $40,000,000 from themselves, of which they returned $30,000,000.

What these figures mean is that the Russian puts his hand in for about 4 percent of the Austrian budget and the Briton and Frenchman each for 2½ percent, while the American keeps pouring money in.

RED SYSTEM EXPLAINED

The way the Russian gets his extra dividend from the American taxpayer is especially adroit. Here's how it is done:

After the annual percentage figure has been agreed on by the four generals—with Austrian groans audible halfway across Europe—all four powers are supposed to get a quarter share of the pseudo-Austrian pie made of American materials. The facade of allied equality is maintained, but it is only a genteel sham to conceal the Soviet advantage.

The Americans take their $15,000,000 and hand it right back into the Austrian economy, to join the approximate $500,000,000 they have given under ERP. In addition the Americans pay in dollars their household costs of around $13,000,000.

FRENCH GET SHARE

The French take their $15,000,000 and pay their local bills, exclusive of soldiers' pay. Whether they do better than break even, nobody knows.

The British claim their $15,000,000, but for the last 6 months they have let it remain untouched. Without releasing their share, as the Americans have done, they have given the Austrians hope that they will, by paying their current accounts themselves.

The Soviets take their $15,000,000 and use it to meet some expenses. Then they take about half their Austrian bills and send them unpaid to the Austrian Government. And Austria pays them—with American money.

Mr. Speaker, if we would revamp our foreign policy so as to act with some sense to see to it that our money does not reach Russia and to see to it that no more is furnished to helpless European countries than is absolutely necessary, we could save enough money to furnish Federal aid to schools, to build flood walls, make river and harbor improvements, construct farm-to-market roads, have real farm conservation, and greatly improve and protect our own people. In addition to this, we could take a great tax load off the shoulders of the American people and further reduce our tax burden. I am hopeful the present administration will do this.

What Tomorrow of Today's Youth

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Connecticut Circle:

WHAT TOMORROW OF TODAY'S YOUTH

Is he correct in his slogan—Uncle Sam owes me a living?

As we pulled up at our favorite gas station the other day the station owner, as he filled the car remarked, "Did you see that fellow who just drove out of here?" With our "Yes," he continued, "I cash his check each month. He is having his tuition and expenses and the equivalent of board paid by the Government—over a 4-year period. The check I cashed was in addition to this subsidy, in an amount just over $100; and as I gave him the cash, he said, 'How the h— does Uncle Same expect me to get along on this?' "

Two students from one of our Connecticut colleges were expounding for our benefit the other day and one of them said, "Communism—they haven't got communism in Russia. That's dictatorship over there. Communism is all right." Now he didn't get those ideas out of his own thinking. He was taught them and it's not a hard matter today to put your finger on those teachers. Communism and socialism are bandied about by university professors today in just about the same manner that free silver and free trade were preached in the nineties and early 1900's—with just as much ultimate good for the general welfare.

Our public schools and public and private colleges teach just about as little partiotism as possible and if a character like George Washington is brought up for discussion, more than likely it will be the Rupert Hughes version that is professorily propounded to receptive and retentive young minds. Pride in heritage is a matter of feeling as well as knowing. And heritage is not just a matter of possession by ancestral lineage. Heritage is the prideful ownership of those individual rights and the freedom of action and thinking which we have as a result of pioneer settlers, who sought and found religious freedom and followed it with civil demands for self government, which when refused, they fought, bled, and died for in order that we today—as has this country for a century and three quarters—might reap unforeseen miraculous "profits."

Only by the right thinking and industrious individual ambitions of our youth, can we expect to survive this present-day holocaust of unrighteous sycophant-breeding propaganda with which they are being filled. Nothing is worth while, which is not arrived at through hard work. If that belief alone may be instilled into today's youth, we will win the fight and raise such a bulwark against those who would tear down all that has been built for good in this country that we may look forward without fear to our continued better way of living, and be justly proud that we are carrying on "our heritage."

HARRY FRANKLIN MORSE.

The Present Crisis in Aviation

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include the following address entitled "The Present Crisis in Aviation," delivered by Mr. Louis E. Leverone on October 18, 1948, before the Economic Club of Detroit:

Today, and every day for many months past, your daily newspaper has carried a column or a paragraph or some comment about the magnificent effort of the United States Army Air Force in maintaining the airlift to Berlin. Each 24 hours hundreds of huge Army transport aircraft arrive at Berlin airports bearing precious cargoes of the necessities of life for the beleaguered citizens of Berlin, and, discharging these cargoes, depart—to return the next day in this history-making shuttle run.

In its least important aspect, the dollar cost of such an effort is high. In its truest objective, the airlift means to every one of us that the international prestige of America has been upheld, and, furthermore, by this very action we may hope that the same air power which won the war will, God willing, preserve peace for the world in years to come.

There can be no doubt about the importance of air power to our national security and to world peace. What about the place of aviation in our world of commerce? What are the basic economics which make aviation an integral unit in the economic mosaic of American prosperity? These are the points which I should like to discuss with you.

It is particularly fitting that I am privileged to make these remarks in the city of Detroit, the motor capital of the world. Men

started to fly airplanes at about the same time they began to drive automobiles. But flying involved not only a new method of transportation, but also a new science, and an exploitation of a new dimension. Only recently has aviation assumed important proportions in our economic orbit.

From Detroit came much of the pioneering and planning for the development of aviation. The late Henry Ford was the first private contractor to carry air mail. His interest in commercial aviation in the twenties instilled confidence in a public still thinking in terms of wartime flying. The Ford trimotor, affectionately known as the flying washboard, is a monument to Mr. Ford's encouragement of safe ships and accurate instruments. Incidentally, some of these ships, built before 1930, are still flying.

The beloved Charles Kettering, of General Motors, worked on aviation in World War I, organized and backed air-line transportation between wars, and was right back in the harness building our Air Force for World War II.

Prior to 1940, such leaders of motordom as Ernest Breech, now with Ford Motors; Howard Coffin, of Hudson; Alvin Macauley and Jesse Vincent, of Packard; Walter Chrysler; R. E. Olds; the Fisher brothers; Charles Nash; Henry Leland, of Cadillac; Charles Wilson, of General Motors; and many others were, at one time or another, actively backing aviation projects.

In World War II the task of powering our aircraft was, by and large, assigned to Detroit, and every leader participated. I might add, Detroit delivered the goods.

So this is a subject not only of international and national interest, but also of local interest.

The years between 1930 and 1940 marked the establishment and expansion of our present great network of air lines. Much credit for this solid foundation must be given to Walter Brown, Postmaster General under President Hoover, who foresaw a time when it would be possible to travel from coast to coast by air in a matter of hours. Through persuasion, by insistence, and by his own forceful belief in the future, Mr. Brown built the greatest air-mail system in the world. This was accomplished at a cost of only $73,000,000 to the taxpayers. At that time Mr. Brown was under political cross-fires for this program, and later, in the first years of the New Deal, saw a depression-minded Congress sharply curtail the appropriations for this program.

Within the last year a top Government official was quoted: "Our investment in air-mail service has proved to be the best expenditure in the history of Congress."

I mention this bit of history of aviation because of its specific parallel to the circumstances of the present day.

The aviation problems of 20 years ago may have seemed a little bit tougher, probably because they were a little bit newer. The problems facing us today, in aviation, involve the welfare of a great Nation, and, perhaps, the peace of the world.

Until these problems are seized with a firm grasp, aviation faces a crisis.

The crisis began to develop on VJ-day.

The vast manufacturing capacity which had been speedily developed during the war years for the output of aircraft was no longer vitally needed. Actually, very little of this productive effort for aviation was required for peacetime purposes, so it became our job to convert as quickly as possible to other lines of peacetime production.

Air transportation faced a similar reconversion problem. The DC-3 equipment, which had performed so valiantly for years, must be replaced by aircraft of longer range, and larger capacities, in the interest of progress. These newer aircraft, developed by and because of the war, had to find their place in peacetime commercial channels.

Operators of airports, who functioned as guardians of the main interests of aviation, supplied thousands of youngsters to the Air Corps during the war years. These training programs were sponsored by and paid for by our Government. After our victory, the emergency no longer being present, these war training programs were replaced by veteran training on a greatly restricted basis.

So we reconverted. But reconversion, in the case of aviation, proceeded too swiftly, our usual American custom of getting things done.

Reconversion picked up speed, and with a tempo which disregarded the realities of our international situation, snowballed to proportions which, a year ago, threatened to absolutely shut down the aviation industry.

Thousands of aircraft plants went out of business, and in their place other lines of industry started. Many aircraft manufacturers turned to production of household appliances, auto accessories, and even metal caskets.

The great aircraft manufacturing industry of the United States, greatest in world history, had, with but a few exceptions, disappeared.

The Eightieth Congress, to their credit, recognized the danger in falling below the minimum of needed production facilities, and, over the protest of the present administration, enacted into law the 70-group air-force bill.

In explanation of the 70-group air-force bill, I should like to point out that if this program were in operation in its entirety as authorized by Congress, there would be no problem in maintaining basic necessary manufacturing facilities. The extent of the increase here is sufficient to allow ample production, and its manpower requirements, although substantial, would be taken care of. Here again, there has been delay and procrastination, and no national policy in this important phase of aviation has been enunciated. This effort of Congress therefore must be accepted as a stopgap.

The air lines no longer have the long waiting lists of passengers brought to them by war-swollen travel demands, but the air lines do have expensive equipment to pay for, and most air-transportation companies have become involved in heavy debt structures. Deficits have become the rule, rather than the exception, as testified by air-line earning statements of the first 6 months of this year; their financial future has become obscure.

The immediate solution for the air lines seems to lie in an adjustment of the air-mail rate presently allowed them by the Post Office and the Civil Aeronautics Board. To realize this, one need only to go back to the year 1940, when approximately 23 percent of the net revenues of air lines was received from air mail, and then look at the present figures—8 percent of the net revenues from air mail.

The disparity is too obvious to need any further explanation. Earlier, I referred to the sustaining help given to the airport and fixed-base operators by the Veterans' Administration-training program. But wait. In spite of an act of Congress ordering the continuance of such a program, and in spite of a promise made to our young men in service that such training would be available to them, sometimes it seems to have gone off on the wrong tangent.

Those in the Veterans' Administration who have been entrusted with the responsibility of handling this assignment have apparently decided to override the orders of Congress, and to stop veterans' flight training at once.

This is the condition in my home State of Illinois, and I am informed—in my capacity as president of the National Aeronautic Association—that this arbitrary misinterpretation of a congressional directive has become widespread. Corrective measures, or, at least, a clarification of Veterans' Administration policies, is definitely needed here.

As the major facets in commercial aviation, the foregoing branches of aviation hold the bulk of its problems. The question is—What's to be done?

We know that we need a strong national policy on aviation, and we are equally aware of the fact that we don't have any policy.

We are fearful of war, and, as yet, have not clearly blueprinted our objectives, should war come to us.

We know that the aviation industry has provided thousands of jobs for Americans, in carrying its share of our tax burdens, and contributes to our economic balance, yet, to date, we have not helped the aviation industry to become a prosperous cog in our commercial wheel.

If we are to survive in the air age, here are some of the steps this Nation must take:

1. LEAD IN AERONAUTICAL RESEARCH AND DEVELOPMENT

We have lost our leadership in the past 3 years. Great Britain, France, and perhaps Russia, have developed jet planes of the transport size. Our best effort to date on jet-propelled aircraft is concentrated on smaller one- or two-man fighter planes. Think of it! United States, the wartime leader among nations in the production and development of aircraft—losing out—in the newest type of flying technique—to less powerful neighbors. We have our XS-1 and our other supersonic test aircraft. But we are not accomplishing our ultimate goals, principally because the means have not been set up. What's the answer? Every possible test of new types of aircraft should be encouraged, supported, and paid for by our Government. The National Advisory Committee for Aeronautics, one of our best Government agencies, should be expanded by direct appropriation of Congress. This organization, through its three laboratories, is already a world leader in aviation research. Aircraft manufacturers should receive not only the manufacturing cost of the equipment they produce, but, also, should be reimbursed completely for all engineering, research, and development costs.

2. MAINTAIN AN AIRCRAFT INDUSTRY CAPABLE OF MEETING MILITARY AND CIVIL DEMANDS

The wartime accomplishment of our aircraft manufacturers provided a record of ability to produce, or the lack of ability to produce. There were some terrific production flops, as well as some outstanding know-hows. On the old axiom—"By their deeds, ye shall know them," it would not be difficult to set up the most able of our manufacturers in a permanent production or stand-by position. This, again, must be accomplished by Government aid:

3. TRAIN AND EQUIP A MODERN AIR FORCE SUFFICIENT TO DETER OR CONQUER ANY ATTACKER

Let me say that in this proviso we can be justly proud. I think that one of the most impressive days that I have ever spent was less than 30 days ago as a guest on Air Force Day. I was keenly struck by the enthusiasm, the ability, and the very definite long-range vision of our Air Force. Demonstrations which I speak of attracted hundreds of thousands in New York City, and simultaneously many millions of people in other parts of the country saw the maneuvers of our Air Force that day in tactical war games. This was an effort on the part of the Air Force leaders to sell their problem to the public, and a worth-while job was done.

4. STRENGTHEN OUR DOMESTIC AND INTERNATIONAL AIR TRANSPORT

Let us admit that from time to time our air lines may have suffered from excesses of prosperity in which they may have planned unwisely and not too well. Let us all agree that unfortunate accidents, which usually make headline reading, are not conducive to

the immediate return of passenger confidence in flying. But, in spite of these things, let us realize that a strong and well integrated network of air transportation is just as essential to our national well-being as any other form of transportation. It is also probable that a strong international air-transportation system, under the control of the United States, is more necessary than any form of transportation. This is not a problem of expediency, but of long-term need.

5. SUPPORT OF THE FURTHER GROWTH OF PRIVATE FLYING

There is only one way that this particular step can be accomplished. I think all of us realize that personal aircraft, or small planes, fall far short of practical utility requirements at the present time. Most small aircraft are not fast and many of the present types of small planes will have to be improved considerably from a safety standpoint. Nevertheless, our progress in flying is inescapable and, for the time being, every effort should be made to keep alive the interest and betterment of private flying. This, again, leads us to the next point, which is actually an extension of No. 5.

6. DEVELOP AIRPORTS, AIRWAYS, AND FLYING SAFETY

It is not the accepted pattern that development of large airports is the joint responsibility of city, State, and Federal Governments. Many large cities have realized what appears to be a most practical answer to airport development in the development of the so-called airport authorities, whereby the administration of all matters pertaining to airport development is centered in one body, which body may cooperate with any other subdivision of State or local government, and which, in turn, may receive funds from Federal appropriations. In its broader aspects, however, and in the development of secondary airports, while a substantial part of this can be, and is now being, accomplished through local subdivisions of government by far the greater part of airport development must be channeled through private capital. It is these smaller airports that have kept the interest in flying alive for the past 20 years, but which are now faced with wholesale bankruptcies because of the abrupt cessation of the veterans' flight-training program.

While I am inclined to the opinion that the veterans' flight program must stop sooner or later, I am definitely opposed to the sudden manner in which this accepted source of revenue was shut off from small airports and airport operators.

As far as airways and flying safety are concerned, we may find no quarrel with the programs currently under way in the Civil Aeronautics Administration in the various State agencies. In this respect, aviation is at least up to if not ahead of schedule. And coming to my most important point—No. 7:

7. MAKE THE PUBLIC UNDERSTAND THESE BASIC REQUIREMENTS FOR AIR PROGRESS

All of the foregoing provisions are not equal in importance. International tensions and the complicated foreign situation would indicate that the most important problem of today is military preparedness. Accordingly, military preparedness must have precedence over all other requirements, and must so be emphasized.

On the other hand, in one way or another, each point has a definite and important bearing on all phases of the program. This must be an approach where any one step may be sacrificed in the interest of another.

It does not mean that in the future when the peak of emergency is past that air progress will mean advancement of aviation on a broad front and not on the military field alone.

I wish that we could reminisce for hours and turn back the pages of history to the glamorous exploits and adventures of such men as the late Jack Knight, who made the first night air-mail flight; or Pop Hanshue, daddy of air transportation in the far West; or Col. Roscoe Turner, the great racing pilot; or other immortals of aviation history. Most of these incidents make colorful and interesting reading, but are only as important in aviation today as was the Golden Spike which joined the tracks of the first transcontinental railroad, many years ago.

These accomplishments were in the past and our problems are with us today, and for future years.

Any kind of program which we contemplate or establish must not be timed for now, or for even next year. In the final analysis any planning which falls short of 5 years or longer will not, in the long run, gain us our objectives.

What we need today—and at once—is a firm and definite national policy on aviation. I should like to at this time, pay tribute to the fine efforts of such men as Welch Pogue, former chairman of the Civil Aeronautics Board, and its present chairman, Joseph J. O'Connell, Jr., who, with his associates, is working very ably to the solution of these problems. The head of our Civil Aeronautics Administration, Mr. Dell Rentzel, has brought his agency to a new high in efficient operation. Such manufacturers as Larry Bell, and his pioneering efforts in helicopter flight—supersonic flight—and others in that field—are adding daily to our record of air progress.

The Glenn Martins, the Kindlebergers, the Bill Allens, and other leaders in American aircraft manufacturing industry, are each working his way to better methods and better airships.

The Eddie Rickenbackers, the C. R. Smiths, the Bill Pattersons, and those of our great air transportation industry are gradually overcoming many of their internal headaches, but the fact remains that all of these groups, and each of these men, is handicapped by the absence of national policy which would specifically establish the limits, the pathways to the goals for a national aviation program for the next 5 years.

If you recall, we of the American public were presented with two sets of recommendations within the last year. One set came from a very able committee, appointed by the President. The other set was presented by an equally able group, appointed by Congress. So far, no determination has been made as to what we, as a Nation, must do or may expect.

May I review the points which I have presented to you as our constant and immediate need for a construction aviation program:

1. Lead in aeronautical research and development.

2. Maintain aircraft industry capable of meeting military and civil demands.

3. Train and equip a modern air force strong enough to deter or conquer any attacker.

4. Strengthen our domestic and international transport.

5. Support the further growth of private flying.

6. Develop airports, airways, and flying safety, and—

7. Sell this program to the public as the basic requirement for air progress.

There is one more specific point of progress which I should like to mention briefly. Most of us use air transportation at one time or another in the course of our business. On days when we are scheduled to take a flying trip, I am sure that many of us cast an anxious eye on weather and hope for clear skies for our trip. The fact is that the worst threat to sustained operations of commercial air transport, and one of the big reasons for air line deficits, is bad weather. Just about a year ago I was invited to attend the demonstration of the instrument landing system, sponsored by the United Airlines in Chicago. All of us who had the opportunity to see this demonstration came away convinced that the instrument landing system, or its counterpart—the ground-controlled approach system, provided the answer for all-weather flying. Here's the problem.

The dollar expense of the installation of all-weather flying systems for commercial purposes would be astronomical.

The Civil Aeronautics Board officials can see no possibility of the air lines being able to afford the tremendous financial outlay for the development and acquisition of new all-weather equipment, and substantial increased personnel necessary to apply the principles of the Berlin airlift to domestic operations. According to the CAB, the principal thing proven by the Berlin airlift is that anything can be accomplished if no economic problem is to be considered. The Air Force is expending unlimited personnel and funds to maintain the all-weather operations; the relation to commercial operations in this country is little more than fractional.

Unless Congress and the taxpayers want to subsidize—with much higher mail rates or direct appropriations—the billions necessary to make all-weather commercial flying a possibility of tomorrow, instead of 15 years hence, we can expect that it will be at least 15 years before all-weather instrumentation and production is available for commercial purposes.

Rising pressure from defense advocates is for all-weather flying now, not 15 years hence, but neither the air lines nor the Government can speed up the development without much greater subsidies.

It takes 10,000 men on the ground, covering all operations, including freight and air traffic control, to handle the airlift at two German terminals. And the distance is so minor as to be without any real significance in this country. Greater distances mean more airports, more installations and more personnel.

Air lines are reducing rather than adding personnel; all-weather landing and take-off equipment is better than ever, but still too expensive. In Berlin three kinds of blind landing devices are used to afford checks against each other. The best now in partial use in the United States are two types, ILS and GCA, and their effectiveness is diluted by various natural phenomena.

Only a relatively few airports have ground-control approach and it is too expensive for the air lines to install generally. The Army has new electronic equipment that serves as a check against failure of either ground-control approach or instrument-landing system, and, of course, its ground-control approach installations in Berlin and other air-lift terminals are few compared to what the domestic air routes would demand.

May I hasten to assure you that I do not wish to liken myself to a modern Paul Revere, rushing from door to door, to ring an alarm. Nevertheless, the cause for alarm is present—and time is rapidly slipping away. We cannot wait until the air lines are finally bankrupt; nor can we delay until grass has overgrown the runways, nor manufacturing has ceased.

I believe in free enterprise, as do most of you. But as a believer in free enterprise and supporter of our present form of government, I am convinced that an investment now in aviation, and for the next few years, will be the best possible investment that we, as stockholders in our Federal Government, can wish to make.

I dislike the word "subsidy" and feel that this phase of our economic life is way overemphasized and overdone.

There are cases, however, where subsidies must be given for the safety of our country, and I definitely favor governmental help to foster and advance aviation, to have our country attain and maintain a definite position of leadership in aviation in all of its forms.

Detroit has been a pioneer in the development and advancement of aviation. While the production of planes in Detroit has been practically discontinued, Detroit still makes its great contribution to aviation, and in the future, with this great industry, Detroit, I know, is going to play its full part.

I should like to again refer to my earlier comment about Mr. Hoover's Postmaster General, Walter Brown. We need a man, or men, like Mr. Brown to make these decisions in our national interest today. We need somebody to take this problem in his hands and, by foursquare and direct consideration of its different elements, to resolve such a program and set our pattern for us.

There is one way to get such a program under way. The way to do this is to do it—and do it now. Tomorrow may be too late.

Belasco Theater—Bring the Theater Back to Washington

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include the following editorial taken from the Washington Post of March 25, 1949, an article from the Washington Post of March 27, 1949, and an article from the Washington Star of September 1, 1940:

[From the Washington Post of March 25, 1949]

BELASCO THEATER

Long before the National Theater sold out to the celluloids, Washington theater lovers talked of bringing the old Belasco back to life. Indeed, there was more than talk. Bids were offered to the Public Buildings Administration for leasing, refurbishing, and operating the building as a theater. It is now owned by the Government and used by the Treasury Department as a combination office building and warehouse.

We have hitherto supported every effort to put the Belasco back in business as the best available method of restoring the living theater to the cultural life of the Capital. Every such effort heretofore has aborted. Government obstacles stood in the way and could not be removed, partly because there was no organization to make the sentiments and wants of Washingtonians effectively felt by the Government.

We are, therefore, particularly happy to welcome the birth of a new and apparently sturdy move to get a legitimate theater in Washington. Out of what might have been just another wailing session last Wednesday evening has come a committee of key citizens, of doers, headed by Mr. Melvin Hildreth. Their first objective is the Belasco. Or, perhaps more rightly, their first objective is the Congress. Representative CELLER has introduced a bill under which the Government would make over the Belasco and lease it for stage productions.

The Belasco is certainly not an ideal solution to Washington's need for a legitimate theater. But it is still the only reasonable target for action, and many obstacles remain to be overcome before its curtain can rise again. The real significance of the new development is perhaps the appearance, almost spontaneously, of a group of citizens with the determination to get something done. Our theatrical desert is disgraceful.

[From the Washington Post of March 27, 1949]

A NEW, STRONG STEP TAKEN TO GIVE US BACK THEATER

(By Richard L. Coe)

The meeting didn't look too promising. As one of the speakers remarked, everyone who wanted one had an aisle seat.

But from it came the most constructive move yet in the effort to resume the living theater in the National Capital. Everyone in the hall of Smithsonian's Natural History Building had gone out of his way to be there. Everybody there, it turned out, meant business.

By business they didn't mean more talk, although the talks of the evening were far more concrete than the endless yuckety-yuk that's been going on since it was clear the National would replace the Capital's sole workable stage with a silver sheet.

But somehow, though roughly 140 souls looked pretty slim in the cavelike hall, they intended something more than just sitting around and saying, Something will turn up. They got together, elected a committee, which will be enlarged in time, and told it to bring back a living art to the most important city on the face of the earth.

CELLER BILL FOCAL POINT

The focal point of the evening was the Celler bill, designed to restore the Government-owned Belasco Theater with Government funds and then turn it over to the professional theater.

Representative EMANUEL CELLER, Democrat, New York, who introduced the bill in Congress, was there to explain his idea and two of his House colleagues were on hand to speak bluntly about what Washingtonians could do.

"From the looks of this slim crowd," said Representative JACOB K. JAVITS, Republican, New York, "I'm not sure Washington wants a theater. Unless the voteless people of Washington can impress on the Congress that they want a live theater, I don't see much hope of the bill getting out of the Public Works Committee.

Representative JOHN A. BLATNIK, Democrat, Minnesota, a former school teacher and war veteran, put much the same idea in different words: "Make yourselves articulate," said he. "We on the Hill are not unaware of the lack of a theater, but you've got to talk it up."

COURSE BEING CHARTED

How to talk it up, how to make Congress conscious of Washington's need and desire for a theater, will be the work of the committee formed Wednesday night under the chairmanship of Melvin Hildreth, Democratic National Committeeman for the District.

Already Hildreth and several Congressmen are mapping the campaign and a meeting of the growing committee will be held sometime this week.

Eventually the plan will include the "write your Congressman" drive that has been the spearhead of many moves resulting in direct action. It's too soon to explain exactly what moves will be urged by the committee, but all the city's drama editors have promised to keep the public informed through their columns.

VOICE OF THE CITY

Chief virtue of this citizens' committee, as I see it, is that, for the first time, the city has found a voice in this matter, a voice that leads to action. No longer need it be the subject of isolated newspaper articles and sly cracks in national news magazines misinterpreting the lack of theater as lack of desire for one.

Another vital aspect is the fact that the group is out to bring back the theater. If the Celler bill does not pass, though at the moment several astute politicians have high hopes for it, there can be other means tried. The committee will keep at its task until a worthy curtain rises somewhere somehow.

After Thursday's newspaper stories appeared a person prominent in the National Theater dispute stopped me in the street. "Had this committee of residents been formed 2 years ago," my friend remarked, "the National need not have closed its stage door."

JAVITS' SUGGESTION

Representative JAVITS touched briefly on one possibility that deserves the greatest consideration. As author of the bill which seeks to create a national theater of the United States, Representative JAVITS suggested that ANTA—the American National Theater and Academy—might be the suitable authority to take over the Belasco once the necessary renovations have been made. This would have the effect of assuring management for the theater no matter what the National's Marcus Heiman does in the face of a second live theater; it also would give ANTA the home it should have in the seat of government which created it.

That, to be sure, is still in the discussion stage, but it is an idea worth consideration. The committee under its skilled political chairman will no doubt come up with other ideas impossible to foresee at present.

But at any rate, the citizens of Washington now are beginning to form into a concrete mass. And for a project about which there has been entirely too much talk and too much sitting around and too much "let George do it," this is a heartening thing.

Chairman Hildreth's committee includes: Miss Bess Davis Schreiner, Mrs. Hazel Markel, Miss Frances Starr, Mrs. Constance A. Snow, Mrs. Edgar Mowrer, Miss Charlotte London, Mrs. Edward Sturdevant, Miss Carolyn Will Stuart, Mrs. Frances Nash Watson, Father Gilbert V. Hartke, George Vivian, Horton Foote, Lawrence Heller, Edward Mangum, George Frain, Owen Dodson, Patrick Hayes, Ernie Schier, Oscar Davis, Tom Donnelly, and this reporter.

[From the Washington Sunday Star of September 1, 1940]

FINAL SCENES AT BELASCO THEATER BRING BACK MEMORIES OF STAGE TRIUMPHS—TALENT OF CAPITAL WOVEN INTO FABRIC WHICH GAVE DISTINCTION TO PLAYGOING—GHOST OF ANCIENT ACTOR WHO SEES SEATS REMOVED LAUDS GRANDEST UNITED STATES INSTITUTION

(By John J. Daly)

They took the seats out of the old Belasco Theater yesterday.

The seats were removed because the Government has purchased the theater, along with the adjoining Cosmos Club. And when the seats went the soul of the Belasco died.

In the lobby an old-time actor looked on.

"Ye gods!" he exclaimed. "There go the remnants of one of the grandest institutions in the United States—the old-time theater!"

When the last seat was carried out the actor wept. He was the ghost of one of the many old-time actors who had performed behind the Belasco's footlights, who had been spurred by roars of applause from those very seats.

On those boards, where once he had trod, had stepped the feet of most of the celebrated actors and actresses of America—and also of England, France, Germany, Russia.

Helen Hayes—Washington's Helen Hayes—made her debut on the Belasco stage. So did Ruth Chatterton—in a walk-on part, as a maid. Later she was to be starred. And so was Ina Claire—the Ina Claire born in the Capital as Miss Fagan, down in Swampoodle.

"I remember as far back as 1908," the old actor said, "when the Metropolitan Opera

Co. played the Belasco. * * * That was the year Caruso, Tetrazzini, Amato, and others of that grand company sang The Sextette From Lucia. They were encored 19 times—a record for Washington or any other city."

The Belasco Theater presented such stars as David Warfield, in The Music Master; Denham Thompson, in The Old Homestead; and James T. Powers, one of America's greatest comedians, in The Runaway Girl.

SWANKIEST IN TOWN

Before it was the Belasco they called it the Lafayette Opera House. In those days it was the swankiest place in all Washington. As an opera house it entertained the great and the near-great of the America theater—people like Jenny Lind, Mme. Schumann-Heink, and others of that caliber.

Then the house turned into a strictly American theater with minstrel shows rampant. It had Lew Dockstader, Honey Boy Evans, Neil O'Brien, and Primrose and West dancing on the stage.

"Will I ever forget those days?" the old actor asked as they moved the seats out of the Belasco.

"I saw Lew Dockstader and Neil O'Brien at their best, and there were never two greater blackface comedians. They knew their stuff. They could make you laugh over the simplest joke. That's what the old minstrel men did in the old days and there was never a dirty line in their text. They got applause because they deserved it."

On the trail of those old-timers came such stars as Helen Hayes.

"And I remember the day Helen got her start in the theater," said the old-time actor. "Lew Fields had come to town in a comedy called About Town, which contained a travesty on The Music Master. He saw Helen Hayes and liked her. Then signed her, as a young girl, to a contract. Next year she appeared with him in a play, and that was her start toward stardom. I tell you, boy, I've seen 'em all. I've seen Wilton Lackaye, who came out of the old Carroll Hall Players, and Al Jolson, who lived down in southwest Washington. I've seen 'em start and I've seen 'em finish. And they all looked good to me.

"There was, in those days, a different theater treatment from what you have today. Take Frank Daniels, for instance. He was a comedian of the first water. And he could set an audience crazy merely by the lifting of an eyebrow. That was the Frank Daniels technique. Well, sir, it was a classic."

MEMORY TEST

"The other day I was talking to Sgt. Joe Harrington, now attached to the traffic division of the Metropolitan Police Department. In the old days he was a program boy at the Lafayette Theater. Said Joe:

" 'Mister, when you talk about the old Belasco Theater you're giving me a memory test.

" 'I remember back to the days when Ira La Motte, of blessed memory, was manager of the Belasco. That was before "Duke" Fosse took over the role, or even L. Stoddard Taylor, both great managers. * * *

" 'What I was getting around to, of course, was the entertainment that went on the boards of the Belasco. One of the first plays that made an impression with me was Marie O'Dile, which featured Frances Starr, then under the direction of David Belasco. Previously she had starred under Belasco in the Rose of the Rancho and had as her leading man the famous matinee idol, Charles Richmond. Eventually she married the late R. Golden Donaldson. She is still a Washington resident.

" 'Now I remember a show called The Three Little Lambs. In this performance was Raymond Hitchcock, Marie Cahill, and Clara Palmer—all three later to become stars in musical comedy. I saw them when they got their start— and was that a thrill.

" 'Boy, will I ever forget the night of the opening of Victor Herbert's beautiful operetta, The Fortune Teller, starring Alice Neilson. She was a baby doll, as we used to say in the old days. In this cast were such performers as Eugene Cowles, Joseph Cawthorne, the old comedian; Johnny Slavin, who knocked down John McGraw, of the Giants; Joseph Herbert, no relation to Victor; and Josephine Bartlette, the original Dame Durdin in Robin Hood.' "

When you talk about the old Belasco Theater you must always remember Estelle Wentworth, one of the greatest singers ever developed in Washington. Sergeant Harrington was a personal friend of her late husband, Albert Parr, who was one of the greatest singers ever developed on the American stage. His singing of Robin Hood will never be forgotten by the old-timers. Miss Wentworth appeared with De Wolfe Hopper at the old Belasco in Happyland. In this same show was little Marguerite Clark, who afterward became a great moving-picture star in the silent days.

OLD STOCK SEASON

Along about Easter of each year the road shows stopped coming in and Washington enjoyed the old Lafayette Stock Co. In this company appeared such favorites as John T. Sullivan, Eugene Ormonde, John Daly Murphy, and a young actress by the name of Antoinette Walker, who afterward made a tremendous hit in David Belasco's famous show, The Warrens of Virginia. The star of this show was the late Frank Keenan.

"Are you telling me about the old Belasco?" asked the ghost of an old star.

And then he answered, through the voice of Andy Kelley, the old dramatic editor:

"It was at the Belasco that Florenz Ziegfeld signed Will Rogers for the Follies. He didn't actually sign him, for the cowboy comedian didn't believe in contracts. He just gave his word and took the other fellow's.

"Ziegfeld found Rogers playing two-a-day vaudeville for the Messrs. Shubert. He went back to his Lafayette Square dressing room, much to the consternation of Ira La Motte, the Shubert manager. Mr. La Motte hastily 'long-distanced' a phone call to the New York office of the Shuberts, and was told to 'throw Ziegfeld out.' But before the telephone conversation ended, Ziegfeld had received Rogers' promise to appear in his "Midnight Frolic on the New Amsterdam roof."

WHITE HOUSE OBJECTION

"Will Rogers that week encountered the first and only objection to his humor, which was registered from the White House. Among his drolleries was this: 'The American public will never get much accomplished until they get a President who gets seasick and who can't play golf.' Obviously, that was a quip on President Harding, who was addicted to the links and who took occasional trips on the White House yacht.

"A secret-service man called at the Belasco and conveyed word that the White House would appreciate it if Mr. Rogers would eliminate the joke. As it was an important part of his routine and got appreciative audience response, Rogers refused.

"Several months later, Rogers came to the National Theater as the star of Ziegfeld's Midnight Frolic. During that week President Harding was holding a congressional reception at the White House. Rogers wanted to go because it was an excellent source of material for his daily newspaper column. He made the usual approach for an invitation and was politely informed none was available. At the Saturday night performance of Midnight Frolic, Rogers stepped out of character long enough to say: 'All my life I have been making humorous observations and comment about the great and the near great. Invariably they have accepted it in a spirit of fun and with an appreciation that no malice was intended. I regret that I have offended the President, but I can also say that he is the first prominent American to publicly object to my stage liberties. I am sorry he can't take a joke.'

"On the opening night of Al Jolson in Wunder Bar at the Belasco, during the prohibition era, those in the front rows—and especially the critics—were handed drinks from the bar on the stage. Jolson personally distributed the liquids, and much to the surprise of those favored, the cocktails and highballs were found to have a high potency. It was a 1-day sensation, and the Internal Revenue Bureau got busy the next day. The investigation resulted in this report: 'No grounds for prosecution discovered. All the evidence, if any, was consumed.' And so that was that."

WILSON'S LAST VISIT

President Wilson's last visit to the Belasco was to see Percy Mackaye's new play, "George Washington," with Walter Hampden as the immortal patriot. Mr. Wilson thought it a good play, and so generously reported for publication, but in this case the New York public took the opinion of Alan Dale, who damned the play with no praise, as did his fellow critics. "George Washington" perished after 3 weeks.

As the old ghost recalled, President Coolidge was a loyal supporter of plays or musicals in which his friends appeared. He went to the Belasco one night to witness a performance of John Drinkwater's "Robert E. Lee," with Berton Churchill playing the immortal hero of the South. Mr. Coolidge's visit was a tribute to his old friend Burr McIntosh. But when the lights came up in the darkened theater, after the close of the second act, a romantic scene in the moonlight on the lawn of the Lee mansion, many eyes in the audience turned to the White House box. President Coolidge had his chin resting on his breast; he was sound asleep. The President's impromptu nap received more publicity than did the play, "Robert E. Lee," which survived only a week of New York performances. One New York critic said the fact that a play had put a President to sleep offered a form of criticism better than any which could be written.

Address of Dr. Tadeusz Bielecki

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. SHORT. Mr. Speaker, on my return from Europe last November I met in Paris, Dr. Tadeusz Bielecki, who before the last war was a member of the Polish Parliament, later he was vice-president under Paderewski, served with the Polish Government in exile in London during the war and is now chairman of the Polish National-Democratic Party.

After visiting with Dr. Bielecki for a few minutes I was so impressed with his comprehensive grasp of world affairs, his accurate knowledge of history, and his obvious honesty and love of liberty that I spent most of the afternoon with him.

In parting I invited Dr. Bielecki to call on me when he visited our country.

Realizing the long and loyal friendship that has existed between the United States and Poland, and in appreciation of the memory and services of Pulaski and Kosciusko, I was eager to have Dr. Bielecki meet some of the Members of the United States Congress.

A few days ago he called at my office and on March 22, 1949, he kindly consented to address a small group of about 30 of our colleagues at a luncheon in the Speaker's Dining Room, which I was happy to give in his honor.

Dr. Bielecki's statement was so forceful and forthright, so timely and convincing, that most all the Members present wanted a copy of it. Under leave to extend my remarks, I include his statement, which I wish every American could read because it is a most timely warning, full of sound and helpful advice:

Congressman SHORT, ladies and gentlemen, I greatly appreciate the invitation to this luncheon, as it gives me the opportunity of meeting such distinguished representatives of the American people.

The more the distances on our globe are shrinking, thanks to technical and scientific progress, the more cooperation is needed among the nations. But it is impossible to trust each other and to cooperate wholeheartedly without personal contacts and mutual understanding. In friendly conversation mistrust vanishes and prejudice is dispelled.

There exists, for example, a fairly widespread belief that the United States is a country of bull-headed materialism where the almighty dollar reigns supreme. I knew that such an opinion was a gross exaggeration, and that a certain power is spreading such falsehoods in order to slander the United States. But only after my arrival in this country, after visiting several States of the Union, and after talking to many Americans, I became convinced that at the roots of your great material power there are immense moral values and spiritual strength. In this country there is certainly no shortage of people who, devoid of any selfish interest, are willing to throw huge material resources into the struggle against communism for the purpose of destroying evil and introducing everywhere a just social and moral order. The right of each individual and of each nation to freedom, the right to organize the life of each nation according to its traditional customs, and not on a foreign-imposed pattern, are the guiding principles for a better world.

It is, therefore, highly gratifying that there exists a power capable of challenging the Soviet superstate both materially and spiritually. Otherwise, the entire world would be by this time under the Soviet heel.

To think that Communists may be converted or convinced by persuasion alone is a dangerous illusion. Communism in its essence abhors compromise, does not tolerate a conflicting opinion, destroys mercilessly people economically independent of the compulsory state. It tends to uniform the soul of man, to deprive him of all individual property, and to turn him into a slave of the state.

Therefore, the increase of the American Air Force to 70 groups, as adopted recently by the House of Representatives, is a most convincing argument for peace.

Force without law is lawlessness, but law without force is weakness.

We Poles, as well as Americans, are branded warmongers by Soviet Russia and her satellite regimes, because we advocate military preparedness as an effective safeguard for peace. But there is only one indisputable warmonger today—the Politburo of the Bolshevik Party in Moscow—which destroys the feeling of security, foments unrest, and sets the stage for an armed conflict by sowing seeds of distrust and uncertainty, and by splitting the free nations internally through such pronouncements of treason as those of Palmiro Togliatti, Maurice Thorez, Harry Pollitt, and William Foster.

I know that the United States does not want war. No responsible statesman or politician would ever instigate an outbreak of armed hostilities.

But the crucial question is what does the Soviet Union want?

The study of communism, its ideology and program of action, combined with the living examples of Soviet imperialistic policy, leave only room for one answer: the Soviets want to dominate our globe and are resolutely moving toward this goal.

I am not in a position to judge whether it is wiser to wait for an open act of Soviet aggression and for the successful culmination of the Soviet atomic research program, spending in the meantime enormous sums of money on rearmament and military aid to other free countries, or whether in the interest of humanity it is more advisable to bring matters to a head at an earlier date, to clear up the situation, and to establish a just and durable peace.

Considering the possibilities of avoiding war, the only way as I see it, is to weaken the Soviet Union. How to accomplish this?

First. The spread of communism must be stopped and its vanguards in western Europe, America, and the free parts of Asia reduced to helplessness.

Second. The Soviet Union must not be allowed to digest the nations under its domination and to consolidate its hold over the countries which were lightheartedly hitched to the Soviet wagon. I have in mind the historic countries of central-eastern Europe, of which Poland is the largest and most populated.

As we now know, the conquest of Poland and her neighbor states did not appease the Soviet Union. To the contrary, it sharpened its appetite.

In my country at present the Communists are struggling feverishly to smash any obstacle in the path of a complete Soviet rule.

After a ruthless onslaught against the democratic Polish political parties, the pressure spread in two directions: Godless communism began to destroy religious life and the Christian moral foundations of society. On the other hand, compulsion and terror are aimed at the individual farmers, who in their great masses formed the membership of my party—the National-Democratic—and of the Polish Peasant Party. The farm collectivization program was launched about 7 months ago. It cannot be realized too rapidly, because the Red regime lacks tractors and other agricultural machinery, needed by the so-called cooperative villages. However, the process has commenced and is being accelerated.

The struggle behind the iron curtain, though necessarily silent, is of a momentous character. Our people, surrounded by the Soviet Army and enmeshed by the secret police, are resisting in a brave and spirited manner, despite the feeling of being abandoned and forgotten by their western allies.

President Truman said that those who did not surrender to tyranny are helping America. It is certainly true. But those people in turn look toward the United States for political and material aid, which would enable them to survive until the international situation changes in their favor.

The main problem for our people today is the problem of physical and spiritual survival.

If Russia is permitted to consolidate her grip over the eastern part of Europe, to conquer Asia, and to undermine the Western Hemisphere, if she succeeds in producing the atomic bomb—the situation may become extremely serious, if not hopeless.

It is, therefore, necessary to switch from defensive to offensive, from containment to pressure.

The United States is being asked for help literally by scores of countries. I know that your resources, although enormous, are not inexhaustible. But maybe it is possible, without undertaking new obligations, and even without appropriating additional funds, to distribute the aid, already earmarked for Europe, in such a way that modest assistance could be provided for the anti-Communist forces of central-eastern Europe.

Some assistance could thus be given to the people behind the iron curtain, to the new political refugees fleeing the red terror, and to the free representatives of the enslaved nations.

There are many channels—let's call them unofficial—through which the people inside Poland may be reached.

The atitude of the Western Powers toward the free representatives abroad of the central-eastern European countries is also of primary importance. Our nations cannot speak or act freely. Therefore, we, their true representatives, speak on their behalf, and express their desires and opinions.

The anti-Communist forces of central-eastern Europe must not be wasted. Without war being actually waged, the struggle now in progress between the western Christian and the Eurasian worlds assumed such gigantic proportions that each addition to the strength of the United States is desirable and may prove decisive.

I would prefer not to go into details as regards the possible ways and means of cooperation. Our activities, both at home and abroad, assume various forms. The Poles still have a government in exile, which, though unrecognized by the big powers, is considered legal and constitutional by my countrymen. The Hungarians, Czechs, and others are organizing national committees. The formal aspects of cooperation are, however, immaterial and may be mutually agreed upon.

I am quite sure that the country of Washington, Jefferson, and Lincoln will not fail in this hour of trial, and that ultimately, with American assistance, a strong independent Poland will be established between Germany and Russia, a bulwark against these two traditional aggressors and the best guaranty for durable peace in Europe.

Thank you.

The American Theater and Academy

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, March 29 (legislative day of Friday, March 18), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I have prepared on the subject of the American National Theater and Academy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In 1945 I had inserted in the CONGRESSIONAL RECORD a statement of purpose which the American National Theater and Academy (ANTA) has since put into operation. To quote from that statement: "I see in this plan a hope and an opportunity that the people in the 48 States, my people in Utah,

may some day have some of the cultural advantages of the professional theater available in the places where they live—whereas now, at least 90 percent of them have never seen it."

It is a major satisfaction that the American National Theater is living up to its purpose as a service organization on a national scale. A tangible demonstration of this in my State is worth recounting. ANTA has been instrumental in bringing us some of the finest artists of the theater, Miss Katharine Cornell, Mr. Orson Welles, Miss Judith Evelyn, Mr. Brian Aherne, Miss Blanche Yurka, and others in the finest dramatic plays. In association with this nationally chartered theater organization, plans for building a great theater building, and for establishing a distinguished, professional State theater company are under way. We could not have reached this point without the help and assistance of ANTA.

Mr. President, there has been introduced into the Senate this year a bill sponsored by the Senator from New York, Mr. IVES, and myself providing for a national theater. And because of widespread interest throughout our country I ask unanimous consent to have inserted in the Appendix of the RECORD comments appearing in the press concerning the work which the American National Theater has thus far accomplished in one field of operation.

[From the New York Times of November 21, 1948]

THEATER USA BOWS

(By Jack Gould)

Theater USA, produced by the American National Theater and Academy, is one of the new season's brightest and most zestful radio shows. Presented at 7:30 Thursday evenings over the ABC network, the program is by broadcasting's present day standards practically a paradox: it is a variety show, yet it has variety.

What ANTA has done is both so simple and sensible as to merit consideration for a Peabody award. It has enlisted the sundry talents of the world of entertainment but, more importantly, it has allowed those talents to stand on their own without superfluous production embellishment, without the usual maddening chit-chat of a master of ceremonies and without the common air of pontifical self-consciousness.

The result, judging by the premiere performance, is an eminently businesslike 30 minutes that boasts pace but still seems unhurried. Under the firm directorial hand of John Houseman, who has been away from radio too long, the first performance ran the gamut of spritely song, both broad and subtle comedy, and sophisticated drama. Theater, USA, is a refreshing example of what professional show folk can do on the air when they are left alone by the self-anointed experts of Radio Row.

On the initial performance, the proceedings were opened by Mary Martin in a rendition of Buttons and Bows. Next came Willie Howard in his uproarious French lesson, followed by a superb Puccini-Irving Berlin version of Annie Get Your Gun, contributed by Alec Templeton. The closing item offered Tallulah Bankhead and Donald Cook in a scene from their current revival of Noel Coward's Private Lives. As the presiding officer, Alfred Drake was a model of modesty, lending the show a lively sense of continuity without getting in the way.

Theater, USA, is presented in behalf of the current Army recruiting drive, but it goes without saying that ANTA, too, will benefit as much as the program's military sponsor. For on Thursday nights the theater definitely is putting its best foot forward.

[From the Billboard of November 20, 1948]

THEATER USA

Producer, the American National Theater and Academy; director, John Houseman; executive director, Roland Martini; writer, Howard Teichmann; music composer-conductor, Nathan Kroll; emsee, Alfred Drake. Cast: Tallulah Bankhead, Mary Martin, Donald Cook, Alec Templeton, Willie Howard.

One of the nicest greetings sent out by the Army is the new Theater USA program produced by the American National Theater and Academy (ANTA), with the tab being picked up by the Army and Air Forces recruiting service. The initial outing of the new series, aired via American Broadcasting Co. (ABC), offered a collection of top pro talent in a potpourri of variety acts.

Alfred Drake set the pace as emsee, staying out of the way of the various acts and doing a smoothly unobstructive job while on. Cast for the opening gambit included Mary Martin, Willie Howard, Alec Templeton, Donald Cook, and Tallulah Bankhead. Miss Martin led off with a lilting rendition of Buttons and Bows, ably abetted by nice backing from Nathan Kroll's tootlers. Willie Howard added a touch of nostalgia with his ancient French professor routine. Templeton did one of his usual take-offs on a classical number with a clever parody on Haydn's Surprise Symphony and encored with Miss Martin in a demiopera based partly on Madame Butterfly and partly on Annie Get Your Gun. The show wound up with a choice excerpt from Noel Coward's Private Lives, emoted with the proper understatement by Cook and Miss Bankhead who head the current legit revival of the play.

Two commercials stressed the positive significance of the Army and did not pitch hard for recruits. One spoke of the uniform as the symbol of freedom and peace; the other described how American youth is "voluntarily" rallying, not to win the peace, but to secure it. The show itself is grade A radio fare and will continue to offer entertainment's biggest names. As such, it furnishes ABC with the backbone of a strong Thursday night schedule.

[From the San Diego (Calif.) Tribune-Sun of March 10, 1949]

HUMPHREY, LAUREN HEAD PROGRAM OF STARS SPONSORED TONIGHT BY ARMY AND AIR FORCE

(By Dorothy Mahoney)

Theater USA a recruiting program sponsored by the United States Army and Air Force, will present Lauren Bacall and Humphrey Bogart, among others, at 8 tonight on KFMB. One would think that the radio appearance of two such microphone-shy actors as the screen team would be enough to satisfy any top sergeant, but Comedian Bert Wheeler, Bandleader Louis Prima and Singer Jane Froman are tossed in for good measure. There's one unqualified statement that can be made about the show: it doesn't drag for lack of talent.

[From the New York News of March 4, 1949]

LOOKING AND LISTENING WITH SID SHALIT

Nominated for the Radioscar: WJZ's expertly directed Theater USA. ANTA-Army sponsored show, for which you can credit Howard Teichmann and Vinton Freedley.

[From the Houston (Tex.) Post of March 3, 1949]

THEATER IS A REAL VARIETY

(By Jack Norton)

If you like a true variety show—a program that neatly combines the better elements of what once was vaudeville in this country and is referred to as music hall in England, catch the offering on KXYZ-ABC at 7:30 p. m. Thursday. Called Theater USA, it has, over the past season, gone quietly about the business of presenting some of the world's top entertainers in a nice blend of music, comedy, and drama.

[From the Fairmont (W. Va.) Times-West Virginian of February 27, 1949]

UP AND DOWN BROADWAY

(By Jack Gaver)

One of the radio shows that has attracted most attention this season has been Theater USA heard every Thursday evening on the ABC network under sponsorship of the recruiting program of the United States Army and Air Force. No other air show has such access to the best talent in all amusement fields.

This is because it is produced by show business itself, in the name of the American National Theater and Academy, which has a congressional charter to promote the theater throughout the country. Any stars in New York are happy to appear on this show, either as individuals doing specialties or as actors in scenes from Broadway successes of the past.

The roster of those who have appeared includes such names as Joe E. Brown, Tallulah Bankhead, Helen Hayes, Walter Huston, Mary Martin, Benny Goodman, Rise Stevens, and Jack Pearl, to mention only a few. Stage producer Vinton Freedley serves as master of ceremonies.

It is one of the best radio shows available.

[From the Cincinnati (Ohio, Post of February 24, 1949]

THEATER USA

(By Mary Wood)

On the chance that you might not have discovered it—it's fairly new—I'd like to recommend Theater USA tonight (WSAI, 8:30 p. m.) as the best of the current crop of variety shows on the air. Most of the guest stars are recruited from Broadway hits and the result is a happy blend of theater and radio.

[From the New York Sunday Journal American of February 20, 1949]

STARS ASSIST THEATER USA

Operating under a plan that makes available for appearances prominent entertainers from the legitimate, concert, and musical stage, Theater USA, the new air show heard every Thursday evening on the ABC Network, is the first regular major broadcast to represent the entire Broadway amusement field.

Sponsored primarily as a part of the recruiting program by the United States Army and the United States Air Force, the show is produced in cooperation with the American National Theater and Academy, chartered by Congress for the establishment of a National Theater.

Theater USA has in recent weeks presented such stage stars as Tallulah Bankhead, star of Private Lives, at the Plymouth; Joe E. Brown, Helen Hayes, Cornelia Otis Skinner, and Walter Huston in scenes from well-remembered and current stage vehicles.

The musical-comedy stage has contributed Mary Martin, Georgia Gibbs and Nanette Fabray, and Ray Middleton of Love Life at the Forty-sixth Street Theater.

And from the musical and concert field have come artists of such diversity as Benny Goodman, Eugene List, Rise Stevens, Tommy Dorsey, Segovia, and Vincent Lopez.

Theater USA is broadcast from the famous old Playhouse Theater on West Forty-eighth Street.

Vinton Freedley, producer of many Broadway hits, is master of ceremonies. The program is written and produced by Howard Teichmann. Nathan Kroll is the musical director.

[From the New York World-Telegram of February 19, 1949]

A NATIONAL THEATER IN ANTA

(By William Hawkins)

Interest in Anta throughout the world of showmanship is so intense that Theater

USA, as the airer is known, has never yet had to cope with a turn-down from any artist asked to appear.

Typical of the caliber presented are the most recent programs which included Charles Boyer and Judith Evelyn in Angel Street, Beatrice Lillie, Dorothy Shay, and the Piano Playhouse team of Cy Walter and Stan Freeman. Next Thursday the line-up will offer Rex Harrison and Joyce Redman in Anne of the Thousand Days, Lawrence Tibbett, Jack Carson, and the Ink Spots.

The "Gimmes" Sap the Nation's Strength

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following two brief articles from this month's Reader's Digest. Some of us have been preaching for the past 16 years the truth contained in these two articles, and certainly it is to be hoped that most Americans are now fully aware of the financial danger that threatens to destroy us. They follow:

THE "GIMMES" SAP THE NATION'S STRENGTH

This country—indeed, the whole world—is being swept by an epidemic of the "gimmes." Nearly everybody wants to be given something at the expense of somebody else. This epidemic grows out of a belief that government can somehow provide aid and security for its people, no matter what the cost and how far in debt it already is.

The more government provides, the more is expected of it. One of the penalties of government assistance is a widespread lowering of the sense of responsibility. Individual stamina and self-determination go down at a time when public expenses are going up. This parallel development has destroyed other nations. It enabled a few thousand barbarians to overthrow the mighty Roman Empire. The Romans came to depend on the state for food, shelter and entertainment. In their eagerness for free security at state expense, they became so insecure they lost everything.

A state is just a large number of individuals. In the end, it is subject to the same limitations as the individual; it pays the same penalties for bad management. Take debt, for example. The United States Government owes over $250,000,000,000—more than $6,000 for every American family. Other political subdivisions—States, cities, counties, school districts—owe twenty billions.

All of them are under terrific pressure to provide more services and greater benefits. All are having to boost taxes and borrow money to pour out to a never-satisfied public.

The popular idea is that these funds can be obtained from the rich and the big corporations—so that the majority of people can have the benefits without paying the cost. But nobody gets anything for nothing. Everybody shares the debt. Everybody pays taxes—direct or indirect.

There aren't enough rich people to enable the government to finance itself at their expense. If government took all the wealth of the corporations, it wouldn't put the country on a sound financial keel. But it would put the corporations out of business and workers out of jobs. Meanwhile, all that the big companies pay to government becomes a part of the cost of the goods they produce—an important factor in the cost of living for everybody.

Only wider realization of these basic facts can stop the tragedy that must eventually happen if the give-everything-to-everybody theory continues unchecked.

THE EVER-LENGTHENING SHADOW

In 1929 Federal spending amounted to less than two-thirds of the personal income of the inhabitants of California. By 1947 Federal expenditures were approximately equal to the total personal income of all the inhabitants of California, Washington, Oregon, Nevada, Idaho, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, North and South Dakota, Nebraska, Kansas, Oklahoma, and about four-fifths of Texas.

Federal expenditures amounted to $121 per family in 1929, $250 in 1938, and about $984 in 1948.

Remember that these figures represent the spending of the Federal Government only. When State and local government spending is added, the total amounts to some 30 percent of our national income. In other words, the American people devote nearly one-third of their working time and effort to supporting their various governments.

Rankin Pension Bill

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron Beacon-Journal of March 25, 1949:

BY ONE VOTE

The margin by which the House finally reached a wise decision on the Rankin pension bill couldn't have been closer.

The vote to send the bill back to committee was 208 to 207. Representative RANKIN for the first time this session uttered words that made sense when he then said, "That kills this legislation for this Congress." He could have persisted in bringing it out again.

As we said yesterday, the amendments that had been tacked on in 2 days of debate made an already unsound measure into a "bonus-pension freak."

If the motion to recommit hadn't passed by the hairbreadth margin, it is possible that other amendments might eventually have modified the extravagant scheme. But that was by no means a certainty, after the spectacle that many House Members made of themselves in trying to be all things to all persons.

The only reassuring note in the pension battle was the sensible attitude taken by many nonprofessional veterans who said frankly that they didn't want the Rankin pensions.

By far the most sensible words spoken on the floor of the House came from Representative CHARLES EDWARD POTTER, of Cheboygan, Mich., who lost both his legs in a battle at Colmar, France.

When he joined the Army in 1942, he said, he wasn't thinking about collecting any cash rewards. And he doesn't want any now.

"You can't make mercenaries out of the veterans by paying them a few dollars each," he declared.

We wonder whether Representative RANKIN and many of his colleagues haven't underrated both the patriotism and the good sense of a vast majority of the veterans.

It's fortunate that there are men in Congress like Representative POTTER to offset the Rankins. Yesterday, it was doubly fortunate. If POTTER were for pensions, the Rankin bill would still be kicking around.

Schools of Politics

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I want to include an editorial from the Akron Beacon-Journal which calls attention to the splendid program that has been initiated at Ohio Wesleyan University, Delaware, Ohio, which is in my district.

Certainly those at this great university, who are responsible, are to be congratulated for taking the initiative in giving the opportunity to the student body, as well as to the general public, to meet and discuss from a practical approach the various political issues of the two parties. This is truly a commendable program, Mr. Speaker, and I am certain will bring splendid results.

The editorial follows:

SCHOOLS OF POLITICS

Wesleyan University is teaching its students practical politics. The Delaware, Ohio, school is pioneering in an addition to college curriculums that has long been needed but generally overlooked in higher education.

The objectives of the school are twofold:

1. To prepare young men and women for positions in Government by classroom instruction and by requiring internships in public offices;

2. To prepare those students not interested in a political career for intelligent participation as citizens in their Government through lectures, seminars, and direct contact with political situations.

Practical politics is a subject that has been studiously ignored in the past to the detriment of our Government. Our educational system makes provision for educating teachers, mechanics, and businessmen. It provides long and detailed courses of studies for those who undertake medicine and law. The fields of journalism, engineering, chemistry, biology, agriculture, and practically all the rest are well covered.

But the men and women who direct the greatest business on earth, the Government of the United States in all its Federal, State, county, and municipal ramifications, have not been educated specifically for their jobs.

The people who are ultimately responsible for good government—the voters—have been restricted in a vast majority of cases to a smattering of civics in high school and a quick dash through American Government in college.

It is time for this Nation to accept public officeholding as a separate profession and to insist that candidates be trained for the work. It is time that our citizens be given

a broader, more complete view of their responsibilities and duties.

Every election brings out the same crop of perennial office seekers, many of whom possess few or no qualifications for the office to which they aspire. They need the jobs. They have friends who will support them and they are dependable "hacks" to whom political leaders owe some measure of political debt. Too often these incompetents get themselves elected.

One bright spot in the picture is that since the war, many young men, especially veterans, are taking a more active interest in politics, even to the extent of challenging the old-timers. But even these young men are handicapped by a lack of knowledge of both politics and of government.

Teaching practical politics in college and requiring internships in public offices will give young politicos both background and practical experience.

National and State leaders of both Republican and Democratic Parties are slated to take active roles in the Wesleyan University Institute. They can do more than talk. They can spot bright, energetic young men and women who may soon be likely nominees for political offices. Veteran politicians can give this training new impetus by guaranteeing internships for graduates.

A school for politicians is something novel in American education. If the idea spreads, it may be the means of producing a marked improvement in government and candidates.

Suppression of Anti-Semitism

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill introduced by me:

A bill to suppress the evil of anti-Semitism and the hatred of members of any race because of race, creed, or color

Be it enacted, etc.—

FINDINGS AND DECLARATION OF POLICY

SECTION 1. (a) Congress hereby finds that anti-Semitism and bigotry are potent weapons in the hands of the enemies of this country and of its institutions, and that the enemies of this country and of its institutions have been and are using the United States mails and the channels of interstate and foreign commerce to spread the doctrines and foster the feelings of anti-Semitism, religious, and racial hatred because of race, creed, or color, thereby tending to destroy the unity of this Nation, creating discord among our people, disrupting the normal channels of trade and commerce, and interfering with and dislocating the economic life of the country.

(b) It is hereby declared to be the policy of this act, through the exercise by Congress of its powers to regulate commerce among the several States and with foreign nations and the other powers granted to it by the Constitution of the United States, to prevent the spread of anti-Semitism, religious, and racial hatred because of race, creed, or color, through the use of the mails and the channels of interstate and foreign commerce.

IMPORTATION, MAILING, AND SHIPMENT

SEC. 2. It shall be unlawful for any person to bring, or cause to be brought, into the United States, or any place subject to the jurisdiction thereof, or to deposit, or cause to be deposited, in the United States mail for mailing and delivery, or to deposit, or cause to be deposited, with any express company, or other common carrier, for carriage, or to send or carry from one State or Territorry of the United States, or the District of Columbia, to any other State or Territory of the United States, or the District of Columbia, any book, pamphlet, picture, paper, letter, writing, print, or other publication which exposes the Jews or any other group as a nation, people, or any substantial portion of them, to hatred, contempt, ridicule, or obloquy, or which causes or tends to cause them to be shunned or avoided, or which has a tendency to injure them in their occupations, employment, or other economic activities, or exposes any race because of race, creed, or color to hatred, contempt, ridicule, or obloquy, or which causes or tends to cause the members of such race or religion to be shunned or avoided, or which has a tendency to injure the members of such race or religion in their occupation, employment, or other economic activities.

RECEIPT AND DISTRIBUTION

SEC. 3. It shall be unlawful for any person to take or receive from the mails, or any express company or other common carrier with intent to sell, distribute, circulate, or exhibit the same, or to read the same to others, any matter or thing forbidden by section 2 of this act to be imported into the United States, or to be deposited for mailing, delivery, or carriage in interstate commerce; or to sell, distribute, circulate, or exhibit, or to read to others, any such matter or thing, knowing the same to have been imported into the United States or carried in the mails or interstate commerce in violation of the provisions of section 2 of this act.

PUNISHMENT

SEC. 4. Any person violating any of the provisions of section 2 or 3 of this act, or who conspires or acts in concert with any other person or persons to violate any of the provisions of section 2 or 3 of this act shall, for each such offense, upon conviction thereof be fined not more than $5,000, or sentenced to imprisonment (at hard labor) for not more than 5 years, or both, at the discretion of the court.

JURISDICTION

SEC. 5. Any person charged with violating the provisions f this act may be prosecuted in any district in which any part of the offense has been committed by him or by his actual associates participating with him in the offense or by his fellow conspirators.

Jeopardy

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 29 (legislative day of Friday, March 18), 1949

Mr. THOMAS of Utah. Mr. President, from his bedside in the naval hospital at Bethesda, Md., where he is recovering from a heart attack, James Patrick McGovern, citizen, soldier, lawyer, poet, and crusader has sent me a sonnet entitled "Jeopardy," which I deem worthy of insertion in the CONGRESSIONAL RECORD. Therefore, I ask unanimous consent that this sonnet be inserted in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

JEOPARDY

Men of America, in jeopardy
Stand the traditions of our country's soul;
Less and less the Nation's glorious role
Gemmed with starry truth's white majesty,
Lives in our flag, long famed in peace and war.
False gods of justice, virtue, beauty spurn
The wisdom of our fathers and unlearn
The human heart and simple nature's lore.
The fashions, rivalries, fanfare, and din
Serve private ends and not the commonweal;
The billions of our riches, gold and steel,
Grow Frankensteins, gross idols, public sin.
Have we no Christians now who live and die,
With truth their cross, to challenge every lie?

Chinese Communist Peace Conditions

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. McCORMACK. Mr. Speaker, I include in my remarks an interesting and challenging article on the present situation in China, written by Constantine Brown and appearing in the Washington Star of March 28, 1949:

THIS CHANGING WORLD

CHINESE COMMUNIST PEACE CONDITIONS SEEN REVEALING ERROR IN UNITED STATES ANALYSIS

(By Constantine Brown)

Unless the Chinese Nationalist' "rump government" at Nanking decides to accept at any price the so-called peace conditions offered by the Communists, it is highly doubtful that anything will result from the protracted negotiations which have been carried on since Chiang Kai-shek was forced out of the Nationalist set-up.

The Reds original nine points, on which there has been a considerable amount of Oriental bargaining, now have been reduced by the Peiping Communists to three. These are:

(1) Communist troops shall garrison Nanking, Kiukiang, and Hankow.

(2) All officials under the authority of the Nanking government who are not or have not been friendly to the Communists shall be removed from office; and

(3) The Nanking government, while not breaking diplomatic ties with the United States and Great Britain shall undertake to sever the hitherto friendly relations with those governments and remove American influence from all of China where it exists.

Later move seen

The request that Nanking, Kiukiang and Hankow be handed over to Communist troops would place them in key strategic position for a later move toward the still little-infiltrated south. The presence of Mao Tze-tung's forces in these areas by agreement with the Nanking government is considered to mean that the Communists would hold not only a blackjack over the Nanking government, but they would secure safe jumping-off points for a move southward whenever Russian strategy demands.

The request that all officials in the former Nationalist government who are unfriendly

to Communists should be dismissed is regarded to mean that an entirely new set of officials will be placed in responsible positions—and they will be hand-picked by the Communists themselves. In other words, the Peiping government is demanding the communization of all Chinese officialdom, even in areas which nominally would remain under the control of the Nanking government.

The most important condition—from our point of view—is the reported demand that the ties between the non-Communist Nanking government and the United States should be loosened almost to the point of nonexistence.

Error of policy

Some Chinese experts in the State Department have maintained in recent years that this country need not be concerned over Mao Tze-tung and his aides taking over China, since they pay only lip service to Moscow and are in fact, only agrarian reformers. They expressed their firm belief that once the corrupt Kuomintang government, and particularly its key men around Chiang Kai-shek, were removed, we would be able to continue our traditional friendly relations with China through the Communist leaders.

These arguments were accepted at face value by our policy makers, who were convinced that we would be able to deal with Mao and his associates. This belief was akin to Washington's conviction prior to 1947 that we need entertain no fears that Russia would not sincerely collaborate toward peaceful reconstruction of the world and that she had no real expansionist designs on her neighbors.

The reported demand from Peiping to the Nanking government that it eliminate the Anglo-Saxon imperialist influence may open the eyes of our Government, even if belatedly, to who is top boss in China today.

Federal Loyalty Check Program

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus Evening Dispatch of March 15, 1949:

THE ANSWER IS "NO"

A Washington newspaper whose readership, naturally, is heavy with Government jobholders, suggests that it is "time to call off the dogs," i. e., the Federal loyalty check program. Its reason is that Government workers checked have been found "99 percent-plus pure," since in only 7,996 cases out of 2,387,235 persons checked for loyalty has a full investigation been ordered.

It calls this result a heart-warming testimonial to the allegiance of Federal workers. No one can quarrel with this comment. It is. And it should be. After all Federal payrollers are Americans. It would have been a stunning surprise had a couple of hundred thousand or more subversives been uncovered.

Nevertheless the answer to the call-off-the-dogs proposal should be "no." Why?

1. Because, despite its insignificance percentage-wise, 7,996 is still a lot of people of questionable loyalty to be in governmental employ. The small percentage is due to the enormous size of the Federal bureaucracy. It is not impossible that a clever and devious enemy still could have planted substantial numbers of spies and sympathizers if the Government pay roll were only half as large.

2. Because one disloyal person in the right place at the right time can do as much damage as 7,996. A former State Department official is under indictment. A former Justice Department employee is under arrest. Both had access to secret data. Extend these cases statistically into the thousands and they add up, potentially, to an extremely threatening situation.

3. How many clever disloyal persons may have escaped detection?

We are fighting a cold war, all over the world, financed by billions of taxpayer dollars against a resourceful and ruthless system that seeks our Government's overthrow. All this effort and sacrifice, conceivably, could be wasted by failing to fight the whole battle; by giving subversion its opportunity to deal the treacherous blow at home that might cancel out the total effort.

Everyone will be glad to know that Government workers have been found 99 percent and a fraction pure. But while we're dealing in familiar sayings, let's not forget also that an ounce of prevention still is worth a pound of cure; that battles have been lost for want of a single horseshoe nail.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 29 (legislative day of Friday, March 18), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me over Station WDEL, Wilmington, Del., on March 27, 1949, in which I outlined my reasons for opposing the legislation pending before the Congress providing for Federal aid to education.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I fully recognize that the educational system in our country is in need of vast improvement. This situation is true in our own State. I have always believed in and advocated an educational system for Delaware second to none, but it has been my contention that such improvements as are necessary should be conducted and financed on a State and local level.

Since 1919 proposals for annual Federal appropriations to the States for elementary and secondary education have been introduced in the Congress in increasing numbers. The appropriations called for have ranged from $100,000,000 to over $1,000,000,000 per year. The methods of allocation have been numerous and fantastic. The guiding hand behind these proposals has been, and still is, the National Education Association and its affiliates, and in order that there might be no doubt as to the scope of their fantastic scheme, I quote from a news release which they made on February 28, 1948, outlining their program:

"Carefully worked out, along practical lines, our program stresses education for all. It sees the future need for compulsory education from 6 to 60, such as exists today from 6 to 16. * * * To secure these, an increase of $5,000,000,000 yearly expenditure is proposed."

Already scores of bills have been introduced in the Eighty-first Congress dealing with Federal aid to education. The two most likely to receive serious consideration are S. 246 and S. 496.

S. 496, the McMahon-Johnson bill, provides the same distribution by States as contained in S. 246 except that it extends the benefits to all private and parochial schools. When we speak of parochial schools, it is not a question of dealing with any particular religious denomination but a question of continued separation of church and state. In our own State we have parochial and private schools supported by practically every religious denomination. For instance, in Dover we have the Wesley College, a Methodist school, as well as schools supported by both the Mennonites and Seventh Day Adventists. In Middletown we have the St. Andrews School maintained by the Episcopal Church. In Wilmington, in addition to schools supported by these denominations, there are those supported by both the Friends and the Catholics.

Our forefathers left Europe and came to this country to obtain religious freedom and to escape the compulsory allegiance to any church of state. To guarantee this freedom in establishing this Government, they insisted upon a complete separation of church and state. Our freedom will last only so long as we maintain this separation.

The real issue confronting us today is not the appropriation of $325,000,000, which is only a beginning for the alleged purpose of equalizing the educational advantages for our boys and girls; the real issue is whether or not we shall take this most crucial step toward the socialization of America and thereby lose our individual freedom, the priceless heritage which our forefathers bequeathed to us. We must not forget that Federal aid will ultimately mean Federal control, and Federal control would reflect in the classrooms the views of the Government in control, thus hastening our progress toward state socialism.

May I call your attention to some of the other reasons why I believe Federal aid to our public-school system is unnecessary and most dangerous.

STATE RESPONSIBILITY

General education is not properly a function of the Federal Government. According to the Federal Constitution and tradition, education is of local, State, and private concern.

No stronger argument against Federal aid to education has been given than that given by Senator TAFT (in a minority report relative to S. 637) when he said, "Our schools are one of the few remaining bulwarks of local self-government and community enterprise. They should so remain." Mr. TAFT further stated, "We cannot give Federal aid to education without the Government controlling education."

General Eisenhower on October 16, 1948, said he was opposed to Federal aid to education "so long as there is one single iota of Federal control coming with it * * * and * * * the Federal Government has no right to take tax out of our pockets and then give it back to us without some form of supervision."

In a test case brought before the Supreme Court of the United States in 1942, this highest court ruled that, "The Federal Government has the right to regulate that which it subsidizes." I am sure we do not wish our States to lose their identity nor to become merely administrative subdivisions of the Federal Government. Notwithstanding the arguments of the proponents of Federal aid, we all know that one Congress cannot bind a succeeding Congress, and any succeeding Congress can change the requirements of

participation and allocation of funds set up in this bill.

I cannot support any legislation which takes from either the individual or the State the freedom which was guaranteed to us by our Constitution.

MORE MONEY NOT THE CURE

The expenditure of money will not cure all the ills of our educational system. If the expenditure of money was the solution to our educational problems, then we would find in our richest States and cities, where there is no need of Federal aid, the highest level of spiritual, cultural, and political health. There the most is spent on education, yet there we find most deeply entrenched one-party political machines and the worst political corruption and great disparity in educational opportunity. Also, from these same places we find the greatest demand on the Federal Government for food, shelter, health, and education.

A few years ago, one of the greatest educators in our Nation's history, Nicholas Murray Butler, speaking on this subject, said:

"There is not enough money in the United States, even if every dollar of it were expended on education, to produce through Federal authority, or through what is naively called cooperation between the Federal Government and the several States, educational results that would be at all comparable with those that have been already reached under the free and natural system that has grown up among us.

"Unless the school is both the work and pride of the community it serves, it is nothing. A school system that grows naturally in response to the needs and ambitions of a hundred thousand different communities will be a better school system than any which can be imposed upon those localities by Federal regulations, Federal inspections, Federal reports, and Federal uniformities."

No longer should the major emphasis be upon how much money we can spend. On the contrary emphasis should be upon moral purposes, upon character and citizenship, without which no nation can long preserve a glorious republic like ours.

STATES BETTER ABLE TO ASSUME FINANCIAL RESPONSIBILITY

The States, at the present time, are much better able to assume the financial responsibility for an efficient school system than is the Federal Government.

Federal aid to the public schools of America is not desirable and it is not necessary. The debt of the Federal Government is over $250,000,000,000. The debt of all the 48 States, added together, is about $2,500,000,000. The debt of the Federal Government is, therefore, 100 times as much as the total debt of all the States combined.

Since 1940, the debt of the Federal Government has increased more than 600 percent while the debt of the 48 states has actually gone down. There is not a single State that is not better able to pay the expense of the education of its youth than is the Federal Government. Why, therefore, should we saddle the cost of education on the Federal Government?

Since 1936 annual public-school expenditures have increased from $1,760,000,000 to $3,700,000,000 in 1948, or more than double.

It is interesting to note that during this period in which the States have doubled their education expenditures, they have at the same time vastly improved their financial position. There is not a single one of the 48 States which has not reduced its debt since 1940 and at the same time greatly increased State contributions to public schools.

For example:

1. The national average of salaries paid public-school teachers has increased 86 percent in the past 8 years. The average salary was $1,270 8 years ago. Today it is $2,362.

2. In the Southern States, teachers' salaries improved markedly in the past 8 years. They have increased 156 percent in Mississippi; 150 percent in Alabama; and 157 percent in Arkansas.

3. State aid to education has increased 117 percent in the past 8 years. State governments paid 31 percent of the cost of public education 8 years ago. Today State governments pay 42 percent of the cost.

4. State governments now are better able to support their school systems than before. The tax collections have increased 88 percent since 1939.

5. Local school districts are in a better position to support their schools than ever before. Their tax rates have gone up; their assessed valuations have increased; and their tax collections are higher today than ever before.

DISTRIBUTION UNFAIR TO MANY STATES

Under the formula provided in this bill the State of Delaware would be compelled to pay $2,970,000 but would receive only the $5 per pupil minimum, or about $285,000.

Even if I were in favor of Federal aid to education, I would be opposed to taxing the citizens of Delaware to support education in other States until such time as the citizens of those States are taxed on a basis comparable to our own.

For example, Texas, under this bill, will receive $18,675,000, while only required to pay $7,950,000, or a net gain of over $10,500,000. At the same time Texas boasts of its number of millionaire ranchers and oilmen; yet Texas does not levy any income tax against its citizens. Why should the citizens of Delaware, who are already paying State income taxes to support our school system, now be expected to pay an additional income tax through a Federal-aid program in order to subsidize the Texas schools?

The same situation is true with many other States. In fact, there are 18 states which do not levy any State income tax on their citizens. In addition to the 18 States which levy no State income tax, there are 12 States which levy no inheritance tax. Many of these same States, some of which have neither inheritance nor income taxes, are the principal ones which are today seeking benefits under this Federal-aid program.

The argument is used that these States, principally in the South, are unable to finance their own school systems, but no mention is made of the fact that so far, notwithstanding their need for additional revenue for education, they refuse to tax their citizens on a basis comparable to ours. While it is true that their per capita income is lower, they at least could tax those of their citizens whose income equals that of any Delawarian.

Not one of the 18 States having no State income tax and not one of the 12 States having no inheritance tax has any right to expect the Federal Government to support their educational system until they have at least equaled the efforts of other States.

The argument has often been advanced that the principle of this Federal-aid program is merely an extension on a national basis of the system which is now operating in our own State whereby the more wealthy and more populated areas are supporting the rural schools. This argument cannot be supported in the face of the facts. It is true that in Delaware the schools in the rural areas are supported to a large extent by the more populated areas, but the citizens who live in the rural areas are taxed on exactly the same basis as the citizens in the more populated areas. This situation is not true on a national basis where, as I have pointed out, certain States are seeking to benefit under this Federal-aid program, yet they are not willing to tax their own citizens to the extent to which we are taxed in Delaware. Many of these States are enticing the industries and citizens of our State to take up residence in their States because of lower taxes.

How long would the citizens of our cities and towns subscribe to the principle of supporting the educational facilities in the rural areas if the citizens of these rural areas were granted exemption or a lower tax rate? Yet such is the principle embodied in this proposed Federal-aid program.

I am not overlooking the fact that throughout the country, including Delaware, we need a vastly improved education program. I heartily endorse the principles embodied in both the State Democratic and State Republican platforms last year advocating major improvements in our State educational system, and I am gratified that the State legislature is now considering a redemption of these pledges. I have always believed in and advocated an educational system in Delaware second to none. But such improvements should be conducted and financed on a State and local level.

If the Federal Government is sincere in its effort to aid the States, there is an easy way to accomplish this goal without endangering either our educational system or our freedom. For instance, the annual pay roll required to support the more than 2,000,000 Federal employees today exceeds $6,500,000,000. A mere 10-percent reduction in this pay roll, which anyone will agree could easily be achieved, would mean savings to the States of $650,000,000 annually, or just double the amount proposed under this Federal-aid program. Furthermore, if we are in earnest, let us give the States real Federal aid. All that is necessary is the adoption by the Congress of the economies recommended by the Hoover commission. These economies, through the elimination of overlapping bureaucracies, would result not only in a more efficient Government but also in a saving to the American taxpayers of more than $3,000,000,000 annually. This is 10 times the amount proposed under this Federal-aid program.

The best way, therefore, to achieve real Federal aid to the States without Federal control is to reduce the cost of the Federal Government, thereby reducing the amount of revenues taken from the States.

I summarize my opposition to Federal aid to education as follows:

1. Education, in accordance with our Constitution, was never intended to be a Federal responsibility.

2. Federal aid always brings with it Federal control.

3. Any aid granted now will only be an opening wedge for greater demands in the future.

4. States and localities are better able to finance school systems than is the Federal Government.

5. The present conditions of schools is due not altogether to finances but partly to inefficient organization and operation.

6. Methods of allocating Federal aid are unfair to many States.

7. Once Federal aid is granted for education, other State and local services will have a precedent for requesting aid.

8. Religious freedom can survive only so long as free public schools survive. Federal subsidy and Federal control will kill both.

I am thoroughly convinced that the enactment of Federal aid to education will be another long step along the road to national socialism. Let us not be fooled by believing this is a cure-all for the ills of our educational system, nor will it guarantee educational security without the loss of our educational freedom. Let us always remember the wise words of Benjamin Franklin, who once said, "He who trades freedom for security will lose both."

Rankin Pension Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial appearing in the Pittsburgh Post-Gazette of March 28, 1949, entitled "On Saying and Doing":

ON SAYING AND DOING

The anxious student seeking an answer to the question, What's wrong with the GOP?, need look no further than the House's voting record last week on Representative JOHN RANKIN'S pension proposal.

Despite the GOP accent on Government economy—which, indeed, is supposed to be the party's hallmark—106 Republicans in the lower Chamber voted to save the multibillion-dollar Rankin scheme and only 57 of them voted to have it sent back to committee (which was equivalent to killing it). Across the floor, 151 Democrats, whose party the Republicans often charge with "squandermania," voted to defeat the proposal and 100 to save it.

Now, it took political courage as well as political principle to defeat the Rankin bill, and that, pure and simple, is the point of this story. Before fussing any further about whether their party should become more or less liberal in order to win the electorate's support, the Republican officeholders might first try proving that in the pinches they really stand for what they say they stand for.

Health Insurance

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 29 (legislative day of Friday, March 18), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Pacific Northwest Cooperator commenting on an article by the senior Senator from Montana [Mr. MURRAY] in the Progressive, relating to health insurance and the activities of the American Medical Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL MONOPOLY UNDER UNITED STATES FIRE — SENATOR BLASTS TAX-EXEMPT AMA'S "EDUCATIONAL" FUND — SENATOR MURRAY, HEALTH-INSURANCE PLAN SPONSOR, RAPS MEDICS' "MISREPRESENTATIONS" AND LOBBYING ACTIVITIES

MADISON, WIS.—Senator JAMES E. MURRAY, Montana, Democrat, warned the American Medical Association that its tax-exempt status as a scientific and educational society was being endangered by its lobbying activities, especially its costly campaign against national health insurance.

Writing in the February issue of the Progressive magazine, Senator MURRAY, coauthor of the measure to finance a national health-insurance program by increasing employee and employer pay-roll taxes, denounced the AMA's House of Delegates as an august body of short-sighted seers bent on spoon-feeding the American people their own special brand of education about national health insurance.

SLUSH FUND

The House of Delegates, he charged, decided on raising $3,500,000 to fight health insurance by taxing its members $25 each without consulting its membership. Seasoned observers easily saw this for what it was and called it a political slush fund.

MURRAY said that "many physicians, regardless of their position on national health insurance, resent an assessment intended for legislative propaganda to be conducted under the guise of education by societies incorporated for scientific and educational purposes. Certainly legal questions of charter and tax exemption are involved. And physicians should be disturbed because the activities of the existing medical lobby (already spending more than any other single registered group) are marked for sharp public scrutiny. The methods, if not the motives, of the medical lobby are clearly open to question."

NOT SOCIALIZED

Senator MURRAY assailed the AMA for "loosely using the phrase 'socialized medicine' for smear purposes" to describe national health insurance.

"Intelligent, literate minds define socialized or state medicine to mean that the Government owns and operates all hospitals and that practicing physicians are employed by the Government on a salary basis—that is, are Federal employees under Government control.

"No such system is or has ever been proposed by those of us advocating national health insurance."

FREE CHOICE OF DOCTORS

"Proponents of national health insurance cherish the freedom and intimacy of the doctor-patient relationship as much as our die-hard opponents. Patients, as now, would select their own doctors; doctors, as now, would accept or reject patients. National health insurance is just a method of paying for medical care.

"The only change proposed by advocates of national health insurance is that, instead of the patient paying when and if he has money available, the doctor or the hospital of his choice would be paid by the insurance system at a rate and by a method to which the doctor has agreed. This is impeccably American—based on insurance principles which have been part of our national practice for more than a century. Furthermore, the system would not be run from Washington, but by local areas and States. The national health-insurance bill plainly provides for this decentralization."

Congress and the President

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mount Vernon (Ohio) News:

BOTH SIDES OF IT

President Truman, addressing the Conference of Mayors the other day, denounced troublemakers who talk of a rift between him and Congress. He asserted he and Congress are working together for the good of the country, and predicted enactment of a major share of his legislative program.

That's one side of the story. Here is the other as related by Ray Tucker, National Whirligig correspondent in Washington, who has gained a reputation for his careful and accurate portrayal of developments in the National Capital.

Says Mr. Tucker: "The basic explanation for the numerous rebukes which both Houses of Congress have delivered to the White House is the growing belief on Capitol Hill that President Truman is not big enough for his job, or willing to learn by experience.

"The bipartisan coalition, which is now a fact rather than an administration fear, means to handle national problems without regard for his advice or pressure. It is doubtful whether a single important Truman-sponsored suggestion will be approved at the present session, even though the Democrats enjoy full control.

"President Truman would not have suffered so many rebuffs, personal and political, if he had not been wrong so many times, not on routine questions but on major issues essential to economic stability and prosperity of the present model."

And then Mr. Tucker goes on to say that the record upon which congressional opinion of his ability was formed includes major blunders such as:

His forecast of 8,000,000 unemployed soon after the end of the war, whereas a boom developed and lasted through 1946, 1947, and 1948.

His stressing, during his 1948 campaign and in messages to Congress early this year, of inflation as the only domestic danger, whereas prices have levelled off and are still dropping.

His statement that only food prices had fallen, whereas cost of numerous basic commodities has fallen sharply, and supplies have become so plentiful that the Federal Reserve Board has relaxed credit controls.

His demand for authority to construct additional steel plants to meet an expected shortage, whereas there is now a likelihood of a surplus of this product.

His demand for a Taft-Hartley law substitute that would not bar the closed shop or give him power to ask injunctions in strikes in key industries, after which the Supreme Court has held the States have authority to ban the closed shop and John L. Lewis has called a coal-mine stoppage which would be disastrous but for the large supply of coal above ground.

Possibly the differences of opinion between the White House and Capitol Hill can't be described as a rift, the differences going far deeper than that.

They seem to stem from the opinion, on both the Republican and Democratic sides of both houses of Congress, that the President's program is not sound and is not in the best interests of the country at large.

To make matters worse, doubts about the ability of the President to lead the country through the complex problems of the post-war-reconversion period have arisen in minds of business and the public alike.

The President's legislative program contains measures which, if adopted, would impose heavy new burdens on business and individuals, at a time when the tax burden is the heaviest in the history of the country and when tax reductions are more appropriate than increased spending. At the same time, Mr. Truman would impose Government controls, if Congress should approve, on both business and individuals.

Our economy is so delicately balanced at present that it could be tipped either way. New tax burdens and new restrictions, for instance, could deal business a blow from which it could not easily recover, and might throw the country into a recession.

At a time when business is attempting to make a safe emergence from the infla-

tionary era, Government's aim should be to lend a helping hand and nothing that holds the least threat of curbing business activity should be given serious consideration.

Programs which contain the prospect of greatly increased taxes are discouraging to business at this time. Controls are even more unsettling in business circles. Even though there is the prospect Congress may not act favorably on Mr. Truman's recommendations, the very fact that there is a remote possibility of their enactment has an adverse effect on business.

Governments—Federal, State, and local—are costing the American people about $55,000,000,000 a year, roughly about one-fourth of the national income. And, under Mr. Truman's program, this cost would be materially boosted.

The American public can't take much more in the way of a tax burden. It isn't merely guesswork to say that increasing the tax burden or imposition of Government controls, or both, could well prove a disastrous blow to our economy.

This country has everything necessary to assure an era of great prosperity, if granted competent leadership. It would be a shame if lack of that one essential should not be forthcoming.

The Burley Tobacco Season of 1949

EXTENSION OF REMARKS
OF

HON. THOMAS R. UNDERWOOD

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. UNDERWOOD. Mr. Speaker, another burley tobacco marketing season has come to an end. Once more the chant of the auctioneer that was heard on one of the floats in the inaugural parade has ceased for the season. Once more the planters of the golden leaf in eight States know that they can keep their children in school, maintain their financial solvency, and face life free from the gaunt specters of want and deprivation. Tobacco farmers always grow other crops. The planter rotates his crops, for it is unwise to continue to grow tobacco back again on the same acres. The tobacco farmer always is producing food as well as planting on a selected plot the tobacco that goes into the American cigarette.

In the case of tobacco, the farm program has succeeded beyond all anticipation. Many grave difficulties are encountered in the development of any extensive plan or program touching upon any industry, agricultural enterprise, or branch of the Federal Government. When we find anything that works all right, we had better keep hands off, except to pat it on the back, keep it like it is, and give it all the help we can.

The total gross sales for the 1948 burley tobacco crop were the second largest on record. The Federal-State Marketing News Service reports that 632,332,263 pounds of type 31 Burley were auctioned for an average of $46.06 per hundred pounds. The total volume was roughly 131,000,000 pounds more than last year. The largest gross sales on record were reported for the 1946 crop when over 636,000,000 pounds were sold. It is interesting to note that the total number of pounds sold exceeded by approximately 115,000,000 pounds the original estimates of the Federal Government experts. Despite this large crop, the general average received was only $2.24 per hundred pounds less than the all-time high established last season. Some of the crop was of inferior quality due to bad weather as much of it was wet. This was a factor in the weight of the crop. Prices were off for some of the grades, although they held up well for the better type of cigarette tobacco. The total given for the sales and the average are preliminary and subject to revision and, also, include resales.

Of the total of slightly more than 600,000,000 pounds that were sold, after the resales are eliminated, the four Burley cooperative marketing associations, that are designated by the Commodity Credit Corporation to handle nonrecourse loans based on parity price of tobacco on which bids are rejected, received a total of approximately 97,000,000 pounds of the 1948–49 crop. These associations are formed by the growers themselves. They are designated by the CCC to handle the loan program as loan agents. They took approximately 16 percent of the total crop. At the beginning, the associations took approximately 15 percent, but during the last week they took as high as 25 percent of all tobacco offered for sale.

Where would the tobacco farmers have been without the loan program, properly and sympathetically administered in their behalf? Let it be borne in mind, too, that not $1 has ever been lost to the Federal Government by this program. It has not cost the taxpayer a cent. Every dollar, underwritten by the Federal Government in the form of loans, has been returned as soon as the cooperative associations have sold the tobacco they have taken off the auction warehouse floors under the farm program, authorized in the Agricultural Adjustment Act of 1938 as amended.

Nothing has contributed so much to the popularity of this program as the fact that it has been administered by the cooperative associations, whose memberships include 274,000 tobacco growers and whose directors are elected by them. Recently there was a proposal that the Production and Marketing Administration State committees would replace the tobacco cooperative associations in all transactions involving the receipt, redrying, and packing of tobacco. After the outspoken expressions from the growers, the Commodity Credit Corporation and the Production and Marketing Administration rejected any such proposals. The PMA State committees are appointed and paid by the United States Department of Agriculture and are not elected by the farmers. No greater mistake could be made than to change the present method of administration. Anyone who has witnessed the operation of the control program knows this.

Of course, the loan feature is only one part of the tobacco program. Tobacco farmers have applied the acreage allotment quota provisions of the Agricultural Adjustment Act of 1938 to their production continuously since 1938, except in 1939. Quotas are now in effect for these types. Next year a 3-year-quota period comes to an end. The tobacco growers will have the option next year by referendum of adopting either a 1-year program or a 3-year-quota program.

In 1943 after tobacco production had been reduced during the war period, there was a rapid increase of domestic consumption and for the armed forces and lend-lease. In 1945, burley tobacco farmers were allotted 609,740 acres. In 1946, this acreage was reduced by 52,336 acres and in 1947, it was reduced 88,784 acres. The allotment for burley production in 1948 totaled 463,186 acres, a reduction of 24 percent below the allotted acreage for 1945.

Decreased exports of tobacco in 1948 resulted from the conditions that made the Foreign Assistance Act of 1948 necessary. There were larger exports in 1946 and 1947, but in 1948 they decreased. The total of exports of all types of tobacco last year was far below the estimate of the Committee of European Economic Cooperation prior to the adoption of the Marshall plan. Tobacco was included in the Marshall plan legislation as a commodity desirable for export. It is one product for which the people of foreign countries are willing to pay, since American cigarettes were popularized by the GI during the war. Also, to use the phrase of Vice President ALBEN W. BARKLEY, it is advisable "for the domestic economy" to include in ECA commodities this important product of American farms.

A summary of the season and the situation shows that these factors fit together into a pattern. No single step prevented depression in the Burley Belt. However, the price did turn downward, but this was accepted without disorder or any panicky anxiety because:

First. Loans were available based on 90 percent of a parity price determined by a fixed base period. This is essential so the grower can have some definite assurance as to what such loans will be before he prepares his plant bed. The loan program took from the auction markets approximately 16 percent of the tobacco or almost as much as the difference between the size of the actual crop and the advance estimate of the experts as to what it would be.

Second. The reduction in acreage allotments has amounted to approximately 24 percent in the past 3 years.

Third. The continuation and prospect of exports abroad were advanced by the ECA and reciprocal trade agreements.

The earliest recollection of my life was seeing the tobacco warehouses burned by the night riders at the beginning of this century, when low agricultural prices forced them to desperation. That was the wrong way. Through the long years tobacco farmers have groped, experimented, and struggled in the effort to find the solution to their own problem. They have done so in the present Agricultural Adjustment Act and I hope that in regard to tobacco it will not be tinkered with or upset, because the success with this commodity offers a conspicuous example of a farm program that really works, now, just as it is.

Arms for Peace

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the CONGRESSIONAL RECORD another brilliant and compelling editorial written by Ted Thackrey, editor and publisher of the New York Post Home News as it appeared in yesterday's Post, dated March 28, 1949.

Not only is the Post virtually the only liberal daily newspaper published today in the United States, but Ted Thackrey is almost the only remaining exponent of militant, liberal, personal journalism. His editorials are frequently written in the first person and burn with the fire of his own ardor.

In this editorial Mr. Thackrey proposes a simple and logical solution of our international complications.

He proposes that the people of the world act now to make the United Nations a real and decisive force by creating at once a United Nations military force.

Of and by itself, the idea is not novel.

What makes this editorial an important historical document is its clarity and its urgency.

Mr. Speaker, we are soon going to vote on and doubtless pass the most stupendous military budget ever proposed in peacetime. We are going to pass over the crying needs of the people for schools, hospitals, civil rights, and the fruits of our complex and unique technology with scant notice, while we build such a military machine as the world has never known in a peace-loving nation. God knows, we may be creating a Frankenstein monster to devour us and our way of life.

Ted Thackrey's editorial proposes that we take the simple and logical step of making the United Nations work by supplying, through collective action, a collective force.

He proposes arms for peace.

Mr. Speaker, I commend this editorial to every Member of Congress. I commend it to the Committees on the Armed Services and on Appropriations. I commend it to the Secretary of National Defense and to his Secretaries of Army, Navy, and Air Force. I commend it to the President of the United States and to his Cabinet, and to the Director of the Budget and the Secretary of the Treasury.

I commend it, Mr. Speaker, to every responsible public official, and to every man, woman, and child in this mighty Nation.

We can have a peace with dignity, and Ted Thackrey marks the highway.

The editorial follows:

ARMS FOR PEACE

(By T. O. Thackrey)

I have a simple armaments program calling for the formation of a new military force, complete with Army, Navy, Marine and Coast Guard divisions and a mobile air force.

In a way it is a suggestion of a substitution for the rearmament plans proceeding feverishly on both sides of the so-called iron curtain, though it is much less ambitious in its initial stages.

In the beginning, I venture that my armaments program's first year budget would be smaller than, say, the cost of maintaining the Berlin airlift alone during the next 6 months, or the equal of Russian Army-Air Force operations cost for patrolling the border of Finland this winter.

It is a deadly serious proposal.

If by some miracle it should be adopted during the next month—and it can be—I believe we will have made a beginning in the direction of securing the peace of the world, reviving the United Nations as a living and powerful instrument for international cooperation, and restoring a feeling of security for people everywhere.

Despite its simplicity—or possibly because of it—my proposal seems to be just about the only arms plan continually brushed aside by the military experts of west and east alike, but perhaps it is only because their attention has been so concentrated lately on preparation for something called by both sides "a defensive war" that an army for peace has begun to seem an anachronism.

It seems to me that the chief and fatal weakness thus far of the United Nations has been something other than the irritations of a stubbornly used Soviet veto, or the failure of the United States to challenge Great Britain and the Arab League in their grievious and continued violation of the Charter provision against aggressive warfare, serious as these have been.

The United Nations is constantly apostrophized * * * and bypassed * * * on the ground that it has no force; no power to compel but merely power to persuade.

Very well, then, let us by all means quit merely deploring its weakness, but proceed at once to make it strong.

Let us give it force, real force, of its own.

Let us provide it without delay with means for developing an independent, international supranational army, navy, and air force, modest in its initial stages, but entirely freed of subservience to any merely national command.

Theoretically, of course, nations that are so minded are now empowered to place contingents of their national forces at the disposal of the United Nations military staff committee, subject to the agreement of the Security Council that such forces should be called into play.

This is fatally defective for several reasons, chief among them being the very rivalries and suspicions between nations which the United Nations was organized to dispel. National contingents are placed at the disposal of international bodies exclusively for the achievement of what are considered primarily national objectives.

I would replace this unworkable theory with a workable and sound practice. I would first free the members of the military-staff committee from both the duties and the privileges of any national citizenship whatever, giving them undivided loyalty to the United Nations.

I would release to the United Nations, as such, the power and financial resources to recruit and equip military contingents, initially by volunteers from among the several nations comprising membership in that organ, designed to secure for future generations release from the scourge of war.

I believe there are enough internationally-minded people, including some who would be attracted at first merely by the adventuresomeness of membership in such a force, to provide all the manpower needed for at least the first year of organization and training.

I would not be averse to a lend-lease program for some primary equipment, either, and would not be too particular whether the half-tracks and the bomber-fighters and the corvettes and the cruisers came from the western or eastern division of the world, as long as they proved useful for the months intervening while United Nations ordnance- and material-purchasing organizations sent out their own specifications and sought world bids.

Some of the advisers to the military staff committee with whom I have talked protest that it would take perhaps a year as a minimum to train and coordinate a single ground and air division of such a mixed group. The only sensible answer I know to that is that if we wait a year it will still take another year, and that any week now it may be actually too late to begin.

I say that we must begin sometime and somewhere, and that the time is now and the somewhere is when the United Nations opens its formal sessions April 5 at Lake Success. I think preliminary plans should be under way, now, today, this minute * * * and I would like to see the United States take leadership in this particular armaments proposal.

I agree with those who declaim that we have learned, all of us, to our sorrow that moral persuasion is not enough; though I insist that we could use a higher standard of morality and more persuasion, too.

I agree that power and force are necessary to any organ seeking to compel as well as advise compliance with decisions, whether that organ is a city, a nation, or UN.

But I insist that the time has come to begin concentrating on building up that power where it can serve the international rather than the purely national concepts that ride as old men of the sea around the necks of our national diplomats and generals.

I would suggest small beginnings * * * nothing beyond the capacities of the relatively small initial force.

In the Middle East, for example, what a boon to Mediator Ralph Bunche and to the entire burdened world, if a contingent of say only 10,000 international troops, with a single bomber-fighter squadron, were to take over the task of defending the Israeli and Arabian borders while truce and peace talks are continuing at Rhodes.

Surely, not too ambitious a project for the world's only organ for collective peace!

And yet, think of what a blessing this small force would be to the various nations nervously and suspiciously eyeing each other in the Middle East, anxiously adding dollars to national budgets for military purposes.

Think for example, of the relief to Israel in being able to disband its mobilized citizenry in security and turn to reconstruction.

Think of the sigh of relief from Great Britain, for example; freed of the necessity for constantly pouring in reinforcements for Arab armies at Aquaba and other points in and near Palestine; relieved of the necessity for continuing the $8,000,000 annual subsidy to Transjordan for supporting the Palestinian invasion.

Egypt, Syria, the Lebanon, Iran even, and Iraq and Turkey would feel the tensions release as the military appropriations dropped. Who knows but that a similar force might relieve pressure on the Soviet budget along her southern borders and, in particular, on the boundaries separating the eastern and western bloc nations.

No United Nations official who has seen diplomatic or semimilitary service in the Middle East and in Palestine has been found who will fail to agree that such a United Nations force could and would result in the possibility of disarmament of more than 10 times that number of other troops under arms in the name of purely national interests.

Or in the Pacific, where the troops of Holland and the civilian soldiers of the Republic of Indonesia continue a murderous and desperate struggle in defiance of the suggestions of the United Nations Commission.

Who can doubt that the borders and waters of Indonesia would be patrolled in

safety and security from attack by either of the forces now bitterly contesting? Think of the relief of the budget of Holland, now draining off at least a million dollars a day in the name of securing "law and order", and the relief to the sorely pressed Indonesians who could in security lay down arms and take up rubber-tree spikes once more to help the world's production of this scarce product.

It would be naive in the extreme to suggest that adoption of my proposal would bring universal cheers, particularly at first.

It is possible that Great Britain, for example, might not really welcome being relieved of the necessity—or shall I plainly write excuse—for maintaining large military forces in support of Arab political ambitions.

It is even possible that some members of the general staff operations in the United States, in the Soviet Union, in Holland, in every country, in fact, might view the proposal with some dismay, since it would be certain to result slowly but surely in a certain form of technological displacement, But I ask you. is that kind of unemployment bad?

It will be objected—in fact it has been objected in several private conversations—that any nation on the Security Council, including the Soviet Union or Great Britain or even the United States, might be able and willing to paralyze the international army by withholding orders.

My reply is that it would be at least much more difficult to thwart the wishes of the General Assembly if an actual available force were organized and at hand.

Certainly certain manufacturers of national and even international arms equipment might be aghast at an international force steadily growing in power to the point where disarmament of national forces could safely begin without conceivably impairing any national security.

Is this a reason for dismay and delay? I say "No."

At the worst, my proposal would, if adopted, rob every nation of the excuse for bypassing the United Nations on the ground that it is without power.

In our present world, where individual nations are planning new military budgets running annually into the billions, I say that as much as 1 percent, say, of the total direct military appropriation by every nation now holding United Nations membership would scarcely be an improper price to pay for this experiment in arming for peace.

And who knows, by creating an international army of international citizens, we might demonstrate the desirability of international status for international civilians?

Since it appears that the world as a whole is determined to train more soldiers and produce more arms rather than more houses, more food, more transport, more hospitals, more schools, let us at least demand that armaments and their human operators be subject to one loyalty only—loyalty to collective enforcement of peace under law.

Keep America Saving

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. ARENDS. Mr. Speaker, I have just been advised by the Treasury Department, United States Savings Bonds Division, that the new theme song for the Opportunity Bond Drive will be Keep America Saving, composed by Frank H. Thorne, of Chicago, a former international president of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc.

Thorne's stirring song was selected by Fred Waring, chairman of a judging committee, with Oscar Hammerstein II and Perry Como, over 42 other songs submitted by barbershoppers in a contest sponsored for the Treasury by SPEBSQSA. Soon Keep America Saving will be sung, played, broadcast, whistled, harmonized, and otherwise musically rendered throughout the Nation. This song is the Treasury's first peacetime theme song. Irving Berlin's Any Bonds Today? was written especially to promote the sale of war bonds. I wish to compliment Frank Thorne, a busy industrial executive, on his achievement. He is the author of Keep America Singing, the theme song of SPEBSQSA. He is the colorful bass of the former world championship Elastic Four Quartet. He is practically a symbol of barbershopping in this country. Runner-up song was Buy a U. S. Bond Today. Joe Martin was the coauthor with Howard Liffick. I do not refer to the distinguished gentleman from Massachusetts, our former Speaker, but to Joe Martin, of Benton Harbor, Mich.

This evening the prize bond song will be sung at the Congressional Secretaries Club Talent Night at the Congressional Library by the Washington Treble Shooters Barber Shop Quartet.

Would the Sale of Yellow Margarine Actually Hurt the Dairy Industry?

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. POAGE. Mr. Speaker, one of the most frequent prophecies by those who oppose the repeal of the Federal antimargarine laws is that such action would mean the ruin of the dairy industry.

There is no proof to support these charges; the prediction is made and there the matter rests; and I am sorry to say that many dairymen have accepted these prophecies and have accepted them without looking into the facts.

For several years now I have been studying the butter-margarine controversy. I have advocated, and still advocate, repeal of the Federal antimargarine laws. I have done this as a matter of principle and in the interests of the consumers. However, I have come to the conclusion that the long-time interests of the dairy industry will be helped by repeal of the Federal antimargarine laws. I have come to the conclusion that butter has become an old man of the sea—riding on the back of the dairy industry. Today I propose to tell you some of the reasons for my conclusion.

First of all, the margarine fight has put the dairy industry in an extremely bad light. To unbiased observers, it seems that butter simply does not want to compete on even terms with a competitor. As a result, there has been a steady barrage of criticism against butter and the dairy industry generally; over and over again, the people have been told that margarine is a perfectly good product and as nutritious as butter. In other words, the margarine-butter fight has given margarine millions of dollars worth of advertising. It has caused many persons who otherwise would not have bought margarine, to try the product and, having tried it, to continue using it. The public relations of the dairy industry have been bad. Instead of campaigns aimed at increasing the sale of their products, the dairy industry, at the behest of the butter interests, has been fighting a product which competes with butter.

Bear in mind that there is no competition between the dairy industry and the margarine industry save on the single issue of butter. Margarine does not compete with fluid milk, with ice cream, with cheese and other dairy products.

It also must be borne in mind that butter furnishes the least profitable use for the dairyman's products. Or to put it another way, butter is his loss leader. He gets less for butter than for any other use of his milk.

The average price paid for standard—3.5 percent—milk sold as fluid milk or cream during the 10-year period, 1938–47, was about $1.05 per pound of butterfat. During the same period the same milk used for butter brought per butterfat pound, only about 54 cents. The prices paid for milk for use in ice cream, cheese, and other products fell between these two levels.

In other words it was twice as profitable during this period for the dairy farmer to sell his milk for whole milk use as it was for him to divert it to butter manufacture.

I am advised that this week Texas processors are paying $5.60 per 100 pounds, basis 4-percent butter fat, for milk used for fluid grade-A distribution; $3.10 basis for milk for making cheese and condensed milk; and only $2.20 (including allowances for the value of skim milk) for milk used for butter production. It undoubtedly costs somewhat more to meet the requirements for grade A milk, but certainly nothing like twice as much.

I do not believe it is possible at the present time for the dairy farmer to produce milk and sell it at $2.20 per 100 pounds without losing money and, yet, that is exactly what the butter people have been able to sell the dairy industry and the dairy industry has been sufficiently gullible to fall for the propaganda that the butter market absorbs the surplus of the over-all milk production and that if margarine replaces this surplus, it is going to mean the destruction of the dairy farmer.

Such a conclusion is as absurd as it is illogical. I am convinced that, if the dairy industry did not have any market

for low-grade milk used for butter manufacture, the industry as a whole would be in much better condition than it is today. First, it would necessitate a little original thinking and planning for better merchandising of milk products from those areas where grade-A markets were not immediately available.

All of us know that the real food value of milk is not in its approximately 4-percent butter fat. Further, there are many other foods that could be substituted for the fat itself and at much less cost. As you know, the real food value of milk is in the serum solids or the solids, not fat. It is here that the dairy industry has its greatest opportunity to develop markets for milk products so that the consumer will get the benefit of the full food value of milk and not just that represented by the small percentage of fat in the milk.

The dairy farmer actually finds nothing in the expansion of the margarine industry that will deprive him of any income. For that reason, I cannot see why anyone who is really interested in dairying will take that part of whole milk which produces the very lowest revenue for the dairy farmer and expend their energy fighting for that product which contributes practically nothing to the net profits of the dairy industry and absorbs the energy of the dairy industry that should be directed toward a better marketing of milk in more profitable forms where the consumer can get the full nutritive value of the product.

The real interests of the dairyman lies in expanding his markets for fluid milk, for cream, for cheese, and for other use except butter.

Today, many dairymen who do not sell a single pound of milk to be used for the manufacture of butter have been deceived by the butter propaganda to the point where they are all excited about margarine. To them, I say that the margarine fight is giving the dairy industry generally a black eye and that, furthermore, the advertising given margarine is increasing its use among those able to buy butter, far more than outright repeal would do. Repeal would only enable the low-income family which can never buy much butter, to buy more margarine in its most acceptable form. This dog-in-the-manger attitude of the butter industry has actually driven thousands of butter customers to use margarine.

Now, as to the facts about the effects of repeal of the Federal antimargarine laws upon the dairy industry:

During recent years the butter market has been reduced approximately one-third. Total butter production, in 1940, was 2,240,000,000 pounds. In 1946, it was 1,505,000,000 pounds. It rose somewhat during 1947—to 1,638,000,000 pounds—but the recovery was temporary and the decline set in again in 1948, when approximately 1,530,000,000 pounds were produced. Has this decline in butter production resulted in the disruption of the dairy industry? Has it been accompanied by a loss of revenue or by a reduction in total milk production? Finally, has it resulted in the slaughter of great numbers of cattle?

The facts speak for themselves fairly and convincingly. There has been no disruption of the dairy industry as a result of the decline of butter production. Total cash receipts to farmers from the sale of dairy products has increased from $1,345,000,000 in 1939 to more than $4,000,000,000 in 1947. There has been of course, a rise in prices generally during this period, but this general price rise cannot possibly account for the proportionately much greater increase in dairy income. Two other factors are important: First, dairy farmers were diverting milk from the low-price butter market to the higher-priced whole-milk markets; second, total milk production, far from decreasing as a result of the decline in the butter market, has increased from 106,792,000,000 pounds in 1939 to approximately 116,300,000,000 pounds in 1948. In general, milk production has steadily increased since the turn of the century. Butter has declined.

And finally, there has been no total decrease over this period in the number of dairy cattle despite the butter lobby's charges. Records of the Bureau of Agricultural Economics show that in 1939 there were 24,600,000 dairy cows and heifers 2 years old and over. On January 1, 1949, there were 24,450,000.

Dairymen and livestock breeders generally agree there is a certain periodic cycle in the numbers of cattle and livestock. Thus in 1945 the number of milk cows and heifers 2 years old and over had reached 27,770,000. This represented an increase of more than 3,000,000 since 1939. But, butter production during the same 5-year period had declined more than 500,000,000 pounds. In other words, from 1939 to 1945—butter production decreased approximately 23 percent while total number of dairy cattle increased 17 percent.

But from January 1, 1945, to January 1, 1949, there was a decrease in milk cow numbers from 27,770,000 to 24,450,000. Butter opponents of margarine-tax repeal have used this short-period comparison to buttress their contention that the number of dairy cows, already low, would be further decreased by tax repeal.

More objective dairy economists point out that there are several factors which account for this decline in numbers of dairy cattle over such a short period. One is the cycle previously mentioned. This was at its height late in 1944. The downward swing began that year and apparently still continues, although it should be noted that the most recent report indicates a slight increase in the number of heifer calves. This natural development has been accentuated by another factor, a rapid increase in meat prices, which has made it profitable for farmers to dispose of their less productive dairy cattle for slaughter. Reduced feed supplies accompanied by high feed prices curtailed livestock feeding operations in many cases and prompted marketing for slaughter and closer culling of herds. Labor costs were up, and dairying, particularly farm butter manufacture, requires considerable farm labor.

There is absolutely no evidence nationally that declining butter production was responsible for this reduction in dairy cattle numbers. As a matter of fact, the decline in total butter production during these 3 years was less precipitate than it had been during the previous 5. In 1945 national butter production was 1,701,000,000 pounds. In 1947 it was 1,638,000,000 pounds, a decline of approximately 4 percent. Total dairy cow numbers, on the other hand, declined a little more than 9 percent.

TABLE I.—*Milk cow numbers, 1919–49*

COWS AND HEIFERS, 2 YEARS OLD AND OVER

Year:	*Number*
1919	21,545,000
1920 (low point)	21,455,000
1921	21,456,000

A careful study of the relationship between total milk production and number of dairy cattle in recent years reveals a

significant trend. Total milk production, 1939 compared to 1948, increased 9.5 percent. The number of dairy cattle decreased but 0.6 percent. This emphasizes the fact that the least efficient dairy cows have been culled and the better producers retained, and that more efficient farming practices have been followed. Average production per cow has reached new heights. In our over-all economic picture, this is a healthy factor, and this greater efficiency has powerfully offset the recent decline in cows.

Thus we see that even if margarine tax repeal should fulfill the asserted fears of the butter interests and result in a drastic decrease in butter production, there is no reason why cow numbers should thereby decrease. Indeed there is no reason why they should not be increased to a level sufficient to fill all our whole milk needs in the future.

The reasons for the decline in butter production are simple. The dairymen get less for milk sold for the manufacture of butter than for any other use of his product.

The figures tell the story clearly and illustrate the basic reason for the decline in butter production. Tables III and IV indicate the dairymen's return for milk sold as butter and for other uses during 1947, as compared with 1940.

The composition from margarine has had little, if anything, to do with this drop in butter production.

For example, per capita butter consumption in the United States decreased 6.4 pounds between 1940 and 1946, but during the same period per capita margarine consumption increased only 1.4 pounds. Between 1946 and 1948 per capita butter consumption decreased only 0.1 pound and margarine increased 2.4 pounds.

Nineteen hundred and one was the last year in which yellow margarine was sold in the United States without the payment of special discriminatory taxes. In 1901 the American people consumed 19.9 pounds of butter per capita and 1.6 pounds of margarine. The imposition of the tax on colored margarine did reduce its consumption sharply. In 1902 the use of margarine fell to 0.9 pound per capita and for the following 3 years it was almost consistent at 0.6 pound per capita—or just about one-third of what it had been; but how did this ruin of the margarine industry help the dairyman? His butter sales dropped from 19.9 pounds in 1901 to 17.5 pounds per capita in 1902 and never in any year since that date has the per capita sale of butter equaled the amount sold in competition with yellow margarine. In 1948 they were only 10.5 pounds per capita.

The truth is that, in spite of all the claims of the butter interests that the increased sale of margarine would ruin the dairy industry, there is absolutely no proof that the sale of more margarine would in any manner reduced the sale of butter, itself. These prophets of disaster simply assume a great break in the use of butter and from that point they begin to conjure up all kinds of evil. Before we accept their conclusions, let us look a little more closely at their assumptions.

TABLE VI.—*Margarine and butter per capita consumption, 1924–48*

Year	Margarine	Butter
1924	2.0	17.9
1925	2.0	17.9
1926	2.0	18.4
1927	2.3	18.0
1928	2.6	17.4
1929	2.9	17.2
1930	2.6	17.2
1931	1.8	18.0
1932	1.6	18.1
1933	1.9	17.8
1934	2.1	18.2
1935	3.0	17.1
1936	3.0	16.4
1937	3.1	16.4
1938	2.9	16.4
1939	2.3	17.3
1940	2.4	16.9
1941	2.7	16.3
1942	2.7	16.4
1943	3.7	12.9
1944	3.6	13.4
1945	3.8	11.8
1946	3.8	10.6
1947	5.0	11.2
1948 [1]	6.2	10.5

[1] Preliminary.

Source: Bureau of Agricultural Economics.

The implications of these figures are clear. Many people stopped buying butter. Some new people bought margarine. But, actually, in 1946, the American people consumed 5 pounds per person less total table fats than they had consumed in 1940; in 1948, 2.6 pounds—to their definite nutritional loss. The basic reason for this was nonavailability of any more butter, and legal restrictions on the amount of margarine that could be made. If this still substantial gap in today's supplies of table fats, compared to prewar supplies, means anything, it is that there is much room for both butter and margarine. Butter production has not suffered from margarine, because supplies are still insufficient even by the comparatively modest prewar standards. Butter production has declined because whole-milk markets have demanded the milk.

The most striking evidence that this is so comes from the dairy industry itself. Not only has there been expressed the growing feeling that butter is no longer an adequate base for milk prices, but challenging statements have been made by leaders in the industry. I refer particularly to the editorial in the American Milk Review recently which concluded, after rehearsing the salient points of the strong case for unrestricted margarine, that by antimargarine legislation "the butter industry and the dairy industry as a whole is doing itself more harm than good. We believe that only by aggressive salesmanship, only by enlightened and dynamic merchandising, can this be accomplished," the editorial finished.

In 1940, about 37.60 percent of all milk went into butter; in 1947, only 22.84 percent.

Furthermore, the data graphically indicates that certain areas and States have little interest in the butter-margarine controversy as such. Wisconsin, for example, sold 15.60 percent of its milk for the manufacture of butter in 1940; in 1947, less than 2 percent—1.94 to be exact—of Wisconsin's milk went into butter.

Another indication of the same tendency is the continuing small amount of butter in commercial stocks of dairy products. As table VII shows, on January 1, 1949, of all dairy products in storage—in terms of milk equivalent—butter comprised only 18.69 percent. This is of special interest in view of the claim still made that butter is the basic hold-over outlet for milk. On January 1, 1949, butter ranked third as a dairy storage item. American cheese ranked first, with 35.07 percent, milk equivalent; evaporated milk was second, with 25.26 percent. This, too, is part of a trend that has been going on for some years, and is also reflected in the trend in the milk marketing areas away from butter as a base price factor in fixing class I milk prices—a movement signalized by the adoption of a new economic price base altogether in the Boston area last year, more recently by the abandonment of the butter-powder base in favor of a stipulated price in the Philadelphia area last August, and by demands from New York State groups that the same action be taken in that major milk-supplying area. It is not necessary to go into the various ramifications of this subject to demonstrate emphatically that butter is simply not the major dairy outlet, base, interest, balance wheel, and so on that it is claimed to be by a small group whose eyes remain fixed to this declining aspect of the otherwise flourishing dairy industry.

TABLE VII.—*Commercial stocks of cream and specified manufactured dairy products (milk equivalent) as a percentage [1] of total commercial holdings, 1947–49*

Month	Butter	American cheese	Other cheese	Evaporated milk	Condensed milk	Dried whole milk	Cream	Total

Finally, we have the experience of other countries which have no restrictions upon the sale of yellow margarine. Any comparisons of value must, of course, include countries which have substantial dairy industries.

Table VIII gives the experience of four countries. All have important dairy industry and, for that matter, important margarine industries.

If there was anything in the contention of the butter interests that repeal would destroy the dairy industry in this country, why did repeal of the prohibitions against yellow margarine not destroy the dairy industry in the countries mentioned?

There is no answer to this question save the obvious one that repeal of the Federal antimargarine laws will work no injury upon the dairy industry. It is a question whether repeal would do any real damage to the butter industry. Regardless of what would happen in this field, I think it is time for the dairy industry to shake the butter industry off its back and let butter stand on its own.

TABLE VIII.—*Per capita consumption of butter and margarine in countries where yellow margarine is sold*

	1938		1946	
	Butter	Margarine	Butter	Margarine
	Pounds	*Pounds*	*Pounds*	*Pounds*
Netherlands	11.9	15.7	11.9	15.4
Belgium	16.8	16.2	14.3	16.3
	1936		1946	
United Kingdom	25.0	8.7	10.7	15.3
	1939		1946	
Sweden	24.0	21.0	34.0	8.0

Coming a little closer home, let us look at the actual effect of State law against the sale of yellow margarine. Have such laws ever put a dollar in the dairyman's pocket? The facts are that South Dakota has State laws prohibiting completely the sale of yellow margarine. In

South Dakota butterfat brought only 74 cents in 1947, the last year for which I have the figures. In the adjoining State of Nebraska the State law prohibits the sale of yellow margarine only in public eating places, and butterfat brought 79 cents in 1947. Passing to Nebraska's southern neighbor, we find that Kansas has no State laws against the sale of colored margarine, but in Kansas the dairy farmer received an average of 83 cents for his butterfat in 1947.

Similar comparisons can be drawn all over the country. Iowa adjoins Missouri; Iowa prohibits the sale of yellow margarine, and her dairy farmers got only 82 cents for their butterfat in 1947. Their neighbors in Missouri, who met the competition of yellow margarine, got 90 cents for their butterfat during the same period.

In the Northeast, New York prohibits the sale of yellow margarine. New York dairymen got only $1.24 for butterfat, while it brought $1.60 at the same time in Rhode Island where yellow margarine is legally sold.

If we go back for a period of years we find the same kind of relation between prices in States that prohibit the sale of yellow margarine and neighboring States which have allowed its sales. Taking the 10-year period 1938 through 1947, we find the following:

States prohibiting sale of yellow margarine	Average price per hundred, 4-percent butterfat basis	States allowing sale of yellow margarine	Average price per hundred 4-percent butterfat basis
Wisconsin	$3.84	Indiana	$3.92
Iowa	3.28	Missouri	3.60
South Dakota	3.06	Kansas	3.32
New York	4.96	Rhode Island	6.40
Wyoming	3.88	Texas	4.68
Utah (10 cent tax)	4.28	Nevada	4.44

To say the least, these figures certainly do not establish the validity of the butter peoples' assumption that the sale of yellow margarine hurts the dairy industry.

What the dairy people need is some dynamic salesmanship. Who is there to say that pure fluid milk is not a better beverage than any soft drink? What if the dairy industry would devote its energies to opening new markets for its most profitable outlets rather than spending its energy and money in trying to keep somebody else's product from competing on equal terms for consumer acceptance? Coca-Cola has shown what can be done, simply by pushing one's own product. If the dairy people would share in the most profitable part of the great American market, let them devote themselves to the expansion of the market for fluid milk. Let them make their product attractive, dependable, and acceptable. Let them seek new outlets, and let them see that the consumer is supplied at a fair price. Even with today's high prices any eating place should sell milk for 10 cents per glass and show a handsome profit as well as pay the producer far more than he can possibly get by the sale of milk for butter, even when butter is 90 cents per pound.

Were I not an outsider, I would be tempted to suggest to the dairymen that they possibly need some new leaders—some leaders who were interested in the welfare of the men who feed and milk the cows, rather than simply in the least profitable of all outlets for milk. And I might even wonder if the butter people themselves might not do better to spend more time on the merits of their own product than to expend so much effort to keep the public from buying the product the public wants.

Our National Parks

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. HELLER. Mr. Speaker, one of my constituents recently called to my attention a matter which I should like to pass on to the Members of the House of Representatives.

Having enjoyed many excursions during the summer to the national parks, this constituent was shocked when she recently read an article in the latest issue of Harper's magazine which describes the neglect of the parks.

I join with my constituent in the hope that in the not too distant future, adequate appropriations will be made for the benefit of our national park system.

The article referred to follows:

THE EASY CHAIR

(By Bernard De Voto)

Last September a forest fire started on the side of a peak in a remote part of Yosemite National Park. Before it was put out it had burned more than 10,000 acres of timber (in the direction of the Hetch Hetchy Reservoir, which helps to supply San Francisco with drinking water) and had cost the United States $90,000 for fire-fighting alone. The scar of that fire will disfigure Rancheria Mountain, in one of our most famous scenic areas, for many years. Ugliness is an intangible, so its cost cannot be appraised, but the manager of a privately owned scenic resort would understand that forest fires depreciate his capital assets. There is no way of appraising tangible but indirect costs of the Rancheria fire, either, but they amount to a good deal more than the cost of fire fighting. As taxpayers, you and I have to pay for damage done to property of which as citizens we are coowners.

Why did this fire do so much damage? Because it took 24 hours, instead of 2 minutes, to get word to park headquarters that fire had broken out. Why did it take so long? Because it had been impossible to keep park service telephone lines in distant areas in good condition, and the one that led to this area had been forced out of operation. How could such deterioration occur in one of the most publicized places in the United States? Well, the National Park Service simply did not have enough money to maintain all of the Yosemite telephone system in working order.

Olympic National Park contains 11 public camp grounds. Minimum public health standards cannot be maintained at any of them. Nowhere in the park are facilities for water supply or garbage disposal adequate. Some toilets have decayed and collapsed. Many individual camp sites are no longer usable because tables and fireplaces have deteriorated beyond repair. Some bridges in the park road system have had to be condemned; some still in use are dangerous. All the roads are degenerating. Some of them are regularly flooded because revetments, culverts, and drainage ditches cannot be kept in repair. Some roads have had to be closed; long stretches of others are being undermined. The park service cannot get money to take care of them.

Death Valley National Monument has an area of nearly 2,000,000 acres. The permanent force which the Park Service is able to assign to it consists of a chief ranger, three rangers, and a naturalist. They cannot even man the checking stations at the three main entrances (where visitors register so that they can be kept track of in a desert that is sometimes dangerous) because they must patrol the main roads, clean up camp grounds, and serve as janitors for toilets. The water lines—important in a desert—have deteriorated so badly that they may have to be shut off. The Park Service has about 70 buildings in the area, some of them shacks originally erected in the understanding that they were to be temporary. The maintenance staff consists of one man and there are practically no funds to buy materials for repair. Three hundred miles of highway built more than 15 years ago have been so neglected that they cannot be repaired, they must be reconstructed. There are no funds for reconstruction.

At Grand Teton National Park a visitor must arrive at a public campground before 2 p. m., or there will be no room for him to camp. The park has at last got all its trails open for the first time since 1941, but cannot afford to put them in first-class condition. The Tetons attract mountain climbers and they are not all experts, so that half a dozen times a season one of them must be brought down from some precarious place on a stretcher. The park is so understaffed that when this happens from 50 to 75 percent of the whole ranger force has to abandon everything else in order to do the rescue job.

At the Statue of Liberty, a national monument, most of Bedloe's Island is closed to the public because the walks cannot be put in proper condition. Many of the 500,000 people who visit it every year wonder aloud why there is no historical and interpretative museum; one has long been planned but there are no funds to build it. Beginning in March there is a season when moisture condenses on the inside walls and the water drips on the visitors. A heating system would obviate this unpleasantness, would make the place comfortable in cold weather as it assuredly is not now, would protect the health of the Park Service personnel, and would prevent deterioration of the symbol that means the United States to hundreds of millions of people. A heating system cannot be installed—No funds.

Three years ago, administration of the Lake Textoma recreational area was turned over to the National Park Service. There were practically no visitors then; last year there were 2,500,000. And last year the Service could hire only three men for sanitation and clean-up work. It has no administration building; most of its office furniture has been borrowed from other Government agencies. It brought 45 trucks and automobiles to the area; 80 percent of them are more than 8 years old and the maintenance crew consists of 2 men, who must also take care of roadmaking equipment. The

rangers who patrol the lake have one motorboat, a 10-year-old, 31-foot cabin cruiser that can travel 12 miles an hour. When someone seems to be in a hurry about drowning, the rangers borrow a private boat, if one happens to be at hand.

These are just specimens. The National Park Service administers 180 areas all told: National parks, national monuments, historical parks and sites, military parks, recreational areas, parkways. From many parts of this large system similar reports have been made to me. Lack of adequate funds is causing one of our great public possessions to deteriorate at an alarming rate—while the demands put on it by the public are rapidly increasing. Many requirements of the public cannot be satisfied. Measures necessary to safeguard their health and comfort cannot be taken. Much irritation has to be inflicted on them. Many campgrounds are overcrowded and new ones cannot be built. Enough guides cannot be hired; enough maps and interpretative pamphlets cannot be printed; enough lectures cannot be given. There are not enough museums. Many people come away from parks without seeing what they wanted to because enough guided tours cannot be provided.

Meanwhile much of the physical plant is wearing out: Telephone systems, sewage systems, power systems, warehouses, living quarters. Construction machinery and even firefighting equipment are deteriorating for lack of proper buildings to keep them in. Nearly everywhere roads are going to pieces. Some have had to be closed. Some trails for hikers, riders, and mountain climbers have also had to be closed, either because they could not be maintained in a safe condition or because they could not be patrolled.

No Government bureau is more efficient, more dedicated, more hard working, or public spirited than the Park Service. The national park system, an American invention, is the admiration of other governments, many of which send representatives here to study it. The national parks and the areas integrated with them by the Service were set apart for the preservation of priceless scenic beauties, natural spectacles, and historic and prehistoric sites. But the appropriations for the Service are simply not large enough to enable it to do the full job that Congress and the people have charged it with. Meanwhile the eventual, the once avoidable, bill for deterioration goes on pyramiding. Meanwhile also irreparable damage has been done.

Take another consequence of the lack of funds. Morning Glory Pool was once one of the most beautiful places in Yellowstone Park but it finally revolted against the debris thrown in it by tourists, blew its crater, cleaned itself out, and is now just any spring, its beauty much diminished. The mere presence of a ranger is a deterrent to such vandalism as that which destroyed Morning Glory Pool but a ranger who cannot be hired deters nobody. So a large case of exhibits at the foot of Bright Angel Trail, in the Grand Canyon, was destroyed last year when somebody broke the cover, a sheet of plate glass so large that it had had to be carried down the 8 miles of trail by manpower since it could not be packed on mules. Grand Canyon also lost a heavy oak cross in the Shrine of the Ages, where religious services are held. The superintendent reports his inability to maintain mounted binoculars at observation points. So does the superintendent of Vicksburg National Military Park. The plate glass over a big panoramic picture diagram in Rocky Mountain National Park was twice broken and each time the exhibit was ruined by subsequent rains; cabins high on the side of Long's Peak where first-aid equipment is stored are regularly broken into and the contents scattered. At Zion Canyon merrymakers climbed to a ledge and rolled boulders down on the toilets, destroying them. At Scotts Bluff National Monument the observation station, with its bronze markers and orientation map, has been destroyed repeatedly. At the birthplace of George Washington an ancestral brass candlestick was stolen. At Gettysburg a sword was pried out of a statue and stolen and in 8 years souvenir hunters have carried away 403 parts of cannon.

Souvenir hunters operate wherever they are not watched, chipping off pieces of stalagmite at Mammoth and other caves, chipping rock or wood from other famous sites, pocketing small objects in historic buildings, wrenching off hardware, digging up bulbs, and stealing signs. Directional signs are also favorite targets for people who like to throw stones, and those that are made of wood are popular for fuel. So are picinic tables. And, of course, everywhere people write and carve their names. Various pioneer registers, rock faces where historic figures recorded their passing or where Indians left their signatures in pictographs, have been defaced by tourists who carved their own names over the original ones. There are names and initials in masonry, plaster walls (of famous Spanish missions, for instance), and original woodwork that can never be restored. Lipstick, which is almost irremovable, has recorded the peripatetic love of Joe and Polly nearly everywhere, from the Statute of Liberty to the cone of Old Faithful. A common job of park rangers, who should be serving the public, is removing obscenities from the walls of toilets. An evangelical sect painted its warnings of the wrath to come along Going-to-the-Sun highway in Glacier National Park.

Vandalism is largely a crowd phenomenon. If there were enough rangers to patrol the most crowded, most spectacular, and most famous places, and enough others to catch and prosecute a few offenders, most of it would never occur. But the Park Service has not got funds to hire them.

I cannot treat here the privately owned areas inside parks or on the approaches to them or to historic sites, holdings that must be bought for the sake of protection and decent dignity. Many are hideous or vulgar, some are slums, none or subject to any kind of regulation. Certain areas of the actual battlefield of Gettysburg are beginning to resemble Coney Island; a real-estate development locally called "Slabtown" is enroaching on that of Yorktown.

Two years ago the Director of the Park Service estimated that all the private holdings inside the national parks could be bought for $20,000,000. Last year Congress made the first appropriation toward that highly desirable end: $200,000. At that rate the parks will be complete in a century, if nobody raises his price. We may also remember that the Park Service's plans for development—construction of new roads and trails, opening up of important areas now inaccessible, relocation of buildings, construction of new camp grounds and other accommodations for the rising number of visitors, increase of recreational and educational facilities—these plans, developed by experts over many years, move exceeding slow and in many places are at a standstill.

In short, the National Park Service is failing to perform some of the functions assigned to it and is able to perform but few of them as well as it wants to. Great expense caused by unwise economy measures is piling up and will eventually have to be met. A good many areas that are among the favorite vacation places of the American people have become shabby or worse, and some of the wilderness, scenery, and natural spectacles in which the public takes the greatest pride are threatened with disfigurement and even destruction. Almost the entire national park system is already overstrained by the steadily increasing number of people who use it. The situation is shocking; it is becoming critical.

How did it come about? In two ways—the national park system is an inadvertent victim of the war, and the postwar attendance has been greater than the prewar set-up, even if it had been fully restored, could have handled. During the war only a skeleton force was maintained, and shortages in material and labor made proper upkeep impossible. Since the war the service has never been able to get back to full strength and has never been able to catch up with the job. This, not to mention the new parks that have been created and the new historic sites and recreational areas that have been turned over to it.

Service personnel, attendance, and congressional appropriations were in a fair equilibrium in the late 1930's, but by 1941, the last prewar season, the service was already stretched to the utmost, trying to spread appropriations wider than they could be made to go. In 1941 it had 5,104 permanent employees and 21,000,000 people visited the parks. Last year, 1948, it had 2,393 permanent employees, less than half as many, and visitors numbered 30,000,000, an increase of 40 percent. The cost of hired labor, material, supplies, and machinery has risen just as much for the service as it has for the country at large.

For the current fiscal year the Park Service appropriation is $13,000,000, of which less than five million is for roads, trails, and physical improvements. The Director has estimated that to rehabilitate the parks and equip them to meet the increased demand would require $145,000,000 for building and rebuilding roads and another $115,000,000 for other needed developments. (The latter figure is considerably less, all told, than the increase—not the total sum—in appropriations granted in a single year to the Army engineers for nonmilitary projects.

Unlike some Government bureaus, the Park Service has no enemies, so far as I know, in either Congress or the Bureau of the Budget. The disastrous situation has arisen through sheer disregard—concentration first on the war and then on defense measures has diverted everybody's attention elsewhere. Congress does not sufficiently realize what has been happening, the service does not and cannot set up such a bull-roaring as the Bureau of Reclamation does when someone threatens to reduce its appropriations, and anyone who wants a reputation for guarding the Treasury can always demand why anything must be done about Old Faithful while the promised 12-foot channel for barges in Goose Creek remains undredged.

Nevertheless the situation does exist, it is disastrous, and it must be met. Elementary business principles require us to protect a large national investment. The satisfaction of the millions who use the parks must be assured. And the declared will of Congress and the people, that the areas administered by the Park Service be kept inviolate for succeeding generations, must be carried out. The Park Service must have a lot more money than it has been getting. And it must begin to get it at once.

German Reparations

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mrs. ST. GEORGE. Mr. Speaker, a letter appeared in the New York Times under the date line of February 21, on German reparations, by the Society for the Prevention of World War III.

The following answer seems to me to deserve publication:

The letter on German reparations by the Society for the Prevention of World War III, published in the New York Times, should be answered, since there are several misleading statements in it.

The society pictures continuation of the German plant-dismantling program as one which the "highest officials in the Government, including Mr. Marshall" support, while the report of the investigative Humphrey committee, appointed by ECA, is discredited in advance since, says the society, the Humphrey committee included members who "belong to industrial organizations which have had financial interests in the heavy industries of Germany."

The facts are that Mr. Marshall's reaffirmation of support of the reparations program, probably referred to here, was made almost a year and a half ago, at the time Bizonia was set up and before any serious reappraisal of the economic effect of the program had been made. Mr. Marshall's support was based on the argument that we had committed ourselves at Potsdam to this program. Since that time, a flood tide of opposition to the dismantling program has mounted. This opposition has been based in main on these grounds; (a) The Potsdam agreement, in which we pledged 25 percent of west zone reparations to Russia, has been invalidated by the many instances in which Russia has violated the terms of the agreement, and by her failure to comply with her side of the pledge to give back in the form of specified commodities 60 percent of the value of the reparations shipped to her. Three years after Potsdam, Russia had fulfilled less than 9 percent of her return obligations; (b) the tremendous financial assistance to Europe through the ERP, not anticipated at Potsdam, has many times over compensated for the loss of promised reparations matériel; (c) the reparations program, insofar as it has involved the dismantling of plants essential to the immediate recovery of western Europe, has created bottlenecks which threaten to bog down the whole recovery program; (d) the dismantling of those German plants most potentially competitive with the export trade of the other 16 nations which constitute the Marshall-aid countries, means the liquidation of Germany's ability to pay her own way in the future, and thus creates a permanent burden upon the American taxpayer.

The American people are not even yet, I fear, sufficiently familiar with the extent of the economic havoc worked upon the European recovery program through the dismantlings. As long as a year ago, the UN Economic and Social Council explained in its Survey of the Economic Situation and Prospects of Europe. "Among steel products there are particularly acute shortages of certain items for which production capacity is insufficient to meet requirements. Sheets, tin plates, and transformer and dynamo sheets are outstanding examples of products for which production will, in the next 2 years, fall seriously short of requirements; the shortage is estimated at 500,000 tons in the case of sheets * * * and 50,000 tons in the case of transformer sheets for the 24 months' period." Yet it is reliably reported that the Wolf Steel Investigating Committee, appointed last spring by the joint congressional committee, the Army, and the ECA, to reappraise the dismantling of German steel works, found that estimated capacity on the dismantling list included 100,000 tons of sheets, and 50,000 tons of transformer sheets.

There has been a continuous outcry for dynamo and transformer sheets to meet desperate power shortages. The August Thyssen works at Hamborn in the Ruhr have a capacity of 50,000 tons of electrical sheets annually, and represents half of the remaining capacity for electrical sheets in Bizonia. Yet the Thyssen-Hamborn works have been closed since the war, and are slated for total dismantlement.

The importance of such dismantled equipment to the claimant countries at some distant date (time required to dismantle, move, and reerect a steel plant elsewhere has to be reckoned in years, not months), is exploded by the further statement of the UN Security Council that "the new sheet mills which will come into production from 1950 onward will rapidly eliminate the deficit in sheets, and the same is true of transformer sheets and seamless tubes." In other words, the German steel-making equipment is not urgently needed in other countries.

The Thyssen works had not even been bid upon at last report. On the contrary, the greatest need Europe will have had for this equipment has been in these years immediately following the war, before the new plants of the other countries have been completed. There appears little doubt that in their willingness to see this vitally needed equipment lie idle and then suffer years of dismantling and reassembling, certain countries placed the importance of eliminating future German competition thuswise above the discomforts of living through an intermediary period of acute shortages requiring pump-priming from America.

It is inescapable that those plants which figure in past years most heavily in Germany's export trade, and hence possess greatest ability now to earn dollars for needed imports, are precisely those plants which have been placed on the doomed list by those countries fearful of future German competition. Conspicuous among these are, for instance, the Deutsche Edelstahlwerke, Germany's leading producer of high-quality steel, and the Rheinische Roehrenwerke, with a capacity to produce annually 100,000 tons of oil pipe. World shortages in oil tubular goods have caused world prices of steel tubes in the gray market to rise from $185 per ton to double that amount since the end of the war. At the time its dismantlement began this past fall, Rheinische Roehrenwerke was in possession of a contract, O. K.'d by the Dusseldorf Joint Export Import Agency, for 65,000 tons of desperately needed oil pipe for the Texas oil fields. Yet on September 13, this plant was placed by the British on the "rush" dismantlement list.

It is quite certain that the society is unable on the basis of evidence now available to make out a case for the dismantled equipment being used more economically in the other nations to which it has been allocated. Our State Department quite frankly states that it has almost no knowledge of what has happened to this equipment since it left Germany, or what contribution if any it has made to the economies to which it was given.

That part of the society's letter should not go unanswered, either, which implies that opinion on the German reparations is divided between "those in high government" who support, and those "interested groups" which oppose, the program. The society will have a hard time making out a case against such a large section of American opinion opposed to the present dismantling program as represented in the A. F. of L.; the CIO; the United Mine Workers of America; the National Association of Manufacturers; the National Grange; the United States Chamber of Commerce; the leading Protestant weekly, the Christian Century; the Commonweal, influential Catholic weekly; Herbert Hoover; the Administrator of the ECA; the Joint Committee on Foreign Aid; and the House Select Committee on Foreign Aid (the Herter Committee).

One further point, since the society has impugned the motives of the Humphrey committee, a great deal of interest is being manifested on Capitol Hill these days as to the motivation behind the society's continuous virulent attacks upon any form of German revival. It constantly harps upon the danger of the German "Colossus." Yet, in contrast to over-all recovery gains made by the rest of western Europe, which show an average level of industrial production higher than prewar, western Germany has recovered to only 78 percent of her prewar level of industrial production, and this figure ignores the important fact that 10,000,000 expellees have been herded into this area since the end of the war. Per capita German recovery is far lower.

The society's continuous campaign of vilification of the postwar German approaches in venom the genocidal, anti-Semitic attacks of Julius Streicher during the Third Reich. The society's slick-paper bulletin, which is distributed monthly all over the country, including copies sent to every Member of Congress, must run into hundreds of thousands of dollars of cost. All these hundreds of thousands of dollars are devoted to putting across policies which envisage the Morgenthau goat pasture at its worst. If carried out, they would be an insurance that Germany would in the end turn to Russia in sheer desperation. Nothing could be better calculated to serve the interests of the follow-traveler group. The American people have a right to push the society very hard regarding its honest intentions.

JOAN S. CRANE.

ALEXANDRIA, VA.

Results of the Marshall Plan

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks an interesting and informative letter received from Hon. James R. Nolen, of Boston, Mass., of certain impressions of his as a result of a recent trip to Europe:

BOSTON, MASS., *March 25, 1949.*

Hon. JOHN W. McCORMACK,
Majority House Leader, United States Capitol Building, Washington, D. C.

DEAR JOHN: I have just returned after a business trip that took me into Norway, Sweden, Denmark, Holland, Belgium, France, England, and Ireland. Although I am just an ordinary, plain citizen, I feel that I should write you my impressions of the effect of our Marshall plan, as I observed it in the countries I visited. I was fortunate to associate with all classes in these countries and therefore, my opinion probably has some of the reality that may be accounted to a cross-section observation.

There is no question but that the Marshall plan has been and is the instrument that has temporarily blocked the advance of communism into western Europe. The people of all of these countries which I visited are grateful to America for the aid that has been given them and they are determined to make every effort to rehabilitate themselves quickly and relieve us of the economic burden the Marshall plan has put upon us. Their spirit is remarkable and their effort is extreme.

The Norwegians and the English are outstanding in the effort they are making for rehabilitation. So that they may use our Marshall dollars for the purchase of basic equipment that will make possible an industrial recovery, they have accepted restrictions that are so severe that they are practically without many of the necessities of life. They have not only forgotten the luxuries, but they are making a sacrifice which includes a

lack of food and a lack of clothing and this whole spirit of sacrifice is sustained by the hope that they have in the United States of America and that hope has been signified to them by our Marshall plan. If this hope were now taken from them, in my opinion, nothing could stop the indoctrination of western Europe by communism.

In the other countries there is no food shortage because they are essentially agricultural. However, there is a clothing shortage everywhere and there are no luxury items anywhere. Moreover, there is no appreciable black market to be found in any of these countries. The people have accepted restrictions because they are certain that an honest, determined effort together with American help, will save democratic government for Europe and the world.

I know, of course, that you are in sympathy with the administration's policy for a continuance of ECA. Yet, I think that you can be inspired in your effort by the knowledge that the ordinary man and woman in Europe not only appreciates this program, but is demonstrating that appreciation in an all-out sacrifice for democracy. If Congress now saw fit to curtail or reduce the appropriation for Marshall aid, it would be a signal to communism for a renewed effort to capture the sympathies and to control the governments of western Europe. It would also signify to the peoples of western Europe an American surrender to tyranny and oppression. For the sake of freedom, liberty, and the security of our children, I sincerely hope that the Marshall aid will be continued and later extended into a basic, free economy embracing all of our democratic governments.

Sincerely yours,

JAMES R. NOLEN.

Government Propaganda

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of February 6, 1949:

GOVERNMENT PROPAGANDA

A government dedicated to guiding and assisting the individual from cradle to grave (or some portion of the span of life) inevitably grows like a tree. Twigs shoot out from the trunk of government, and as twigs grow into strong limbs, new branches shoot out from them.

The tree feeds on tax revenues, which are moneys taken out of the pay envelopes of the governed, the men and women who work in industry, business, and professions.

As the tree grows and nurtures a splendid foliage of Government employees, an ever-increasing amount of food for the tree is necessary. Taxes go higher and higher. The men and women who work and feed the tree have increasingly less and less left for themselves.

Moreover, the jobs on which the people work to nourish the tree are gradually but inevitably starved by it, for the multiplying employers of government do not themselves produce food, clothing, automobiles, and houses. They drain off a part of what the working population produces; they live off the workers.

The capital, too, which builds factories and develops new and better products is undergoing a shrinking process, as more and more of the money that the working population could be saving is drained off in taxes.

Investment of the capital that remains is also discouraged, as the claims of the tax collector, which come first, render new industrial and business projects more perilous. The chances of success become continuously more doubtful.

And all the while a secondary, insidious, and evil activity of government is growing like suckers on this tree of government. It is the activity of government propagandists, an activity in which scores of governmental agencies embracing thousands of employees dissipate tax revenues pouring Government doctrine into established channels of information.

The House Subcommittee on Publicity and Propaganda of the previous Congress found that in 1946 above 42,000 Federal job holders devoted full or part time and spent $75,000,000 in this manner. The number of employees and the amount so spent was sharply above previous years, and are greater today.

And besides, we can be sure that the House subcommittee only scratched the surface. It is extremely difficult to learn exactly to what extent this propaganda mill operates as employees by the thousands engaged in it are concealed by titles that are innocent and misleading.

The primary design of the work of these propagandists is to justify their own existence and that of the bureaus to which they are attached. The House subcommittee singles out, as the most flagrant examples, propaganda in behalf of socialized medicine, national health insurance, and compulsory military training.

The newspapers, radio, and the moving pictures, no matter how vigilant their guard, disseminate much of this propaganda as news by virtue of the circumstance that it is cleverly and deeply disguised as official information emanating from legitimate and responsible arms of government.

An idea of the quantity of this insidious propaganda that comes out of governmental bureaus is gathered from the Public Printer, who estimated that in a single week bureaucrats sent to the New York Times alone enough material to fill 800 columns.

Of course, the caution of the editors of the Times prevented most of it from getting into print. And this only emphasizes the enormity of the Federal waste, as huge and expensive governmental agencies were spending thousands of dollars in tax money for no purpose at all.

The Army has been assailed on factual evidence for the manner in which it has spent its funds in a public campaign for universal military training by going to the people in behalf of its ambitions instead of working out military problems with the proper committees of Congress and officials of the executive branch of the Government.

It is the duty of Congress, which alone has access to the facts, to cut out of the Federal Budget the enormous sums that are now being used by useless employees in bamboozling the taxpayers. And this spreading tree of government will never be trimmed until the fallacious notion that government can and should support and guide the individual from cradle to grave is crushed.

The way we're going now, the tree will sooner or later fall on us.

Time Has Passed Since Potsdam

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. KELLEY. Mr. Speaker, under leave to extend my remarks, I am including an editorial comment, Time Has Passed Since Potsdam, from the March issue of the Priest. The viewpoint as expressed here is one that no doubt will be interesting to many people who are concerned about our relationship with Franco. I have read it with a great deal of interest and enlightenment.

TIME HAS PASSED SINCE POTSDAM

Some of us have gone all out for Franco; some have gone all out against him; not surprisingly and perhaps as an inevitable result, some—despairing of the truth in a welter of charge and countercharge—have grown cautious, reserving judgment. Notwithstanding the old, old canard about the Catholic Church in politics, Catholics as usual have been divided.

The Partisan Review thinks it has discovered two Catholic parties, a pro-Franco Jesuit and an anti-Franco Dominican faction. More relevant and more credible evidence of the principle in dubiis libertas is the correspondence section of our own Catholic papers. Not too long ago a professor of philosophy fairly shrieked at the editor of the Boston Pilot: "Your cowardly and treacherous editorials against General Franco prompt me to call for public prayers on the part of loyal Catholics for the protection of the most gallant soldier of Christ in our times." We were delighted at the editor's calm rejoinder, "Franco is an item of current history. He is not an article of faith. The emotional partisans of General Franco and his equally emotional critics, both so passionately sure of their 'facts,' add heat to the discussion but small light." Amen!

Of course, it would be far more pleasant to dodge the controversy, to return to the proverbial Ivory Tower, to shut out the din of battle, and to recapture the calm of a bygone era. But Spain has again become a vital issue; again the problem turns about the question of communism, this time not within but without her borders.

SICKLY THOUGHT

For that matter, there is no dodging controversies today; less than ever before it would seem is there a place for splendid isolation. Your so-called liberal, whose liberalism consisted largely of inaction born of indifference or confusion, who was kind toward your opinion only because he was so unsure of his own, that liberal finds himself in a quandary today, caught between opposing forces which are terribly intolerant of his indecision. The modern Hamlet, his native hue of resolution sicklied o'er with the pale cast of thought, is a shocking anomaly. The times demand action and brook no delay. Specifically—something must be done about Spain.

Taking our cue from the newspaper quoted above, we shall try to consider Franco and Spain. Franco and Spain together, as an item of current history. Going still a step further, we shall try to consider them from the viewpoint of what is now erroneously called realism, that curiously and today characteristically immoral attitude (certainly not our own) which would divorce politics from right and wrong, making political success an end in itself. We shall range ourselves on the side of the many modern Machiavellians for whom might makes right. We shall somehow, with an effort and a wrench, twist ourselves round to that alien position where mass bombing of civilians and total warfare become legitimate because expedient, where anything goes provided only it really goes.

HUE AND CRY

What brings up this whole discussion is the rather solid evidence that our State Department is seriously considering a change of policy with regard to Spain. A hue and cry have immediately gone up from the same old gang against any relaxation of our defacto hostility—that hostility which has led us to

keep Spain out of the United Nations and has cut her out of the provisions of the Marshall plan. We shall make only one easy assumption: that a government which has sponsored a Marshall plan for the democratic rehabilitation of the world (and is even now pondering a north Atlantic alliance linking us with Canada, Great Britain, France, Belgium, The Netherlands, and Luxembourg for a concerted defense against "aggression") thereby manifests its full awareness of the immediate threat of communism and the immediate need of help from anti-Communist nations. We shall ask only one question: Why, instead of alienating her, haven't we enlisted the aid of Spain?

FACING FACTS

We must first of all keep in mind that it is the proud boast of the realist that he above all others can appraise a situation precisely because he uncompromisingly faces facts. Because he is unafraid of facts, utterly without presuppositions, particularly of a theological nature, he alone can dig them out. As Thomas Huxley once said of his ideal scientist, he sits down before nature like a child. But, of course, his conclusions are utterly mature.

What are the facts he has gathered on Spain? Here unfortunately we find not fact but the most arrant kind of wishful thinking.

He would erect standards for this poor little country which can barely be met by our own. He tends to forget that Spain would be poor, Franco or no, as many small nations are poor today; that Spain as well as many another country has fallen victim to international factors far beyond her control. He talks as if replacing Franco would restore her to the splendors of the days of their Catholic Majesties Ferdinand and Isabella, whom, of course, he also dislikes, but whose power and prestige he feels his dream government would easily rival.

He appears to know nothing of the perilous course of pre-Franco history in Spain; and, where the trained observer fears to tread, he rushes in with light-hearted abandon. Yet Spain has rarely had good government. Even in the immediate past, of which he seems unconscious, the Moroccan War which brought about the dictatorship of Primo Rivera and the eventual if delayed abdication of Alfonso, was set in a context of confusion, rivalry, class hatred, oppression, and suppression. There have been not one but three military dictatorships in Spain since 1868.

SPANISH FAILURE

Sir Samuel Hoare in a book he calls Complacent Dictator speaks aptly of "the Spanish failure to achieve community of thought and action between the government and the people." Carlton Hayes agrees on the basis of his experience that the supreme individuality of the people is "especially in political matters a vice. They simply couldn't or wouldn't think alike or act together. And everyone was so sure he was right that he was apt to be intolerant of dissent or opposition. Compromise was alien and unpopular."

Providence, it seems, did not intend good government for Spain. Or at least that is the tenor of the following story Spaniards tell on themselves.

When Ferdinand III, who had freed Seville from the Moors, died in great repute, legend has it that, bypassing purgatory, he went straight to heaven where, further favor, he was asked by our blessed mother what he would wish for beloved and loving Spain.

"A fine climate."

"Granted," said our lady.

"Brave men and women."

"Granted."

"A fertile soil."

"Certainly."

"Oil, wine, and garbanzos."

"Granted."

"And a good government."

"Nay," replied the gracious lady at this juncture, "that boon can never be conceded, for then the very angels would leave heaven for your country."

But granted that our realist is ignorant of the past, where does he get his current information? Mostly from what Rita Hume calls "the 10-day journalist," who rushes in and out with startling revelations. Her own experience was that persons most qualified to do so will not venture a guess about what will happen next. She points out, too, but not to him, "Spain is a country of such diversified elements that anyone who comes here with a specific ax to grind can find almost anything to support his opinion."

LOUD-MOUTHED PUBLICISTS

He often enough falls victim to these axgrinders, too. So almost did the American State Department itself, its delicate negotiations through Carlton Hayes being nearly wrecked by the loud-mouthed publicists at home. Our then Ambassador writes, with understandable regret, of a group of journalists who compensated in noise and fury for what they lacked in numbers and knowledge.

Their sources? First, Spanish Republican or Communist refugees who wanted the United States to help them get back to power in Spain; second, American Communists and fellow travelers who took their cue as usual from Moscow. One group served narrow factional aims, whatever their merits; the other was a tool of Russia; neither paid attention to vital American and Allied interests.

This is indeed a strange kind of realism. For our part, we prefer Franco's.

Looking at the matter calmly and dispassionately, it now appears that, call him whatever else you like, Franco knows a thing or two about the political world. If it be objected that he is nothing but a hard-headed, hard-hearted politician himself, let it be remembered that we are talking about realism.

We can now see that Franco enjoyed clearer vision; that more than one man hailed prematurely as a great leader. During the height of the hostilities, he outlined for Carlton Hayes the theory of three wars: One was between the Allies and the German-Italian bloc, towards which he claimed a kind of neutrality tipped in our favor; and another, the Pacific war, he hoped we would win, and in this he was willing to cooperate; the third, he said, was the defeat of the Axis, for communism would seek to dominate the entire continent, would dominate it de facto. Oh, my prophetic soul!

IN GOOD FAITH

To this, Hayes, as almost any one of us then, answered that democracy would prove to be the eventual choice of the great majority of the masses of people everywhere. No answer at all, for it was predicated, though in good faith, on the assumption that a postwar world was to have the blessed privilege of self-determination.

True, the Atlantic Charter regarding the United States and Great Britain expressed what it called a desire to see no territorial changes that do not accord with the freely expressed wishes of the people concerned. This turned out to be no desire at all but, rather, what theologians call a velleitas, a vague prompting, an ineffectual low-grade wish that dies aborning.

The Charter likewise proclaimed its respect for the right of all peoples to choose the form of government under which they will live, a fine high-sounding bit of froth equal in effect to the complementary piece got off by Stalin: "We have not nor can we have such war aims as the seizure of foreign territories or the conquest of other peoples. * * * We have not nor can we have such war aims as the imposition of our will and our regime on the Slavic and other enslaved peoples of Europe who are awaiting our help. Our aim is to help these people in their struggle for liberation from Hitler's tyranny, and then to accord them the possibility of arranging their lives on their own land as they see fit, with absolute freedom." (Yes, he really said that.)

FABULOUS EMPIRE

It was likewise Franco, the realist, speaking when he tried (in vain) to enlighten Sir Samuel Hoare about the prospects of a Germany occupied by Russia: "Will not the major peril to the Continent and England be Sovietized Germany which will distribute to Russia its secrets and manufactures of war, its engineers, its technicians and specialists, giving them the opportunity to create a fabulous empire from the Atlantic to the Pacific?" As for central Europe, he predicted only too accurately, "We can be sure that communism will reign supreme in these nations after the occupation."

Perhaps he foresaw also the disastrous Morgenthau plan, implying in his warning, "If Germany did not exist, Europeans would have to invent a Germany, and it would be ridiculous to think that Germany's place could be occupied by a federation of Lithuanians, Poles, Czechs, and Rumanians, which would be rapidly transformed into a federation of Soviet states." Space forbids our quoting Hoare's reply, the expression of his vapid optimism. One can scarcely credit him with believing it himself. (The major part of the text of both letters, Franco's and Hoare's, can be found in the Brooklyn Tablet for October 23, 1948.) In any case, Franco has called the turn.

But by sheer dint of repetition, the American people have concurred in ignoring both him and their own real interests. They have gone so ridiculously far that they have even looked with the aid of foreign (not rose-colored but red-colored) glasses at Spain as a threat to their own welfare. When a quarter of the world's population and a fifth of its territory have fallen under the sway of Russia, they lie awake nights worrying about the threat of tiny Spain to the world's peace. And one might ask, What peace?

THE RAGING BEAR

It is the old story of the elephant and the mouse—the elephant afraid of the mouse but munching his peanuts in elephantine calm while a raging bear tears down the main tent. Of course, it doesn't make sense, except to the few behind the scenes who are managing the whole farce.

If there is any reason to be afraid of Spain (and there is, on second thought) it is rather in spite of Franco. The question that should rather exercise us is, what would happen to Spain without Franco? Prescinding entirely from the issues involved in discussing his own status as dictator or liberator or what, one should not fail to consider the alternative of a Spain without him and his established government; the important word being "established."

Some argue, it seems to us most naively, that, on the supposition of Franco's entire wickedness, he is furnishing a great impetus to communism; that to liberate Spain from Franco would be the first and greatest blow against communism. This is to suppose, in an innocence whose beauty is marred only by its complete lack of a sense of reality, that social justice would then be allowed to flourish all unimpeded and that all the natural and supernatural virtues of the Spanish people would immediately spring into full and luxurious bloom.

Has one never heard of the manifest strategy of communism throughout the rest of the world, of Red intervention and Red infiltration and Red double-dealing and dissimulation? The political vacuum produced by the downfall of the de facto government would be filled immediately.

LENIN ON SPAIN

Russia has always wanted Spain. Guided by the type of realists we have described already, Russia knows what Spain is worth

in the over-all picture of world politics. It was Lenin who first predicted, as he looked over the map and drew up his blueprint for conquest, "There will be the next Communist state in the world." And it would have been if our puny partisans had had their way. Russia, he saw, cannot control the Aegean and the Mediterranean without first controlling Spain and Gibraltar.

Shall we be less wise? We have already sought vigorously to offset Russia in Turkey and Greece; shall we now throw away the most important part of our international defense by neglecting Spain? Shall we shut in our own face the gateway to western Europe? Spain actually managed to remain neutral in the last war, though her neutrality was an impediment to Hitler (as Goebbels raved) and an advantage to us (as Churchill recently confessed); but she cannot remain neutral in the event of another.

Said Jim Farley a few months ago: "It is not a matter of whether we agree with the politics within Spain. It is simply a matter of whether Spain is essential to the security of the democracies, and any military man will tell you that it is." There is realism in a few words.

Said Mr. Churchill, "It is a great mistake to allow legitimate objections to Franco and his form of government to be a barrier at this time between us and a country with whom we have many natural ties. It is folly." Here is realism again, mixed in with a little rueful hindsight, for Churchill adds, "It is true that I agreed at Potsdam that Spain should not be invited to join the United Nations, but I said that in hope of obtaining full Russian cooperation in a real instrument of world peace. Time has passed since Potsdam and we have now a different relation with Russia." Different indeed in one sense, but in its fundamentals absolutely the same; only now we are more generally inclined to recognize how things really stand.

As we write this, the reports reach us that Spain is in dire need of help. Leigh Hunt claims that "The entire Spanish economy is on the verge of collapse." We are rather inclined to credit him, for his reputation has never been that of a pinko. We are more inclined to credit his recommendation that immediately we instigate a policy of economic cooperation, that Spain should be offered Marshall-plan assistance, that we help her to help ourselves.

A Sea-Level Panama Canal

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. BLAND. Mr. Speaker, under unanimous consent, I extend in the Appendix of the CONGRESSIONAL RECORD an article contained in the March 1949 issue of the Pacific Marine Review, entitled "A Sea-Level Panama Canal," by Brig. Gen. Hans Kramer, United States Army, retired. The article is as follows:

A SEA-LEVEL PANAMA CANAL

(By Brig. Gen. Hans Kramer, U. S. Army, retired)

(EDITOR'S NOTE.—The maritime industry is affected so greatly by any development at the Panama Canal that we are publishing a series of articles on various phases of the proposal for a sea-level canal. The first article appeared in the February issue and dealt with the dredging problem. A third article, dealing with commercial traffic and toll rates, will appear in an early issue.)

The present Panama Canal is highly vulnerable to destruction by sabotage or bombing. To appreciate that fact fully requires some understanding of the Canal's physical characteristics. Without going into a detailed word picture, let me recall to your minds for purposes of this discussion that the principal elements of the Canal are twin flights of locks at each end, a deep cut through the Continental Divide and a large artificial summit lake perched at 85 feet above sea level. Gatun Lake, the summit pool, is dammed in by earth embankments, by the concrete lock structures and by the steel lock gates. Enemy attempts to destroy these vital elements were envisioned at the time of their construction as taking the form of naval gunfire, sabotage, or attack and demolition by land forces, and the Canal was well planned to meet those threats. However, with the advent of the airplane as a military weapon, the security of the Canal became obviously inadequate. But not until 1939, shortly before World War II, was work undertaken to augment the resistance of its vital structures and that work was designed to protect against attack by the largest aerial bombs then in production. It seems almost superfluous to point out that the 1939 degree of protection is now considerably out of date.

These shortcomings were substantially the basis for action by Congress in 1939 in authorizing the construction of a third set of locks for the Panama Canal. The new lock chambers were to be somewhat larger than the old locks, 1,200 feet long and 140 feet wide, compared with 1,000 x 110. The lock walls and other protective features were designed against 2,000-pound bombs. The new locks paralleled the location of the present twin locks, but at a third to a half-mile away for the sake of security against aerial attack. Construction of the Third Locks project was started in 1940 but suspended early in 1942, after an expenditure of about $75,000,000, because of more pressing war needs for labor, materials, and shipping. I was identified with that project, first as construction engineer and later as supervising engineer in full direct charge.

As we all know, World War II and postwar developments have brought us face to face with astounding advances in the gentle art of military destruction, particularly aerial bombing with conventional weapons as well as with atomic weapons. By "conventional weapons" I mean any weapon loaded with explosives not of the nuclear-fission type. Such weapons could be aerial bombs, aircraft rockets and cannon, guided missiles, or robot planes loaded with nonatomic explosives, that is, with explosives of the familiar TNT type.

These newer and much greater threats to the security of the Canal, together with its actual and potential inadequacies to accommodate traffic, caused Congress late in 1945 to direct the making of a comprehensive review and restudy of the means of increasing the capacity and security of the Panama Canal to meet future needs of interoceanic commerce and national defense. Those studies were conducted under the direction of the Governor of the Panama Canal who submitted a full report thereon to Congress late in 1947. It was my privilege to be a member of the board of consulting engineers which served in an advisory capacity in the preparation of that report. The Governor also relied heavily on expert technical advice from all branches of the armed services, the Atomic Energy Commission, and civilian sources.

Let me condense for you, from the official report on those studies, the consensus of expert opinion as to the potential effect of conventional weapons and atomic weapons.

First, with respect to the existing canal: Any conventional weapon could damage or destroy the locks and the larger bombs could breach Gatun Dam to such an extent that Gatun Lake would be drained. The loss of Gatun Lake would close the Canal for a period of one or more years, depending upon the volume of water lost and the amount of work necessary to repair the damaged structures. If the atomic bomb is used, a single direct hit could demolish the twin-lock chambers or breach Gatun Dam so that Gatun Lake would be lost and the Canal rendered useless. Contamination and lingering radioactivity from the atomic explosion, even though a vital structure were not physically damaged, would seriously impede and probably preclude functioning of the operating personnel, and therefore of the Canal, for a long time.

Next, with respect to an armor-plated lock canal. (I don't mean armor-plated literally, but a lock canal designed for maximum security with all the resistivity to destruction that could feasibly be built into such project.) I won't take the time to outline the structural treatment for such a canal but will merely ask you to bear in mind that as a lock canal it will still involve and be dependent upon a summit pool or lake. A determined attack with large conventional bombs on either the locks or retaining dams could bring about drainage of the summit lake and resultant uselessness of the canal for several years. A concentrated attack with two atomic bombs could render the canal useless for 4 years or more.

Finally, with respect to a sea-level canal: The canal channel could not be obstructed by debris or slides produced by any known or foreseeable weapon of conventional type. (The vulnerability of the auxiliary structures of a sea-level canal is not a governing consideration, as I'll bring out later.) The most serious damage to a sea-level canal would be from a surface or underground explosion of an atomic bomb in the canal channel or on its banks so as to close the channel with radioactive earth and rock debris. Such a block could be removed with dredges and other equipment specially shielded against the effects of radioactivity. It is estimated that traffic could be resumed within a matter of weeks, or within a few months, at the most, if adequate personnel and suitable equipment were available to start clearing operations. Despite contaminated water in the canal, vessels could navigate through it safely once a passage had been opened through the crater debris. Even complete destruction of the shore facilities by atomic bombing would not stop ships from using a sea-level canal because its operation, in extreme emergency, is not dependent on shore assistance. Furthermore—and this is a very important consideration—a sea-level canal has no vulnerable essential operating elements that might be subject to sabotage.

Thus, the Governor concluded, no lock canal but only a sea-level canal would meet the future needs of national defense.

The Governor's report goes on to present an up-to-date review, reestimate and analysis of the time and cost of construction, as well as all other pros and cons, of 30 alternative isthmian canal routes at locations all the way from the Isthmus of Tehauntepec in Mexico to the Altrato River in Colombia. Both lock-type and sea-level-type canals, either of which would meet the future needs of interoceanic commerce, were considered for each route where both were at all feasible. (Lock dimensions were projected as 1,500' by 200' to meet the Navy's requirements as against the present lock dimensions of 1,000' by 110'; channel dimensions would be 600' wide by 60' deep as against Gaillard Cut's 300' by 42'.) Comparative estimates show that a modernized lock canal, with maximum protective features, would cost $2,300,000,000 at Panama and $3,500,000,000 at Nicaragua,

the next cheapest; a sea-level canal would cost $2,500,000,000 at Panama and $4,600,000,000 on the Altrato route in Colombia, the next cheapest. These alternate figures cover only the costs of engineering works. They do not include the tremendous costs—and I can't give you those figures—of duplicating defense installations.

Today, fortunately, our engineering technique—as is true of all other scientific and technical processes—has the advantage of new tools and methods for dealing with problems that were almost unfathomable a generation ago. We now employ exploratory drilling to develop subsurface geological conditions in great detail and we have the relatively new science of soil mechanics for analyzing and testing earth materials and predetermining their behavior.

With the application of the modern techniques present-day engineers are able to design safe slopes for excavation in various materials and various heights. For example, a 500-foot cut in the weakest Cucaracha material would be designed for a slope of 1 on 9—that is, 1 foot rise for every 9 feet horizontally. The estimates of quantities to be excavated are all based on such very conservative slopes. It would be foolhardy, of course, to assert that even with such conservative designs there will be absolutely no slides in excavation. But it is safe to say—and I say this advisedly—that the hazards of slides will be minimized and that the engineers are justified in being confident of a successful job.

The second engineering problem is that of flood control for a sea-level canal. If large uncontrolled flows from tropical floods were to enter the canal, they would cause velocities and cross currents that would be objectionable and dangerous to navigation. Fortunately, there are favorable physical possibilities for taking care of those floods by means of a comprehensive system of diversion works and regulating reservoirs. This is a perfectly orthodox, workable, and effective engineering treatment of the flood-control problem.

THE TIDES

Now for the problem of tidal currents. This is one of the most debatable as well as intriguing aspects of the sea-level proposal, but fortunately it is not one of vital significance in the over-all plan. Even the man in the street asks: "What about the difference in tides on the Atlantic and Pacific sides? The Pacific tide has a range of about 20 feet while the Atlantic range is only about 2 feet. Under extreme conditions of spring tides—which fortunately prevail only about 2 percent of the time—the tides can create a maximum head or difference of level of about 11 feet which, in turn, would generate a current through the sea-level canal with a maximum velocity of about 4½ knots, or about 5 miles per hour. By way of comparison let me give you the corresponding data for other sea-level waterways. The Suez Canal experiences maximum currents of 3½ knots; the Cape Cod Canal experiences maximum currents something over 5 knots.

The practical question is, Would the Panama Canal be unduly hazardous for navigation with currents up to 4½ knots? On that question, frankly, there are some honest but not serious differences of opinion. But there is no difference of opinion on the conclusion that such currents could and would be navigated if and when they had to be, even though they might be undesirable for regular, normal operations. Accordingly, the engineering treatment is, in a sense, a compromise. The solution consists of tidal-regulating works which would provide control so that ships would not encounter canal currents greater than 2½ knots. At times when the tides would create velocities greater than 2½ knots in an open canal it would be closed off and the difference in level negotiated by means of a tidal lock. At times when the tidal current would be less than 2½ knots ships would go straight through a navigable pass in the control works instead of using the tidal lock—this is common practice on the Ohio River.

The point may be raised that a sea-level canal containing a tidal lock such as I've described is really a lock canal. That may be true as a matter of precise definition. But it is not true in the sense in which I have used the term "lock canal" in this talk, namely, a canal in which locks serve to negotiate a difference in land elevation by creating and retaining a summit lake. In that concept of a lock canal, as I've pointed out, the lock structures and lock gates are the solar plexus. If they are knocked out in any way, the lake drains and the canal is useless. A tidal lock, on the other hand, is merely a convenience to navigation; as a structure it is not vital to the rest of the canal. If the tidal lock or any other elements of the tidal control works are knocked out in time of war, any obstructive debris would simply be cleared away; ships would use the navigable pass exclusively, whatever the currents; and the canal would function as an open waterway without the help or need of any tidal regulation. I can assure you that that condition of functioning is anticipated in realistic planning and that it is entirely acceptable to the Canal's most important wartime customer, the Navy.

An obvious prime requisite in the plan of conversion is that the conduct of the work must involve an absolute minimum of interference with normal canal traffic. That requirement is met, in the first instance, by the alinement of the sea-level channel not being identical with that of the present canal; the new canal is designed to eliminate the sharp angles and short reaches that are bothersome to navigation in the existing canal. By virtue of that fact, the old and new alinements will coincide or overlap at only a few points so that the bulk of the new work can be carried on without regard to canal traffic in much the same way that highway construction on a bypass does not affect traffic on the old route except at the junction points.

DREDGING

The next feature involves some unprecedented but entirely feasible, though perhaps spectacular, procedure. It consists of digging down to grade and section; that is, to 60 fee below sea level and 600 feet wide, for the entire length of the new alinement while the old canal remains as is; that is, with the water in Gatun Lake and in Gaillard Cut remaining at elevation 85 feet above sea level and the small Miraflores Lake remaining at elevation 54. As I've mentioned, roughly a billion cubic yards of material will have to be excavated in that operation, material that varies in character from ultra soft muck to super-hard rock. Roughly a third of that volume will be removed by floating dredges, with hydraulic suction dredges handling the softer materials and bucket ladder dredges, of the type used in the California gold fields and internationally for ore dredging, handling the harder digging. These dredges will be designed and built (in fact, they're already designed [see February Pacific Marine Review—Editorial]) to dig to a depth of 145 feet below the water surface, so that they can dig the new channel to minus 60 while floating at plus 85. These machines will be veritable behemoths but entirely practicable with American know-how. While the dredges are working in the wet, so-called dry excavating equipment—that is shovels and draglines, but of king size—will be chewing away at the other two-thirds of a billion cubic yards of excavation. That equipment will work in the dry, behind cofferdams and natural plugs which will separate their sites and keep back the water from the old canal. However, these land machines will load their spoil into scows so that the excavated material will be taken away afloat rather than on wheels. The whole excavation process is, of course, the key to the entire job. Housing construction to accommodate the workers will precede the excavation; flood-control structures, tidal regulating works, and other appurtenances will be built concurrently with the excavation.

Even with all the work I've just described, we're not quite done with the conversion. We've dug a completely new channel, but the part dug in the wet still has water standing over it 85 feet above sea level. However, in the process of the excavation rock plugs have been left in place at the two ends, Gatun and Pedro Miguel, and a temporary steel dam for Miraflores Lake has been installed in the tidal lock. Also, that portion of Gatun Lake that has become separated from the parent body by virtue of the flood-control diversion embankments has been drained down. So now all the lock culverts, as well as the outlets of Gatun Dam and all other flood outlets, are opened, and the water remaining in Gatun Lake and in smaller Miraflores Lake starts to rush out in two directions to reach its level with the two oceans. Meanwhile, tunnel outlets that have been preexcavated but blanked off in the rock plugs are blasted open to accelerate the outflow and finally the temporary steel dam is rapidly dismantled section by section and the remaining mass of the plugs is blasted and obliterated. That entire draw-down procedure would take about 7 days and the Canal would have to be closed to traffic during that week of conversion. But that week could be anticipated and scheduled to suit traffic conditions and it would constitute the sum total of traffic interruption.

The complete job that I've outlined with such broad strokes of the brush would involve an estimated expenditure of about two and a half billion dollars ($2,483,000,000 is the actual engineering estimate). To attain optimum efficiency and economy it is programed to be performed in 10 years' time, with an average annual appropriation of $250,000,000 during that period. Employment estimates indicate a peak labor force of about 40,000. All in all, it will be a tremendous job but no more so, relatively speaking, than our initial "Big Ditch." I venture the assertion, with due humility, that the sea-level job, like others that have challenged our engineering profession and construction industry, can be creditably performed.

So much for the major engineering aspects of converting the Panama Canal to sea level. There still remains the overriding matter of strategic policy which has been dramatically highlighted in recent months by various political disturbances in Central America. Renewed concern for the security of the Panama Canal has brought forth proposals for new canal construction at alternative locations, on the premise that "it is unwise to carry all your eggs in one basket." However, that adage is utterly fallacious when applied to defensive strategy in respect to the Panama Canal because guaranteed interoceanic communication is not a matter of carrying eggs but of protecting baskets. Let me assure you that the Panama Canal sea-level recommendation submitted to Congress by the Governor of the Panama Canal was critically reviewed at the highest levels of United States strategic policy. That review led to the firm and irrefutable conclusion that the Panama Canal converted to sea level would be America's stoutest and safest basket and that our canal security lies not in trying to spread our defense to cover several canals but in having the staunchest canal obtainable and concentrating on the defense of that one.

North Atlantic Military Alliance

EXTENSION OF REMARKS
OF

HON. VITO MARCANTONIO

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. MARCANTONIO. Mr. Speaker, pursuant to unanimous consent granted me today to extend my remarks, I include herein a speech delivered by the Honorable Henry A. Wallace on Sunday, March 27, 1949:

On this Sabbath afternoon, I would like to speak to you of the peace of the world. The peace I am talking about is the one-world peace which Wendell Willkie and Franklin Roosevelt proclaimed. But today those who stand for one world based on mutual understanding are looked on with suspicion.

Four years ago this spring Roosevelt died—and every spring since there has been a determined drive against world peace. The latest is the North Atlantic military pact.

A farmer friend of mine said the other day: "What is this North Atlantic Pact? I hear over the radio that you are against it. Why? What is this pact anyway?"

My reply was very simple. I said this pact really means that we are going to send billions of dollars of tanks, planes, and guns to arm western Europe. My farmer friend is a veteran of the last war—and promptly replied: "How long will it be before we have to send men?" Ideologies mean nothing to him. Russia means nothing. But getting into war again means everything. This man had never talked politics or policies with me until the North Atlantic Pact came up. When he gets worried it means nearly everyone in the United States is worried.

Americans are rightly worried. They sense that the pact, as one writer has put it, is "superseding a one-world organization with a military alliance looking toward the possibility of war in a world split in two."

The first victim of the pact is the United Nations—the one hope for peace.

When Secretary of State Acheson claimed the pact is an essential instrument for strengthening the United Nations, the New York Post called this the most absurd of all claims, and one columnist called it nauseating. For the clear intention of the pact is to take the place of the United Nations. Mr. Bevin and Mr. Churchill have been more frank about this than Acheson. The pact sets up an Atlantic council with a military staff committee in Europe with more power than the UN Security Council. The Atlantic Pact substitutes the divided nations for the United Nations. The military men and the diplomats who put over the pact try to justify it as a regional arrangement under the United Nations Charter.

What kind of region is it that covers everything from the Aleutian Islands in the North Pacific to Africa? Can this hard dividing of the world into two armed camps bring peace?

Stripped of legal verbiage, the North Atlantic military pact gives the United States Army military bases up to the very borders of the Soviet Union.

Recently a national conference was held by the Federal Council of Churches of Christ in America, representing all the Protestant denominations. These Protestant leaders said about the North Atlantic Pact, "No defense alliance should be entered into which might validly appear as aggressive to Russia, as a Russian alliance would undoubtedly appear to us."

As we ponder these words and think of the bases which the Atlantic Pact will set up so close to Russia we cannot afford to forget Russian history. In the last 25 years they have been attacked by foreign armies five separate times. Does anyone imagine that, as they stare across their borders at our jet bombers and our cannon, calm visions of peace will be born in their minds? If we apply Christian behavior and try for a moment to put ourselves in their place the true meaning of the Atlantic Pact will be clear to us. Supposing the Soviets had military bases on the Mexican border? Th Canadian border? On Cuba? Could the treaty which put guns in our faces be called a pact of peace? Has it ever happened in the world that the massing of armed men brought peace? Has it not always brought war? To call the Atlantic Pact a peaceful thing is hypocrisy and nothing less—and I raise my voice against it so that you may know it for what it is.

But there are many people of honest heart who say we must run the terrible risk of war which the Atlantic Pact involves because of the threat of Russian aggression. Is there really such a threat?

Even Mr. John Foster Dulles, leading Republican spokesman on foreign policy, recently said, "I do not know any responsible high official, military or civilian, in this Government or any government, who believes that the Soviet state now plans conquest by open military aggression."

If Mr. Dulles is right, and I think he is—if the Soviet Union does not plan military aggression—then to surround them with military bases becomes an act of aggression on our part. The road to peace is not lined with military bases. The road to bankruptcy is. This is what Roosevelt said at Buenos Aires in 1937. Roosevelt said of nations who spend their money and men in creating vast armaments:

"We know that nations guilty of these follies inevitably face the day either when their weapons of destruction must be used against their neighbor or when an unsound economy like a house of cards will fall apart."

For 150 years our reverence for the wisdom of George Washington has barred this country from entering into entangling European alliances. Now the Atlantic Pact plunges us into the maelstrom of European politics. It forces us into a European alliance against a European power. It moves the heart of America right up to the muzzle of the first gun fired in Europe. And it commits us, without the right of deciding for ourselves, to another European war. No honeyed words from the State Department can cover up these facts.

This new pact forces all Europe to rearm. That continent, only half recovered from the most terrible war in history, is now to fling away its final hope. We impose on Europe again its ancient curse—the massive standing army. A rearmed Europe can never be self-supporting. The pact will impoverish Europe.

What will it do to the United States? According to Hanson Baldwin, of the New York Times, a new lend-lease program will cost the American taxpayer three to four billions a year over a 4- or 5-year period. These billions added to our present $21,000,000,000 cold-war program means that we will not build houses in America, or hospitals, or schools. Former Secretary of Defense Forrestal spelled all this out last December when he said that the American people will not only have to give up domestic reforms but tighten their belts and lower their living standards in order to rearm the world. The Congress has already shown its readiness to vote vast sums for armaments while it defeats civil-rights legislation, waters down rent controls, fails to repeal Taft-Hartley or provide relief for growing numbers of our unemployed. Both parties in Congress voted for a bigger Air Force—but cut low-cost housing.

And all this we do and fail to do in the name of surrounding with armies a nation which no responsible statesman claims either can or will launch a military attack beyond its borders.

But perhaps the worst disaster created by this new pact is not a material one at all. This pact will place us upon a war footing, and all these millions of Americans who still wish to question, who still wish to seek peace, will be reviled in the press, and attacked in the pulpit. As I speak to you, the National Council of Arts, Sciences, and Professions is holding a Conference for Peace in New York. This council includes among its members some of our most brilliant men of science and of the arts.

To try to stop the trend toward war, it invited to our country scientists and artists from every country in Europe. But our State Department, using a very clever and very dishonest method, has barred practically all the non-Communist delegates from western Europe, so that you would think that only the Communists were interested in the conference; so that you could easily be led by the nose to damn outright any American who participates in it. The English press is highly indignant over the barring of Dr. Bernal, who was decorated only 2 years ago by our own Government for distinguished services during the war.

The State Department is trying to bully everyone who dares ask questions and demand answers. Since when have our policy makers become immune from criticism? The administration thinks it has presented you with an accomplished fact that you will not dare to question or contradict. I say to those very clever men that this democracy takes no marching orders and writes no blank checks. No group of men has the right to lead us into war in the name of peace.

There is one particular result of this new pact which has received little notice in the press. It is this: If it now becomes American policy to rearm Europe, are we going to rearm Germany, too?

It was German militarism and German aggression against which we were forced to fight two wars in a single generation. It was German militarism and German aggression that launched all the carnage of the twentieth century. Our military men have already decided to place arms in the hands of the Germans, the very same Germans, unchanged and unrepentant, against whom we fought. Under the Atlantic Pact, the Nazis will have uniforms again. These will be of American and Australian wool, dyed a new color perhaps, but it will be German dye, and the men under the cloaks will be Germans. As the military expert of the New York Times writes, "Many of our military observers advocate a plan frankly based on the eventual utilization of Spanish and German manpower." Spain too, of course. Because it was Franco who in November of 1944 first proposed in a letter to Churchill the western alliance against Russia. Yes, Franco's Spain—the creature of Hitler and Mussolini—Fascist Spain is in our camp because she hates Russia just as she hates Protestantism. Does anyone imagine that the Japanese, with their Emperor intact, his admirals and generals at his side, will not be next on the list of American allies?

But this is practical politics, is it not? I would like to be present when its fine points are explained to the ghosts of our dead on the islands of the Pacific and the shores of the Rhine. I say to you that it is not practical politics—it is impractical and immoral politics, and the worst of it is, it is politics that can lead only to disaster. The proof of this is plain in China, Greece, and Turkey.

What we did in China is exactly what the Atlantic Pact would have us do in Europe. We spent some $6,000,000,000 to arm the Chiang Kai-shek government. We trained

whole divisions of its army and its entire air force.

What happened?

Whereas the country was only partially Communist when our military aid began, today it is all but completely Communist. And the irony is that the Communist armies are in great part using American equipment that they captured—or sometimes bought—from Chiang's armies.

But our American luck was with us in China. For there was no pact binding us to Chiang Kai-shek. If there had been a treaty like the Atlantic Pact covering the Far East, we would now be at war with Russia on the Asiatic mainland.

As it is, we have wasted billions in the money of American taxpayers. More important, where once the name of America was held in highest honor, the Chinese people now regard us as their enemies. Millions of them hold us responsible for feeding the fires of a civil war that might have been avoided. Even American businessmen, whose very essence is conservatism, plead through the press for a hands-off policy in the internal life of China.

Is this what we want to happen in Europe? Our policy there is the same. Will the results be different? For months the Russians have been saying to all the world that they are willing to sit down with us to talk out our differences. Stalin himself has invited President Truman to do this. The State Department and the White House brushed him off. The Atlantic Pact, this war alliance, is their reply. Forget, for a moment, the effect upon Russia. What does it mean to the man on the street in Paris, in Rome, in London? Does it raise our prestige? Does it make us seem like victims or aggressors?

An Oxford professor, Max Belloff, wrote the answer in the New York Times magazine. "It is perhaps not fully realized in the United States," he declared, "how instinctively Europeans still recoil from the idea of a new war. However exasperating the attitude of Soviet Russia may be, talk of a showdown which can only mean a shooting war, seems to Europeans no answer."

Of course it is no answer. No answer for Europeans, and no answer for Americans. It was no answer in China, and it will be a catastrophe for America in Europe. We are asking the people of Europe to become American mercenaries and to turn their countries into battlefields once again. We are saying to them, "Set aside your dreams of a better world; take this gun and stand ready. Watch your fields grow over with weeds. Set your tractor plants to turning out tanks again. Come out of school and take up arms. We have run out of ideas. We know nothing but war as a way to peace. You must follow."

We made that speech in China, friends. But the Chinese did not follow. We are making that speech in Greece, and there are now more Greek rebels in the hills than there were when we started to wipe them out.

Perhaps the military and Wall Street men who took over American foreign policy when Roosevelt died do not understand how this failure is possible. No more did King George understand how the farmers of New England could withstand his trained regiments in 1775.

In the same way, Adolph Hitler swore he would be in Moscow 5 weeks after launching his attack.

All these men were right, from a purely military point of view. But the military point of view, which is responsible for ideas like the Atlantic alliance, never understands one thing—one angry peasant, fighting for what he believes, is worth a company of mercenaries who fight only because fighting is forced upon them. The spirit of the people decides wars, and that spirit cannot be produced, like guns, in arms factories.

The Atlantic Pact, if ratified by the Senate, will put the people of western Europe into American uniforms. Amid their cathedrals, we will pitch the tents of armies. We will crush their hope of recovery under the burden of our arms.

What do we offer them in return?

Nothing of the spirit but anticommunism. That was not very strong meat for the Chinese to feed on, and they turned their faces from it. When the first blow is struck, is it reasonable to think it will be different with the Europeans?

Neither the United States and Britain nor the United States and western Europe can carry on the burden of the world by themselves. Down that path hatred accumulates. We don't have to choose Russian communism but neither do we have to embrace the British Empire, Roman Catholicism or monopoly capitalism. There is a fifth choice which is the concept of old-fashioned Americanism moving to bring about a sense of responsibility for the welfare of the whole world.

It is not our obligation to save any vested interest. A Churchill may come to our shores in March of every third year to stir us to action in shouldering burdens which Britain no longer can carry. A Catholic prelate may try to convince us that the one choice is between Rome and Moscow. Corporation presidents may strive to rouse our hatreds to such fever heat that great appropriations will be made to increase the business of concerns making airplanes and munitions. Our newspapers will run interference for all these vested interests. But neither the vested interests nor the newspapers can bring your children and my children security.

I have seen and talked to the common man in Latin America, China, western Europe, Palestine, and Soviet Asia. They all have the same hope of peace and fear of war. They all distrust balance-of-power politics.

Jeremiah and Isaiah, the ancient Hebrew prophets, were caught in times like these when two great powers were striving mightily for supremacy. They looked at those who trusted in the sword and turned away. By the law of the spirit they knew that those who take up the sword shall perish by the sword. They knew that the only final strength was in the Lord and his righteousness. They knew that violence never finally paid either in personal affairs nor international relationships.

If the Bible says anything of value in international affairs it says that the path to peace is not the path of arms nor the path of international alliances. "Put no trust in earthly princes" said the Psalmist. Put no trust in arms. Only by world service shall the Nation be saved.

If the administration, as it professes, sincerely desires peace, let it state its terms. Let the Russians do likewise, as they have clearly and repeatedly told us they are prepared to do. Let the heads of both nations, after preparations at the expert level, sit down to negotiate those terms. Peace will require compromises and accommodation on both sides. But no government that wants peace and knows its minimum demands can refuse to discuss them, and propose a war-creating alliance instead.

Why then should our Government so fear the risk of conference and negotiation with the Russians while it incurs the incalculably greater risk of war?

Now is the time for the American people to act. The UN was born at San Francisco in 1945. The supreme question is: "Shall it die in Washington in 1949?"

Will history record that the fatal step was taken when the Atlantic Pact decision divided the world into two warring camps? With you who hear my voice this Sabbath afternoon rests the decision. In this vast radio audience are millions who know that the only road to peace lies through the United Nations and an understanding with Russia. To you I appeal to make your voices heard in Washington before it is too late. Let your Senators know that you want full hearings, consideration and debate on the North Atlantic Pact. Urge them to vote against a step which may destroy the United Nations and commit our beloved country to a course that would finally divide the world into two armed camps and take us down the fatal road to war.

Payments to State of Montana in Lieu of Taxes on Lands Owned by the United States

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks, I include the following Senate Joint Memorial 6 of the Legislature of the State of Montana, with regard to payments in lieu of taxes on lands owned by the United States Government:

Senate Joint Memorial 6

(Introduced by Tibbals, Aronson, Markle, Ross, Valiton, and Fewkes)

A joint memorial of the Senate and House of Representatives of the State of Montana to the Congress of the United States, United States Senators JAMES E. MURRAY and ZALES N. ECTON and Representatives MIKE MANSFIELD and WESLEY A. D'EWART, all of Washington, D. C., requesting the enactment of legislation allowing for and directing the annual payment of grants by the United States Government to the State of Montana for the use and benefit of the several counties of Montana in lieu of taxes on lands owned by the United States Government in the State of Montana

Whereas in Montana there is in excess of 39 percent of our landed area which is owned by the Government of the United States, so held by it in proprietory or trustee capacity for Indian reservations, forest reserves, wildlife refuge, grazing lands, military reservations, and numerous other governmental purposes and objects, none of which lands pay taxes to the State of Montana or the counties therein, nor contribute equitable amounts in lieu of taxes to the school districts, counties, and State government, all of which furnish services to such lands and their occupants; and

Whereas such areas are increasing, and the taxation burdens upon sparsely settled communities of our State are becoming more serious; and

Whereas these areas should bear some part of the tax burden comparable to that imposed on lands of our own taxpayers; and

Whereas there has been and will be introduced in the Congress of the United States acts under which the Government of the United States will pay to the several States of the United States for the benefit of counties wherein Government-held lands are located, grants in lieu of taxes upon these lands: Now, therefore, be it

Resolved by the Thirty-first Legislative Assembly of the State of Montana (Senate and House of Representatives concurring), That we respectfully urge the enactment of legislation by the Congress of the United States providing for the evaluation of property owned or held by the United States Government and providing for payments or grants to the State of Montana for the use and

benefit of the counties wherein Government-held lands are located, in lieu of taxes upon these lands; and be it further

Resolved, That copies of this memorial be submitted by the secretary of state of Montana to the Senate and House of Representatives of the United States Congress and to Senators JAMES E. MURRAY and ZALES N. ECTON and Representatives MIKE MANSFIELD and WESLEY A. D'EWART.

PAUL CANNON,
President of the Senate.
LEO C. GRAYBILL,
Speaker of the House.

Approved February 25, 1949:
JOHN W. BONNER, *Governor.*

New York Shows the Way

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. MULTER. Mr. Speaker, despite the rantings and the ravings of those who do not know, FEPC is working out well in the State of New York. The following editorial which appeared in the New York Herald Tribune of March 28 is a fair review of the situation as it there exists:

NEW YORK SHOWS THE WAY

Legislation against discrimination in employment is practical and successful. This is common knowledge in New York; the evidence is everywhere plain. There were serious doubts when our State commission against discrimination began operation in 1945, but the subsequent record is one of expanding progress. The achievements have been many and precise, and the New York system is so well established and recognized that it is now taken as a model in other forward-looking cities and States.

The commission's annual report is a cheering document for all who believe that it is possible to proceed exactly by specific legislation against the social imponderable. The law's stated aim is "to eliminate and prevent discrimination in employment because of race, creed, color, or national origin," and this is exactly what New York is doing. Statistics hardly tell the story. There were 273 complaints filed last year, mostly charges of race discrimination. But the commission, ably headed by Mr. Charles Garside, was not content to sit and wait until approached by an aggrieved individual. Its formative investigations were successfully directed, for instance, at Caucasian clauses of labor unions and advertising in telephone directories. Broad and productive conferences were conducted on the industry level, such as the confectionery business, private hospitals, and surety companies. Continuing consultation proceeded on every level of government. Any New Yorker can look about in daily life, in offices, department stores, and everywhere, and see that something very definite and personal is being done.

What is our secret of success? First, there is determination firmly and simply expressed in law. Second, the commission gets results by conference, conciliation, and persuasion. Third, our law has teeth. Up to now, the cease-and-desist sanctions of court order have never been sought, which is a tribute to the commission's skillful and forehanded administration. The necessity for crackdown is avoided by developing a community atmosphere that is progressively favorable. We progress by conscious education; the whole air is cooperation instead of conflict. And this is the triumph of intelligent legislation, the proof that a broad and imperative aim can be harmoniously translated into happy result.

ECA Still Discriminates Against American Shipping

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. SADOWSKI. Mr. Speaker, when the Members of Congress voted for the Marshall plan they certainly did not do so with the intention of destroying American shipping, or other American industries. This, however, seems to be the policy of Hoffman and the ECA administrators. It was most foolish to have set up a separate administration over ECA funds. This act should have been administered under control of the State Department and the Department of Commerce. Under the present administration many American businessmen are waking up to the fact that their industry and business are being put on the skids. Let us take, for instance, American shipping—a recent ECA report discloses that United States flag ships carried only 43 percent of the aggregate ECA cargoes from the United States in January and February of this year. This figure includes shipments on Army vessels averaging 10 percent of the aggregate, according to recent testimony of an ECA representative before the House Merchant Marine and Fisheries Committee. The percentage of ECA cargo from the United States carried aboard United States flag commercial vessels was therefore approximately 33 percent of the aggregate.

A very small percentage of ECA cargoes shipped from the United States by so-called maritime recipient nations in northern Europe was carried on United States flag vessels. From April 1948 to February 1949 the United Kingdom shipped only 17.6 percent of ECA cargoes from the United States on United States flag vessels, Netherlands only 29.8 percent, Denmark 17.7 percent and Norway 30.7 percent.

Certain American steamship lines provide regular and frequent year-around service to these northern European countries under contract to the United States Government through the United States Maritime Commission. They are not assisted in earning the necessary revenues to maintain these services by being advised that the deficiency in the statutory 50-percent requirement is to be made up by some other country to some other shipping line.

Failure of these nations to provide their fair share of United States flag ECA cargoes as required by law is evidence of the necessity of a country-by-country administration of the ECA Act.

Shadow of Fear

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 11, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following article by Marquis Childs, which appeared in the Washington Post on March 29, 1949:

WASHINGTON CALLING
(By Marquis Childs)
SHADOW OF FEAR

NEW YORK.—If a master Communist planner had carefully worked out a way to get the utmost public attention for the Communist-dominated world peace conference held here over the week end, he could not have improved on what actually happened. The supposed enemies of communism took care of all that.

They picketed in noisy, marching crowds outside the Waldorf-Astoria Hotel and Carnegie Hall. They carried banners and placards duly recorded by newsreel and television cameras.

Without all this voluntary advertising, it seems to me likely that the conference would have been almost ignored. Americans have learned enough in the past 3 years about Communist propaganda techniques not to be fooled by such a transparent device as the conference.

The very fact that a delegation from the Soviet Union, including such a showpiece as the composer, Dmitri Shostakovich, could come here was sufficient proof of the importance the Russians placed on the meeting. From almost everything that was said, and above all from the reception of the carefully hand-picked audience, it was obvious that the immediate objective is a meeting between Truman and Stalin.

Back of that objective is the aim of halting the program of the United States Government for restoring the strength and independence of western Europe. America has gradually come to accept world responsibility. That does not fit into the Soviet postwar plan. In fact, it cuts directly across the Russian goal of domination in Europe and Asia.

A Truman-Stalin peace conference, in a climate of opinion warmed up by Soviet sympathizers and the deep desire of almost all Americans for peace, could achieve a lot. At the very least it would put the United States in the role of rejecting Stalin's magnanimous offer of peace on Stalin's terms.

One disservice done by all the free advertising was to make it seem that we were really afraid to have these people speak their piece. The State Department helped that impression along by its stupidity in refusing visas to some who wanted to come from western Europe and South America.

It must have seemed to the visiting Russians that we were in a highly jittery and nervous state. As they were spirited in and out of the Waldorf while the marching pickets shouted, they must have felt that here were overtones of the same fear that obsesses their country.

Fear is like a spreading plague in the world today. It seemed to me to be deeply etched in the thin, taut face of Shostakovich as I watched him sitting on the platform during the interminable and repetitious speeches.

Here is a young man who has composed some of the most brilliant and exciting music of our time. The music of Shostakovich

is played every day in this country and in almost every other country in the world.

Yet periodically the political bosses of the Soviet Union crack down, accusing him of political heresy in his music. According to those who have lived behind the iron curtain, this is torture for Shostakovich.

Some musicians and writers have become cynical under the Moscow whip. They shrug it off and promise to be good little boys. But not sensitive Shostakovich. He really believes he has betrayed a cause, and he suffers.

That seemed to me to be written in his face—in the tense, turned down mouth, in the restless movements of his thin artist's hands, in the way in which from time to time he glanced nervously at one or the other of the Russian delegation. Here was a man who lived under the shadow of fear.

Another meeting in New York over the week end was largely devoted to that fear. It was a meeting of protest called by Americans for Intellectual Freedom held in Freedom House, which is dedicated to the late Wendell Willkie. In a succeeding column I want to write about that other meeting.

One thing both meetings agreed on, and that is that the world is a very sick place. It is sick with the spreading plague of fear. Every manifestation of that fear in this country is a sign of weakness. It is a sign that we do not trust our own strength and our own resolution for peace. Fear can bring the thing that people everywhere live in dread of—another war.

Rent Control

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. CHRISTOPHER. Mr. Speaker, it has been said by gentlemen on the floor of this House that rent control was of little concern to the rural districts. That statement is true only by comparison, of course. Rent control is not so vital in agricultural sections as it is in Chicago, New York, and Philadelphia. But my people in Missouri have rent-control problems of their own, although not so vital as in the congested areas. In the Sixth Missouri District we have one town of 75,000 population, one of 20,000, and 20 more where population will run from 2,000 to 8,000. Even if there were no towns in our district, we would be interested in the measure, because we are a part of this great country. A country that our boys fought, and some of them died, to save. We as farm folks are deeply interested in the welfare of our great cities. Good American men, women, and children live and labor in those cities, and we country people have always been generous, unselfish, and God-fearing. We have always been willing to live and let live, and help to do that which would bring the greatest good to the greatest number.

This rent-control measure has been evolved by the best minds of both Houses of Congress. The conference has reported a bill designed to give equal consideration to landlord and tenant. In the integrity, the honesty, and the ability of these gentlemen I have the greatest faith. I believe they have reported to this House a compromise bill superior to either original House or Senate bill. I am going to support the measure, and I firmly believe it is the best bill that it has been possible for the best and fairest minds of both Houses to evolve.

A Timely Editorial

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, time and again I have pointed out on the floor of the House of Representatives that there are, all told, 45,000 publicity persons on the Federal pay roll scattered throughout the Departments and Bureaus of the Government; of the 45,000 there are 23,000 permanent publicity persons and 22,000 part time. More amazing still is that these self-serving barnacles on the ship of state have a budget of $70,000,000 taken from the pockets of the taxpayers.

I am inserting, under leave heretofore granted, an editorial which appeared in the Washington Evening Star on March 29, 1949, which points out the danger of self-serving bureaucratic propaganda.

PUBLICITY AND PROPAGANDA

There is a section of the 590-page printed report of the Hoover Commission's task force on public welfare that should be required reading for all of the Government's many publicity men. The section, entitled "Government Propaganda," deserves the special attention of congressional committees concerned with preventing improper use of departmental appropriations. For the task force (the Brookings Institution) found that some agencies, especially in the public welfare field, do not seem to understand the difference between objective publicity and bureaucratic propaganda.

Here is an excerpt from the report: "Although this (propaganda) situation has always presented some difficulties, it has become increasingly important in recent years with the advent of new philosophies as to the functions of the state in relation to economic and social policies. In the administrative branch, both in political and in permanent civil-service positions, are a substantial number of employees considerably to the left of the majority of the Members of Congress. Some of them appear to have a conviction that it is their duty to attempt to influence Congress and, in interpreting and applying laws, to go as far as possible in achieving the reforms in which they believe. They are not satisfied to act and administer within the intent of Congress. The experts in the executive establishments, according to this philosophy, know more and are better equipped than the Congressmen, and the view is not accepted that the experts should be on tap but not on top. Such attitudes affect both the research work and the publications of some governmental agencies. The most common manifestation is to give wide publicity to the material that will popularize a program and lead to its expansion and to play down the material that might raise opposition to it."

That is a serious charge by a competent investigating group. The report backs up the allegation by citing some of the research activities of the actuarial office of the Social Security Agency. It is asserted that although the actuarial office has prepared studies showing ultimate costs of old-age and survivors insurance of such magnitude that they may have a profound effect on the economic and social system, the SSA publicity emphasis has been on the benefits of the system and the need for extending and liberalizing it.

This tendency of Government press agents to emphasize only the favorable aspects of the work of their respective departments is not new or confined to the welfare field, of course. It is the natural inclination of a public-relations man to encourage good public relations for his agency. But the Hoover Commission is correct in viewing the tendency toward suppression of unfavorable facts and publicizing of the favorable as a real danger to democratic government. As the Brookings report comments, it is anomalous that the Government should tolerate misleading advertising by some of its own branches while condemning false advertising in private industry. The best curb on biased Federal publicity is unbiased congressional publicity exposing bureaucratic propagandizing whenever and wherever it occurs. Congressional committees have done some effective work along this line in the past. The vigilance should be increased as the opportunities for governmental propaganda multiply with the expansion of Federal activities into new fields.

Storm Against Excise Tax Rates

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Mobile Press-Register of March 25, 1949:

STORM AGAINST EXCISE TAX RATES

In recent weeks Representative JOSEPH W. MARTIN, JR., of Massachusetts, and others in Congress have focused the spotlight on the fact that full wartime excise tax rates still apply to quite a list of articles, including cosmetics.

Women are beginning to demand relief from the tax on cosmetics. The Christian Science Monitor, taking note of this, comments:

"Where is American chivalry?

"Is it so much a thing of the past that the men of the United States Congress are willing to sit idly by and let the bloom fade from the cheek of the American woman and her cherry lips grow pale?

"During the war and the immediate post-war period hardly a feminine voice was raised against the 20 percent cosmetics tax.

"Loyal and patriotic wives, mothers, and sweethearts never murmured when they had to pay the extra dimes for their lipsticks, powder, face creams, and shampoos, even though they knew that comparable prerequisites of good grooming for the men—shaving cream and razors—were tax-free. They just paid and were patient.

"Masculine legislators, thinking over national problems as they applied their razors to well-lathered faces in days past, may have assured themselves that all was quiet on the cosmetic front. Maybe they didn't know that quiet often precedes a storm.

"The time has come, and the storm is on—a storm of protest from women throughout the country. Their patience was not rewarded, so they are now on the warpath."

We think the women shouldn't have to carry on a single-handed fight for relief from wartime excise tax rates. We think the men should help them out. After all, who earns much of the money that women spend on cosmetics and other products affected by these taxes?

They Walked in Darkness

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. MULTER. Mr. Speaker, on March 23 I gave my views on the floor of the House as to what could be expected of the Cultural and Scientific Conference for World Peace that opened in New York City 2 days later. That I foretold accurately what would happen there is best evidenced by the following editorial which appeared in today's New York Herald Tribune:

THEY WALKED IN DARKNESS

The Cultural and Scientific Conference for World Peace has adopted its resolutions and adjourned. The resolutions are commendable in themselves, full of lofty aspirations which can only be challenged because of their source. For the conference was riven by an inner contradiction which sprang from the stark fact that to promote peace on the sponsors' terms, culture and science had to be disregarded.

The conference was based on the assumption that assorted warmongers, spreading hysteria, raised obstacles in the way of those practitioners of the arts and sciences who wished to use their common intellectual interests to transcend frontiers and political systems. But it was embarrassingly apparent, even to the supporters of the conference, that it was Russia which rejected the whole concept of cosmopolitanism in culture and science and which was indoctrinating its people with the contrary notion that no achievement in any field of human activity was valid unless it could be considered Marxist, as the Politburo defines Marxism. Indeed, the Soviet Union has gone farther. It has endeavored to force the mind of Russians into a strait-jacket of narrow nationalism, drawing upon the Czarist past for fantastic claims of Russian superiority in every branch of learning or artistic achievement. And this has not been done as the spontaneous expression of a victorious people, but under command, enforceable by the grimmest of penalties.

Under such circumstances, the sessions inevitably became unreal. Consider the irony of presenting a scroll to Mr. Shostakovitch which spoke of music as "an international language"—a heresy which the Russian composer has expressly recanted. And when the conference adopted a resolution praising the American Bill of Rights as a charter of cultural freedom under which "thought has made its eagle flight to new horizons," it stated good democratic doctrine, but only emphasized the fact that any unauthorized thought which flies toward Moscow will be shot down without compunction.

It was only by evading these thorny truths by considering the mote in democracy's eye as the equal of the beam in that of communism, by dismissing the differences between East and West as of no account, that the conference could discuss peace. But to do so, the self-appointed representatives of American art and intellect had to abandon the only fields in which they might be considered expert. At best, they could give voice to a pious hope; at worst, they confounded the existing confusion. They failed to shed any real light on real problems because they walked in darkness themselves.

An Appeal From the Youth of Europe

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of David S. Richie, a young man who has worked with the youth of Europe and has a message which I think should be of great interest to all of us.

The thoughts expressed in his statement have been clarified in his mind through his experiences as a staff representative of the American Friends Service Committee during 23 months of the past 3 years spent in Europe. These thoughts are, of course, his own, and he is no longer on the staff of the AFSC.

For identification purposes, it can be said that he is an executive secretary of the Philadelphia Friends Social Order Committee; but this statement is entirely his own and not authorized by his committees. He is a graduate of Haverford College and has been secretary of these committees since 1939.

In May 1946 he went for the American Friends Service Committee to Poland and did relief work there for 6 months. In November he went to Finland to promote the international voluntary work camps, staying for 5 months and returning there again in June of 1947 and again in June of 1948, for the same purpose. In April 1947 he participated in a work camp in Belgium and then returned to Poland to organize the first such international work camp held in Poland, at Lucimia during July and August 1947. In September he participated in four similar work camps in Germany before returning to America. In May of 1948 he returned to Europe to visit work camps in Italy, Switzerland, Germany, and Finland, and to share in the responsibility for the three camps held in Poland during July, August, and September of 1948, and returned to America in October of 1948. All told he has spent 12 months in Poland, having been permitted to pass the iron curtain on 5 occasions—10 times counting both ways.

Mr. Richie's statement follows:

AN APPEAL FROM THE YOUTH OF EUROPE

"Give us freedom from fear of war—that is enough!" This appeal, addressed to America by a Finnish volunteer worker helping with the reconstruction of Lapland summarizes the greatest longing of the young people of all Europe.

I have worked with these young people in Poland, Germany, Finland, Italy, France, and Belgium, during 23 months of the past 3 years, rebuilding schools, hospitals, and homes. Always the fear of another war has hung over their heads, war threatened, they feel, as much by the United States as by Russia. I have interpreted to them again and again and again that the American people do not want war, that the American people do not threaten war, and only too readily they agree, remembering too well how little the people in their own countries wanted the last war, how completely their own government got out from under the control of the people.

"Give us freedom from the fear of war. In Finland, right next door to Russia, they are doing their full share to free themselves from this fear as well as from the devastation of their two cruel wars. They have an unwritten agreement not to publish anything inflammatory against Russia in their newspapers. Last spring they forced the resignation of a Communist Minister of Interior for abuse of powers but granted the Communist Party complete freedom in the June political campaign. A dozen Finnish work campers, with twinkling eyes, pointed out to me the almost ever-present Communist posters denouncing American imperialism to see my reaction. They and the rest of the Finnish people calmly went to the polls and roundly defeated the Communists in the July election. For 3 years now Finland has had as Minister of Defense an acknowledged pacifist, pledged never to prepare for war or resort to war. That and the prompt payment of their heavy reparations even though they hurt are the surest guaranties Finland can make that Russia will have no cause to invade her land. But everyone knows that Finland will be occupied by Russia within 24 hours if a war between the United States and Russia should break. It is no wonder they appeal to us for freedom from fear of war.

In Poland the people are even more under the domination of Communist propaganda. Each American press release on our latest guided missile or rocket ship is publicized to strike fear into the hearts of the people. Again and again and again they are reminded that the former United States Secretary of State, James F. Byrnes, said at Stuttgart that we did not consider the present Polish-German border as necessarily finally determined, a comment which can only be interpreted as meaning we might require the return to Germany of the lands allocated to Poland by the Potsdam agreement. This American bid for popularity in Germany has certainly hurt our popularity in Poland; but in spite of this there is a very large proportion of the Polish people who do not support the Communist efforts to prepare Poland for war.

In fact, I am convinced that there are fewer enthusiastic Communists in each country in Europe than there were immediately after the war. Communist ruthlessness, the deception and intrigue have disillusioned many millions at one time attracted by a Communist utopia. Now increasingly they fear it or hate it. But better than we can, they understand it. They share the longing of the Russian people for peace and for the chance to rebuild their thousands and thousands of square miles of ravaged countryside, and they understand the desperate fear of the Russians of another invasion, this time spearheaded by American atomic bombs. Often western Europeans explained the ruthlessness of the Communists by their fear of American encirclement and threat of war.

At the same time, as Europeans have become disillusioned about communism, a great reservoir of gratitude and good will for

the American people has been built up throughout eastern and western Europe by the UNNRA aid, the millions of CARE packages and direct mail parcels, and more recently by the Marshall-plan program. Certainly Poles and Czechs and Hungarians are grateful for the aid they have received and many of them are still aware that the Marshall-plan aid was originally offered to them.

But that has not been all. At the same time there has been a developing distrust of America, a fear that we have been buying their support for our side in a war, a feeling—ever since our unilateral military intervention in Greece—that we are ready to use them as cannon fodder in another war if it suited our purposes; that we are really not any more ready to compromise our purpose for the sake of peace than the Russians are.

Again and again I asked European work-camp groups what they would want me to advocate back in America. Usually they would hesitate at first to speak their mind, but when I suggested that the problem seemed to be to convince Europe that we really intended peace they readily agreed. When asked if they would be convinced if we reduced our military appropriations from fifteen billion to five billion and increased our Marshall-plan aid from five billion to fifteen billion they looked at me with such a wistful longing that I felt ashamed of raising their hopes when I knew it was too much to hope for. But why is it too much to hope for? Is it because we are preparing for aggressive war? No. Is it because we are afraid of an attack upon ourselves? No. Is it not because we have not made up our mind how we can save western Europe and ourselves from communism?

We want to save Europe by economic assistance in reconstruction. We also want to be prepared to stop military aggression by military force if necessary. But we do not yet realize that our military preparations defeat our primary peaceful purposes. The danger is not that Russian armies will attack the United States or that they will invade France or Italy, but that dissatisfaction and despair in those countries will make an internal seizure of power by local Communists possible. That danger is real. When we offer the poverty-stricken French or Italian workers guns instead of bread, tanks instead of houses, we are increasing their dissatisfaction and thereby increasing their readiness to follow Communist leadership. This is an inescapable and, I hope, sobering fact. When, on the other hand, we offer economic aid for reconstruction we offer hope; and the degree to which we offer hope will determine the degree to which Communist influence will decrease and the Communist danger will disappear. An all-out economic-assistance program, freed from all military entanglements, is the surest road to peace. Millions of common folk throughout Europe are praying that we will see this light before we clamp upon them a North Atlantic defense pact that will condemn them to a living death.

Ours is a fateful responsibility. If we ever use the atomic bombs, the guided missiles, the rockets, we are now spending billions of dollars upon, we will become the most hated people on earth, and rightly so. Even though by such methods we maintain our domination for a generation, our doom will be assured. That much is clear. What we must also realize is that merely the threat to use these modern means of slaughter, even for the loftiest motives, condemns us and alienates people from us.

Consider, for example (the young people of Great Britain particularly would ask us), the 1,500,000,000 colored people throughout the world, for whose loyalty we are competing with the Communists. Our military might has absolutely no attraction for them, especially when our race relations record here at home brands us as hypocrites. On the other hand, we can win the loyal cooperation of these hundreds of millions of colored people throughout the world. Britain in India is proving it. We can win, but only by actually practicing here at home the equality of opportunity for all people, which we profess, and by actually providing the economic, educational, and humanitarian assistance to the depressed people of Africa, Asia, and Indonesia, which our tremendous productive capacity makes possible. This is the only road to peace. Can we see how much, how desperately much, the tortured people of the world want us to choose this road and renounce the road to war?

Most young people in Europe understand economics better than we do. They know that free-enterprise economies are threatened by periodic depressions when the people cannot buy the total production of the nation. They know that these depressions can be avoided in two ways. They can be avoided, or at least postponed, by ever-increasing military expenditures, but everyone in Europe knows that Hitler proved this way to be the way of death. They also know that these depressions can be avoided by the cooperation of industry and agriculture with government in social-welfare programs that fully utilize the nations' productive capacity. Great Britain and the Scandinavian countries are proving this can be done, and they will do it if their economies are not overburdened by military involvements forced upon them by the North Atlantic Pact. They appeal to us to do likewise, to reject the profits and wages made by preparations for murder and to strive forward toward that free, full-employment, welfare economy that is within our grasp.

Finally, young people in Europe would urge us to put our faith in world government, in full support of the United Nations. Whether they are from eastern or western Europe young people would say the same—the North Atlantic military defense pact is a rejection of the United Nations; it is an admission that we consider the United Nations to have failed, that we consider cooperation with Russia in the United Nations to be hopeless.

It is an assertion that we choose to rely on the ways of force rather than on the ways of peace. They would say that this decision has not been forced upon us. They would say that the United Nations has not failed; the way of war has failed, but the way of world government has not yet seriously been tried. How can it be otherwise when the United States has not spent as much as one-fifteenth of what we are spending on war preparations this year on the peacemaking institutions of the world government? What could happen if we invested one-fifth or one-third, or conceivably one-half, of our military budget in the peacemaking functions of the United Nations, of UNESCO, and the rest? The people of Europe do not expect us to do so; they are only too cynical and discouraged. They are only too likely to become increasingly bitter. But somehow, I still have faith. I have faith in the American people, in our good intentions, in our ability to see the right, and in our courage to do it, without fear.

I have faith in the responsiveness of people and of governments to such right behavior. I have seen such responsiveness on both sides of the iron curtain to the tiny demonstrations of good will that the American people have made possible for the Quakers to carry out in a dozen countries of Europe. It is my hope that we will multiply these authentic demonstrations of good will. But it is my hope, above all, that we will listen before it is too late to the appeal of the Finnish work camper in Lapland, and so win the peace of the world:

"Give us freedom from fear of war. That is enough."

New Notions at Beirut

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include an article by Malvina Lindsay entitled "New Notions at Beirut," which appeared in the Washington Post on March 23, 1949. The article describes the third conference of the United Nations Commission on the Status of Women.

This conference, it seems to me, is of great moment. If the women of the world can be united behind common objectives, our chance for peace will be strengthened.

I should like to call to the attention of the House that I have introduced a bill (H. R. 2396) to provide for the investigation of discriminations against women on the basis of sex, to establish policies for the removal of such discriminations and for other purposes.

I have also introduced a bill providing equal pay for equal work for women.

The article referred to follows:

NEW NOTIONS AT BEIRUT

(By Malvina Lindsay)

FEMININE STRATEGISTS

An event that may influence the lives of women—and inevitably the social order—in many parts of the world is taking place this week in Beirut, Lebanon. While on the surface nothing more than carefully worded resolutions may come out of the third conference of the United Nations Commission on the Status of Women, yet the ideas set in motion at this spot, called the "cross-bridge between Asia, Africa, and Europe" are likely to bear surprising fruit in a few years.

For in this global feminine stocktaking, women of east and west are finding in what ways they lag behind each other as the free human beings the United Nations Charter envisages. From these discussions women in the three continents lying off this listening post and across the seas in the Americas will get new notions of their own worth and destiny.

Few national toes but what will be stepped on at this Beirut meeting. Among these will be the 21 nations in which women do not yet vote—countries that will get the stigma of backward in the discussions. Also charged at this bar of feminine opinion will be nations that take away a woman's citizenship when she marries a foreigner, that deny her freedom of choice in marriage, that do not give her equal rights in divorce, that give control of her property or earnings to her husband or father, that do not give her freedom to join her spouse in another country, and that offend against the dignity of the wife by sanctioning polygamy.

Many of these ideas will prove disturbing to husbands in the areas around Lebanon. Yet the west cannot be too smug at this conference. For on some of these things it is vulnerable. The United States still discriminates against alien husbands of American women, and has not yet put women on a basis with men in all immigration matters. And hundreds of discriminations against women exist in State laws.

On one of the main subjects on the Commission's agenda, equal pay for equal work with men, the faces of both Great Britain

and the United States will be especially red. While the British are worse offenders than the Americans in this, yet this country has an Achilles' heel of discrimination that was recently taken advantage of by the Soviet Union when it charged in a statement on International Women's Day that American women get 30 to 40 percent less pay than men for the same work.

Another leading subject at the conference is nationality status of women who marry foreigners. The Commission is working for a general treaty to clear up the world-wide confusion on that matter. Now the diversity of laws results in some women who marry other nationals finding themselves citizens of two countries, while others become women without states.

Both west and east realize they have something to learn from each other about women's status—that is why the Commission is holding meetings in varied parts of the world. In Lebanon, for example, women have made great progress even though they lack the vote. In this small ancient country of 2,000,000 population on the eastern edge of the Mediterranean, women can attend any university on an equal basis with men—a privilege not open to American women—and can study at these any subject they may choose.

Education is the main lever women of the so-called backward countries have been using to get greater political and personal rights. One question that repeatedly comes before the Commission on the Status of Women is whether to put the main emphasis on getting political rights for women of the world or to press for more opportunities in education, which would equip them better to use the vote.

Helping women in remote areas to make themselves economically independent is another indirect way of breaking the power of those who would keep them in their place. The present conference will do something about this, too, through its action to raise nursing standards in all countries, and to encourage women to aspire to the professions.

Long Waiting Lists Tax Services of London Hospitals

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. MULTER. Mr. Speaker, on March 28 I placed in the RECORD the fourth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 22, is the fifth of the series:

LONG WAITING LISTS TAX SERVICES OF LONDON HOSPITALS—GOVERNMENT PAYS FOR ALL UNDER NEW LAW

(By E. J. Delaney)

(Fifth in a series)

LONDON, March 22.—The extent of the clamor for admission to hospitals is shown at a 500-bed hospital that has a constant waiting list of 700. That testifies to the public requirements that have arisen under the free National Health Service.

This particular hospital is of the teaching kind; that is, it is connected with a university turning out physicans and surgeons and has a school for nurses. It also manages another hospital with 300 beds, some 15 miles distant, that always has a waiting list of 600 prospective patients.

This teaching hospital would have preferred to have remained out of the health scheme and to have gone on as a private charitable institution. Its policy, through its long history, has been to house only those earning less than $1,600 a year and even then to receive only donations that patients can afford to make.

Under the arrangement, one who became its patient explained his economic circumstances to an almoner and if he was not in a position to pay anything, that is what he paid. All this is changed now, of course, and the Government does the paying for everybody. No private patient is accepted in this hospital, its service cannot be bought.

It is in an unusually fortunate financial circumstance. A century ago it was bequeathed a large tract of land which since has become of great value and delivers an income of $480,000 a year. In the past this was spent in the routine conduct of the institution and, in addition, monetary gifts helped it along further.

Its own income now is used in reopening laboratories that have been closed for some time and the renewal of scientific research tasks. It believes it can make some important contributions to medical knowledge under the new arrangement. Also some of its own money is continuing to be devoted to the provision of added personal comforts, over and above the routine, for those patients who are without funds of any consequence.

It is managed by a board of governors, appointed by the Minister of Health, and its standards have not been lowered by its National Health Service connection, it believes. It considers the contrary to be true. The type of person placed on the board is just as worthy from the medical viewpoint as in the past and many who have been on the board for 20 years have been retained.

It considers itself as being tied in with a necessary scheme and does everything conceivable to make hospitalization under the new plan just as successful as can be the case. Wards that have been closed since the war are being reopened as steadily as nurses and equipment are discovered and it is enthusiastic over its ability to take part in improving the health of the country.

At this hospital the physicians who send in the names of patients for admission are asked to take some of the responsibility of seeing that urgency is served. The physicians are expected to scan their lists often and to inform the admission staff when there is a change in a situation, when it becomes important to bring in a patient at once, or there no longer is an immediacy involved.

There is no making out of individual bills for the patients. The Government advances money to it every quarter of the year and it goes along in its work as economically as it can. There are observations by the governors all the time and, since these men are direct appointees of the Minister of Health, it practically is directed by top-flight figures.

Surgeons like to be attached to the hospital under discussion, as it adds to their prestige. When the board decides to employ a new junior surgeon it posts a notice of examination and scores of candidates file petitions for the assignment.

Another hospital serving a big district quite far from London is tackling the nurse-scarcity problem in a new way. It is seeking the interest of 16-year-old girls in becoming "cadet" nurses, a form of nurse's helper. A girl who accepts is promised she will not be called upon to do any of the work of a domestic or an orderly and will be given $120 a year "pocket money," board, lodging, laundry, and uniforms.

The People Report Progress in Civil Rights

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a brief summary, the People Report Progress in Civil Rights, appearing in the February issue of the Woman's Press, the national magazine of the YWCA, and an editorial from the New York Herald Tribune of February 5, 1949, relating to this report:

THE PEOPLE REPORT PROGRESS IN CIVIL RIGHTS

The February issue of the Woman's Press, national magazine of the YWCA, is a report of progress in civil rights from many parts of the United States and in many areas, including education, employment, transportation, housing, municipal protection of minority groups, and so on. The stories were gathered through the cooperation of nine national organizations. As the New York Herald Tribune stated editorially, the story that it tells is one of the success of gradualism, "the answer is exhilarating."

The issue opens with a foreword signed by a member of the national board of the YWCA, which reads:

"If one should venture to be prophetic so early in the new year, one might predict that 1949 will be an important milestone in the history of our Nation.

"For the third time in our history we are casting a critical eye over the state of our much-vaunted freedoms. The first appraisal culminated in the Bill of Rights; the second in the abolition proclamation. And this year of our Lord—the first anniversary of the Report of the President's Committee on Civil Rights—may well bring the promise of a day when neither race, color, creed, nor national origin will prove a deterrent to equal opportunities for education, employment, and housing, or to freedom from fear in the United States. In view of the pledges made by both major parties in the recent Presidential campaign, how can legislation to implement these ideals fail of passage? * * *

"This issue of the Woman's Press is in the nature of a report of the progress in civil rights that has made in many American communities, through the efforts of many individuals and of many national and local organizations."

I should like to quote particularly from the article written by Father John LaFarge, of the Society of Jesus:

"A cynic once remarked that a program of human rights was a refuge for lost causes. * * * The Gospel of Jesus Christ has taught the world that the ultimate guaranty of human rights is to be found not in man alone, but in the God who created him and to whom man and his laws and governments are ultimately responsible. * * * In the maintenance of this basic principle, and of the practical conclusions that flow from it, Jew, Protestant, and Catholic alike have a common duty, and—let us proudly say—a common privilege. Such maladjustments as exist in our democratic society can only be remedied, as President Shuster observed, 'by a complete awareness on the part of the public and a determination on the part of all groups to work together to cure them.'"

Religious groups are working actively in behalf of civil rights, as indicated in the statement adopted on December 3, 1948, by

the Federal Council of Churches, called the Churches and Human Rights. Individual churches are working toward complete human brotherhood among their members and congregations. The United Council of Church Women all over the country, but particularly in the South, is moving forward in the same direction. I quote from an article entitled "The Southern Woman Looketh to Her Household," by Mrs. M. E. Tilly, a member of the President's Committee on Civil Rights, in which she says:

"Otherwise timid women, with little religious or educational background, but with a deep sense of responsibility for safeguarding their families, now venture into council chambers and into courtrooms. * * * Women are learning that if democracy lives anywhere it must live in their own local community."

In the field of education, through such organizations as the YWCA, the Bureau for Intercultural Education, the National Conference of Christians and Jews, the Pacific Coast Council on Intercultural Education, and so on, programs are developed in public schools, colleges, and universities to foster intercultural and interracial understanding and to lessen hatred and prejudice between groups of differing racial and national backgrounds.

In employment, many department stores are finding that discrimination in employment does not pay. In one article in the February Woman's Press entitled "Democracy Pays Off in Merchandising," personnel directors in large department stores, including Macy's in New York, G. Fox Co. in Hartford, Conn., and Gilchrist's in Boston, speak as follows about the work they have done in employing Negroes in other than maintenance operations:

"We have used Negro sales girls successfully in practically every department of the store. * * * Within the past year we have placed several Negro salesmen. * * * The rug salesman is outselling every other sales person in the department. We have had several fine comments, including customers' letters of appreciation of his fine services."

"The standards for job performance are the same for all employees. * * * While there are instances of meritorious service among our Negro personnel, the job performance varies with the individual capabilities. There is no evidence of special qualities in job performance that arise out of racial origin."

In another article on fair-employment practices laws now operating in seven States, Mr. Ralph Bass, of the American Jewish Committee, writes that:

"There has been no influx of undesirable workers, no decline in profits. There has been the establishment of broader labor markets, greater efficiency, and a more vital conception of the meaning of democracy. The executives of the States and cities which have adopted the laws are soberly sanguine. They share a common belief that it will be necessary for the Federal Government to establish Nation-wide standards for nondiscrimination in employment. Then the local governments could really go to work and carry them out."

In another article entitled "Labor Fights Discrimination," by Carl Rachlin, a member of the panel of the New York State Board of Mediation, this significant paragraph appears:

"In recent years organized labor has declared that its objective of greater economic and political democracy for all people can only be achieved beyond the collective bargaining table. The American Federation of Labor and the Congress of Industrial Organizations have both entered with determination upon the promotion of political programs which will increase democracy in all aspects of our existence. One of the items high on this list is the elimination of racial discrimination."

In a still further article, When Free Enterprise Meets the Color Line, by Dr. Clara A. Hardin, there are these sentences which point out the necessity of improving democracy if we are to maintain free enterprise:

"Racial minorities have had a difficult time in becoming established in successful business enterprises because they lack access to capital or credit. Despite their handicaps, however, their record of achievement has been impressive. The tragedy is that the individual who wins success is pointed to as an exceptional member of his race. In a truly free-enterprise system, success should be accepted at face value for any citizen."

Individual communities are working at the problem of discrimination in many areas in order to make possible decent housing, health facilities, suitable education, and proper police protection for minority groups. Among the communities that have done special work in this area are Chicago, Ill., Chester, Pa., and Denver, Colo., where Quigg Newton, a young Navy veteran who is now mayor, has taken the lead in establishing a committee on human relations. Mrs. Dorothy McCullough Lee, mayor of Portland, Oreg., is also taking a forthright stand, as indicated in her article on the municipal government's responsibility in these areas. The State of Michigan has a new State-wide committee on civil rights which has been very effective in many places in that State, as indicated in the article entitled "Michigan Works To Secure These Rights" by Olive R. Beasley. In Grand Rapids, Mich., there has been special progress in making hotel facilities available to all groups, and it is because of this that so many conventions consider it the ideal convention city.

This is a brief summary of the contents of this issue entitled "The People Report Progress in Civil Rights." The conclusion is that the American people, by and large, are eager to move forward toward the promise which both the Republican and Democratic Parties made as part of their national campaigns in the fall of 1948. There is much still to be done. There is no question but that the people expect this Congress to implement the President's committee report.

[From the New York Herald Tribune of February 5, 1949]

A HEALTHY FERMENT

Postwar ferment over civil rights has focused attention on the spots where democratic theories and practices do not meet. We begin to question whether reliance upon gradualism to right the disparities has not involved two steps back for one forward. [An answer is given in the Woman's Press, national magazine of the Young Women's Christian Association, which devotes its February issue to a report of civil rights progress in American communities from coast to coast.] The answer is exhilarating.

One review points out that efforts to outlaw unfair employment practices will be launched in 20 States in 1949. New York, which led the way with its 1945 antidiscrimination law, was followed by New Jersey, Massachusetts, Connecticut, Indiana, Wisconsin, and Oregon. The last three have no enforcement provisions but since all such laws depend more upon conciliation than compulsion, their working is similar. Chicago, Minneapolis, Milwaukee, Cincinnati, and Philadelphia have adopted antidiscrimination ordinances. The experience of these communities, where none of the prophesied catastrophes developed but prejudice did drop, should make victory easier in the 20 States.

The YWCA magazine reporters, enlisted from national organizations, describe community efforts to better democratic practices in Detroit, where racial tension is ever present; in Grand Rapids, where hotels invite conventions on a no-discrimination platform; in San Francisco and Portland and Denver, and in San Diego, where there is a project to fit Indians, Mexicans, and Orientals into the schools on a mutually respectful basis. They report the work of the Councils of Church Women in the South; one council told its legislature that it expected laws against the desecration of the cross (by the Ku-Klux Klan) to be enforced. They report movements on college campuses to look at prejudices and do something about them. Finally the YWCA checks on its own efforts to square practice with preaching: a 1948 interracial workshop that brought together everybody who could offer guidance; a move to merge interracial branches, and the success of an American room set up in Oklahoma City to offer one, just one, pleasant place in which Negroes might lunch with their fellow workers of whatever race.

A review highlighting the spots of progress rather than the spots of reaction leads to one very important conclusion. The ferment is strong and is healthy. We must wait upon gradualism to change the ways of years. But gradualism is a relative term. Great forces of the day, the lessons of the war, the goals of the United Nations and of the President's Commission on Civil Rights, are speeding its pace. Two steps ahead for one step back seems now a realistic prospect.

Development of Missouri Basin Resources

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30 (legislative day of Friday, March 18), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared in regard to the Hoover Commission Report on the Pick-Sloan plan, which was filed last week, together with certain excerpts from the report.

There being no objection, the statement and excerpts were ordered to be printed in the RECORD, as follows:

PICK-SLOAN PLAN CONDEMNED BY HOOVER COMMISSION

Mr. President, the report which was filed with the Congress last week by the Commission on Organization of the Executive Branch of the Government contains a critical analysis of the Pick-Sloan plan for development of the Missouri River Basin, referring to it as a sort of horrible example of extravagant waste and general bad administration.

For several years the Congress has been hearing warnings that the Bureau of Reclamation and the Army engineers, operating under the Pick-Sloan plan, have been pursuing a course in the Missouri Valley wasteful of money, wasteful of resources, and wasteful of the area's great potentialities. These warnings have heretofore been totally ignored, but now we find that the report filed last Thursday by the Hoover Commission and its task force on natural resources completely justifies all these warnings. The criticisms

of the Pick-Sloan plan in the Hoover Commission Report are even more devastating than anything which heretofore has been said.

The Commission and its task force, both composed of eminent citizens of both political parties, tell us that the Pick-Sloan plan is not a properly integrated plan at all; that there is serious question if the supposed agreement between the Army engineers and the Bureau of Reclamation—actually a fictitious front arrangement—is not more costly to the Nation than continued disagreement.

ENORMOUS WASTE

It is going to take a good deal of time for the committees of Congress to study the Commission's reports and act on them. Some may lay over from this Congress to the next. But the Hoover Commission Report on the Interior Department, as it points out the enormous, current, questionable expenditures in the Missouri Basin, should have our immediate attention. There are before the Congress right now proposals for appropriations, in pursuance of this arbitrary and recklessly concocted plan, totaling many, many millions of dollars. These expenditures would commit us to further appropriation of even larger sums.

As an example, we are now asked for money to proceed with Garrison and Gavins Point Dams, in the Dakotas. In the study which was submitted to us, there is a finding that "the public may very well question those parts of the Pick-Sloan project as economical expenditures. They represent an eventual investment estimated in January 1948, at about $218,000,000."

The study calls attention to the fact that, when originally justified, the Garrison Dam was defended on the basis of impounding water for farm and domestic use in the Dakotas. But in the compromise between the Army engineers and the Bureau of Reclamation, the Dakota water diversion was transferred from the Garrison Reservoir up to Fort Peck, so the huge Garrison structure now has only the most vague sort of justification.

NO REAL PLAN

The Hoover Commission task-force study is actually an astounding document as a commentary on the sort of wildly extravagant program which has been put over on the Congress, and for which appropriations are now being sought. It is indeed a major congressional scandal.

The Hoover Commission tells us, in direct quotations from the study of the task force:

"The (interagency) committees have failed to solve any important aspects of the problem * * * because the dominant members, the corps and the Bureau, have been unwilling to permit interagency committees to settle their differences. The result has been neglect or avoidance by the committes of virtually all major areas of interagency conflict, and concentration instead on technical studies and publicity. * * *

"The development agencies sometimes compromise their differences. After sharp clashes over plans for the development of the Missouri Basin, the corps and the Bureau announced complete agreement on the Pick-Sloan plan. Analysis of that plan reveals the fact that it contains many projects which previously had been subjected to devastating criticism by one or the other agency. The compromise consisted for the most part in a division of projects, each agency agreeing to forego the privilege of criticizing projects assigned by the agreement to the other. The result is in no sense an integrated development plan for the basin, and there is serious question in this case whether agreement between the two agencies is not more costly to the public than disagreement."

The case study in substantiation of this statement is specific on a large number of matters involved in the Pick-Sloan scheme now before us. I have told you of the comments on Garrison and Gavins Point Dams. There is another analysis of the water supply for all the things that the Army engineers and the Bureau of Reclamation propose.

Mr. President, those of us who advocate an MVA program for several years have warned that there is not enough water in the river for both the Sloan upper basin plan and the Pick plan for a flowing navigation channel. The study filed with us indicates that there may be water deficits even larger than we had anticipated. It points out that private irrigation, industrial use, and soil conservation may require much larger amounts of water than heretofore estimated. In that event, the expenditure of $6,300,000,000 for both the Sloan plan for upstream uses of the water, and the Pick plan for a flowing navigation channel, would be even more ridiculous than anyone has claimed up to this time.

Mr. President, the eminent gentlemen who conducted this study and prepared this report constitute a nonpartisan group of nationally recognized experts in the field of conservation and use of our natural resources. They are Leslie A. Miller, former Governor of Wyoming, Chairman; Ralph Carr, former Governor of Colorado; John Dempsey, former Governor of New Mexico; Horace Albright, former Director of the National Park Service; Donald H. McLaughlin, president of the Homestake Mining Corp.; Dr. Isaiah Bowman, president of Johns Hopkins University; Dr. Gilbert White, president of Haverford College; Prof. Samuel T. Dane, dean of the School of Forestry and Conservation, University of Michigan.

INVOLVES BILLIONS

Mr. President, the Pick-Sloan plan involves proposed expenditures of $6,300,000,000 or more. This part of the Hoover Commission Report relates to current and urgent matters, of great concern to all the people of the Missouri Basin, all the taxpayers of the Nation, and to the Congress. I am sure my colleagues will agree with me that it should have widespread public circulation and study. I therefore ask that pertinent excerpts from the Hoover Commission's Natural Resources Task Force Study be printed in the RECORD at this point in my remarks.

DEVELOPMENT OF MISSOURI BASIN RESOURCES—A CASE STUDY IN THE ORGANIZATION OF FEDERAL ACTIVITIES

(Excerpts from the Hoover Commission's Natural Resources Task Force Study)

BROAD PLANNING

The greater part of the agencies which are concerned with planning and operation in the [Missouri] basin act in terms of the authorized projects, with only passing reference to the likely economic and social pattern of the region. The Department of Agriculture should be commended for its insistence on planning, programing, and operation in terms of the rural economy as a whole, but no group as yet appears to be considering all aspects of the economy and society in an over-all valley program, and the relation of water and land resources to them. This is evident in the lack of any systematic plan for the development or encouragement of industry, industrial research on regional problems, or community planning. Yet diversification of opportunities for employment and opportunities for a better life for all classes in the region are very closely tied to such actions. Adequate consideration of them might even have changed some specifications for the engineering works. Even more important, there is no provision for continuing integrated action on these matters, which will become more real when the large engineering projects are completed. It would seem that regional conservation and development is not being looked upon as a dynamic process of indefinite duration, but is an emergency objective, which will drop out of focus until another emergency arises. A Department of Agriculture statement on one phase of the program might well be needed for the whole: "Making water available to a semidesert or subhumid area does not of itself guarantee successful development. Sound social and economic engineering is as essential to the success of such projects as is adequate engineering of the physical * * * plant."

IRRIGATION

These points emerge from the controversy concerning irrigation developments on the subhumid lands:

1. There is reasonable doubt as to the likelihood of farmer acceptance in the plannable future of irrigation in the subhumid areas, which comprise more than half of the proposed irrigated lands in the Missouri Basin. Therefore there is reasonable doubt as to the ability of the Federal Government to obtain eventual reimbursement for expenditure on the extensive works required.

2. There is some question whether the scope of the proposed irrigation program, particularly in the eastern section of the basin, can be justified as essential to the stabilization of the rural or the regional economy.

3. There is reasonable doubt as to the size of production increase which will result from the application of irrigation.

4. There are not sufficient basic data at hand to form a valid judgment as to the desirability of developing the large irrigation projects authorized for the subhumid areas of the Missouri Basin.

5. It is entirely possible that the funds required for development of these subhumid irrigation projects would yield greater benefits in terms of increased agricultural commodity production (possibly many times) if they were directed otherwise. Among the possibilities which may be mentioned are (a) land drainage in humid sections; (b) seed-improvement programs; (c) supplemental irrigation in humid areas more likely to accept irrigation; and (d) production of food yeasts.

NAVIGATION

The present navigation-channel plans call for a 9-foot channel from Sioux City to the river mouth. The amount of flow necessary to maintain this channel during the navigation season is not known exactly, but the figures most generally used are Corps of Engineers estimates of a discharge of about 30,000 cubic feet per second at Yankton, S. Dak., or 35,000 cubic feet per second at Kansas City. However, the Geological Survey records from 1929 to 1942 show a mean annual discharge at Yankton of only 21,780 cubic feet per second. On this basis Bureau of Reclamation testimony before a House committee in 1944 definitely suggested that the needs of both irrigation and navigation as planned could not be served consistently. * * *

The further elements which should be considered in judgment on the water supply leaving the upper basin are:

1. Beneficial use may very well include industrial demands and general community needs considerably greater than amounts now devoted to them. * * *

2. The Department of Agriculture considers the proposed irrigation development to be only part of eventual additions to the basin's irrigated lands. * * *

3. Treatment and management of all land in the basin for soil conservation and on-the-

spot water conservation, as proposed by the Department of Agriculture, may reduce the stream discharge of the upper basin. * * *

Under the circumstances it appears entirely possible that dependable navigation facilities, ensuring attainment of the objectives sought by the people of the lower basin, and at the same time giving the people of the upper basin the water promised them under the 1944 and 1945 Flood Control Acts, will be obtained only by the construction of a slack-water channel with locks. Many works constructed for the open-water channel obviously will contribute little to a slack-water channel, and the need for the authorized big dams upstream will be affected.

ELECTRIC POWER

The total power possibilities of the basin may be considerably different from those contemplated in the Pick-Sloan plan. The studies of the Federal Power Commission indicate that the 1,600,000 kilowatts which the Pick-Sloan plan would provide is less than one-half of the total potential hydroelectric possibility of the Missouri Basin. The figure for potential installation is 5,000,000 kilowatts, from which an average annual generation of 25,000,000,000 kilowatt-hours could be expected.

WATER MANAGEMENT

There is no provision for unified management of water by the Federal and State agencies responsible for its use. The Corps of Engineers will control main-stem reservoirs from Fort Peck on downstream, managing them primarily for flood control and navigation, if they are to discharge their principal responsibilities. The Bureau of Reclamation will control most of the remaining dams, particularly on the tributaries, but they will contain space for flood storage and in certain cases may be also used for navigation purposes, so that operations for these and other purposes will require some regional center of unified control. These will be managed with priority for irrigation. Although both sets of reservoirs certainly are going to produce power, it is not unlikely that there will be waste water which could be avoided with a single management of all Federal facilities in the basin.

Lack of coordinated water management is also a feature of concern in the development of ground-water supplies. * * *

ENGINEERING

At the time when the needs for irrigation, navigation, and flood control on the Missouri were being debated publicly by the agencies which later developed a combined plan, two features of the present authorized flood-control works were called into serious question. W. G. Sloan, of the Bureau of Reclamation, testified before a Senate Commerce Subcommittee hearing concerning the large Garrison Dam in North Dakota, now under construction:

"It is unnecessary * * * not worth the expenditure * * * floods can be adequately controlled without it * * * (it) floods out 50,000 acres of irrigable land, including 20,000 acres in an irrigation project just completed at a cost well over $1,000,000."

It may also be noted that the earlier exhaustive engineering report on the Missouri by the Corps of Engineers also eliminated Garrison as a practical site for construction.

On the Gavins Point Dam in South Dakota Sloan offered similar conclusions:

"We think the Gavins Point Dam is unnecessary. * * * It is very expensive for the benefits to be derived. * * * As a power proposition the cost per kilowatt-hour is some 30 to 40 times the cost at any other dam. * * * As a regulator its capacity is so small that all it does is to regulate daily flows and no seasonal flows. * * * It has no flood-control value and practically no value to navigation. * * * We recommend the elimination."

Although the reconciliation of the Pick and Sloan plans, which includes both dams, may be considered a tacit approval of the two on Mr. Sloan's part, his opinion concerning the need for them has never been retracted publicly. The only explanation offered of the reconciliation approval was made by H. D. Comstock in 1945, region 6, director for the Bureau of Reclamation, who is reported as saying:

"When the Bureau opposed the Garrison and Gavins Point Dams there was no complete program. When we reached an agreement we withdrew from the fields of flood control and navigation. We shall be the sole judge of requirements for reclamation. If the Army engineers say those dams are required for their functions, we have no opinion."

The Garrison Dam was justified in the original Pick plan primarily as a reservoir for storage of water to be diverted into the Dakotas for farm and domestic use. This plan, however, was shelved in the reconciliation document, and the Dakota water diversion is to be made from the Fort Peck Reservoir. The Garrison Dam was justified in the reconciliation document only with very general reference to flood control, navigation, irrigation, and silt collection to prolong the life of downstream reservoirs.

The Garrison issue was not laid entirely to rest with the reconciliation. A later controversy arose over the dam's height, which finally had to be settled in Congress. The dam was originally scheduled to operate at a pool level of 1,850 feet above sea level. As it is finally to be constructed, foundations will be laid for a dam capacity of operating at the 1,850-foot level, but the reservoir actually will not be permitted to operate above a 1,830-foot pool level. This hardly seems an economical procedure.

In view of the conflicting engineering opinions on the value of the Garrison and Gavin's Point Dams, the lack of detailed justification for their construction, and the incompleteness of integrated flood-control investigations in the basin, the public may very well question those parts of the Pick-Sloan project as economical expenditures. They represent an eventual investment estimated in January 1948 at about $218,000,000.

TROUBLES AHEAD

The questions on water which thus far remain unanswered are matters of special concern to the people of the region, and may lead them into later difficulty which will dwarf their past water controversies. As matters stand the uncertainties are approximately as follows:

(a) Navigation or irrigation water?

(a) The present storage system will not provide adequate water for the authorized irrigation works, and the authorized navigation channel during an extended dry period.

(b) In the event of conflicting demands for the same water, Federal statute promises priority to upstream interests.

(c) The discharge, or storage available for release during dry periods may actually be less than now calculated, because:

1. Total additions to irrigated area may be larger than those now proposed.

2. Industrial and other needs may cause withdrawals not now calculated.

3. Water retardation operations may lessen stream discharge.

(d) More water may be needed for navigation (to supply the 12-foot channel) than now estimated (for the 9-foot channel), if the benefits of competitive water transportation are to be given the lower valley.

Accordingly, in the event that the uncertain water supplies are ignored and navigation facilities are developed, and traffic assumes the proportions promised in official documents, there almost certainly will follow a legal contest to test the constitutionality of the O'Mahoney-Millikin amendment when drought comes. The prospect of this eventuality can only serve to generate a feeling of insecurity on the part of prospective water users in the upper basin, and in the end might result in unusable developments having been made in the upper basin, should the decision be in the lower basin's favor.

(b) Who takes account of industrial water needs?

Under the plans presented, the decisions made and the actions taken, the provision for industry is not entirely clear. First, its position as a water user is not completely secure. If west of the ninety-eighth meridian, it is given preference in water use over navigation by the amendment, but that cannot be considered fully secure. Then also, what are its rights if conflict arises between it and other beneficial consumptive use within the upper basin? Furthermore, since the dams are to be managed for irrigation, flood control, and navigation, what assurance of firm power is there during extended dry periods? Attractions to industry in the upper basin are not at their best, so long as these uncertainties prevail, and that may be considered a definite loss to the people of the basin as a whole.

(c) How much will irrigators and other water users pay for their water?

The financial obligations of prospective water users in the Dakotas and Nebraska are not by any means clear, in spite of the estimates issued on amounts reimbursable. There is a possibility that the costs per acre may be much higher than those estimated. It is by no means certain that the net amount of land finally irrigated on the Nebraska-Dakotas projects will be as large as estimated in the Pick-Sloan plans. The amount of class I land in the proposed projects is unknown, and the extent of farmers' acceptance of irrigation is unknown, although some indications provide a pessimistic outlook. Therefore, it is entirely possible that the amount of good land which will actually be placed under water will be much less than that inferred in the general statistics on reimbursement. The capital-cost obligations of these good lands may be very high. It has been estimated that in Nebraska they may run as high as $500 an acre, if power contributions cannot offer material assistance. The Bureau of Reclamation itself estimates the irrigation repayment cost of one Kansas project at $263 per acre. Clearly, then prospective water users have some reason for a feeling of insecurity in the present outlook.

(d) What will power rates be?

One of the reasons, from a regional point of view, for the investment of huge sums in water development, is the opportunity for obtaining cheap power. Improvement of rural living conditions, and particularly the attraction of industry are closely dependent on it. The relative cheapness of the probable power available is not yet assured, however. It is to be noted that the greater part of the large power-producing projects will be under Corps of Engineers control, to which the following provisions of section 5 of the Flood Control Act of 1944 apply:

Electric power and energy generated at reservoir projects under the control of the War Department and in the opinion of the Secretary of War not required in the operation of such projects shall be delivered to the Secretary of the Interior, who shall transmit and dispose of such power and energy in such manner as to encourage the most widespread

use thereof at the lowest possible rates to consumers consistent with sound business principles. * * * Rate schedules shall be drawn having regard to the recovery * * * of the cost of producing and transmitting such electric energy, including the amortization of the capital investment allocated to power over a reasonable period of years. * * *

Since power's share of capital costs is going to be high, along with all other costs, and the provisions of the 1944 act are adhered to, one of two eventualities seems likely: (a) Power rates will not be low, or at least attractively low to industry in comparison with rates elsewhere; or (b) there will be little surplus revenue to assist in reimbursement for irrigation developments.

REGIONAL INTERESTS

It must be admitted that the programs are not ideal, that the job will not be completed even when present programs have been fully implemented, and that seeds of contention and difficulty will be left which may spring to life at any time. These are all matters of special concern to the people of the valley.

1. Over-all responsibility and initiative: The most conspicuous missing parts from the region's point of view are: (a) A means of considering the over-all social and economic objectives of the region (toward which all present effort should be directed); a means of evaluating the several programs in relation to those objectives; and an instrument for integrating the programs on some basis other than Federal agency compromise. (b) A means of continuing consideration of regional development and conservation problems, prepared for study, recommendation, and action on them as they arise.

It may be maintained that the Missouri Basin Inter-Agency Committee answers these needs. Only a far stretch of the imagination could fit it into this role. Among the reasons why it should not be considered adequate are:

(a) It has no authority, other than the separate delegations made to the agencies and States represented on the committee. It therefore has no capacity for decision, and any controversial issue must be referred by the separate channels to Washington for decision there. It has no staff for the study of problems concerning two or more of the programs.

(b) It does not have an over-all social and economic program, nor the means of formulating one in its present composition.

(c) Stabilizing the economy and improving living conditions for the region involves more than is embraced in the present problems. A stabilized income and social structure will not be provided on the plains by irrigation alone because its effects cannot possibly touch the major part of the most susceptible dry-farming and ranching area remote from the large projects. This committee is not equipped to carry on the continuing research on industrial engineering problems relating to the development of raw materials, processing, plant-site location, employment, or the many other phases of a program of industrial encouragement. There is no provision for undertaking the complex task of balancing manufacturing and agriculture in the valley.

(d) The committee is not at present an agency for anticipating general problems, it is a forum for harmonizing established programs.

From one important point of view, then, the people of the Missouri Basin are not receiving all that might be provided for them at slight, if any, extra cost to the Nation beyond that now planned. In its present organization the Federal Government is not designed to provide either a temporary or a continuing agency for consideration of overall social and economic problems in the Missouri Valley, while the States concerned have not yet shown themselves temperamentally inclined or financially able to support one. * * *

ONE AGENCY NEEDED

The present system may also be criticized because there is no single administrative center in the region which can take leadership in pulling together the many segments for a comprehensive resources program for the entire basin. The State membership on the Missouri Basin Inter-Agency Committee, together with the public hearings procedure used by that committee, do not meet the need fully. They do not assure a basin-wide and active consciousness that the basin is a unit for coordinated management, despite the admission of informed public officials that it should be so regarded. The really important plans and decisions are made by separate Federal agencies responsible to a Washington desk or by the Congress or the President. Thus the present organization encourages centralization and the habits of dependence on centralized authority and largesse. A more unified organization in the basin should mitigate these tendencies.

One may raise doubts about the validity of the principal defense of the present organization of programs in the Missouri Basin (i. e., it is the most democratic procedure possible). Another more unified organization with less centralized agency responsibility, and more regional responsibility might presumably adhere more closely to the spirit of democracy in some respects, and probably would operate more efficiently.

American Workers Hurt by Low-Paid Foreign Labor

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. WEICHEL. Mr. Speaker, the misnamed reciprocal trade treaties in practice have no reciprocity. Foreign, cheaply made products of low-paid foreign labor are brought into this country with import duties so low that American labor must lower its standard of living or such American-labor-produced products must go off the market.

The fishing industry and the handmade glass industry are some of the most outstanding examples. The recent hearings held by the House Committee on Merchant Marine and Fisheries show that the payment to labor of foreign-produced fish is not as much as that paid to American labor for fish production. In the Great Lakes area the pay to foreign labor on imported fish is nearly 40 percent less than that paid to American fishermen and with correspondingly low labor rates on foreign fish imported from salt waters.

These hearings have shown what a blow the executive side of the Government is dealing to the oldest American industry, especially to the tens of thousands of American workers engaged in the industry.

Mr. Speaker, I believe that the Government should investigate this attack on labor engaged in the American fishing industry; especially should the Department of State, the Department of Commerce, and the Tariff Commission, and I have introduced the following resolution calling upon them to report to Congress their investigation of this matter before May 15 of this year.

The resolution follows:

Whereas the fishing industry is an important part of the economy of the United States; and

Whereas the growing population of the Nation emphasizes the increasing future importance of fish as a food; and

Whereas the men and equipment of the fishing fleets and the shore workers engaged in the preparation of the catches, and the food resource thereby made available, have been demonstrated in two world wars to be necessary to the national defense; and

Whereas operations of much of the fishing industry have been seriously curtailed by reason of steadily growing imports of fish and fishery products, particularly of fresh and frozen fish, and there is reason to believe that similar conditions are imminent in the tuna industry on the Pacific coast; and

Whereas if the present trend is permitted to continue, the fishing industry will, within a short time, be so impaired as to force out of business a major portion of the fishing fleet of the United States and force out of employment a major portion of the workmen employed in various phases of the industry; and

Whereas the domestic fishing industry has already been adversely affected and is further seriously threatened by the consistently increasing importations of fish and fishery products into the United States; and

Whereas the imported fish are caught by workmen whose wage scale and standard of living are far below those of Americans in like occupations; and

Whereas notwithstanding the resulting lower cost of fish in their primary foreign market, the finally processed product is sold to the American housewife at the same price as the domestic fish; and

Whereas representatives of the fishing industry and others from many parts of the United States recently appeared before the Committee on Merchant Marine and Fisheries and attested to the facts hereinbefore stated; and

Whereas the foregoing indicates the need for an immediate study, examination and investigation of the causes and effects that will result in the serious impairment of the oldest and one of the most important food-producing industries in the United States: Therefore be it

Resolved, That the Secretary of State, the Secretary of Commerce, and the Tariff Commission be, and they hereby are, directed to make an immediate study of the effect on the domestic fishing industry of the increasing imports of fresh and frozen fish, to report to the Congress the effects covering such importation of fresh and frozen fish, its effect upon the American fishing industry, the means whereby the American fishing industry may survive against the importation of low-labor cost, foreign caught and foreign processed fish; and further, by reason of the fact of testimony before the House Committee on Merchant Marine and Fisheries describing the present conditions with reference to the importation of fresh and frozen fish and processed fish on the Atlantic coast, the Pacific coast, and the fresh waters of the Great Lakes, the Department of State, Department of Commerce, and the Tariff Commission are requested to make their report to the Congress thereon not later than the 15th day of May 1949.

Hon. John Kee

REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. McCORMACK. Mr. Speaker, while we are all deeply grieved at the death of our old friend Sol Bloom, but with his passing on we are pleased that the distinguished gentleman from West Virginia [Mr. KEE] has succeeded him as chairman of the important Committee on Foreign Affairs. I hold in my hand a copy of House Concurrent Resolution 33 adopted by the Legislature of West Virginia expressing the pleasure of that great legislative body on the designation of the gentleman from West Virginia [Mr. KEE] as chairman of the House Committee on Foreign Affairs. This resolution is as follows:

House Concurrent Resolution 33

Concurrent resolution concerning the appointment of the Honorable JOHN KEE to the chairmanship of the Foreign Affairs Committee of the House of Representatives

Whereas West Virginia has been honored by the appointment of the Honorable JOHN KEE, a Member of Congress from the Fifth West Virginia Congressional District, to the chairmanship of the important Foreign Affairs Committee of the House of Representatives as the successor of the late Sol Bloom; and

Whereas Mr. KEE is now serving his ninth consecutive term as a Member of the Congress and has ably and capably represented his district and country during these crucial years in the history of the Nation; and

Whereas Mr. KEE prior to his service in the Congress was a leading member of the bar in West Virginia, active in all civic and public affairs, a leader in his political party, and prior to his election to the Congress served as a member of the West Virginia State Senate; Therefore be it

Resolved by the house of delegates (the senate concurring therein), That the Members of the West Virginia Legislature have learned of this appointment with great pleasure, commend the Nation on securing the services of this distinguished citizen of West Virginia in this highly important position, and congratulate Representative KEE on this signal honor which he has by long and faithful service won for himself and for his State.

Communist Manifesto

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of March 4, 1949:

COMMUNIST MANIFESTO

Throughout the world, the Communists have issued a new manifesto, the gist of which is that in the event of war between Russia and the United States they would take their stand with Russia.

There is really nothing surprising in this declaration. It always has been known that Communists recognize no loyalty other than allegiance to Russia and the dictates of the Kremlin. But, as we pointed out recently, there may be some significance in the fact that they chose this particular time to give advance notice of their intention to commit treason.

First there was the statement by Maurice Thorez that French Communists would welcome the Red Army as a liberator in the event of war between the East and West. This was followed by the declaration of Palmiro Togliatti that Italian Communists would aid the Russian Army if it ever chased "an aggressor" onto Italian soil.

Then Harry Pollitt said British Communists would try to sabotage any imperialist aggressive war against Russia. Next Wilhelm Pieck and Otto Grotewohl accused the West of preparing for war against Russia and declared that German Communists must fight the aggressors and support the Soviet Army in its effort to create peace. The Austrian Communists also joined the refrain that they would support the Soviet Union.

And now the American Communist Party, whose leaders are on trial on the charge of conspiring to overthrow the United States Government by force, have announced that they, too, would oppose an unjust, aggressive, and imperialist war. Of course any war against Russia, even one in self-defense against a Russian sneak attack, would be unjust, aggressive, and imperialist, according to the Communist Party line.

Last May, William Z. Foster, national chairman of the American Communist Party, made virtually the same statement to the Senate Judiciary Committee which had under consideration the Mundt-Nixon bill to regulate and control Communist activities in the United States.

Are the Communists trying to scare somebody? They can't do it by announcing what everyone already knew, namely, that they would betray their native countries the first time the opportunity arose.

It is difficult to understand what Moscow is up to. The United States has no intention of starting a war with Russia, but the American people are concerned about their ability to defend themselves in case Russia starts a war.

The Communists may be preparing in advance their alibis for engaging in treason, on the supposition that Russia soon will take some aggressive action in the cold war, or perhaps they are merely trying to dissuade some of the nations of western Europe from joining the projected North Atlantic defense pact.

Readying a Scapegoat?

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus (Ohio) Evening Dispatch of March 30, 1949:

READYING A SCAPEGOAT?

Businessmen and consumers (in other words, the people) were warned by the chairman of the Council of Economic Advisers of the President, Dr. Edwin G. Nourse, that they could hurt the economic situation in the coming year by their attitude toward the changing economic picture.

Economist Nourse took both sides of the question saying, on the one hand, that "conditions are sound and basically favorable" and, on the other, that he had no intention of "fooling the public with an assertion that there are no perils in the economic situation today. As a matter of fact," he continued, "I think the year 1949 will present very sober and serious responsibilities to the American people, both in its private business agencies and in its public policies and actions."

He then went on to suggest that panic on the part of the people could spoil the future prospect and said that was the real danger in the situation.

It seems that Dr. Nourse is offering a rebuttal in advance. If the economic situation is deteriorating, the people cannot be blamed for that nor can they be blamed in advance for whatever further deterioriation occurs. The American people are fundamentally optimistic. They do not panic nor do they succumb to pessimism without cause. The world's greatest nation was not built on pessimism and it is not maintained in panic. When the American people do feel fear, when they do retrench, when their confidence is challenged, these reactions stem from fundamental stimuli and the control of factors capable of arresting their inherent optimism lies far more in the hands of their leaders than in themselves.

If a climate of confidence, optimism, expansion, and productivity is what Dr. Nourse wants in order to maintain a high level of economic health the way to encourage such a climate lies in not doing the things that worry the people.

A government does not encourage its people when it burdens them with the heaviest tax load in their peacetime experience and then threatens them with even more taxes; it does not encourage its people when it spends more and more money for nonproductive governmental purposes in the face of a declining national income; it does not encourage its people when its leadership is alarmist, disunited, and contradictory; it does not encourage its people when it continually sponsors class antagonisms and wars against this group of the population and that, the while promising all things to all groups.

People do not collectively and suddenly decide that they will become discouraged or that they will panic. Always there must first be a set of definite circumstances so overriding that they can break down the people's natural optimism. When the concern is economic, in whose hands rests the power to create circumstances which can frighten the people? When the problems are economic who, by cowardice or inability, can panic the people by sidestepping them? The answer is, of course, the government.

Hon. James Forrestal

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial appearing in today's New York Herald Tribune in commendation of our former Secretary of Defense, James Forrestal.

It is an honor for me to have James Forrestal as a constituent, and I know his

legion of friends in our part of New York State are proud of his receiving the Distinguished Service Medal from President Truman. Yesterday the House Committee on Armed Services expressed their appreciation of the cooperation they have enjoyed with Mr. Forrestal. I am sure that all of the residents of the Thirtieth Congressional District of the State of New York join with me in wishing Jim Forrestal the very best of everything, which he so rightly deserves.

The editorial follows:

DISTINGUISHED SERVICE

When President Truman pinned the Distinguished Service Medal—the Nation's highest civilian decoration—on the lapel of the former Secretary of Defense, Mr. Forrestal stammered and was left speechless with surprise. The surprise will be shared by none of his countrymen. Mr. Forrestal has rendered both difficult and highly distinguished service to the Nation. Even more than that, perhaps, he has stood as a prototype of the kind of public servant—highly competent, trained in business administration, understanding the strengths and needs of an enterprise economy but at the same time willing to give all his talents to the complex tasks of modern government—which this country must continue somehow to enlist if it is to bring its full potentialities to bear upon the gigantic issues which confront it.

When Mr. Roosevelt, in 1940, summoned the president of Dillon, Read & Co. out of Wall Street to be one of his administrative assistants there was a considerable lifting of Leftish eyebrows. The only result was to prove that even Wall Street could contribute essential virtues to the efficient and nonpolitical conduct of the public business. Within a few weeks the administrative assistant had become the first Under Secretary of the Navy; within a year or so he was driving the gigantic programs of naval building to success and victory; in 1944 he was obviously the only possible successor to Mr. Frank Knox as Secretary of the Navy, and in 1947 he was the inevitable choice as first Secretary of Defense. The whole story of his patient yet firm and expert work in face of the incorrigible problems of unification has not yet been told; perhaps it never will be fully, but if it ever is, the Nation will realize that it owes a debt to this loyal administrator which even a Distinguished Service Medal can only partially acknowledge. It may also realize how badly it needs more like him.

Farewell Ceremonies to Secretary of Defense James V. Forrestal

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proceedings before the Committee on Armed Services, House of Representatives, Tuesday, March 29, 1949:

The committee met at 10 o'clock a. m., Hon. CARL VINSON, chairman, presiding.

The CHAIRMAN. Let the committee come to order.

Mr. Secretary Forrestal, this is not an ordinary committee meeting of the kind you have participated in so frequently in this room in the days that have gone by.

This is a special meeting. It is called for a specific purpose—to take official note of your retirement yesterday from your high office in the Government.

Mr. Secretary, you have a long and brilliant career. Much of it has been on the highest level of finance and industry. But it is in the service of your country, as a high official of our Government, that you have most singularly distinguished yourself among your fellow citizens.

I recall that on August 20, 1940, you assumed the office of the Under Secretary of the Navy. Much of the world was then at war. That was the time when the Nation as a whole—and the Congress and official Washington in particular—were beset on the one hand with the hope that this country could avoid war, and on the other hand, with the fear that we could not.

At that time, what did we have in the way of a Navy? When you became Under Secretary of the Navy, we had 1,058 vessels of all types, comprising 1,892,000 tons, of which 383 were combat vessels. We then had only 189,000 men in the entire Naval Establishment. This seemed a large force in those days.

It was then that your characteristic vision first became apparent. For in those troubled times, when the future was cloudy, you foresaw not only the scope but the very nature of the conflict in which we were to be so soon involved.

It was your foresight—and this is a matter of historical record—which resulted in the early plans for the procurement of large volumes of material and its construction into naval weapons.

It was your vision and the magnitude of the conflict just over the horizon that prompted the Navy to embark upon its huge construction program of 200 combatant ships at a cost of over $3,000,000,000.

This was a tremendous task then. And it was undertaken at a most difficult time. The results you achieved in the brief time remaining before hostilities bore fruit at a most critical time.

Then came Pearl Harbor. The blow, though serious, was not deadly due largely to your efforts of the preceding year. Due to your farsighted preparations, the Navy Department had been brought to a state of readiness where it could replace in part and repair sufficiently most of the losses and damage.

It was 8 months to the day after Pearl Harbor that the Navy struck back to check our enemy in the Pacific at a critical point in his advance. At Guadalcanal Navy ships and aircraft and Marines engaged the enemy in a ferocious contest. I well recall the Imperial Japanese Command proclaimed this engagement to be crucial.

The progress made in the short period of 8 months from the disaster of Pearl Harbor to the grim struggle at Guadalcanal is a measure of the amazing achievements for which you are in large part responsible.

Two years later, on May 19, 1944, when we were saddened by Secretary Knox's untimely death, you became Secretary of the Navy.

The war was now reaching a climax. Two and one-half years of warfare had passed and the organized might of American industry had reached that astonishing and irresistible height which foretold victory.

In the short space of 4 years since you first took office in the Navy Department, the Navy had grown from 189,000 men to 3,600,000, from 383 combat vessels to 1,500 combat vessels, and from 1,058 vessels of all types, comprising 1,892,000 tons, to more than 40,000 vessels, aggregating more than 10,000,000 tons.

This was a phenomenal accomplishment—a tribute to American ingenuity, enterprise, and determination, and especially a tribute to your painstaking and farsighted efforts as Under Secretary of the Navy.

So you, as the new Secretary of the Navy, with the production problem already in hand, your concern was mainly one of governing, administering, and directing the full force of the flood of naval weapons and sailors to use them, which were pouring out in a steady stream against our enemy across two oceans and reaching out to many lands.

During this time the great sea battles of the Pacific were undertaken. The campaigns of the Carolinas and the Mariannas and others were prelude to the greatest sea battle in the history of the world. It was your privilege, Mr. Secretary, to be head of the Navy Department at the time of the battle of Leyte Gulf, where the opposing sea power was decisively defeated. You were fortunate, indeed, to see the culmination of your thought and efforts in the brilliant accomplishment of our fighting forces and the final surrender of our enemy on the deck of the battleship *Missouri*.

Yes, it was your responsibility and high historic privilege to guide the destiny of the largest Navy in all the history of man—probably the largest Navy ever again to be seen.

And it was likewise your responsibility to direct the expenditure of much of the $118,000,000,000 appropriated for the Navy since July 1940. And never, not once, in all these difficult years was there any criticism of the administration of these vast funds.

This is truly a great record of which you have every right to be proud, and for which the Nation may be everlastingly grateful.

Mr. Secretary, in the years I have been a member of the Committee on Naval Affairs, and more recently, this committee, a number of great and distinguished Americans have held the office of the Secretary of the Navy. Let me name a few to recall to our minds the great character and ability this country must recruit from its citizens to fill the office of the head of one of our military departments.

Josephus Daniels, of North Carolina, a gentleman and patriot, forthright and vigorous, was the first I knew, and he left a large mark in the history of the Navy.

Charles Francis Adams, of Massachusetts, was another who brought great talent and high character to this office.

And Claude Swanson, of Virginia, was a statesman and administrator of notable vigor and integrity.

Mr. Secretary, I deem it a privilege to say that you have every right to be numbered in the distinguished company of these great citizens, who have given so much of themselves to the country through their task of governing the Navy Department.

It is, in fact, a fair statement, Mr. Secretary, that you have assumed and performed with distinction duties far transcending in responsibility any heretofore undertaken by any previous Navy Secretary in the history of our great Nation.

That you filled the office in such critical and momentous days would be honor enough for any man.

That you filled the office with such outstanding success entitles you to distinction and recognition far beyond that attainable by more than few men in our history.

Certainly your attainments will have lasting influence on the Navy, on the National Military Establishment, on the Nation as a whole—influence working to the Nation's advantage far into the future.

With the end of the war, not only the Navy but the other services as well were confronted by other great problems.

The lessons of the war had to be applied quickly while they were still fresh in all minds.

Certainly the guiding principle of the war was that of teamwork.

So acutely had you become aware of this that it was due in large measure to your

efforts that the Congress enacted the National Security Act of 1947.

Then, on September 17 of that year, you became this country's first Secretary of Defense.

The task you then undertook, and from which you have just departed, was that of welding our armed forces into an effective team.

Assuredly this has not been and is not today an easy task.

And as all of us know who have dealt with these matters, such a task cannot be accomplished over night.

Your efforts as Secretary of Defense have been highly successful.

They have resulted in notable and meritorious progress—progress which others less gifted with administrative acumen, patience, and vision would have found wholly impossible.

In view of all of these significant events in which you have played so commanding a role, we want it long remembered and permanently recorded here that your outstanding talents and accomplishments on the highest levels of our Government have been appreciated and valued highly by this committee and the Congress.

Your wise counsel and devoted service have been a tower of strength in aiding the old Naval Affairs Committee and this committee in the discharge of its responsibilities.

Mr. Secretary, on behalf of the committee, I present you this token of our high esteem. Engraven upon it you will find our names in testimony of our regard. That regard is also indelibly inscribed in our hearts.

We will miss you, Mr. Secretary. [Applause.]

(Presentation made.)

Secretary FORRESTAL. Mr. Chairman, I am too much overcome by what I consider to be a very gracious and a very moving testimonial of your friendship and of those deeper feelings that come from the heart.

I should like to say for the record, however, without venturing to contradict the rhetoric of the chairman, that that tribute which he gave should properly be directed to himself and to the members of this committee because it was the unfailing zeal, the high intelligence, and the continuing zest for work which really built the American Navy and which under the chairmanship of Mr. VINSON will also build the defense forces under the unification which I know will be ably guided by Colonel Johnson, my successor.

I am much too moved to go into a longer appreciation for this most generous and exceptional act. I thank you deeply. [Applause.]

The CHAIRMAN. The Chair recognizes the distinguished gentleman from Missouri [Mr. SHORT].

Mr. SHORT. Mr. Chairman, Secretary Forrestal, and fellow Americans, often I have thought, now I know I was born to be an anticlimax. But as a member of the minority I wish to say on their behalf and I am sure it is the sentiment of every member of this committee that we wholeheartedly concur in the very fine, noble, and well-deserved comments of our distinguished and able chairman, the gentleman from Georgia, in regard to James Forrestal.

Loquacious as I might be at times, those who know me best I think will agree I am not prone to flattery or addicted to fulsomeness, but I can't refrain from saying on this occasion which is both pleasant and sad that in my own personal opinion James Forrestal is the perfect example of the highest type of public servant. After spending a year at Dartmouth and 3 years at Princeton, he learned a little about zinc and more about tobacco. He is one of those awful investment bankers. But when the First World War came on he quit his lucrative job and went into the service I think as a seaman second class. He came out a naval aviator. He served his country well in war as he has in peace. He came up the hard way, as a poor boy, to become president of Dillon, Read & Co. He was selected by the President of the United States in 1940 to come as his executive assistant to Washington.

Grand are the names of our military and naval and air officers who were at the guns. We should not forget the men back of the guns and back of the men behind the guns. I think through the terrible, trying years of the war much of the credit for our victory should go to the Under Secretaries: Bob Patterson, Jim Forrestal, and Jack McCloy. They did a marvelous job. They did it so well that two of them were made the Secretary of War and the Secretary of the Navy following their illustrious predecessors.

Nobly and ably as they served their country during war, I want to say that following the war in this most difficult period of transition the first Secretary of National Defense will always be remembered for the outstanding job he did in a most difficult, complicated, and almost impossible position.

Jim Forrestal will forever be remembered by the members of this committee because of the admirable mixture of imperturbability and of daring that is in him. Always cool, calm, courteous, courageous, and kind, he has won a permanent place in all of our hearts.

We regret to see you leave, sir, because we have seen you literally wear yourself away at this job, working from early in the morning until late at night. The public doesn't know the agony through which you have gone. With all of these contending forces and conflicting interests, in an atmosphere of disputatious contentiousness you have labored. And I think you have brought forth something more than a mouse. I am sure that the success you have achieved has been due largely to the cooperation and the understanding of Secretary Royall, Secretary Sullivan, and Secretary Symington.

We need a natural, healthy rivalry among our armed forces. It is a good thing. But we do want to forget the little, petty jealousies, bickerings, and bitterness. We shall continue to strive for unity, cooperation, and solidarity.

You are going to be succeeded by a great American, an illustrious soldier. I think I am not out of order, Mr. Chairman, when I say that Louis Johnson will have the same consideration and the same cooperation from this committee which Mr. Forrestal has had. Certainly we have not always agreed with him. We have fought and battled. But the members of this committee are a big family. I happen to be No. 8 in a brood of 10 children at home. We used to fight and knock each other over and break the furniture, but whenever some stranger or outsider jumped on one of us kids he had the whole family to whip. We are not always going to agree in the future, but I can promise you this: We have the welfare of the Nation at heart and the security of this country uppermost in our minds and we want to do everything in our power to keep America strong and to contribute our share to the establishment of a just and lasting peace.

As you leave us, Mr. Secretary, we want to wish you continued success, which we know your clean and clear mind, your stout and honest heart, and your ready and able hands will achieve. We hope most of all that you will get just a little well-earned and well-deserved rest. We wish you the best of health and God speed in all your undertakings. That comes from our hearts. [Applause.]

The CHAIRMAN. Thank you, Mr. SHORT.

Now, members of this committee, I have the honor to present to you the new Secretary of National Defense, Mr. Johnson. [Applause.]

Secretary JOHNSON. Mr. Chairman and gentlemen of the committee, my friend, Jim Forrestal. To the limit of my knowledge, I subscribe to everything that has been said about Jim Forrestal's record. Of my own personal knowledge during these last 60 days—and, parenthetically, the only well-kept secret since it was known Jim was retiring is the fact that Jim and I have been working together, even the Pentagon didn't find out about that until it was announced—during that 60 days in which I came to value Jim Forrestal's friendship, I came to value, too, a keen, incisive mind, one of the best analytical minds I have ever come to know. I have come to treasure the love of America, with the friendship between us that has now developed, that prompted him to help me get started on this job. I know I can do a little better job from this 60 days of intensive effort on Jim Forrestal's part to indoctrinate me.

I am glad to come before this committee, Mr. Chairman, and bear testimony to my affection for Jim Forrestal, but more importantly to bear testimony to the debt of gratitude I owe for his patience with me in this past 60 days. I haven't the gift of words of your brilliant testimonial. It is one of the finest things I have ever heard. I don't have round phrases like your colleague on your left used. I don't come from a family of 10. There were only six of us. We had the same sort of experiences.

I want the privilege of coming before this committee when you don't send for me sometimes and with the doors shut just talk about some of the problems that Jim leaves for me.

And, lastly, I want to say that there are things that will happen in the Pentagon in the next 3 or 4 weeks, a month or two, and the headlines will probably say Louis Johnson did this or that. I want you to know—for instance, there are two announcements that we will make at the press conference today on reorganizational matters and the headlines will say Louis Johnson did that—that those things are the results of studies that go back for months under the direction of Jim Forrestal and all that happened is they weren't quite ready to be announced before Jim came out over there and the credit is really Jim's.

I want to say further, sir, my affection for him and my appreciation for the foundation he laid is so great that never knowingly will there be a word come out of the Pentagon against the great record of Jim Forrestal. [Applause.]

Secretary FORRESTAL. If I might, I cannot let this occasion pass without paying tribute to the men who are seated behind me: Secretary Royall, of the Army, who has given the most devoted and loyal service; Secretary of the Navy Mr. Sullivan; and Secretary of the Air Force Mr. Symington, whose zeal and high devotion to his beliefs will be a lasting tribute to his record. [Applause.]

The CHAIRMAN. May I assure the distinguished new Secretary of National Defense, Mr. Johnson, that I know I speak for all of the committee when I say we will welcome at all times counsel and advice. And we will be calling on you and no doubt you will be calling on us, and we will try to work with one objective in view: The best interests of our great country.

Mr. SHORT. I think we overlooked just one thing, Mr. Chairman. I am sure our professional staff, who worked so closely with you, Mr. Secretary, and with all the other Secretaries here, as well as our office force, will heartily agree with everything Mr. VINSON and myself have said.

Secretary FORRESTAL. To your staff, Mr. SHORT, and Mr. Chairman, both the committee and the military services are very deeply

indebted. They have made a very great contribution of intelligence and perception and work to the efforts of your committee and to the accomplishments of the military services.

Mr. SHORT. We think we have the best staff on the Hill.

Federal Control of Schools

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30 (legislative day of Friday, March 18), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Federal Control of Schools," published in the St. Louis Globe-Democrat the week of March 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL CONTROL OF SCHOOLS

Two bills, which would provide $335,000,000 annually for Federal aid to education, have been approved by the Senate Labor and Public Welfare Committee. One of the measures is the controversial school-aid proposal designed to equalize school opportunities in the States. The other is an appropriation bill to give $35,000,000 a year to check on the health of school children.

The Federal school-aid bill appears to have the support of nearly all of the southern Members of Congress. This is to be expected. No one is inclined to snub Santa Claus. The South is the section of this country which will receive the greatest benefit from Federal aid. The National Education Association and allied groups, which are supporting the bill, insist that the Southern States are economically unable to support adequate schools.

This argument, however, falls of its own weight. Texas and North Carolina, for example, cannot be called poor States. Yet together they would receive $41,500,000 under the distribution formula—which is approximately one-seventh of the entire amount. Alabama is another Southern State which has made rapid advances in industrial development during and since the war. Alabama, under the formula, would receive $19,390,000, and pay back in Federal taxes about $3,734,000. Kentucky certainly would resent being designated as a have-not State, yet Kentucky would receive $16,120,000 and pay back in taxes about $3,595,000.

On the other hand, as Missouri's Senator KEM points out, this State would receive about $4,000,000 in Federal aid and would pay out in taxes approximately $8,000,000 annually, a net loss of $4,000,000. In short, Missouri taxpayers would be required to help pay the cost of public-school education in the South, largely because the taxpayers of those States are unwilling to pay enough in local taxes to maintain proper standards in their schools.

The grave danger for the schools in every State is the threat of Federal control over education. It is as dangerous a fallacy to assume that Federal control of the purse strings does not mean Federal control, as it is to assume that Federal aid to schools will be limited in the future to $300,000,000 a year. The plain lesson of experience is that there is no such thing as a little pump priming. Once the precedent is set for Federal aid, there will be increasing demands for larger and larger appropriations until ultimately the Federal Government will be expected to carry the major part of the load. When this happens, if not before, Federal control of education will be inevitable.

Red Letter Man Hates Our Letters, But His Novel Wasn't Very Novel

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Victor Lasky, World-Telegram staff writer, which appeared in the New York World-Telegram on March 26, 1949:

RED LETTER MAN HATES OUR LETTERS, BUT HIS NOVEL WASN'T VERY NOVEL

Burly, voluble Alexander Fadeyev, who heads the Soviet delegation at the Waldorf-Astoria peace conference, achieved international attention last August when he described American literature as "reactionary waste paper" and swing music as "contemporary St. Vitus dance."

A writer himself—he has written two novels—Mr. Fadeyev accused leading American and European authors of breeding war propaganda. He mentioned by name Eugene O'Neill, John Dos Passos, T. S. Eliot, James Farrell, Jean Paul Sartre, and Andre Malraux.

"If hyenas could type and jackals could use fountain pens," he told the Polish-sponsored intellectual congress, "they would write such things."

EVEN HE ERRED

Mr. Fadeyev, as secretary general of the Union of Soviet Writers, is commander in chief of the well-disciplined army of Soviet literary folk. But even this top post did not save him recently from humiliation.

He was forced to rewrite completely his best-selling novel, Young Guard, after Pravda accused him of political heresies. And Mr. Fadeyev made the following confession:

"I quite agree with the criticism of the novel. I agree, not as a matter of form, but because I deeply understand the essence of this criticism."

TYPICAL RED AUTHOR

He went on to say that he would "attentively and lovingly" revise his novel to make it correspond to the "high demands of the party and the Soviet people."

Mr. Fadeyev thus typifies the Soviet man of letters—love of bureaucracy, servility, and what apparently is an almost paranoiac hatred of Western culture.

Mr. Fadeyev was born in Vilna in 1901, the son of a country doctor. He left a business school to join the Communist movement and between 1919 and 1921 fought with the Red Army against the White Russians and Japanese. After attending a mining school, he published his first novel, which was translated into English as The Nineteen. It dealt with Mr. Fadeyev's war experiences.

According to Dwight MacDonald, editor of Politics, Mr. Fadeyev then became a leading figure in the Association of Proletarian Writers (Rapp) and crusaded with fanaticism for Socialist realism.

His Young Guard, the story of Soviet partisan resistance to the Nazis, has sold more than 1,000,000 copies and won the coveted Stalin prize. But it was in December 1948, 3 years after he had written Young Guard, that he was forced to rewrite it.

MADE INTO MOVIE

Young Guard was made into a movie, whose musical accompaniment was composed by Dmitri Shostakovich, another Soviet delegate to the peace conference here.

Only recently Mr. Fadeyev led the public inquisition of several Soviet drama criticis. It seems they had not denounced with sufficient fervor the bourgeois-liberal play All My Sons, last year's Pultizer prize winner.

All My Sons was written by an American—Arthur Miller. Mr. Miller is a fervent sponsor of the Waldorf peace parley. Observers are awaiting with interest the moment when Mr. Fadeyev is introduced to Mr. Miller.

Tragic Conditions of Our National Fauna

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, March 30 (legislative day of Friday, March 18), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a translation from Spanish of an article entitled "Tragic Conditions of Our National Fauna," by Julio Estrada, which appeared in the January 1949 issue of Cazador, Mexican outdoors magazine and official organ of the Federation of Hunting, Shooting, and Fishing of the Republic of Mexico, comprising over 300 sportsmen's clubs.

There being no objection, the translation was ordered to be printed in the RECORD, as follows:

TRAGIC CONDITIONS OF OUR NATIONAL FAUNA

(By Julio Estrada)

The title of this article is painful.

I am certain that many will be shocked at seeing it in print and that it will cause others to protest, but a large majority will agree with me that it is an obvious statement and deserves most serious consideration by all hunters in the Republic, by our public authorities, and even by those who are interested in this sport.

For several months I have been tempted to write on this subject, but for one reason or another I had postponed it until now, because of the arrival of an American official mission from Washington, headed by Mr. Albert M. Day.

This mission will make investigations concerning the treaty on migratory birds in effect between the two countries and I have been honored with an invitation, together with other sportsmen of this city, to the various conferences that are being held on this topic.

American hunters are having trouble with their duck shooting because year after year the amount of birds of this species has greatly diminished, to such an extent that now the number of birds they may kill in 1 day is limited to only four and according to their laws they are only entitled to eight (in their possession).

Their hunting season has been limited to 30 days and, depending on the locality, the days suitable for this kind of shooting very often do not exceed 1 week, because these birds do not stop for a longer time on their way south.

As a consequence of these conditions, among other reasons, it has been imagined

that a frightful slaughter is going on in Mexico, because of the continuous reports they are getting in Washington, concerning the armadas that are systematically fired in the valley of Mexico, with the full knowledge and consent of the authorities, and to this date no steps have been taken, not even the most elementary ones, to stop this practice.

On the day this mission arrived, its members were interviewed and the newspapers of Mexico City published an article, with photographs, to the effect that the Government of our neighboring country was extremely satisfied with the way in which the international treaty on migratory birds had been complied with, and that the armadas had been completely abolished.

The statement made by the press can only be qualified as ridiculous because the foreign commissioners know that the armadas are fired, and to make us all appear even more ridiculous, a party of duck hunters, to which I belong, has leased the La Curva, La Fabrica, and Los Americanos lakes; among the members of this group well-known hunters such as Ramon Llano, lawyer Virgilio Galindo, Fransisco Gonzalez de la Vega, and the author of this article were present on the occasion I shall relate.

We had invited Mr. Day and his two companions Mr. Bennet and Mr. Gascoyne, and during the morning in which we were shooting an armada thundered right in these respectable gentlemen's faces, as if it had been prepared beforehand in order that they should fully realize our inefficiency to comply with the terms of the treaty that I have mentioned.

I was at my post (blind) with Dr. Bennet and I was horror-stricken when I heard the armada broadside, and also when he told me "Well, until (sic) I get to see what an armada is." A moment later the flocks of ducks the armada had started began to fly; an unavoidable confirmation of what had happened.

The readers may arrive at their own conclusions and imagine the opinion with which these gentlemen will return and make a report to the officials of their country who will undoubtedly be in a position to cause us a great deal of embarrassment.

The duck armadas as well as the use of (jacklighting) lanterns, the excessive abuses practiced by those living in rural districts, and unfortunately the continuous killing of the females of decreasing species of our Mexican fauna, has brought about a situation that now borders on tragedy.

And not only are we facing the appalling problem of the almost total extinction of our wild species, but these conditions have been extremely grave, and although many hunters realize it and bear it in mind, nothing, absolutely nothing has been done, neither by our officials, nor by the hunters, in order to avoid this calamity which has already made such great inroads.

I realize and imagine that our Government's problems are of great importance, and although it may seem harsh to say so, little does it care whether our descendants may have deer, ducks, or pigeons to shoot at * * * these are the actual facts.

Hunting laws are published but their observance is limited to whatever the hunters choose to do, or to the needs of a few wardens who in their zeal to comply with their duties may be carried to the extremes of quixotism.

San Luis Potosi, the source of white-tail deer in the Republic, so to say, and the State that undoubtedly had a larger amount of this species than any other, is today in conditions hardly possible to believe. I was in the capital of that State during the first week of December and I was astonished by being told by many hunters who are friends of mine that on several occasions when they were out hunting they had been unable to see a single male deer.

On the other hand many other unscrupulous hunters had killed some female deers.

One of my good friends returned from a hunting trip in the north, and told me how indignant he was to have seen a small truck loaded with two female "bura" deers that had been lanterned (sic); and I would never end if I were to investigate and seek evidence of such cases, and besides it being a bothersome task it would be courting trouble.

The critical moment has arrived in which radical measures must be taken, and as it seems that the proper authorities do not take the lead, it is therefore the duty of the hunters of this country to give this matter their most earnest consideration so that through them adequate means to this end are adopted, which, if put into effect at this time, will bring about a slight improvement of these conditions within 5 or 6 years, or probably 10. What does this mean? Simply that absolutely all of us, with certain exceptions, agree to a hunting prohibition for all "bura," white-tail, berrendo (spotted) and borrego deer, the latter two species being of course in more critical conditions than the former. The wild boar must also be included.

More than 300 clubs have been recently founded which belong to the National Hunting and Fishing Federation. In my opinion, these clubs perform their activities in a most excellent manner; they have kept their respective organizations perfectly well disciplined; the Government has granted us licenses to carry arms; it has made high velocity ammunition available to us, and we have enjoyed absolute freedom in the possession of the number of guns each of us may own. The only answer to this is that they have acted most honorably, a fact which our Government authorities should not fail to take into consideration, and it is with strict discipline and a most orderly manner they have taken advantage of the privileges that were granted them.

If this has been possible, why should not our federation take over the enforcement of hunting laws with the cooperation of the Hunting and Fishing Department by delegating to all the clubs of the Republic the facilities and responsibilities to do so. All this in view of the fact that they have given evidence of their union and discipline in their organization and shooting practice in their respective camps. Why not let them assume the obligation of enforcing hunting laws in their respective localities and decide on the hunting prohibitions they may consider necessary, which in my opinion should be a general prohibition for all the Republic or for a large portion of it, so that, as I have already mentioned, within a few years it may be possible to enjoy hunting again in a reasonable and just manner.

I sincerely believe that the suggestions that I am hereby making to all my fellow hunters of the Republic should deserve their serious consideration, and that we have, of course, our magazine Cazador which all can make use of to publish their opinions, to suggest and propose the measures that may be necessary with the definite purpose of putting a stop to the tragic conditions in which our national fauna now finds itself.

Cultural Parley Is Scored by Rabbi

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the New York Times on March 27, 1949:

CULTURAL PARLEY IS SCORED BY RABBI—ROSENBLUM SAYS RED DOCTRINE PRIESTS TURN LITTLE LAMBS INTO PROPAGANDA GOATS

The Cultural and Scientific Conference for World Peace was criticized for befuddling and deferring earnest efforts for the prevention of war by Rabbi William F. Rosenblum in a sermon in Temple Israel, 210 West Ninety-first Street, yesterday.

Other rabbis here preached on faith in democracy, promotion of world peace, biblical optimism and the renaissance of Hebrew culture.

Rabbi Rosenblum said he found it difficult to understand "how men of different faiths can make common cause with such individuals as the representatives of the Soviet and satellite nations, whose known plan to liquidate religion when communism comes to power is there for all to read in its manifestoes and for all to hear when its commissars get together."

"Unquestionably," Rabbi Rosenblum said, "the more trained and clever 'priests of the red doctrine' know that many artists, scientists and clergymen, once they leave their easels, laboratories, or pulpits, are so many 'litle lambs' of whom it is easy to make the 'goats'.

CITES PROPAGANDA SHEEP

"As for men like Shostokovich and his Russian fellow delegates, they may wish to be free and untrammeled intellects at heart, but it is clear that the Soviet Government has taken these mild 'sheep' and dressed them in the 'wolves' clothing' of red propaganda."

Vote on Rankin Pension Bill

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit, for the benefit of the GOP leadership in the House, an editorial from the Pittsburgh Post-Gazette, and I suggest that they reexamine their campaign pledges in promising Federal economy.

The editorial follows:

ON SAYING AND DOING

The anxious student seeking an answer to the question, What's wrong with the GOP, need look no farther than the House's voting record last week on Representative JOHN RANKIN'S pension proposal.

Despite the GOP accent on Government economy—which, indeed, is supposed to be the party's hallmark—106 Republicans in the Lower Chamber voted to save the multi-billion-dollar Rankin scheme, and only 57 of them voted to have it sent back to committee (which was equivalent to killing it). Across the floor, 151 Democrats, whose party the Republicans often charge with "squander-mania," voted to defeat the proposal, and 100 to save it.

Now, it took political courage as well as political principle to defeat the Rankin bill. And that, pure and simple, is the point of this story. Before fussing any further about whether their party should become more or less liberal in order to win the electorate's support, the Republican officeholders might first try proving that in the pinches they really stand for what they say they stand for.

Rankin Pension Bill

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of March 28, 1949:

BUYING VOTES

When the House voted by a majority of one to send the amended Rankin bill back to committee, the gentleman from Mississippi sorrowfully proclaimed that veterans pension legislation was dead for the session.

This, unfortunately, proves not to be true. Within 24 hours, he introduced a new bill.

This one would apply only to veterans of World War I. It would pay $72 a month instead of the $90 he proposed in the original bill. And it would be received only by those with less than $2,000 income, if single, or $3,000 if married or with dependents.

These changes reflect criticisms voiced in the House and some of the amendments adopted before the bill was re-referred by 208 votes to 207.

The amendments, of course, are welcome insofar as they tend to diminish the burden on taxpayers, including all veterans, for the rest of this century. Amended or not, the bill ought to be defeated.

If Rankin could get even his diluted measure adopted, it would only be a few years until he or his successors managed to work it back up to the bonanza that was first proposed, or something even more expensive.

On this issue, the American Veterans Committee was wholly right. It took the position that decent security for the aged is a general problem that does not concern veterans alone.

The Illinois Senate has already taken action to improve the payments of aid to the aged. So will Congress before the session is over.

The Congressmen from Illinois did not make a very good showing in the test vote to send the bill back to committee.

Only two Republicans from Illinois voted to send the bill back: MASON and MCMILLEN. Eleven Republicans voted to keep the bill alive: HOFFMAN, JONAS, CHURCH, REED, ARENDS, VELDE, CHIPERFIELD, SIMPSON, JENISON, VURSELL, and BISHOP.

Five Democrats, on the other hand voted to recommit the bill: DAWSON, SABATH, YATES, MACK, and PRICE. But seven Democrats voted to keep it alive: O'HARA, LINEHAN, BUCKLEY, GORSKI, O'BRIEN, GORDON, and CHESNEY.

These votes indicate one of the serious things wrong with the Republican Party in Illinois. Add to them the votes against recommittal by the official Republican leaders of the House, JOE MARTIN and CHARLES HALLECK, and you have a picture of something wrong with the Republican Party nationally.

Here is a defeated and largely disorganized party trying to establish some line of principle on which it can stand before the Nation.

Economy, financial integrity, prudence, and responsibility are the first things it ought to stand for. So many of the dangers that threaten the Nation are the byproducts of waste and the hand-out philosophy on which it is based.

But when the chips are down, too many Republicans vote just as recklessly as the Democrats. When you turn from their oratory to their performance on the subject of Government spending, you get the impression that many of them look wistfully upon office as a chance to outdo the Democrats at the business of buying votes with public money.

It was that theory that induced Governor Green and the last Republican legislature to vote a State bonus to veterans twice as generous as any other State's. Perhaps they concluded that the national administration's success at the polls was the result of spending for pressure groups, and decided to outdo the Democrats at their own game.

The time is here when stringent economy in public expenditures would prove decidedly popular, if anybody had the will to try it.

Contributions to Volunteer Fire Companies Should Be Tax Exempt

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. MILLER of Maryland. Mr. Speaker, there was introduced into the House of Representatives on January 25, 1949, by the distinguished gentleman from Delaware [Mr. BOGGS] H. R. 1822. This bill would allow a deduction for income-tax purposes of contributions or gifts to volunteer fire companies. At the time the gentleman from Delaware [Mr. BOGGS] introduced H. R. 1822 he outlined in an exceedingly convincing manner the reasons why this bill should be enacted into law by the Congress.

I want to state, Mr. Speaker, that I heartily endorse the provisions of H. R. 1822, and I urge that favorable committee action be taken on this bill and that the Members of this House give their support to this measure.

In further support of H. R. 1822, I wish to have included as a part of my remarks the following editorial by Mr. Fred Shepperd, editorial director of the magazine Fire Engineering, which appeared in the March 1949 issue of that publication:

BROTHER BOGGS HAS AN IDEAL

In municipalities of this Nation where there is a local sales tax, the taxes are a deductible item in making out a Federal income-tax return.

In such cities, the taxpayers' local taxes go to support the paid fire departments. But in municipalities in suburban and country areas, protected by volunteer fire companies, should you make a donation to the support of the local fire force, whether it be large or small, it is not a deductible item under the Federal income-tax law.

The volunteer fire forces, no less than the paid municipal departments, protect not only the property of all residents and local governments but also Federal and State property, post offices, institutions, and other values.

Contributions to these volunteers in nearly all cases go to buy equipment, uniforms, and other requisites of the fire fighter. So the question arises, Why should Uncle Sam demand his pound of flesh on such contributions?

In the Eightieth Congress, Representative J. CALEB BOGGS (Republican, Delaware), introduced a bill to make these contributions exempt from Federal income tax. His bill got nowhere, despite widespread approval of the fire service, but he reintroduced it early in the year.

Representative BOGGS did not have Maryland alone in mind when he wrote his bill. He was presenting a case for all the volunteer fire service—Pennsylvania, New York, and New Jersey with their nearly half a million volunteer firemen, as well as Delaware with its 45 volunteer companies. He knows that in some communities a small share of municipal funds is given toward the support of the volunteers, particularly for the salaries of a handful of drivers of fire apparatus. The larger part of the bill is generally paid by contributors. Nevertheless, our Federal tax law is so drawn that the contributions are not tax exempt.

In the United States as a whole, there are about 1,000,000 volunteer firemen of all classifications. There are about 100,000 paid and part-paid firemen. There are around 14,000 volunteer fire departments (in many cases, it is true, the organization consisting of a single company) compared with the less than 2,000 fully paid departments.

When it comes to the responsiblity for saving life and property, there is little difference between the paid professional and the volunteer fire fighter. Both are essential to the American form of government and American fire control.

Representative BOGGS has this to say: "In nearly all the communities throughout the Nation served by volunteer fire companies, our Federal Government has post offices and other public buildings and properties of tremendous value. For the protection of these public buildings from destruction by fire, our Government is wholly dependent upon the unselfish service of the volunteer firemen.

"I am not suggesting that these firemen be paid," he continues, "or that they receive any Federal subsidy, but I do say that we should enable these companies to raise larger sums of money by reason of tax exemption to donors so that our public property may be more adequately protected.

"Volunteer fire companies are to a very large extent educational organizations. For many years, in thousands of communities, they have conducted campaigns to educate the public in fire prevention. The number of lives and the property values saved from * * * preventable fires cannot be ascertained in dollars. Everyone who has ever lived in a rural community also knows that the very existence of a volunteer fire company represents an actual annual dollar saving to him by reason of fire insurance rates. Our Federal Government is enjoying the same saving on the insurance of its public buildings."

Representative BOGGS has not stopped there; he and others have gone further—they have pointed out the injustice of the Federal Government levying a tax on fire apparatus bought with the funds of volunteers, or with money otherwise donated for the purpose.

It is too bad that the fire service, and the volunteer fire service in particular, hasn't more Representative Boggses in Washington.

FRED SHEPPARD.

Second-Class Postal Rates

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial from a recent issue

of the Star-Herald, a very fine weekly newspaper published in Kosciusko, Miss.

The thoughts embodied in the editorial are worthy of our consideration and most certainly of the members of the Committee on Post Office and Civil Service.

The editorial follows:

BUSINESSLIKE APPROACH

The Star-Herald has never liked the don't-tax-me—tax-somebody-else attitude. Theoretically, at least, taxation should be equal, just, and fair.

The proposed increase in second-class postal rates would work a great hardship upon the smaller newspapers, but we have not written our Congressman to increase the rates on the big publications without taxing us little fellows. Some have done that, arguing that the big dailies and the national magazines could pay the freight.

We prefer to let every fellow carry his share of the load. While the Post Office Department was organized as a service to the people, and not as a money maker, it should be self-sustaining. The whole question should be analyzed from a business standpoint. We think the Government should determine in just what categories it is losing money and increase postage, if necessary, in those categories.

We are convinced that if this is done the small newspapers will not be asked to pay additional postage—certainly not the all-out-of-proportion increases proposed.

All indications are that extra cost to any small-town post office for handling the local weekly is practically nil.

Hawaii Statehood Opposition

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following letter which appeared in the New York Herald Tribune on Monday, March 14, 1949:

To the NEW YORK HERALD TRIBUNE:

I see the subcommittee of the House of Representatives has unanimously approved the admission of Hawaii to statehood. The objections to its admission have seemed to center around the composition of its population, and we may now take it for granted that those objections are without merit. But no one seems to have given thought to the fact that conferring statehood upon the half million population of Hawaii deprives the other 150,000,000 people in the United States in a large measure of the power to govern themselves. The two Senators that statehood would give Hawaii would give her half million people power equal to that of the 15,000,000 people in New York State or the 10,000,000 in Pennsylvania. They could readily block the ratification of a treaty which required a two-thirds vote of the Senate, or the passage of a bill that has had the approval of the representatives of nine-tenths of the country's population.

As an organized Territory Hawaii has its Delegate in Congress to represent them in every way except the right to vote. In fact, the bill to admit Hawaii to statehood was introduced in Congress by her own Delegate to Congress.

We have already nine States (excluding any of the Original Thirteen) with a combined population of 5,000,000—less than one-third of the population of New York State alone.

May not the time have arrived to postpone the admission of new States, and the consequent dilution of the influence of the vast majority of the country's population, until the Constitution can be so amended as to provide for them such representation in the Senate as would give them only their fair share of influence in shaping our national policies?

MICHAEL SCHAAP.

NEW YORK, *March 8, 1949.*

Underseas Exploration by the Navy

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, March 30 (legislative day of Friday, March 18), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Navy Is Exploring the Deep," written by Ansel E. Talbert and published in the New York Herald Tribune of March 27, 1949.

Ansel E. Talbert is aviation editor of the New York Herald Tribune. He is an honor graduate of Columbia University and its Pulitzer School of Journalism and has traveled world-wide as foreign correspondent of this great newspaper.

He was American delegate to the International Congress of Aviation writers in Rome, Italy, in 1939. He entered World War II as a private in the Eighth Air Force and later was an officer on Gen. "Jimmy" Doolittle's intelligence staff on the battlefront. After 4 years of service he was honorably discharged as lieutenant-colonel.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NAVY IS EXPLORING THE DEEP—UNDERSEA CRAFT AND DIVERS SET NEW FRONTIERS

(By Ansel E. Talbert)

Navy divers and submarine crews are establishing new frontiers beneath the sea while Navy airmen press onward high above it toward new milestones in flight.

Navy subsurface gliders having the appearance of strange misshapen aircraft from another world are being used for surveys of channel bottoms and other areas on the ocean floor. Observers sit inside these gliders like pilots in an airplane and manipulate controls which activate wing-shaped fins while being towed by surface craft.

Underwater television cameras developed by scientists working under Navy sponsorship now are able to pick up views beneath the surface and relay them to screens aboard surface craft and even aircraft.

During World War II a Navy diver named George E. Sherman, a chief warrant carpenter, picked up the first copy of the Japanese imperial code book while strolling about, 17 fathoms deep, off Guadalcanal near sunken Japanese ships. A few days ago Navy Boatswain's Mate Harold Wiensbrod plunged to a simulated depth of 561 feet in a new Navy diving suit during a tank test—a world's record—to give an inkling of things to come in diving.

All these developments fit closely into the Navy's preparations for the possibility of an undersea war of the future fought by fleets of long-range submarines equipped with snorkel breathing devices—or with even more advanced equipment permitting long undersea cruises without even a breathing tube on the surface.

Russia is known to be constructing a large submarine fleet while expanding the Red Air Force. This emphasis on air power and undersea power by both the United States and Russia, incidentally, bears out to the letter a prediction made nearly three decades ago by Gen. Billy Mitchell, America's far-seeing strategist, who while crusading for aviation wrote:

"The offensive power of submarines is constantly developing. Together with the airplane they will control the sea lanes in the future."

The United States, which imports large quantities of strategic materials from many parts of the world, would be particularly vulnerable to unchecked submarine warfare by an enemy nation, as was demonstrated during the early days of World War II. Then German undersea craft sank tankers and cargo ships only a few miles outside New York Harbor.

The Navy is preparing to prove General Mitchell's observation that "the best weapon to use against an enemy submarine is another submarine," and its divers are being trained for a variety of duties.

These include: (1) Examination of anti-torpedo nets; (2) study of sunken enemy submarines and other ordnance equipment; (3) recording of the damage on Navy ships; (4) detection and destruction of camouflaged enemy mines, either off the coasts of the United States or off enemy-controlled harbors.

In performing these and other duties Navy divers are making use of underwater photography and television.

In an effort to observe first hand the little-reported work of the Navy's undersea crews—the so-called silent service—this correspondent not long ago donned a diving suit at a naval submarine and air base in Florida and went down into the waters of the Gulf of Mexico for a look beneath the surface.

The descent took place at the tip of a pier jutting out into the harbor. A five-man Navy crew worked by hand a pump circulating air into the copper helmet fitting over the correspondent's head. The crew first had dropped a weighted rope off the pier's end down which divers could slide like firemen going down a pole in slow motion.

On reaching the bottom, which had a coating of slimy mud and vegetation forming a soft carpet, this correspondent could see nothing at first in the murky waters and was oppressed by a sudden sensation of loneliness and isolation. The only sound was that of the air pumped down from the surface and escaping with a gurgle.

Soon, however, the forms of objects in the vicinity were discernible and the keel of a submarine anchored alongside the pier could be made out, along with the dark shapes of the piles on which the pier was built. The only marine life visible to this correspondent, who already was looking about for giant octopi and other denizens said to inhabit the ocean depths, was a small fish of indeterminate species—almost 2 inches long.

It watched with curiosity for several moments the phenomenon of the correspondent's efforts to walk without losing balance—an awkward matter because of the feeling of extreme bouyancy and lack of weight—then darted behind a pier piling and came back for another look. The mutual observation continued until three tugs on a safety line attached to the diving helmet suddenly brought the correspondent to the surface and ended the acquaintanceship.

With considerable justice a quotation of Sir Walter Raleigh, the seventeenth century explorer, has been adopted as a motto by

Navy divers and submariners. It reads: "Whosoever commands the sea commands the trade; whosoever commands the trade of the world commands the riches of the world and consequently the world itself." They even are willing to add behind "sea" the phrase "and the air," a correction suggested by the Navy air arm.

National Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. HUBER. Mr. Speaker, from time to time we hear the chamber of commerce bitterly criticized. I believe it is unfair to assume that all members of the several chamber of commerce groups are reactionaries and opposed to the enactment of progressive legislation.

I am inserting in the RECORD a letter which I received from the president of the Chamber of Commerce of Falls Church, Va., which I am sure reflects the opinion of many members of the fine chambers throughout the United States:

THE FALLS CHURCH CHAMBER OF COMMERCE,
Falls Church, Va., March 25, 1949.
Congressman WALTER B. HUBER,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HUBER: As a native of of your district in Ohio, I wish to call your attention to a matter of growing concern to businessmen throughout the Nation. American businessmen have traditionally been forward-looking, progressive-thinking individuals, because the competitive system demands these qualities. This picture is being altered now through the propaganda agency of the National Chamber of Commerce. The American businessman is becoming a symbol for moss-backed stubbornness, old-fashioned inefficiency, and general opposition to the public welfare. This picture is not true. The National Chamber of Commerce speaks for the oligarchy of master-minders heading the Washington office, not for the thousands of its members who support the legislative program of the present administration.

With a casual disregard for the opinions of the membership, the national office of the chamber speaks for businessmen throughout the United States. Vicious, untruthful attacks are made on every recommendation or proposal of the Truman administration. The local offices of the chamber in every State are flooded daily with pamphlets, broadsides, reprints, and throwaways describing the so-called evils of the Democratic administration.

The National Chamber of Commerce is no more than a spokesman for the National Manufacturers Association. It callously ignores the wishes of the people of this country as expressed in the November elections. It twists every administration-backed bill into a sorry scheme to socialize the Nation. It mouths the sour-grapes cries of the Republican National Committee, and heaps scorn on any Congressman who realizes that the times demand progressive legislative action, who believes the health of a nation is more important than a measly saving of taxes, who puts the welfare of our working population on a par with that of the top 100 families, who writhes at the sinister liaison of the Republican Party and the Dixiecrats in Congress, who favors world-wide economic aid to rescue the people from starvation, chaos, and communism; in short, who knows that we are living in 1949 and not the horse-and-buggy days of Hayes and Garfield.

I am enclosing samples of the sort of propaganda the national office of the chamber of commerce spends hundreds of thousands of dollars to distribute throughout the country. It is resented by many local chamber officials who prefer to see businessmen stand together with their fellow citizens to build a progressive, foresighted administration.

Sincerely yours,
FRANCIS A. WAGNER,
President.

Women Remember

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I wish to include in the RECORD a speech by Mrs. Leisa Bronson, one of the most distinguished women in the State of California.

Mrs. Bronson delivered the following speech at a memorial dinner for Franklin D. Roosevelt, sponsored by the Democratic Club of Monterey Park, Calif., on January 27, 1949.

In paying tribute to Franklin Roosevelt, Mrs. Bronson reminds us that women made more progress under the Roosevelt administration than they had in the previous 100 years.

Mr. Speaker, we can make some progress where women are concerned in this Eighty-first Congress.

I would like to call the attention of the Members to two bills which I have introduced, H. R. 2396, to provide for the investigation of discriminations against women on the basis of sex and to establish policies for the removal of such discriminations, and H. R. 2438, providing equal pay for equal work for women.

Mrs. Bronson's address follows:

WOMEN REMEMBER

Tonight I have been asked by your chairman to say a few words about the special place which Franklin Delano Roosevelt held and will always hold, in the minds and hearts of women, not only in our own country, but all over the world.

Perhaps one thinks first of the recognition which President Roosevelt gave to the abilities of women, and the opportunities for public service which he afforded them. We remember that it was during the Roosevelt administration that the first woman Cabinet member in our history was appointed. We remember that for the first time a woman was appointed Minister to a foreign country; and that for the first time a woman served as Assistant Treasurer of the United States. We remember the appointment of the first woman Director of the Mint; of the first woman judge of a circuit court of appeals; the first woman member of the Social Security Board; the first woman judge of the United States Court of Tax Appeals.

Women deeply value the confidence thus placed in them and honor the outstanding personalities who have served in these positions. But these appointments are not the thing that gives most meaning to the Roosevelt administration in the hearts of women. They love Franklin Delano Roosevelt because he cared for people as individual human beings. His very first talks to the Nation, in those critical days of his first term, were Fireside Chats which came to the family gathered at home around the radio. He knew the value of those homes, and saw to it that they should be preserved.

Roosevelt cared for children. Through the school-lunch program 4,000,000 undernourished children received at least one good hot meal each day. Under the Social Security Act of 1935, the number of dependent children receiving Federal aid was tripled, so that more than 800,000 of them were able to stay with their own mothers, instead of having to go to institutions or to foster homes. Women remember the striking drop in infant and maternal death rates that took place between 1932 and 1940, after the development of the Maternal and Child Welfare Service. Deaths of children between 1 and 14 years of age also dropped during this period—dropped 38 percent. Child labor on articles in interstate commerce was prohibited in the Fair Labor Standards Act of 1938. Nursery schools and day-care centers were provided. Roosevelt cared for children.

Rural women remember that electricity came to their homes under the rural electrification program, lightening their toil in a hundred ways. Young women remember that they were included in the NYA program; and older women that special WPA projects were devised for them.

These are only a few of the many things I might mention that enabled women to make more progress under the Roosevelt administration than they had done in the previous hundred years. The home continued to be, as it will always be, the center of woman's life. But her horizons broadened; she became a true citizen of the world. This, in turn, will benefit women in many other lands. For all these things, women gratefully remember Franklin Delano Roosevelt, one of the greatest Presidents, perhaps the greatest, that our Nation has ever had.

Slum Clearance and Low Cost Housing

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the general court of Massachuetts:

Resolution memorializing Congress to provide for slum clearance and low-cost housing projects

Resolved, That the general court of Massachusetts hereby memorializes the Congress of the United States to pass legislation providing for greater allocation of funds for slum clearance and low-cost housing projects; and be it further

Resolved, That copies of this resolution be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of Congress and to the Members thereof from this Commonwealth.

In house of representatives, adopted, March 8, 1949.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted, in concurrence, March 14, 1949.

IRVING N. HAYDEN,
Clerk.

Communism Versus Ten Commandments

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 30 (legislative day of Friday, March 18), 1949

Mr. WILEY. Mr. President, in the March issue of the magazine, National Republic, there was contained a very illuminating article on the subject Communism Versus Ten Commandments by Walter S. Steele. Included in this article is an amazing table which documents the case of the Red war on God's commandments. This article and the table to which I refer is, I believe, the first time such a documented parallel of the conflicting ideological war of our times has been prepared. I believe that it will be of vast interest to my colleagues and to the American people, and that it should serve as light, as truth, as a beacon to the American Nation in fighting the godless menace, atheistic communism. I, therefore, ask unanimous consent that the text of this article and table be placed in the appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNISM VERSUS TEN COMMANDMENTS

(By Walter S. Steele)

Communism's attack upon divine religion, especially Christianity, is deeper than the mere attack in the past or present upon any one church, or order of religion, individual priest, minister, or rabbi, of which we read so much today. The Communist attack is made on the very foundation of truths on which divine religion is built and exists.

As individuals and as an organization, Communists (Marxists, Leninists, and Stalinists) adopt and propagate the theory that religion is not truth, is not moral, and is but an instrument concocted by kings and capitalists, improvised for the purpose of subjecting the masses to law and order, and designed for the benefit of the bosses, thereby precluding what the Communists call human progress. Yet, throughout history, religious worship and governments permitting the freedom of religious belief and worship have produced more individual freedom, and provided more human progress and peace than any government or materialistic ideology ever attempted, or that has ever existed under communism.

Because religion is the greatest bulwark against government-organized slavery, which exists under communism, the repression of freedom of thought and action, and the right of individual and collective progress, Communists center their attack upon religion, its foundations and tenets, and on governments devoted to the freedom of religion, individual enterprise and progress. In attacking religion, Communists center their main fire on the Ten Commandments and their fundamental teachings, since these set forth the divine moral principles of God.

The Ten Commandments, first handed down by God to Moses, prescribe God's moral truth to guide His worshipers and followers. And as referred to in the Book of Romans, 13: 8–10, in the Bible, it emphasizes a code of morals which has been the foundation of a civilized world. It provides for understanding and love, and thereby freedom, progress and a goal for man's future beyond his short span of life on earth. Love is the main theme of the commandments. Hatred is the supreme tenet of Communists.

The Book of Romans states: "Owe no man anything, but to love one another; for he that loveth his neighbor hath fulfilled the law. For thou shalt not commit adultery; thou shalt not kill; thou shalt not steal; thou shalt not bear false witness; thou shalt not covet; and if there be any other commandment, it is comprised in this word: Thou shalt love thy neighbor as thyself. The love of our neighbor worketh no evil. Love, therefore, is the fulfilling of the law."

Communism, contrary to the Ten Commandments of God, teaches: "A Communist who rejects the religious commandments and acts according to the directions of the party ceases to be a believer. Inversely, a believer who pretends to be a Communist, but who infringes on the directions of the party in the name of the commandments of religion ceases to be a Communist." ("A B C of Communism," an official handbook and "explanation of the program of the Communist Party of Russia," 1922.)

In 1925 Lunarcharsky, the Soviet Minister of Public Instruction, issued the following statement: "We hate Christianity and the Christians. * * * They preach love of one's neighbors and mercy, which is contrary to our principles. Christian love is an obstacle to the development of the revolution. Down with love of one's neighbor. What we need is hatred. We must know how to hate. Only thus can we conquer the universe."

By these official explanations or commandments of communism one can readily see the violence with which the Communists attack the very foundation of religion. Communists preach hatred toward one's neighbor, that there is no God, there is no heaven, that religion is based on fraud, that there is nothing good in religion, that man's salvation is bound up solely within materialism enveloping himself and the dictatorship of communism, that Christian morals are out of date and are a hindrance to human progress, that the immoral practices advocated and permitted by Communists and communism are the tools of real freedom and progress, that religion hinders freedom and progress, while communism forges them.

Any schoolboy knows that these Communist teachings are lies. Communism is based on immoral ideologies which would drag man down into the sewer of satanic filth, weakening his mind and robbing him of his hope of a future, thereby conditioning him for enslavement to Communist dictatorship without objection. Slaves and morons do not make for progress, and the leveling process through which everyone is forced under Communist rule, either through Communist government or Communist Party following, is the process of decline or retrogression, the beginning of the complete decay of humanity.

The Communist philosophy of destruction and the doctrine of evil are synonymous, in that one follows the other. The opposite is the creative philosophy and the doctrine of good. The first is materialistic; the second, Christian. One represents satanism; the other, godliness. One believes that greater enjoyment and benefits on this mundane sphere are procured by thinking, urging, and producing evil, rather than by thinking, urging, and producing good.

Like Nimrod who lived 2,000 years before the Christian era, Marx, Lenin, Stalin, and their cohorts have posed as the great deliverers. Nimrod, known as the great deliverer in his age, ruled over Babylon. He elevated man and degraded God, advocating that the people attribute their pleasures and fortunes to their own and to his government's actions, and not to God's will. In the midst of the materialistic feast, Nimrod gradually changed the form of government into a tyranny, seeing no other way of turning men completely from the fear of God and bringing them to sole dependence upon his power. Feeling that his greatness exceeded that of God, he determined to build a great and high structure to further exemplify his own greatness—the Tower of Babel, Babel meaning confusion. Babylon became the center of confusion of thought, of perversion of religion, a cesspool of moral debauchery and political corruption.

The Communists believe, as did Nimrod, that the way to control the masses is to control their thinking and their actions, and make them solely dependent upon the dictatorship. They accomplished this by making the individual believe his entire future depends upon the government, that no other power exists.

Jesus said to His disciples: "Beware of false prophets who come to you in the clothing of sheep, but inwardly they are ravening wolves." (Matthew, vii: 15–21.) Communists pose as great humanitarians, claiming to offer the masses "good fruit." With this bait they camouflage their plot to rob men of their very souls. The battle throughout the world today is between Communist apostates and the apostles of religion, with the future of Christianity at stake.

COMMANDMENTS AND RED CREED

The following comparisons between God's Commandments, the foundation of Christianity, and the commands of the Communists should leave little doubt as to the methods Communists are utilizing in an attempt to destroy Christianity and pave the way for world Communist control. Church leaders, when holding the line against Communist aggression, are destroyed, together with churches and other religious institutions. The Communist plot is centered against all religions, which must be eliminated before communism can feel secure.

God's Commandments

I am the Lord thy God; thou shalt not have any strange gods before me.

Thou shalt not take the name of the Lord thy God in vain.

Remember that thou keep holy the Sabbath Day.

Honor thy father and thy mother.

Thou shalt not kill.

Thou shalt not commit adultery.

Thou shalt not steal.

Thou shalt not bear false witness against thy neighbor.

Thou shalt not covet thy neighbor's wife.

Thou shalt not covet thy neighbor's goods.

Red commands

"Lenin is God."—Stalin (1).

"The very first and wickedest moonshiner is named Jesus Christ."—"Besbozhnik" (2).

"Saturday and the Sabbath are suppressed."—Soviet Law (3).

"Children must be taught to hate their parents."—Lenin (4).

"Dictatorship is a government resting directly on the use of violence."—Lenin (5).

"The family and marriage code abolished the terms 'out of wedlock' and 'illegitimate child.' "—Soviet Law on Marriage (6).

"All means are justified."—Stalin (7).

"Adopt all possible tricks, dodges, and illegal methods of concealing the truth."—Lenin (8).

"The freedom of relations between the sexes does not contradict the ideology of communism."—Mme. Alexandra Kollontay (Soviet official) (9).

"The confiscation of all property and the denial of all rights to inheritance is the fundamental law of communism."—"Communist Manifesto" (10).

Following are additional Communist contradictions of the Ten Commandments:

1. "Anyone of the same mind of Lenin cannot believe in God."—ABC of Communism.

"Religion is the opium of the people."—Karl Marx.

"Marxism is materialism."—Lenin.

"We deny all morality taken from superhuman or nonclass conceptions."—Lenin.

"Atheism is an integral part of Marxism."—Lenin.

2. "We have dethroned the earthly Czars; now we shall destroy the heavenly ones."—Besbozhnik.

"The materialist gives a more important place to materialism and nature while relegating God and all the philosophical rabble who believe in Him to the sewer and manure heap."—Lenin.

"In what sense do we repudiate ethics and morality? In the sense that it is preached by the bourgeoisie who declared that ethics were God's commandments. We, of course, say that we do not believe in God and that we know perfectly well that the clergy, the landlords, and the bourgeoisie spoke in the name of God in order to pursue their own exploiters' interests. * * * We repudiate all morality that is taken outside of human-class concepts. We say that this is deception, a fraud which clogs the brains of the workers and peasants, in the interests of the landlords and capitalists. We say that our morality is entirely subordinated to the interests of the class struggle of the proletariat. Our morality is deduced from the class struggle of the proletariat."—Lenin.

"We must make our school boys and girls not merely nonreligious, but actively and passionately antireligious."—Mme. Krupskaya, wife of Lenin.

"Religion and communism are incompatible, both theoretically and practically."—Karl Marx.

"The transition from socialism to communism, will bring about the natural death of all religion and all superstition."—Karl Marx.

"Our task is not to reform, but to destroy all kinds of religions, all kinds of morality."—Zinoviev, president, Third International.

"Marxism is materialism. We must combat religion. This is the ABC of all materialism, and consequently of Marxism. Down with religion. Long live atheism."—Lenin.

"But communism abolishes eternal truths: it abolishes all religion and all morality, instead of constituting them on a new basis."—"Communist Manifesto."

"The fight must develop no less inevitably 'against God,' whether he be called Jehovah, Jesus, Buddha, or Allah."—Commissariat of Public Education, Soviet Government.

3. "To count the years since the birth of Christ is for us inadmissible; such a calendar strengthens religious prejudices by suggesting that Jesus really was born. Nor does the same calendar satisfy us inasmuch as it contains far too many religious feasts. The names of the days of the week (Sunday, Saturday) do not suit us either. This is why Saturday and the Sabbath are suppressed by the introduction of the 5-day week."—"The Godless."

4. "We must remove the children from the pernicious influence of the family."—Official journal of the Commissariat of Education in Russia.

"Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists."—Communist Manifesto.

5. "The world-wide nature of our program is not mere talk, but an all-embracing and all-blood-soaked reality."—Pravda.

"It would not matter a jot if three-quarters of the human race perished; the important thing is that the remaining quarter should be Communists."—Lenin.

"If our war * * * will cost half a million or a million victims in all countries, the bourgeoisie will say that the first victims are justified and the second are not. The proletariat will give quite another answer."—Lenin.

6. "A girl having reached her eighteenth year is to be considered as the property of the state. Any girl having reached her eighteenth year and not having married is obliged, subject to the most severe penalties, to register at the bureau of free love in the commissariat of surveillance. Having registered at the bureau of free love, she has the right to choose from among men between the ages of 19 and 50 a cohabitant husband."—Soviet decree.

"The basis of the family shall be actual parentage; no distinction shall be established between natural parentage and legitimate parentage. * * * An unmarried, pregnant woman shall make a declaration at the registry office. * * * A married woman may make a like declaration if the father of her child conceived is not her registered husband."—Soviet decree.

"The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas."—Communist Manifesto.

7. "There is no way out except by seizing * * * the industries, the banks and all of the economic institutions." The way Out—Manifesto and Principal Resolutions, eighth convention, Communist Party of United States of America.

"I decided to create a purely Bolshevik club for expropriating state funds. Our advanced comrades, and particularly Koba (Stalin) approved my suggestion. In the middle of November 1906 the expropriators club was organized, and at the railway junction at Cheaturi we attacked a post-office railway car and took 21,000 rubles, of which 15,000 were sent to the Bolshevik faction, and the rest to our own group to provide for a series of expropriations. * * * September 27, 1908. * * * Seized a post-office car, terrorized the staff of the station and the car * * * carrying off 2,400,000 rubles."—Kot Tsintsadze.

"What coincides with the interests of the proletarian revolution is ethical."—E. Yaroslavsky.

8. "Communism abolishes eternal truths."—Marx.

"Religious vows, or oaths, are abolished."—Soviet decree.

"It is necessary * * * to be prepared to resort to make any sort of sacrifice, to be prepared to resort to every possible subterfuge, trick, illegal device circulated to conceal the truth."—Lenin.

9. "Communists would introduce community of women, screams the whole bourgeoisie in chorus * * * and Communists admit it."—Communist Manifesto.

"For us, for the republic of the workers, it is absolutely a matter of indifference whether a woman sells herself to one man or to many, whether she is a professional prostitute living by some other source than her own useful labor, or by the sale of her caresses to a legal husband or to an occasional purchaser of female flesh, whose identity may vary from day to day."—Mme. Alexandra Kollontay.

"Law, morality, religion, are to him so many bourgeois prejudices, behind which lurk in ambush just as many bourgeois interests."—Communist Manifesto.

10. "Lenin approved the 'ex'es' while condemning their Apache deviation, provided they were carried out under strict party control. The object of these expropriations was to provide funds for the revolutionary group."—Stalin.

"The theory of the Communists may be summed up in the single sentence: Abolition of private property."—Communist Manifesto.

"Those who cannot coordinate illegal forms of struggle with legal ones are very poor revolutionists."—Lenin.

"All the property of the existing ecclesiastical and religious societies in Russia become the property of the people."—Soviet decree.

West Haven, Conn., Veterans' Hospital Project

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. PATTERSON. Mr. Speaker, with a succession of administrators in the Veterans' Administration, we have been recipients also of a succession of policies, one differing from the other. I wish to point out the results of one of these policies which was inaugurated since the last war, and which is still in effect, to the best of my knowledge.

In October of 1945, the construction of a 500-bed Veterans' Administration hospital was authorized at West Haven, Conn. This was in recognition of the need for additional space to properly care for ill and disabled Connecticut veterans. Our small State contributed over a quarter of a million service men and women in World War II, notwithstanding that at the same time we were the arsenal of America in our contributions of foodstuffs and industrial products to the armed forces and our allies.

One year after the authorization, or in October 1946, the contract was let for preliminary plans for the facility which was to provide necessary hospitalization. The contract was let to a private concern under the policy in operation at that time, and still in effect. Under this system, the preliminary plans, or rough sketches of approximate size, shape, and placement were not completed until March of 1948, or 17 months later. It required from March until December of 1948 to obtain final approval, and to authorize the drawing of architectural plans and specifications for the hospital. The present schedule, I am informed by the Acting Chief of Engineers, Major General Crawford, calls for completion of architectural work by October 1949, and an advertisement of bids in February 1950.

Under this schedule, construction cannot possibly be completed before the fall of 1952. There will be no occupancy of this most necessary hospital for a period of 7 years from the time of its authorization until its completion.

This is a violation of the faith placed in the Government by our veterans and their families.

It is contended by the Disabled American Veterans that 173 of their number alone are now lacking hospital care and treatment in Connecticut. This does not take into account those who are currently ill or who may become ill in the near future.

During the almost 4 years which have already elapsed since the authorization of the West Haven project, Veterans Administration architects have themselves completed many hospitals which are already serving ill and disabled veterans in many parts of the country. Let us either demand that this practice of

letting out hospital contracts be completely abandoned, or that stricter supervision be placed upon private concerns so that definite schedule commitments are adhered to in the future.

Militant Nazis Run German Firms Slated To Exhibit Products in New York, Anti-Nazi League Charges in Protest

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. MULTER. Mr. Speaker, charges that "a very large proportion of militant Nazis, cartel fronts and other undesirables upon whom the swastika trademark has become indelibly stamped" are among the 511 firms scheduled to participate in the AMG-sponsored German industrial exhibition to open in New York April 9—at the Museum of Science and Industry—have been made by the Non-Sectarian Anti-Nazi League.

The league's charges were made in telegrams to House Speaker SAM RAYBURN and Senate President ALBEN BARKLEY, signed by the league's administrative chairman, Prof. James H. Sheldon, and Herman Hoffman, chairman of the board of directors, copies of which have been released to the press.

The Rosenthal Chinaware Co., one of the largest of the corporate exhibitors coming to New York in April, proclaimed its Nazism in paid advertisements in Hitler's personally owned paper, the league said.

Suspension of the projected exhibition was requested by the Anti-Nazi League, pending a full-scale congressional investigation of Army and AMG policies in Germany, which was also asked by the league.

Taking exception to an announcement made in Munich Monday by Gen. Lucius D. Clay that denazification, war crimes trials and demilitarization steps in Germany are over, Anti-Nazi Chairman Sheldon declared:

> The make-up of the proposed German industrial exhibition not only demonstrates that the job of denazification is less than half done, but shows that our policies are actually promoting the revival of Nazi forces in the German economy. The time for General Clay's new order is not yet.
>
> The use of American taxpayers' money to build up American markets for German firms still in the clutches of unreformed Nazis will only mean cut-throat competition for American labor and universal danger for democracy. This so-called industrial exposition is an affront to the memory of our soldier dead, a betrayal of the policies laid down by Congress for the rehabilitation of Germany, and a studied denial of the purposes for which we went to war.

SUBMITS DOCUMENTARY EVIDENCE

From its files the Anti-Nazi League sent the congressional leaders photostatic copies of an advertisement run by the Rosenthal firm—which is one of the largest of the exhibiting groups—in Hitler's Nazi Party organ, the Voelkische Beobachter, in December of 1938, just 1 month following the most violent anti-Semitic pogroms.

This world-famous china and porcelain concern had been expropriated by the Nazis from its original Jewish owners, but the trade name was kept because of its artistic prestige, the League said. The ad in Hitler's paper was designed to refute rumors that the firm was still Jewish-owned.

Headed "In Defense," the ad asserted that the incumbent ownership "corresponds fully with the principles demanded by the New Germany," and that "the management consists of five Aryans, three of whom are old veteran fighters of the Nazi Party." "The highest Nazi Party officials have appreciated this," the ad continued.

The company then went on to ask the public to help it "put our hands on" the "calumnious libelers" whom it described as "saboteurs of the new order, who must be annihiliated." By so doing, the company added, "you will help the 4,000 German racial comrades" which it employed.

The Anti-Nazi League charged that AMG has made only the most superficial changes in the management of this firm, and that the majority of the veteran Nazi Aryan directors installed by Hitler are still in actual control. In addition, four other German firms scheduled to show their products in New York are wholly owned by the same parent corporation, the League said.

PUT HITLER ON WHEELS

A second firm cited is the Lanz truck and vehicle manufacturing concern, which the League charged with being the first firm in the state of Baden to violate the Versailles Treaty by manufacturing forbidden war materials for Hitler's army.

As early as 1933, the owners and directors of Lanz were among Hitler's chief backers, the League added, and in time the firm became almost as important to his war machine as the Krupp arms works.

In addition, the League charged that the Lanz firm was originally built by pirating American machine designs, and that the firm's founder, Heinreich Lanz, financed much pan-German propaganda both before and after World War I. His son, Carl Lanz, became one of the chief financiers of Hitler's illicit militarist organizations, the League asserted.

FARBEN INVITED

Two of the chemical firms scheduled to exhibit in New York are "wholly owned subsidiaries of the notorious I. G. Farbenindustrie cartel," the Anti-Nazi League said.

In this connection the league scored a statement made at a press conference in New York last week by George J. Santry, AMG's coordinator for the exhibition. Santry said then that the 511 firms approved thus far had not been screened, as corporations, for pro-Nazi records, but only for compliance with the decartelization program.

"Inclusion of Farben subsidiaries makes even this screening a mockery," Sheldon said.

The Anti-Nazi League, Sheldon said, is making a thorough survey of the entire list of firms listed for the exhibit, and will make its findings available to congressional leaders. "It is already clearly apparent," he said, "that a very large proportion of these firms approach the American market with unclean hands, and ought not to be allowed to exhibit in New York at this time."

The Panama Canal—Symposium Discussion

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. BLAND. Mr. Speaker, the March 1949 number of the Proceedings of the American Society of Civil Engineers contains a most informative discussion of the so-called Sea-level Panama Canal project, by Capt. H. H. Little, United States Navy (retired).

Captain Little was Assistant Chief of Overseas Bases in the office of the Chief of Naval Operations, 1944–46, with cognizance over world-wide naval bases, including those in the Caribbean and Central American areas during war.

The presentation of thoughtful, well-considered views from different angles, and dealing with varying phases, tend to provide an illumination, of focal character, of the central object involved, viz, determination of the type of canal at Panama, and/or elsewhere which should be ultimately provided to meet the needs of increased facilities. The appended article—among other things—points out the importance of the matter of new treaty rights under agreement with Panama, which appears not to have been taken into account in official studies thus far made; but which, nevertheless, must be met if additional Panamanian territory and concessions are required. Any additional indemnity and annuity costs will necessarily have to be added to basic construction, operation, and maintenance figures, in arriving at totals; and these must, measurably, at least, be reflected in transit tolls to be charged to shipping. Either the tolls must be adequate to absorb these items, or the American taxpayer will have to be assessed for the margins above the maximum toll rates the merchant ships of our own and other lands may be able to bear. Important factors which escape theoretical discussions of the subject, must, notwithstanding, enter into any final and realistic calculation required.

In his analysis Captain Little does not speak especally as a naval officer; but primarily as an experienced seaman and administrator. He presents a truly objective viewpoint, and develops a number

of the most important features embraced in this all-important subject; and which—so far as I know—have not been adequately covered in previous discussions.

Under leave accorded me, I am extending my remarks in the RECORD, with inclusion of the indicated article:

PANAMA CANAL, THE SEA-LEVEL PROJECT—A SYMPOSIUM

(By H. H. Little)

Much was written, in the paper by Colonel Stratton, about the capacity of the Panama Canal. What does that term mean? Great stress is laid on time of transit. To avoid the creation of exaggerated impressions as to their importance, the relation of the terms, "capacity" and "time of transit," to the broad field of strategic planning should be explained by the author, in his closing discussion.

In regard to capacity, very little in the way of factual analysis has been published on the actual capacity of the Panama Canal as it now exists. Messrs. Johnson and Steinborn report (see Capacity of the Present Panama Canal: Dependable Daily Capacity of Present Canal): "The dependable daily capacity of the existing canal is taken at its minimum daily capacity during overhaul—or 36 vessels." This would be a minimum of 13,140 ships a year. Colonel Stratton reports (under Traffic History of the Canal) that there were nearly 17,000 transits of war traffic through the Canal from 1941 to 1945. Assuming that this period includes 4 years, the average yearly transit was 4,250 ships, which would indicate that, during World War II, the present Canal was operated for war traffic to only about 30 percent of its minimum capacity.

Under The Panama Canal As It Is Today, Colonel Stratton states:

"It is estimated that by about 1960 the capacity of the Canal will be inadequate to accommodate traffic without inflicting undesirable delays on peak traffic days."

In other words, the Canal is not to be used to capacity at other times, but by 1960 it will be used to capacity only on peak traffic days. What does industry do when confronted with similar problems of peak traffic? They control them. It spreads the load by proper planning; and, if need be, it increases charges for peak business, peak electric rates, peak labor costs, peak charges of any description. Has any attempt been made to control peak traffic at the Canal? None is mentioned in the symposium. There should be many ways of controlling sailings to, or arrivals at, Panama and also of removing bottlenecks in the Canal so that traffic will not jam on peak days. Certainly no canal could be built which would prevent occasional peak loads when no attempt is made to control traffic or improve its functioning. The obvious answers to the question are the control of traffic and the proper modification of the present Canal, not building canals at other locations across the Isthmus or attempting the construction of a new sea-level Panama Canal.

As for time of transit, it should be realized that plans for military operations are prepared far in advance of the dates of embarkation. Personnel, supplies, and ships are calculated, checked, and rechecked dozens of times. Material is ordered, manufactured, shipped, and stored weeks and even months in advance; D-day is never set until the required resources are on hand and allowance is made for shortages—material which would not arrive because of sinkings, bombings, or failure to load. No general or admiral ever had to tear his hair out because some ship or convoy of ships was late in passing through the Panama Canal. Although the expeditious handling of vessels at Panama (or anywhere else) is expected as normal performance, it is doubtful if any saving in time at the Canal ever had any bearing on the outcome of an important military undertaking.

Colonel Stratton's repeated use of the term "security" deserves to be properly analyzed or circumscribed in his closing discussion. The writer was startled by the statement in the synopsis that:

"A sea-level canal at Panama constructed by the conversion of the existing lock canal could not be destroyed by enemy attack or sabotage. Only the atomic bomb could cause significant interruption in service, and then for not more than a few weeks."

A statement such as this can be misleading without essential amplification. As a major premise it represents the greatest weakness in the attempt to justify the sea-level proposal. The statement is true, of course, in the sense that earth and water cannot be destroyed, but it is not true in the sense that the damage caused to a sea-level canal, even by conventional weapons, would be insignificant. A bomb or 1,000 bombs dropped in the Mojave Desert in California would have no effect in destroying the desert, but determined bombing attacks or sabotage on the many miles of proposed impounding dams, spillways, tidal locks, and other structures of the Panama Canal (which are shown in figure 11 to be necessary for the control of the floodwaters of the Chagres River Valley and for the regulation of tidal currents in a sea-level canal) would create almost incalculable problems and would make the Canal unnavigable for long periods. These dangers together with the greater structural damage and channel closures that may be caused by atomic bombs should be just as effective militarily in interrupting ship transit as would be the draining of Gatun Lake.

From the evidence presented in the symposium it seems questionable if the vulnerability of the many flood-control installations and of the other massive structures in the sea-level plan was explored as it should have been. Until such an exploration is made, the question of which type of canal has the maximum security against atomic bombing appears to be one for theoretical discussions and not for practical planning, because no amount of static defense measures can give a real security to any type of canal.

Conversion of the existing lock canal (see Synopsis) is another term that needs a more complete analysis. With the exception of the channel sections near the ends of the present canal the plans outlined by Colonel Stratton envisage an entirely new canal with the greater part located at varying distances from the present canal. This feature, because it does not conform to canal treaties, introduces a great international political question that would require complicated negotiations for a new treaty with the Republic of Panama and the payment of a huge indemnity and an increased annual subsidy by the United States Government. In view of the rejection of the Defense Base Treaty by Panama in 1948, the negotiation of a new canal treaty no doubt would present even more serious difficulties. This important subject might well be included in the symposium. Certainly any cost estimate should make some provision for the costs that would be encountered in this connection, in order to justify, fully, the ultimate cost of the sea-level project.

Much might be offered in comment on that part of Public Law No. 280 which Colonel Stratton quotes in his Introduction. For example, it is fair to question whether passage of this act really "expressed the temper of present concern" of the Congress rather than the ideas of those proponents who were determined on a sea-level revision. Regarding "increasing the capacity," it might be asked whether the sea-level project if built would work better than the present canal—an important phase not covered in the symposium.

Again, regarding the law's reference to "Canals at other locations," it should be remembered that the Nicaragua and other canal routes have always had large followings which had to be given some hope or the bill would not have passed Congress. In other words, it was a foregone conclusion that no scheme other than a sea-level canal at Panama would receive any real consideration under the act.

Colonel Stratton states (under the heading, "The Panama Canal as it is today") that:

"The restricting effect of the small locks (width 110 feet, length 1,000 feet) of the present canal on the design of Navy ships became intolerable with the approach of war."

As far as has been ascertained, the Navy has made no strong demands; nor has it indicated that the present conditions were intolerable. The U. S. S. *Missouri*, the latest type and only first-line battleship in active use, successfully transits the present canal. All the others are in "moth balls," peacefully awaiting overage status. These include the older battleships, which were modified by the installation of buoyancy blisters on their sides, thus increasing their beams beyond the capacity of the 110-foot locks.

Naval strategy, however, does look ahead. Should it appear that the wider ships are needed on the opposite coast, it would be no great hardship for these vessels to round Cape Horn. They carry sufficient oil for the full trip, coast to coast. Note well that this refers to the largest combatant ships, for there never has been any question about the adequacy of the present canal for the transit of commercial ships.

If the world situation ever requires a precautionary redistribution of United States naval forces, the largest vessels could be sent around South America with the utmost secrecy. There can be no secrecy once vessels are seen in the Canal Zone. As some of the larger aircraft carriers and three older decommissioned battleships are the only war vessels that cannot now transit the canal, the situation would appear far from intolerable from the naval standpoint.

It is true that the Navy asked for locks 140 feet wide for the third locks project. It also recommended locks 200 feet wide as a beginning for the recent studies. These naval statement must have been in the form of guarded replies to specific inquiries from canal authorities rather than as strongly worded recommendations for the 200-foot locks. As a leading question, how many times a year would the larger carriers or oversize battleships use the canal if it could accommodate them? The answer is probably not once in 2 years.

Next, how about the navigational safety of a sea-level canal? The related statements in the Stratton paper, based largely on ship-model tests, are assumptions and not established facts. In this connection, also, further elaboration is requested to support the incomplete facts presented. In the unregulated sea-level canal, with currents as much as 4.5 knots, an element of great danger that cannot be minimized is immediately introduced. In the regulated sea-level canal the much-increased length of restricted channel and the ordinary problems of navigation—night fog, heavy rains, and machinery failures—do not seem to have received the consideration that is due them. To the writer it seems obvious that the lake-type canal with its wide current-free channels is far better adapted to safe navigation than any necessarily restricted sea-level canal at Panama can ever be.

In the synopsis and under "Improvements in the interests of commerce only," Colonel Stratton states that with new navigational aids and other minor changes the present Canal could be improved sufficiently to accommodate the transit of 70 ships a day at a

cost of $129,983,000. The sea-level canal as projected, estimated as costing $2,483,000,000, he states, would transit 69 ships. This comparison indicates that the symposium authors are recommending something that will cost 20 times as much as improvements in the present Canal and that the completed works will not be as efficient.

In their closing discussions the symposium authors need to balance the presentation with an adequate treatment of the present operational deficiencies long recognized by all maritime agencies that use the Canal. These are such that the proposed minimum improvement program ($129,983,000) would not be a realistic solution; it would be only a repair job. For a fair comparison with the sea-level project, the alternate improvement program should include a cost estimate for the third locks project modified to include a Pacific terminal lake based on more reasonable lock sizes. The terminal-lake plan estimate, furthermore, should not be balanced, unfairly, with the costs of protective features against modern weapons when the leading authorities admit there is no effective defense against such weapons. In brief, the relative value of each case should be fairly stated with parallel tables of unit costs so that the best canal can be built at Panama.

The naval aspects of the present canal question have been well summarized by Rear Adm. D. E. Barbey, Commander of the Caribbean Sea Frontier, when he stated that the United States has a two-ocean Navy large enough to permit reinforcements to be sent around Cape Horn, that there is little likelihood of meeting a first-rate naval power in the foreseeable future, and that the Panama Canal has become a primary waterway for merchant ships in time of peace and a secondary route for critical raw materials in time of war. He minimized the probability of any enemy making a major effort to destroy it. "Why," he asked, "should they waste an atomic bomb on the Godforsaken Canal Zone, when they have New York Harbor as a target?"

The military aspects of Admiral Barbey's thesis have been supported by Lt. Gen. Leslie R. Groves, former head of the Manhattan Atomic Bomb project, who has also predicted that in a future war the first attack on the United States would be an atomic attack on New York. General Groves further emphasized that until effective international control of the A-bomb is established the only protection is to keep the A-bomb away by means of a well-balanced, effective, military strength. From this it follows that the only security for any type of canal project across the Isthmus depends on the combined industrial and military might of this Nation and not on the inherent merits or physical features of the Canal.

When the present confusions about vulnerability and security engendered by the atomic bomb are cleared away, and when these terms are understood in better perspective, the way should be open for a practical solution of this great problem as determined by the functional needs of the Panama Canal as a navigable waterway.

The Golden Anniversary

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. BROOKS. Mr. Speaker, our patriotic organizations constitute the bulwark of American liberty. They are composed of men who have served their Nation in times of great emergency.

I have just received in the mail a beautiful brochure entitled "Fiftieth Anniversary, Veterans of Foreign Wars." It is a fine historic review of 50 years of VFW activity. It portrays the birth and gradual growth of this organization from 1899 to the present date. It is truly a nice booklet.

In the foreword of this booklet, Gen. Omar N. Bradley, Chief of Staff, United States Army, most appropriately congratulates the VFW when he states "There is no greater tribute to our gallant dead than service to their comrades. For 50 years, the Veterans of Foreign Wars has been paying this homage by helping the living to achieve a full and just measure of the security and the opportunity for which so many have given so much."

I, too, congratulate this fine patriotic organization on the golden anniversary of its foundation. I wish for it many more years of fruitful, constructive effort with increasing power, prestige, and patriotism. As long as men like Lyall T. Beggs, present national commander in chief, and the peerless Omar B. Ketchum, national legislative director, together with a host of other outstanding patriotic leaders remain at the helm, this organization will continue to exert a profound influence upon the history of America.

Pay the Fiddler

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. CANNON. Mr. Speaker, under leave to extend my remarks, I am supplementing my remarks of yesterday by including further excerpts from letters received by the Committee on Appropriations on Federal expenditures:

WINSTED, CONN.

The biggest element in the cost of living today is taxes, and everybody pays them. The way to build economic strength for this country and the individuals in it is to relieve rather than increase the burden of taxes. That means spending less and spending more carefully. The reports of the Hoover Commission indicate that there is a tremendous amount of wasteful spending and the time has come when the people can no longer support it.

THE UNION PIN CO.

SAN JOSE, CALIF.

Yesterday's Wall Street Journal describes how hardware merchants are using extreme measures such as auctions, in the effort to move their inventories. They have cut buying and have canceled orders in keeping with the changing business conditions.

Considering all the forms of taxation, hidden and otherwise, that people in this country are burdened with, we feel it is imperative that unnecessary governmental expenditures be eliminated and the national budget drastically reduced.

WILMARS, INC.

PORT ANGELES, WASH.

Our Federal expenditures must be cut and cut, and then cut some more. The people of our country are far too heavily burdened with taxation now. Spending more and more for our children to repay, or even worse, to bankrupt our Nation, is asinine and unthinkable to all who will think.

NAILOR LUMBER CO.

WESTMONT, N. J.

I can see nothing but trouble and grief ahead for the American people if the terrific spending is not curbed.

Already the 1933 dollar which contained 100 cents of value, contains a value of only 38 cents today. People who purchased insurance with the 100-cent dollar, are certainly being cheated when they receive a 38-cent dollar, and there is no doubt in my mind but that the terrific spending by our Government has brought about this condition.

W. N. RUSSELL & CO.

MAKOTI, N. DAK.

Any reasonable-minded person can figure out that we cannot keep on spending millions without going bankrupt, however, I am of the opinion that conditions would please the Communists. We surely don't want any part of that organization here.

It has gotten to the point where most everyone is trying to get all they can from the Government regardless of the results, as they feel that the other fellow is doing just that. Unless something is done now I believe we shall soon have the results and they won't be as easy to handle as they were in the depression years, during 1930 and later years.

RENSCH GARAGE.

SEATTLE.

Let me congratulate you on the stand you took in your talk to the House Appropriations Committee on March 2, 1949. It is encouraging to know that we have some men in Washington who see the necessity of reducing the cost of Government.

We have far too big a national debt not to watch every item of expense, particularly at this time, with our foreign relations as they are. As I see it, in case of a national crisis, it would be very difficult to try to overcome the necessity of further taxation.

METROPOLITAN LAUNDRY CO.

WEST ALEXANDRIA, OHIO.

We hope you will be able to make the cuts in the budget, so that our Nation will operate on a financially sound basis, the same that you would operate a business if it were your own.

Although we know you will have lots of pressure brought to bear on you to appropriate the full amounts asked for, we do hope you will have the courage to say no to these unreasonable amounts asked for.

We understand there are billions of dollars asked for socialistic and experimental projects, the very thing that destroys a nation. Our Nation has been strong in years past due to the fact that it has been a capitalistic nation.

Look if you please, at all the nations that have embarked on socialistic, labor form of government, or what have you, and note the plight they are in.

If we continue to throw our money away, we will in a short period be easy prey to socialism, or some other form of government equally as bad, therefore it behooves us to sit up and take notice of our own situation before it is too late.

I wish to congratulate you on the courageous stand you have taken and I am sure you will have the backing of the majority of the population of the United States.

PREBLE COUNTY LUMBER CO.

PHILADELPHIA, PA.

Our Government today is the biggest business in the country and if we are to survive it should be put strictly on a business basis.

No other business in the country could survive with pay rolls padded to the same extent as in the Federal Government today. It is preposterous that 4 years after war our budget is still four times the prewar period.

SCHUTTE & KOERTING CO.

WEST BEND, WIS.

We have had it brought home to us so forcibly in years past and of late the dangers to our way of living should the economy of our country collapse. How better can we prevent this than an honest attempt put forth by our representatives such as you to balance a budget that is so badly in need of balancing.

GROVER'S BADGER PAINT STORE.

BURLINGTON, N. C.

I happen to be one of those individuals who talks to the person of the street and this includes a lot of factory workers and country people at every opportunity and I find that there is increasing interest, as well as concern, about this matter of enormous spending.

Whatever move you make to reduce appropriations for this or that activity, you may rest assured that it will be the wrong one, and other than our direct obligations such as interest on present enormous debt and a practical but realistic defense program, everything else can no doubt stand some trimming and if you don't do it now, it will be even more difficult next year and each succeeding year.

BAKER-CAMMACK HOSIERY MILLS.

PHILADELPHIA, PA., AND MILFORD, DEL.

It is absolutely necessary for your committee to weed out the unnecessary funds in order to check our constantly expanding Federal expenses.

MULHOLLAND-HARPER CO.

PHILADELPHIA, PA.

The people have come to realize the seriousness of the spending policy of our Federal Government. I am certain that the small-business people of the country as well as millions of conscientious Americans, realize that we cannot go on pouring out money without regard as to where it is going to come from.

EVANS & CONVERY.

IRVINGTON, N. J.

If the Government continues to take so much of our income, we can't keep our businesses sound, much less make them grow. We can only get capital by making it and saving it. If you want small businesses to grow, you will have to let them keep something to grow on.

THE PALNUT CO.

RICHMOND, KY.

Be it a nation or a person, when spending is done without careful thought of income, bankruptcy is a natural consequence.

JAMES ANDERSON & SON.

BILLINGS, MONT.

This policy and procedure would not work in everyday business; therefore we naturally do not feel that it would work in government as government must be supported by both business and individuals.

GREAT NORTHERN TOOL & SUPPLY CO.

EL PASO, TEX.

We have so many bureaus and organizations and committees and departments scattered all over the United States that many times only serve to give somebody employment. We voters many times are to blame for this, because our Representatives are too often judged on the basis of how much they can bring home out of the "pork barrel" rather than how much they can save. I think it is high time that we did some careful combing of all of these appropriations for the Federal Government.

CAR PARTS DEPOT, INC.

KEWAUNEE, WIS.

We cannot keep on spending the way we did for the past 10 years. We are no longer at war, and when we were we exhausted our resources to a great extent. We should now begin to conserve, and we cannot conserve by spending.

KEWAUNEE ENGINEERING CORP.

LOS ANGELES, CALIF.

I cannot emphasize too strongly my feelings on the necessity of reducing the Federal budget.

Give us taxpayers a much-needed break in the tax burden.

SCHAFER BROS.

LANSING, MICH.

As a graduate of a university, who majored in business administration, and as a small independent businessman now struggling to maintain his business, the writer learned that the cardinal principle of any business is that its income must be greater than its outgo. Why the largest business in the world should be run on anything but the soundest of business principles is a question which I have never been able to understand.

The very top-heavy structure of our Government, as shown by the recent Hoover Commission Report, is a good example of duplicity and manpower waste. I sincerely believe that reducing Government appropriations is the key to the whole situation. Logically, when the supply of ready cash is cut it will force bureau heads and "empire builders" to reduce their working force so that it becomes necessary for the remaining employees to do a reasonable day's work. It will further enable us to at least make a start toward reducing the astronomical Federal debt.

PAUL AUTOMOTIVE, INC.

SALT LAKE CITY, UTAH.

Having been in business for a number of years, and realizing, as most businessmen do, that to survive we must watch our expenditures, I take this opportunity of expressing my appreciation for the stand of the House Appropriations Committee in demanding drastic reduction in our Federal expenditures.

BURTON LUMBER & HARDWARE CO.

PITTSBURGH, PA.

Substantial reductions must be made—before it is too late—if we are to escape national bankruptcy.

I am in favor of doing everything within reason for the really needy and unfortunate citizens of this country. But too many appropriations, while doing some good, go far beyond the point of reason.

DAVIS BROS.

CHICAGO, ILL.

Most of us, must of necessity, conduct our affairs so that we receive the maximum return for everything that we spend. To do otherwise would put us out of business.

It seems to me that the time has come when our Government must realize that it cannot continually increase taxes but that it must give greater consideration to spending money where it would do the most good for the greatest number of people.

Our Nation is a very rich Nation but even our Nation cannot stand the continued drain that present taxes are making upon all of us.

WELMAID MANUFACTURING CORP.

EDINBURG, TEX.

There is no need to tell you that this is the greatest Nation the world has ever known, and its past greatness is entirely due to the capitalistic system which has received so much abuse at the hands of politicians in the past several years. All that capital needs at the present is a reasonable assurance from the Congress that they will be given a fighting chance to carry on the projects now being handled by the Government.

A budget of $40,000,000,000 represents the entire income of all the people and the business of 25 of our 48 States.

EDINBURG ICE & COLD STORAGE CO., INC.

SAN ANTONIO, TEX.

Reducing the appropriations for the Federal Government at this particular time is imperative if the Nation is to avoid bankruptcy.

SAN ANTONIO LAUNDRY AND CLEANERS.

PROVIDENCE, R. I.

As a businessman of 30 years experience, I cannot see how the Government can continue to spend far more than it receives. Such a policy will not work in one's home, in one's business, or in one's Government.

MARSHALL & WILLIAMS CORP.

SAN FRANCISCO, CALIF.

All items in the budget must be scrutinized very carefully and reduced to the absolute minimum if this country of ours is to be kept from the brink of ruin.

MCCULLOCH AUTO SUPPLY CO.

FORT SMITH, ARK.

If our Government continues to spend such a tremendous amount each year, what little money we have worked a lifetime to save to take care of ourselves when we become disabled will not be worth the paper it is printed on.

FORT SMITH VEHICLE CO.

MILWAUKEE, WIS.

It is rather a sad commentary on the intelligence of some of the people sent to Washington to run our affairs, who try to make us believe that it is necessary to spend in excess of $40,000,000,000 a year to run our Federal Government, or in other words, to make us believe that there is any justification for having the cost of running the Federal Government today amount to over five times what it cost 10 years ago.

There is only one way to keep this Nation solvent, and that is to drastically reduce Federal expenditures and curtail waste and extravagance. If the article, starting on page 61 of the March 1949, issue of Reader's Digest is true—or only true in part—How Bureaucracy Swindles the Taxpayer, it would seem there is plenty to do. Furthermore, the report of the Hoover committee on executive reorganization indicates there are a great many rat holes into which we are pouring money with no visible return.

FRED B. HALDY.

BILLINGS, MONT.

This country is so close to bankruptcy that it isn't funny, and the only way the problem can be solved is that we must start reducing appropriations for the Federal Government. Let's start, and let us start now, on this economy program and reducing the supply of spending money. If we do that, we will then start cutting down Federal expenditure and get our Government down to the

size and type that the taxpayers of these United States will have a chance to handle and take care of on a reasonable basis.

MIDLAND IMPLEMENT CO., INC.

MIAMI, FLA.

All unnecessary appropriations should be eliminated.

FLORIDA GLASS & MIRROR CO., INC.

EVANSTON, ILL.

I hope sincerely you will support the Hoover report and reduce overlapping agencies.

B. D. WARK.

BEATRICE, NEBR.

It is my sound belief and the belief of every businessman of my acquaintance that no one, be it an individual, a business, or government can escape bankruptcy if there is a condition of spending more than is received and of continually going into debt on the basis of future hopes.

F. D. KESS MANUFACTURING CO.

SANTA MONICA, CALIF.

It is imperative that our country gets once more into the proper financial shape and into a safer position to be able to meet unforeseen complications as might arise in the near future.

SPONBERG'S DEPARTMENT STORE.

RIO VISTA, CALIF.

It is quite perturbing to have our elected representatives attempting to increase taxes when the business trend is downward. Apparently there is going to be quite a substantial deficit in the present budget and if appropriations are to be increased the onlly sound way to get such appropriations is to increase taxes. The burden now is heavier than many small businesses can bear. Surely, by such increases many businesses will have to be liquidated, thus again increasing budget deficits.

BLACKWELDER MANUFACTURING CO.

FLAGSTAFF, ARIZ.

Face growing pressure for increased expenditures.

RIORDANS, INC.

DAVENPORT, IOWA.

I definitely feel that the Hoover Commission has done an excellent job in preparing their reports concerning methods to start reducing Government expenditures. I certainly hope that these reports will be given earnest consideration and that most of the recommendations can be adopted.

M. A. FORD MANUFACTURING CO., INC.

NEW YORK CITY.

We, who observe the proposals of the "spenders" to constantly increase the tax burden on wage earners and business are not only concerned but definitely fearful that we are headed for a crash unless somebody in the Congress has the guts to stand up and say, "You have gone far enough."

The people of this country are pretty well fed up with the unnecessary tax burdens that are being placed upon them and the day isn't far distant when they will rise up and let those who continue to add to this burden know very definitely their feelings.

It is very desirable that we call a moratorium on all Government spending, and do it promptly—that is, all Government expending except for the essentials of good, sound, economic Government.

NATIONAL SMALL-BUSINESS MEN'S ASSOCIATION, INC.

PITTSBURGH, PA.

The financial condition of this, our Nation, is and should be the paramount issue before us. We cannot continue to tax and spend for common sense tells us that sooner or later a saturation point must be reached.

GRAFF BROS., INC.

MEADVILLE, PA.

Now is the time, as we see it, for all costs to be greatly curtailed as well in Government as in business. The manufacturer has long realized that the only sure way to solvency is to spend less than the revenue derived.

CHAMPION DEARMENT TOOL CO.

CRESCENT CITY, CALIF.

Up until our day, it is an indisputable, proven fact that democracy has produced the world's finest living conditions, and what logical justification there can possibly be for a change, has not so far been demonstrated. You will appreciate, consequently, that there is a growing and bitter opposition on the part of many taxpayers, who realize only too well, they are being forced to provide funds to tear down the world's best form of government, and that by men who are certainly not true to their oath of office.

TREHEARNE'S.

JACKSONVILLE, FLA.

While I speak only for our individual company I know the problems of the average in the same line of business and our greatest problem today is excessive taxes, and not only can we not stand increases in these taxes but many businesses such as ours will discontinue in the next several months unless some relief from the present high taxes is brought about.

Most of us know that there will, of necessity, be heavy taxes for quite some time, but we all feel that the money asked for in the future budget will go for activities that are of no value to the greatest majority of the American people.

FLORIDA MOTOR SERVICE, INC.

CHICAGO, ILL.

In the past, and for that matter the present, we believe there has been an unfortunate tendency for Senators and Congressmen to listen to vociferous minority pressure groups.

SETHNESS PRODUCTS CO.

KINGMAN, ARIZ.

I am in business here in Kingman and I have Government spending very much at heart.

We feel the time has come to cut on useless Government spending. We have had nothing but spending since 1933, and if we do not halt it now before it is too late, we will spend ourselves into bankruptcy.

WAL-A-PAI AUTO COURT.

Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following copy of a press release by a distinguished citizen of my district and a former Member of Congress, the Honorable Martin C. Ansorge:

A warning that the Eighty-first Congress, by striking out the peril-point-to-American-industry amendment to the Hull Trade Agreements Act may bring on a depression causing unemployment that will dwarf that following the Wilson-Underwood tariff bill of 1913, was sounded yesterday by former Representative Martin C. Ansorge (Republican, New York.) The peril-point amendment passed by the last Congress provides that the United States Tariff Commission shall determine tariff floors below which American labor and American industry cannot compete against cheap foreign labor. It requires that the President report to Congress and offer an explanation of any proposed duties below these peril points before agreeing to them in any trade agreements with foreign countries. The House eliminated the peril-point amendment in its passage of the trade-pact extension, on Wednesday last. The bill will shortly come before the Senate for action.

Citing figures to show that present duties under trade agreements already entered into, are below those of the Underwood Tariff bill of 1913, and referring to the depression that followed during 8 months of operation before the First World War, Mr. Ansorge said:

"With the ending of the war and the gradual reopening of the channels of trade, the problem of protecting American wage earners and American industry from the onslaughts of underpaid European and Asiatic labor competition confronts the Nation. In spite of the pump-priming of the armament and European recovery programs, already there are serious problems of unemployment confronting us.

"For over 130 years a protective tariff has stood as a barrier between the working man of this country and the cheap, underpaid, prison and child labor of foreign countries.

"The continued employment of American labor and retention of his high standard of living are threatened if the Eighty-first Congress strikes out the protective amendment that limits the power of the President by requiring him to report back to Congress, before agreeing with any foreign nation to lower duties below peril points to American labor and industry, as found by the United States Tariff Commission.

"The situation today is no different in principle to that which brought on the depression of 1914. At that time, Woodrow Wilson, a minority-President-with-a-mandate, declared that American businessmen were illogical and provincial in clinging to a policy of protection. The Democratic platform of 1912 went so far as to assert that a protective tariff was unconstitutional.

"The Wilson-Underwood tariff bill, in which the idea of protection was discarded, went into operation December 1, 1913. The effects of that legislation during the 8 months preceding the First World War will never be forgotten. Merchandise with labels 'Made in Japan,' etc., flooded our markets, even as they are beginning to appear today. Foreign-made goods, the handiwork of underpaid, prison and child labor, poured into this country. The roar of factory machinery, the hum of busy wheels, and the smoking chimneys of successful industry melted away as the effects of the Underwood bill began to be felt. The protective wall had by the stroke of a pen been shattered to bits, and over the ruins foreign-made goods poured into this country.

"One-third of the steel mills in the United States closed down. One million men were idle in the iron and steel industries. Two hundred and seventy-five thousand miners were out of work who, under a protective tariff, were earning $715,000,000 annually. Five hundred thousand railroad men were out of employment and 238,000 freight cars lay idle on the tracks. There were 300,000 idle men in the industrial city of New York, and many will recall that a New York newspaper started a 'Save-a-Home' fund to care for dispossessed families. A vacant city building on Lafayette Street, called the Hotel-de-Gink, was opened by Jeff Davis,

'King of the Hoboes,' to house the unemployed. I personally visited the place and saw the appalling sight of men sleeping on bare floors and cooking their meals over canned heat on slabs of tin. Maybe that sight inspires this warning: It may happen here again.

"Millions of working people were out of employment throughout the country after 8 months of the Underwood tariff bill.

"In Japan in the textile factories manufacturing silk and embroidery there were 50,000 children under the age of 14, earning from 6 to 12 cents a day, and 489,000 male and female operators, over the age of 14, averaging 18 cents a day. In miscellaneous factories there were 73,000 men, women, and children averaging 17 cents a day.

"President Wilson, in opposing a protective tariff, referred to the 'unmatched energy of America.' But the unmatched energy of America must be protected from the underpaid energy of Europe and Asia.

"It was claimed by President Wilson that the Underwood bill would reduce the cost of living and capture the markets of the world. It did not reduce the cost of living; the cost of living went up. It did not capture the markets of the world; the markets of the world were rapidly capturing ours, until the European war saved the administration from its own folly.

"No matter what may have caused other depressions, that of 1914 was a man-made depression that was inexcusable and could have been avoided.

"The Trade Agreements Act was adopted in June 1934. The record of tariff slashes under trade agreements to date, is almost unbelievable. Based on the Tariff Act of 1930, duties were slashed 64 percent by 1945. Many were cut in half, hundreds reduced 25 percent, 40 percent, and many frozen on the free list. When the act was renewed in 1945 the President was empowered to cut again up to 50 percent on duties already cut. Since then, many of the 1930 rates reduced before 1945 have been cut or halved again. The United States announced in November 1947 further reductions, froze many items on the free list and affected 80 percent of all of our imports, all without any congressional ratification. As a result of these cuts, two-thirds of this country's imports by kind are admitted duty-free. The average duty on the other one-third has been slashed to 14 percent, even lower than the 27 percent under the destructive Underwood bill of 1913. It is obvious that there are no longer any prohibitive or high tariffs, and that the cry of 'high tariffs" is a pure myth.

"All fair-minded Americans are opposed to a high tariff. But one which compels the foreign manufacturer to pay Uncle Sam the difference in cost of production at home and abroad, is a low tariff, brings revenue into the Treasury and protects the wages of American labor, thereby increasing the opportunity to make and receive advanced wages. Without this protection, wages would have to be reduced to compete with the low level of foreign competition.

"The effect of import duties lower than the difference in manufacturing costs at home and abroad was recently dramatized by the closing down of the Waltham Watch Co., resulting in 2,300 jobless employees. T. Albert Potter, board chairman of Elgin National Watch Co., who died January 24, wrote just before his death to a group of Senators and Representatives, that the tariff on imported watches was so low as to place the American watch industry 'at a hopeless competitive disadvantage.' The watch industry is merely typical of what every competitive American industry will face, should the peril-point amendment be eliminated from the act, and should the President ignore the peril points in future agreements.

"The American Federation of Labor, through its National Legislative Representative, Walter J. Mason, emphasized before the Ways and Means Committee the existence within its ranks of protectionist elements who have always contended that the program of Cordell Hull failed to give sufficient consideration to the competition of low-paid foreign craftsmen. Endorsing the functions of the Tariff Commission, as provided in the peril-point amendment, Mr. Mason testified 'the Tariff Commission seems to us to be the appropriate agency to carry out the necessary factual investigations to aid and guide the State Department in its negotiations. We urge that the authority of the Tariff Commission be accorded full recognition in the adjustment of tariff rates and believe that this will not hinder progress of the trade agreements program.' O. H. Strackbein, executive secretary of America's Wage Earners' Protective Association, representing 12 A. F. L. unions, urged the House committee to retain, as a minimum, the Tariff Commission's present functions in preparation for the negotiations of future trade agreements.

"The escape clause in some of the present agreements provides that if any tariff cut causes or threatens serious injury to domestic producers the cut may be modified or withdrawn. The escape clause has never been used. In all probability, it would not be used until after the damage has been done. The watch industry is a sorry example. Even the escape-clause provision, offered in the House last Wednesday, was defeated by a party vote.

"The argument that we are a creditor nation and that foreign countries cannot pay their debts unless they sell us their products is very convincing on its face. But experience has shown that there is little probability of the debts being paid, and, furthermore, we cannot permit dumping of foreign goods into this country and demoralization of American industry in order to enable foreign countries to pay their debts. If a depression should result, this '- just what the Kremlin is praying for.

"The Constitution separates the powers of government into three distinct parts, so that one will be a check against the others. Congress is given power to provide for the collection of duties and to regulate commerce with foreign nations. The Senate is given power to concur in the making of treaties. Aside from the constitutional question as to the right of the House and Senate to delegate to one man—the President—the uncontrolled and unlimited power to fix duties and to make what are tantamount to treaties with foreign countries, is it consistent with our democratic form of government to place so much power in one man?

"The Hoover Commission, in its report, approved by the House on February 7, states that this Government 'must act decisively to preserve its human and material resources.' This country's material resources include a healthy industry, not one impaired by foreign competition that is being fathered and financed by American dollars.

"As in 1914, we have another minority-President-with-a-mandate. A mandate to do what? Surely not to sell American labor, agriculture, and industry down the river. I am sure that he doesn't want to do that.

"The principle of reciprocal trade is a good one, and the Trade Act should be extended. But the United States Tariff Commission should be permitted to retain the power to determine peril points to American labor and industry, below which the President shall not go without congressional sanction. If this be a crippling provision, it is a necessary one. Better a short delay, than a long depression. If the act be extended without the peril-point amendment, the President should carry out its purpose, in all future agreements. If he fails, the responsibility will be on his doorstep, but the injury will be ours."

England's Religious Hospitals Retain Private Status

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. MULTER. Mr. Speaker, on March 29 I placed in the RECORD the fifth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 23, is the sixth of the series:

ENGLAND'S RELIGIOUS HOSPITALS RETAIN PRIVATE STATUS—HEALTH MINISTRY ALLAYS FEAR OF NATIONALIZATION

(By E. J. Delaney)

(Sixth in a series)

LONDON, March 23.—The hospitals owned and operated by religious orders are among those that have not been nationalized under the British Health Service Act and they are quite happy and optimistic over their outlook.

They have been worried for a year, but now have decided there is, and will continue to be, a great demand for their institutions. In addition to the denominational hospitals, others excluded from the force of the law are one fraternal-order hospital and one labor hospital.

These independents are not opposed to the National Health Service program. Those interviewed have good words for it, but they think it is unnecessary for the state to seize their facilities and compel them to be operated by Government direction in state medicine. They are forming an Independent Hospital Association to unite them for future discussions with the Government, should occasion arise.

CORDIAL RELATIONS

They are enjoying cordial relations with the Health Ministry; there is no antagonism, and they are cooperating by accepting national health service patients when the Government sends some to them. All that they ask is that they be allowed to retain their individual entities.

The religious-order hospitals protested strongly against seizure of their properties by the Government. The health act authorizes the Minister of Health to take them, but he has been persuaded to disclaim his powers over them. The subject was controversial a year ago, but everything is agreeable now.

One of these hospitals explained its operations in detail this week. It is an old institution, started with the encouragement of Florence Nightingale by some of her assistants in Crimea when they returned to England. It has cared largely for those with little means and has relied on contributions from the general public for its continuance.

MOST SERVICE IS FREE

Most of its service is free or at low cost, even though its patients officially are private patients, and it is a private hospital. When service has been rendered, an almoner talks with the patient and inquires if he has ability to pay. He donates nothing, or what he can afford, without pressure, but not more than the actual cost, anyway.

During 1948, when the fate of the hospital was in doubt, the usual appeal for funds was not conducted, and it was necessary to borrow $200,000 to keep going. Now the financial situation is improved, gifts are coming in well, and an appeal committee expects to

find whatever money will be needed to start the institution off anew.

It has 154 beds, only 36 of which are in private rooms available for private-room patients. These folks are charged $88 a week, exactly double what the fees were a year ago. Now all private patients in private rooms are asked to pay the entire cost of their hospitalization, and they pay their own medical and surgical fees, too.

TAKES GOVERNMENT PATIENTS

The hospital has about a dozen National Health Service patients and is paid by the Government for them at the rate of $37.42 a week. These are given exactly the same care and attention accorded the private patients, who also may not be paying anything themselves because they cannot afford to do so.

It seems strange that families with low incomes will make use of this hospital, which expects them to pay something if they can, rather than accept the free hospitalization offered somewhere else by the Government. The hospital says the answer is that it has a good reputation, people want to become its patients when they must be operated on, and there is less delay in getting into it than under the state-medicine program.

While people may not be suffering any health danger during waiting periods under the free service, they do develop an uncertainty and they want to get into a hospital and have the operation over with. Also, if X-rays are to be taken, they like to get them quickly and learn their exact condition.

POINT TO RECORD

These religious-order hospitals steadily impress on a visitor that they are not opposing National Health Service and point to their own century-old free service to anyone and everyone.

All in all, the remaining free hospitals are grateful to the Ministry for disclaiming its right to acquire their premises and to the public for its generosity in helping them to face the future bravely. They desire only to cooperate in fullest degree with the Government and to continue their works of mercy in their own way.

Release of William Wedge by Yugoslav Authorities

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the City Council of Marlborough, Mass.:

IN CITY COUNCIL,
Marlborough, Mass., March 21, 1949.

Ordered, That the city council go on record as thanking the Secretary of State, Dean Acheson and Congressman PHILIP J. PHILBIN for the efforts they attained on behalf of a Mr. William Wedge who was imprisoned by the Yugoslav authorities as the result of an accident in which the jeep he was driving killed a Yugoslav officer, in Belgrade, Yugoslavia, and that through the persistent efforts of the American Embassy in Belgrade, Mr. William Wedge was finally released from prison and has now returned to the United States; and it is further

Ordered, That the resolution passed by the city council and approved by his honor, the mayor, on September 16, 1946, having attained its purpose, that the Secretary of State and the Congressman from the Third Congressional District of Massachusetts be and are hereby given a vote of thanks and appreciation for their untiring efforts on behalf of William Wedge formerly of this city and now of Newtonville, Mass.

In city council March 21, 1949.

Approved by Mayor Carlton W. Allen, March 28, 1949.

A true copy.

Attest: FRANCIS J. BERTRAND,
City Clerk.

Pay the Fiddler

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. CANNON. Mr. Speaker, under leave to extend my remarks, I am supplementing my remarks of yesterday by including further excerpts from letters received by the Committee on Appropriations on Federal expenditures:

PALM BEACH, FLA.

What a wonderful future this country has if the Government and individuals would respect old-fashioned thrift.

S. V. P. QUACKENBUSH.

SPRINGFIELD, MASS.

I believe most thoughtful citizens want our country to help Europe and also to support a western defense program but let's count the cost and not get in beyond our depth and there is a limit to that depth.

It seems to me that it is about time to consider the well-being of our citizenry and try to do something for the folks who must earn the money to pay the taxes. Social welfare is fine, but it is possible to kill the geese who lay the golden eggs and have the nest (our country) defiled by the drones who ask much but give little.

BAY STATE ELEVATOR CO.

NEW YORK, N. Y.

We can't go on spending $40,000,000,000 a year.

The country was developed by people working and not looking for Santa Claus every day.

SAWARD'S JOURNAL.

CHICAGO, ILL.

If this country is to be saved from bankruptcy, socialism, and worse, steps must be taken at once to reduce the expenses of government.

BERKSHIRE PAPERS, INC.

KANSAS CITY, MO.

We believe in our Government's business being "cut to the bone" basis of sound economical standards that serve the people the greatest benefits when they need it.

The various taxes are now so high many small businesses (after taxes are paid) are barely breaking even, and several are folding up under the heavy tax burdens being imposed upon us (the small-business men).

UNIVERSAL TOOL CO.,
O. B. DEMATTEIS.

RICHMOND, KY.

The elimination of all socialistic and experimental items from the budget has my complete backing.

Reduce appropriations not absolutely essential.

CANFIELD MOTOR CO.

KANSAS CITY, MO.

Our Government cannot go on spending billions and billions of dollars and continue to survive.

It seems that certain people have in mind to continue to employ more people on our Government pay rolls, and as we understand it, now we have about four times as many people working for the Government as we had 10 years ago.

We recently read an article in one of our magazines where, in 1937, it took all the income from about three States to pay the operating expenses of the Federal Government, and now, at this time, it takes the national income of 25 States to defray these expenses. In our estimation, this is certainly out of reason.

We sincerely hope you will try to eliminate all socialistic and experimental items from the budget, and reduce our necessary items to the minimum.

W. C. WIEDENMANN & SON, INC.

ST. LOUIS, MO.

Billions are undoubtedly being spent each year for unnecessary purposes and in a wasteful manner. I sincerely hope that the pressure from selfish people will not deter you from weeding out unworthy projects, thereby saving the American taxpayer billions of dollars.

JOHN T. TABOR.

CARTHAGE, MO.

Many business lines are now passing through a cycle of recession. The total industrial activity will almost certainly be less in 1949 than at any time since the war. Even if this is not the beginning of the long-feared depression, it indicates readjustment and is a critical period for the economy. We should reduce Government spending at such a time—not maintain it at the present level or increase it.

H. E. WILLIAMS.

ST. LOUIS, U. S. A.

It is hard to say "No" to so many sincere citizens who devoutly believe that their own particular project is absolutely essential to the welfare of some segment of our population; yet these same groups overlook the most vital point of all—the necessity of keeping our financial house in order.

Certainly the many tried and true factors that we know from past experience must have the financial support of the Congress, should have their requests carefully studied and granted wherever possible; but in Government I believe the same care that we use in private business regarding new expenditures should be followed.

You can't spend more than you take in and still remain solvent; and the Government can't spend more than it receives in taxes without raising the tax structure somewhere.

With our present world-wide commitments, 1949 is certainly no time for spending on a lot of new experiments. The worst service we can render the world would be to go broke ourselves.

ST. LOUIS BLOW PIPE & HEATER CO., INC.

CENTRALIA, MO.

As a democracy, we can afford to spend just so much for Government if we are to remain free, and if Government is to remain the servant of the people and not their master.

The increase in Government pay rolls and the intervention of Government into our everyday lives is leading us down the road to socialism.

The popular opinion that special-interest groups can get something for nothing is a fallacy. What one group gains another productive group must lose, to the ultimate detriment of both groups.

A. B. CHANCE CO.

KANSAS CITY, MO.

During recent months we have all witnessed a substantial reduction in commodity prices, and every businessman knows that the volume of business has been on a steady decrease, and it appears it will continue to decrease for the foreseeable future. This will, of course, mean less income from taxes, and will result in a very serious deficit in the next fiscal year, unless you and others are successful in your efforts to reduce appropriations.

HERBERT V. JONES & CO.

OMAHA, NEBR.

There must, there simply must, be some end to the Federal Government spend, spend, spend program.

PAYNE & SONS CO.

TUSTIN, CALIF.

It is naturally easy for anyone to overspend when handling the other fellow's funds, so weed out unnecessary funds from the budget.

UTT JUICE CO.

ELMHURST, LONG ISLAND, N. Y.

I hope that it will be possible to carry through on eliminating all socialistic and experimental items from the budget and to reduce all the other items as much as possible. It certainly does not seem possible that the Government can go on spending additional billions of dollars each year and expect the country to survive.

ELMHURST RUBBER CO., INC.

JOHNSTOWN, PA.

Remarks about weeding out unnecessary funds before the House Appropriations Committee on March 2 have strengthened my faith in our Government.

HARRY G. WISE & SONS.

ATTLEBORO, MASS.

If they would follow through on the reductions of spending money and cutting the Federal Government down to normal size, I am sure that a lot of important things would have more time in consideration.

REARDON & LYNCH CO.

INDIANAPOLIS, IND.

I have just filed my tax return for 1948 with check covering final payment, and am now starting on the year 1949 with my March 15 declaration and remittance. This subject being so fresh in my mind at the present moment, I thought it might be in order to voice a protest against the constantly increasing tax burden that has been forced on the people of this country. It is causing a great deal of hardship and discontent and will eventually lead to serious difficulty, and the very good possibility that come March 15 large numbers of people may file tax returns, but without the very important remittance being enclosed. This action will be caused in some instances by inability to pay and in other cases as a protest against the constant increased spending and demands for increased amounts of money by almost all departments of the Government, and this would seem to apply all the way from the Federal Government down to the township unit.

THOMAS M. FITZGERALD CO., INC.

LOUISVILLE, KY.

The country cannot continue to spend more than $40,000,000,000 a year and survive. This, I believe, is a self-evident truth but one which must be repeated time and time again for our Nation to realize its significance.

LANHAM HARDWOOD FLOORING CO., INC.

BUFFALO, N. Y.

It is obvious that a stop must be put to the ever-increasing governmental budgets. Continual increasing of the governmental budgets, and the necessity of each and every citizen continuing to work each day of the year in order to alone earn for the payment of taxes, will result in the reducing of initiative of the average individual to the point of what has happened on a national scale in Great Britain today.

EVERYBODY'S DAILY.

SAGINAW, MICH.

I have read a number of articles published in our best magazines on how the bureaus are wasting our money. It is hard for me to believe but it must be true because the writers of these articles are well known and reliable authors.

I am a small-business man and all employees as well as myself are vitally interested in keeping this Nation in a sound financial condition.

CONSOLIDATED FREIGHT CO.

SAGINAW, MICH.

Anyone seriously desiring to keep our economic system as we have known it for the past 170 years and who has the slightest knowledge of economics realizes that your statements are true and that unless we cut Government spending, we are headed for a break-down in our economy and a resulting dictatorship which always follows.

It is unpopular to mention such drastic consequences at this time, but history will reward those who have the courage to stand up for what they know will be right and will prove itself in the years to come. It is only by having a sufficient number of leaders who have the courage and the knowledge to take the steps required to reduce our Government spending that we can save our democracy.

JACKSON & CHURCH CO.

CHICAGO, ILL.

The undersigned is not wealthy, not even well-to-do, but I do have some United States E bonds and some life insurance, but by far more important than my personal welfare is the welfare of our Nation, and our Nation with its present enormous debt cannot stand any additional debt increase. Instead, the debt should be reduced each year. All these new proposals and schemes should be entirely stopped.

J. EMIL HEMMAN.

OSSINING, N. Y.

Weed out unnecessary funds.

Bring us back to the road of sanity and understanding.

OSSINING GARAGE SUPPLY CO.

PITTSFIELD, MASS.

DEAR MR. CANNON: Your remarks at the meeting of the House Appropriations Committee last week were extremely timely.

Your attitude regarding the spending of public money is honest and right, and you are to be commended for your stand. We believe that your position should carry weight and should cause others to stop and consider your statements.

We realize the tendency of the public to expect more and more from society, and to depend less and less upon itself, but there is a limit to what society can afford to do without harmful results and we agree with you that that limit has not only been reached but has been passed.

DALE BROS. LAUNDRY CO., INC.

CHICAGO, ILL.

Our free-enterprise economy is being wrecked by spending, the prodigious and wasteful spending of our Federal and State governments.

As an auditor, I get around a lot. Sentiment is increasing, with bitterness and disillusionment. I have not been across the river, but in central and southern Illinois it is getting pretty strong.

CRUMMEY, KOHTALA & CO.

GREENWICH, N. Y.

The business of our Federal Government is so big it is hard for me to think of it until I imagine the Government as an ordinary citizen just like myself. A look at this citizen's personal finances shows that he owes a year and a half's income more or less right now, and any American I know of that is in this position curbs his standard of living and pays his debts.

R. B. STEVENS.

PITTSBURGH, PA.

We are interested in carrying out former President Hoover's and his committee's recommendations to cut down department spending and overlapping. It should be done slowly, by degrees, accounting system established first, new booking systems, then each branch given 1 or 2 years to comply with some pattern, but it must be rigid and ruthless, because no high-paid Government head is going to reduce personnel or overhead unless he gets instructions and a plan of what has to be done. After changes are made he will be the first to concede that it was a wise move and should have been done years ago. Any organization that grows as fast as the United States during the last 25 years creates barnacles, and it needs a pruning knife to cut out the cancers or it will die of its own weight.

STIRLING LUMBER CO., INC.

NEW BEDFORD, MASS.

The late Franklin D. Roosevelt, in his first campaign for the Presidency, made the statement, "Taxes are paid by the sweat of man's brow." It is my opinion that the majority of the projects which are undertaken are conducted in a very lavish and wasteful manner. I firmly believe the majority of these projects could be conducted, and conducted satisfactorily, at a cost considerably less than is being expended.

In these critical times it is the duty of our Representatives in Congress to eliminate all unnecessary expenditures and to see to it that those expenditures which are made produce value for the money which is spent.

FIBRE LEATHER MANUFACTURING CORP.

CLAY CITY, ILL.

We, as manufacturing and repair operators of oil-field equipment, like many other businessmen, have suffered quite a loss in the last 90 days. We know that we cannot survive if we must continue paying these higher taxes.

BIG FOUR MACHINE & SUPPLY CO.

MUNDELEIN, ILL.

I have a keen appreciation of the problems with which your committee is confronted. It is so easy to appropriate and to spend, but the day of reckoning is so inevitable. The slight abrasions that are caused by cutting appropriations always prove quite superficial, but the wounds of bankruptcy are fatal.

On your committee rests a very grave responsibility. Your decisions today will determine our Nation's future. Undermine it financially is to ruin it; to keep it solvent is to save it.

SPARKLER MANUFACTURING CO.

HUNTINGTON, W. VA.

I believe it is one of the keystones in the Russian arch that we will spend ourselves into bankruptcy and then be ripe for plucking.

No doubt you are now finding yourself under all sorts of pressure by the taxers and taxers and spenders and spenders, but I sincerely hope you will stand pat and find a sufficient number to stand with you so that we can one day get off the foolish road on which we have been too long.

D. G. HUGHES.

MEMPHIS, TENN.

Our Government, I am sorry to say, reminds me of a monkey with a coconut, in that it can manufacture more useless work for more useless people.

During my early years as a civil-service clerk in the Surgeon General's office in 1917, I was given a bunch of cards as a task, to write, which I did in about an hour, and being new, looked for more work to do. I was told emphatically by my associates in the office that the work was supposed to last me all day, and "what was I trying to do, show them up?" Needless to say I did not stay in the Government any longer than I had to.

E. G. COWAN.

MAYWOOD, N. J.

Anyone knows that you cannot continue to waste billions of dollars every year, with a huge debt piled up over your head, and still be able to survive for long.

J & H LABEL PROCESSING CORP.

DETROIT, MICH.

This present transition period back to some semblance of normalcy provides positively no support for definitely unbalanced financing. It is easily possible that a truly unselfish American program could be far more conducive to public interest at this time than a purely political expansion plan serving only a chosen few.

The reduction of the present army of Government employees to a decent level, consistent with good American business judgment, will solve the major budget problem of today. I shudder to envision the Government expanding into the private-enterprise field and shouldering the additional burden such a pay roll would entail.

BERT BAKER, INC.

BERWYN, ILL.

I just completed a short sales trip and I was amazed while on this trip to find how conscious the public has suddenly become on taxes and Government spending. I talked with farmers, small-business men and some big-business men and all seemed to feel that unless some drastic cuts are immediately made in Government expenses this country is headed for a crash.

Let's get back to basic American principles.

SOUTH-WEST AUTO PARTS.

HUNTINGTON, W. VA.

I am just an ordinary worker and I do not know much about my Government, but I understand that the Appropriations Committee has a lot to do with cutting down Government spending, which, of course, determines how much taxes we pay. I surely do hope they will cut down on the present budget.

HERMA S. COPEN.

GREENVILLE, S. C.

When I was in Washington some weeks ago attending the National Small Business Men's Association Washington meeting, the president of that organization made the statement that there was only one item in the Federal budget that could not be cut, and that was the interest on our public debt. I am sure his statement is absolutely true.

If we could just get rid of the lobbyists who are on the pay roll of the Federal Government, in the positions of heads of great bureaus and organizations in Washington, I am sure that we could make tremendous cuts in the budget expenditures of the United States Government. I am sure Congress re lizes that business is beginning to slump and slump badly. In my own immediate section notices have just been published to the employees that most of the textile mills are being cut back to a 4-day basis. This will materially reduce the prosperity of this entire section.

ALESTER G. FURMAN CO.

LOWELL, MASS.

You may know that there is a saying up in this older section of the country which goes something like this: "Any darn fool can spend money—it takes a good person to save it."

F. E. JEWETT CO.

Development of the Waterways of the Commonwealth of Massachusetts

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the General Court of Massachusetts:

Resolutions relative to the development of the waterways of the Commonwealth

Whereas the General Court of Massachusetts favors and urges the development of the waterways of the Commonwealth, wherever feasible, for the production of hydroelectricity to free the Commonwealth from dependence on coal and other fuels which are scarce or nonexistent in the Commonwealth, to stimulate industrial enterprises in the Commonwealth, and to encourage the establishment of new enterprises in the Commonwealth: Therefore be it

Resolved, That the General Court of Massachusetts urges the Congress of the United States to enact such legislation and to take such other action as may be necessary to effect said development of waterways for the production of hydroelectricity to be distributed through private enterprise and municipal power and light plants; and be it further

Resolved, That the General Court of Massachusetts invites and urges the cooperation of the five other New England States and the State of New York in the development of waterways coming to the New England States and the State of New York; and be it further

Resolved, That copies of these resolutions be sent forthwith by the State secretary to the Presiding Officer of each branch of Congress and to the Members thereof from this Commonwealth, to the Governor of each of the five other New England States and the State of New York, and to the presiding officer of each branch of the legislature of each of said States.

In house of representatives, adopted, March 2, 1949.

LAWRENCE R. GROVE, *Clerk.*

In senate, adopted, in concurrence, March 10, 1949.

IRVING N. HAYDEN, *Clerk.*

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Interior Department Appropriation Bill, 1950

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. BARRETT of Wyoming. Mr. Chairman, I rise to discuss the Palisades project, Idaho, the item for which is found at line 13, page 38, of the bill. There was no appropriation for this project for the fiscal year 1949 and the budget request for the fiscal year 1950 is $205,000 which was reduced to $174,250. These funds are to be used to continue investigation and studies of flood control, sedimentation, and related studies. The water that will be stored in Palisades Dam originates in the Snake River in Wyoming. A compact for the division of water between Wyoming and Idaho has not been completed. I shall not object to this appropriation, Mr. Chairman, but I serve notice here and now that I will certainly object to any appropriation for construction purposes on this project for the fiscal year 1951 unless a compact is concluded by that time. I wish to call attention to the letter which I received from our State engineer, Mr. L. C. Bishop, in regard to this matter:

STATE OF WYOMING,
STATE ENGINEER'S OFFICE,
Cheyenne, March 21, 1949.

Hon. FRANK A. BARRETT,
House of Representatives,
Washington, D. C.

DEAR FRANK: This is in reply to your verbal inquiry concerning the effect of Palisades Reservoir on the State of Wyoming, if and when same is constructed and placed in operation.

First, I believe you should know that this development was authorized without the knowledge, advice, or consent of the State of Wyoming. It would seem that in any major development such as this that will require the use of water originating in an adjoining State that hearings should be held and the State that might be adversely affected be given a chance to be heard before authorization.

Immediately upon my information concerning the plan to build this dam, I wrote Idaho officials asking that a compact be negotiated at an early date for the purpose of dividing the water of Snake River and tributaries between Idaho and Wyoming. Idaho officials agreed to this.

Two meetings have been held to date and the best proposition we have received is to the effect that Idaho is willing to sell us storage space in Palisades Reservoir on the basis of 1 acre-foot for each 3 acres we irrigate in the future. They would recognize all present uses in Wyoming.

We have potential needs for the use of Snake River water in Wyoming that might eventually deplete the stream as much as 5 percent within the basin and 5 percent outside the basin (about 150,000 acre-feet each to the Green River and Wind River watersheds), in addition to present depletion of less than 4 percent. We contribute in the neighborhood of 5,000,000 acre-feet to the Snake River and tributaries in Wyoming. We have offered to settle for 5 percent within the basin and agree to make no diversions to other basins.

It is my contention that we are entitled to a reasonable and equitable share of this water. I hope you will back me in my contention. Idaho does not agree with this.

I believe it was in the La Plata River case where the Supreme Court ruled that "No State can use more than its equitable share of the water of a interstate stream."

Here the Bureau of Reclamation has completed plans for a major irrigation development affecting our future economy without in any manner consulting us. Certainly our State should be given an opportunity to be heard in this matter where our water resources are affected before any major development such as Palisades Reservoir is authorized.

Your advice and an early reply will be appreciated.

Sincerely yours,

L. C. BISHOP,
State Engineer.

Copies to Senator J. C. O'MAHONEY, Senator L. C. HUNT.

Social-Security Benefits

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, upon leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from the Buffalo Courier Express dated March 12, 1949, entitled "Social-Security Benefits."

That very able Representative from Rochester, Mr. KENNETH B. KEATING, has voiced his opinions of social-security benefits very well.

SOCIAL-SECURITY BENEFITS

Social-security payments for persons 65 or older are "pitifully small," Representative KENNETH B. KEATING, Republican, New York, recently asserted. He contended recipients have every reason to feel that social security partakes more of the character of lofty promise than tangible fulfillment. He pointed out that they have already paid into it 80- to 100-cent dollars and now face the prospect of drawing out 50-cent dollars. He urged that increased benefits be authorized.

The suggestion previously had been made that persons 65 or older receiving social-security benefits should be permitted to earn $50 in any month rather than $15 through employment, without losing their benefits for that month. That proposal seems most reasonable, as there isn't much sense in depriving a man of his small benefits through social security if he earns the slight sum of $15 a month by working.

But the social-security payments themselves must have some relation to reality and they must take the high cost of living into account as Representative KEATING suggested. Otherwise social security for the elderly becomes a mockery rather than a system designed to be of some help.

There has been much talk of extending social security to many groups not now covered by it. One would assume that the first matter to be taken care of would be to adjust the present payments to the cost of living.

Mr. Speaker, the Republican Party at its convention at Philadelphia last June, had as part of its platform a plank which reads as follows:

Extension of Federal old-age and survivors insurance program and increase of the benefits to a more realistic level.

I heartily concur with Representative KEATING that the Congress should enact legislation immediately to give relief to the needy who must depend upon social security for their existence.

Interior Department Appropriation Bill, 1950

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. BARRETT of Wyoming. Mr. Chairman, last year's Interior appropriation bill carried the following language:

No part of any appropriation contained in this act shall be used directly or indirectly by way of wages, salaries, per diem, or otherwise for the performance of any new administrative function or the enforcement or issuance of any rule or regulation occasioned by the establishment of the Jackson Hole National Monument, as described in Executive Proclamation No. 2578, dated March 15, 1943.

I am not offering an amendment to the bill this year for the reason that the Wyoming delegation is presently negotiating with the Department of the Interior in the hopes that a settlement of this matter may be concluded. A conference was held with Secretary Chapman on March 21 last. It is expected that a further conference between the Governor of Wyoming, or someone representing him, as well as representatives of the Wyoming Fish and Game Commission, and citizens from Teton County, Wyo., in addition to the Wyoming congressional delegation, with Secretary Chapman, will take place the forepart of April. If a settlement of the Jackson Hole National Monument controversy is not arrived at at that time, I will feel constrained to appear before the Senate committee and request the insertion of this limitation in the Senate bill. At this time I wish to call attention to the fact that the State Legislature of Wyoming passed a memorial by an overwhelming vote, and same was approved by the Governor, requesting the Congress to pass legislation abolishing the Jackson Hole National Monument. I call attention to the fact that at the hearings on that memorial, Martin Petersen, president of the Wyoming Federations of Sportsmen's Clubs, testified in favor to the memorial calling for the complete abolishment of the Jackson Hole National Monument. I desire also to call attention to one paragraph in a letter to me under date of January 29 last from Charles E. Piersall, of Casper, Wyo., national director, Izaak Walton League of America, and I quote:

Right at the present time, it is my belief that the surest way to lose our elk herd forever would be for Congress to appropriate any funds whatever for the administration of the Jackson Hole Monument, and I sincerely hope you will withhold your support of any such appropriation until such time as the boundaries of the monument are adjusted to the complete satisfaction of the State of Wyoming.

In a release by the National Park Service on March 21 last, it is contended that 55 percent of the elk in the Jackson Hole area never enter the Jackson Hole National Monument at any time and that 11 percent of the total herd travel across the monument for a distance of 15 miles or more for only 1 or 2 days each year, and that the balance of the herd, or 34 percent, are on the monument for less than 1 day each year. I am attaching herewith a letter which I received from Lester Bagley, Wyoming game and fish commissioner, under date of March 23 last, which, to my way of thinking, is a complete answer to the release by the National Park Service. Attached also are the records on the number of elk killed on the monument during the past 7 years.

STATE OF WYOMING,
GAME AND FISH COMMISSION,
Cheyenne, March 23, 1949.

Hon. FRANK A. BARRETT,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BARRETT: Receipt of a copy of the Department of Interior release dated March 21, 1949, has prompted me to make the following statement relative to what adjustment the Wyoming Game and Fish Commission would feel necessary in effecting a compromise on the boundary lines of the Jackson Hole National Monument.

As you are aware, this department has never taken a definite stand in this controversy other than to insist that the control of the elk herd remain with the commission.

Since the creation of the monument the commission has found it necessary to open the area to hunting periodically in order to reduce the herd that converges upon the national elk refuge and thus prevent overconcentration of the animals and complete destruction of the foliage and browse in the immediately surrounding area.

I am enclosing a tabulation which shows the number of elk killed in the Jackson Hole area, and the corresponding number killed on the monument the same year. During the past 7 years 23,540 elk were killed in all the Jackson Hole area, 11,024 of which were killed in the monument area. There was no other place where this reduction could be made, as this tabulation shows that the area south of Yellowstone Park to the monument boundaries had been opened to hunters from early September through the hunting season, and that the kill in this area was insufficient.

Our surveys and investigations have shown us that the Wyoming Game and Fish Commission must have control of these elk herds through the migratory period. Therefore, it is our belief that all of the area east of the Snake River and within the boundary lines of the monument must be in the hands of some agency that will permit this department to set hunting seasons in this area when necessary to bring about proper reductions in the herds.

Now, relative to the release of the Department of Interior as of March 21, in which they claim they have been studying this migration for a period of 5 years, we are aware that they have had some representatives in the area periodically during that time. When Mr. Cahalane made his first investigations, however, he was there a relatively short time. Last fall I am sure that they spent considerable time there. The report which

they submitted—of which I have a copy—is very unfair and was obviously prepared and the investigations made purely to establish a case for the Park Service to justify present monument boundaries.

In this release the statement is made that 55 percent of the elk migrating south never enter the monument area at all. This is substantiated by their map showing the different migratory routes and the percentages of the total herd passing along them through the refuge. These figures, however, do not coincide with our figures and maps, which were prepared by Game and Fish Department representatives not only for last year but for many years past. I am sure that our Department representatives have spent more hours in this investigation than any Federal biologists have spent minutes. Last season our men lived on these migratory trails, and our report shows that of the 7,375 elk which were counted on these migratory paths, 5,060 (68.6 percent) passed thorugh the monument area.

Further confirmation of this statement is made from the report of the kill on the monument which we are submitting. This report shows that 46.83 percent of all the elk killed within the entire Jackson Hole area during the past 7 years were killed within the present monument boundaries.

As you are aware, the Fish and Wildlife Service insists that 7,000 elk are all that can be safely maintained on the national elk refuge, and the Commission is under agreement to try to maintain that population. A recent count disclosed that we have 8,059 elk on the refuge—over 1,000 more than the maximum number agreed upon.

Due to the seriousness of the winter, practically all of the 5,000 tons of hay in storage has been fed. Since we have not cut any hay on the refuge, but have been purchasing 1,000 tons each year from the Jackson Hole Preserve, Inc., and hauling it to the refuge, it is not likely that we could secure in excess of 2,000 tons from all sources to store on the refuge next year. We are also facing a definite increase of about 18 percent of the 8,000 elk now on the refuge, providing we have a winter similar to last year's.

Just how can this herd be managed properly unless a substantial reduction is made? And how can we make the reduction except through hunting under Commission regulation?

Sincerely yours,

LESTER BAGLEY,
Game and Fish Commissioner.

Forty-seven outfitters in Jackson unit of Sublette and Teton Counties. Seventeen operate in south area of 30. Balance: Twelve have camp sites on monument; 12 have camp sites immediately adjoining monument and must use roads on monument to maintain camps. Other six use area to some extent—roads or hunting. Have no records of outfitters from other sections that use area but know that some do. Monument, itself, is intensely used by resident hunters for camp sites and hunting. If additional information required, wire. (Compiled 1947.)

ELK HARVEST—TETON COUNTY AND FOREST

1942: Total kill, 4,883 (antelope flats opened to hunting); Monument kill, 2,350. Season: September 15–October 31, November 1–November 15, November 16–November 22.

1943: Total kill, 5,542 (antelope flats and refuge opened to hunting); Monument kill, 3,538. Season: September 5–October 31, November 1–November 15.

Following is an extract from the January 15, 1944, Federal aid quarterly report: "A total of 709 elk were killed on the Federal Refuge during the season and 2,829 elk were killed on Antelope Flats which is 63.84 percent of the total number of elk killed in Teton County."

1944: Total kill, 1,170 (refuge opened); Monument kill, 452. Season: September 5–October 31.

1945: Total kill, 2,326 (refuge closed); Monument kill, 834. Season: September 10–October 31.

1946: Total kill, 4,982 (antelope flats and refuge opened, early winter conditions); Monument kill, 2,496. Season: September 10–October 20, September 10–November 10 (Gros Ventre and Buffalo area).

1947: Total kill, 2,272 (antelope flats and refuge opened to hunting); Monument kill, 980. Season: September 10–October 31.

1948: Total kill, 2,365 (antelope flats and refuge closed); Monument kill, 374. Season: September 10-October 10.

Total kill for 7-year period, 23,540.

Total kill on Monument for period, 11,024.

Percent of animals taken on Monument, 46.83 percent.

And so it is plain and evident, Mr. Chairman, that unless a settlement is made on the Jackson Hole National Monument matter so that hunting may be permitted on that part of the monument east of the Snake River that it will be absolutely impossible for the Wyoming Game and Fish Commission to control the elk herd. Wyoming insists that it must have absolute control over hunting in that area in order to maintain the elk herd at a proper livel. Wyoming is unalterably opposed to any arrangement for the butchering of elk on the elk refuge and the sale of elk meat produced therefrom. Unless some settlement of this matter is arrived at, Wyoming sportsmen will find that they will be unable to hunt and kill about half of the elk each year as has been customary and the game and fish commission will find it impossible to control the size of the elk herd to a level that will permit their maintenance during the winter.

Service Pay of the Armed Forces

EXTENSION OF REMARKS
OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. KILDAY. Mr. Speaker, the Hook Commission was appointed by the Secretary of National Defense to study the entire pay structure of all of the armed forces. The recommendations of that commission are contained in H. R. 2553, upon which hearings are now being held before a subcommittee of the Committee on Armed Services. One of the members of that commission was Father John J. Cavanaugh, C. S. C., president of Notre Dame University. Father Cavanaugh rendered outstanding service to the commission. On March 29 he appeared before the subcommittee and testified in favor of the bill. Under leave to extend my remarks, I include the statement made to the subcommittee by Father Cavanaugh:

STATEMENT BY FATHER JOHN J. CAVANAUGH, C. S. C., MEMBER OF THE ADVISORY COMMISSION ON SERVICE PAY BEFORE THE HOUSE ARMED SERVICES COMMITTEE

Mr. Chairman and members of the committee, I was privileged to serve as a member of the Advisory Commission on Service Pay for more than a year. You have heard from the other members—Mr. Keith S. McHugh, Mr. Lawrence Whiting, and Mr. Charles Hook, who served as our chairman and inspiring coworker. I regret that I was unable to discuss our repor' with you in February when the other members were present. Perhaps, however, there is some providential advantage in my appearance at this time, since you have had an opportunity to acquaint yourselves with the problems which confronted us and the solutions we have submitted.

The report, Career Compensation for the Uniformed Forces, which constitutes the findings and recommendations based on our study, seeks to establish a unified pay scale and benefit system which will insure fair and just treatment to the men and women engaged in defending and maintaining our national security, and those of other services who work under similar conditions. I am especially pleased to note and to emphasize that our Commission was unanimous in all its conclusions, and that I wholeheartedly endorsed the recommendations that are before you in legislative form.

At the outset, I should like to say that we regarded Mr. Forrestal's request for a comprehensive study as a mission to explore completely and fairly the financial and related problems of service personnel including the emolument necessary to help maintain the dignity of the individual. We started out with our minds open for study. We analyzed the present pay and benefits, and attempted to learn how they came to be what they are today. We studied the special needs of the various branches of the services, and we designed a scale of compensation with respect for the many military considerations with which your committee is fully familiar. We endeavored to provide about the same opportunity for obtaining fair income and security to men who select military careers as for those who enter the professions or business. Since we proposed that men in the armed services should enjoy such equal opportunity, we felt they should have an equal responsibility to support themselves and their dependents and share in the payment of taxes. These were some of our guiding principles and I believe that we have submitted a program which will permit their realization.

I think that the mature and normal man and woman need a living wage and the opportunity to rear a family in reasonable security. But, it is the duty of the normal individual to earn this wage. In addition to a living wage other incentives should be offered to appeal to the abilities and energies which men possess in varying degrees. A concrete graduated scale of wages and salaries justly determined by the dignity of individuals and on the basis of the relative importance of the services performed is necessary to an organization if it is to function efficiently. This principle, accepted in industry, as a general proposition, was used in arriving at the pay scales which we have prepared. Our task was to adjust the inequities in present military pay to accord with the cardinal principles of pay for responsibility.

I need not stress this point since my colleagues have demonstrated that the varying percentage increases which you find in both the officer and enlisted grades result primarily from the conversion of the present unbalanced structure to one in which promotion is properly rewarded and the monetary incentive to advance is far greater than the increment for longevity. We recognize on this basis that many ranks, particularly those of leadership, are relatively underpaid. We believe that in the program of pay which we propose every officer and enlisted man who chooses military life will have the opportunity to provide well for his material needs

if he applies himself diligently to his chosen career.

We were especially impressed throughout our study with the need for competent leadership in the military services. In the recent past and certainly today, the continuing failure to provide increases in income to the men charged with responsibility for our national security has induced many of the ablest officers to resign or to retire prematurely. The same pattern holds true for many who have attained technical proficiency and who are more appropriately rewarded in civilian occupations. This circumstance must lead to one inevitable result: poor guidance and inadequate concern for the younger men in military service.

My colleagues have emphasized the significance of good management in any enterprise. You will recall Mr. Hook stated that the scales which are recommended and the costs involved must be considered as a sound investment in good management and that well-trained leaders and executives generally save money in the long run. To this, with which I agree, I wish to add that well-trained leaders and capable executives, not only save money, but men. As you know, in my capacity as president of a university, I am mainly concerned with the development of individuals and with the welfare of the Nation which is ultimately composed of individuals. I cannot overemphasize the importance of providing competent men of good character to serve as examples for the great body of men and women who compose the armed forces. You all realize better than I that to attract the best, one must offer to the general run of men more than an ideal, more than a tradition; one must provide the assurance of proper pay and adequate personal and family security.

We must not lose sight of the fact that, despite the tremendous scientific achievement of our Nation and the mechanization which has been adopted in both civilian and military pursuits, the heart and the hand and the mind of man remain supreme. In fact, in this technological age the need of intelligence and a sense of moral responsibility is more acute than ever before, in both leaders and in those who are led. In all our considerations, the Commission was concerned with the human element, the dignity of the individual and the provision of justice, at least within the bounds of our task. We have attempted to apply the well-tried canons of economic reward to the problem of military pay. We proceeded, however, with the full recognition that pay is but one of the many personnel problems confronting the Military Establishment. Opportunity for promotion, assignment to appropriate duties, wholesome environment, recreational facilities and the provision of such elementals as proper food, clothing and housing are as important, if not more important than pay. These last-mentioned items are especially significant to the great body of enlisted men—the backbone and power of military organization. And since the administration of any pay plan ultimately determines its success or failure, I would like to restate what our Chairman said, that our plan is not submitted as a lifeless fixed pattern but one which could and should be modified and sustained by wise administrators to keep pace with changing conditions and needs.

One of the issues that was paramount in our study was the determination of appropriate pay for those who had obtained specialized education prior to entering military service. The question specifically involved, for example, the need of additional pay for doctors, for other professionals, and for those who had a military education such as that obtained at the military and naval academies.

On the whole, our group felt that the basic principle of pay for responsibility should not be modified to provide greater rewards for specialists. In the case of doctors and dentists, however, we were faced with the practical situation of a current shortage in both military and civilian areas and the prospect of a shortage in the foreseeable future. For this reason we approved the existing monetary advantage accorded doctors, but only so long as a shortage exists. We have recommended that the situation be reviewed by a joint board within the Military Establishment to determine the need for continuation of extra incentive for doctors. In all other cases, however, we saw no reason for extra money or extra credit because a man had had a professional education, for example, in law, engineering, or military science. It was our feeling that the selection of a profession or course of study was entirely voluntary and that the Government should not reimburse in any way the man who made such a choice. Presumably he did so in the hope that his advancement would be more assured and that he would be rewarded accordingly as he moved up to a position of greater responsibility. We believe strongly, on the basis of experience, that no further inducement than added pay for added responsibility is needed. Moreover, our surveys indicate that the career income recommended for the officer group compares favorably with earnings of college graduates in comparable civilian employment.

A second issue which the Commission considered and with which I especially was deeply concerned was the provision which our Government could and should make for the families of men in service.

The Commission has recommended the removal of allowances for dependents. During the war emergency when men were called away abruptly from civilian life, special provisions for the family had to be enacted.

It is our opinion that, during stabilized periods, enlisted men who might reasonably be expected to be married and have dependents living with them should be treated on the same basis as officers and be given additional allowances for quarters where there are close dependents, but that no extra allowances should be provided for the men just beginning. Thus, no allowances are provided for the usually very young man in the initial grades, that is, grades 7 through 4 with less than 7 years' service, whose career is still uncertain. Where the Government does not furnish food and quarters, a money equivalent would be given, as at present. The Commission believes that if the pay scales proposed are adopted, officers and enlisted men will be enabled to take care of their own dependents. Accordingly, the Commission's program, influenced by the patterns of our present society and levels of income, endeavors to put the military man, in respect to his dependents, on a basis comparable to that of his fellowman in civilian life.

It was urged upon us that a survivor benefit under which a continuing money allowance or pension would be available to the widow and orphans of a man who died in service or on the retired list should be instituted as a supplement to the retired and disability benefits which we have recommended. The Commission has proposed a $10,000 free death benefit, payable to survivors at the regular monthly salary. The death benefit plan recommended, plus veterans' benefits which may be available, should be sufficient to take care of the adjustment that is necessary upon the death of the husband or father, but it is essentially a personal responsibility and obligation of the individual—not of the Government—to make provision for full security. It is doubtful that in addition to the pay scale proposed a pension for survivors would be just or desirable, in view of the principles of self-reliance which we instill in the citizens of our country and in consideration of the expense to the taxpaying community.

I should like to leave you with this thought, that the Commission reviewed not only the basic and special pays and allowances and the benefits, about which you have heard so much, in terms of scales, costs, formulas, charts, and tables, but mainly in terms of human beings, of fellow Americans dedicated to the important profession of protecting their country. Here as a priest, I should like to pay high tribute to my three colleagues on the Commission. I frankly don't know where men could be found more competent to deal practically with the many complex problems that confronted us, and, of even greater importance, I don't see how men could proceed in such a task with a more painstaking sense of fairness to all. The Commission carefully looked into the special problems of family relationships which I have mentioned, the problems of housing and moving from post to post, and the additional expenses involved in maintaining a dignified and humane career. We were especially impressed with the circumstances of the several hundred thousand men in the enlisted ranks and believe the pay scales we recommended, considered together with the free goods and services which are provided, place these men on a par with, and in many respects ahead of, persons in parallel positions in industry. We understand that the military services have undertaken to plan appropriate careers within the enlisted grades and I fully believe that the pay and benefits which we propose will fit into this highly desirable program.

General Pulaski

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution by the Commonwealth of Massachusetts:

Resolution memorializing the Congress of the United States to pass the General Pulaski's Memorial Day resolution now pending before it

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October, 1779, is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of America: Therefore be it

Resolved, That the General Court of Massachusetts earnestly urges the Congress of the United States to pass, and respectfully requests the President of the United States to approve, the General Pulaski Memorial Day resolution now pending before the United States Congress; and be it further

Resolved, That copies of this resolution be transmitted forthwith by the State secretary to the President of the United States, to the Presiding Officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In house of representatives, adopted, March 21, 1949.

LAWRENCE R. GROVE, *Clerk.*

In senate, adopted, in concurrence, March 24, 1949.

IRVING N. HAYDEN, *Clerk.*

A Real Humanitarian

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. RODINO. Mr. Speaker, people everywhere—whether here in the United States of America or in other countries of the world—look with admiration upon those kindly souls, those true benefactors, who give of their time and efforts untiringly and unselfishly for the welfare of others. Whether it be to aid the poor or to solace the afflicted, these people are ever ready.

In the district which I have the honor to represent there are many who can attest to the good works of one of my finest constituents—Mrs. John F. O'Brien, Jr. And it is with deep regret that I have learned that Mrs. O'Brien will soon leave our fair city to take residence in California. Newark's loss will be California's gain. For I am certain that she will there continue her great work in behalf of humanity.

She has earned for herself the title "A Real Humanitarian." And it gives me great privilege indeed to have the opportunity to insert in the RECORD the following resolution adopted by the commissioners of the city of Newark, N. J.:

Whereas Mrs. John F. O'Brien, Jr., a resident of the city of Newark, N. J., for many years, and who throughout those years has been actively identified with civic, cultural, and charitable groups; and

Whereas Mrs. O'Brien has given of her time and effort without limitation to bettering the condition of our less fortunate fellow citizens; and

Whereas in her charitable endeavors she brought a contagious enthusiasm which induced many others to join in her work of alleviating suffering and hardship, and her untiring energy was an inspiration to all who knew her; and

Whereas Mrs. O'Brien is about to make her permanent home in Hollywood, Calif.: Now, therefore, be it

Resolved, That the City Commission of the City of Newark, N. J., record its appreciation for the splendid contribution made by Mrs. O'Brien and extend to her heartiest good wishes for many, many happy years in her new home, at the same time expressing regret that we are losing a most representative citizen.

THE BOARD OF COMMISSIONERS OF THE CITY OF NEWARK, N. J.
M. ELLENSTEIN.
JOHN B. KEENAN.
VINCENT J. MURPHY.
JOHN A. BRADY.
RALPH A. VILLANI.

I hereby certify that the foregoing is a true copy of a resolution adopted by the Board of Commissioners of the City of Newark, at a meeting held October 8, 1948.

In testimony whereof, I have hereunto set my hand, and affixed the seal of the city of Newark, this 10th day of October A. D. 1948.

[SEAL] HARRY S. REICHENSTEIN,
City Clerk of Newark, N. J.

Why Democracy Works

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following essay entitled "Why Democracy Works," written by George O'Connor, a student at West Orange (N. J.) High School. This was the winning essay in a contest sponsored by the West Orange Elks and was published in the West Orange Chronicle and the Orange Transcript on March 24, 1949.

Young Mr. O'Connor would appear to have a better grasp of the meaning of democracy than many of his elders who pride themselves on their patriotism. His belief that in a democracy the same rights and privileges must prevail for all is in striking contrast to the majority of our United States Senators as evidenced in the recent filibuster. His awareness of the need for tolerance is indicative of the growing realization among our younger citizens that in a democracy rights cannot be withheld from any individuals because of religious beliefs or the pigment of their skin. The young are naturally generous and openhearted, and the idea of second-class citizenship for minorities is instinctively repugnant to them.

WHY DEMOCRACY WORKS

(Winning essay in West Orange Elks contest by George O'Connor, West Orange High School junior)

Democracy works because there are people on the face of the earth who desire freedom and equality. Broad-minded people who unite and form a democratic government because they want to live in a land where all men are brothers to each other. Democracy works because the people who constitute it want such a form of government. They seek the fundamental freedoms which insure their liberty. These people make democracy work.

In a true democracy, each man is his brother's equal and there is no superior sect of people, no one group or race or religion which has the right to look down its nose at the other classes. The same rights and privileges are established for the minorities as are established for the majority.

The word "democracy" is derived from the Greek word "demos," meaning people, and the entire word signifies rule by the people. It is made up of many small things, all of which are essential to a true rule by the people. Tolerance, education, individual self-discipline and independence are a few factors comprising a democracy. All of these are necessary to the function of democracy. There could be no real rule of the people, by the people and for the people if intolerance dominated the minds of the citizens, for it would mean persecution of a minority or small group of individuals because of their religious beliefs, or because of the pigment of their skin.

Education is another essential to democracy. Without it, the people would be ignorant as to their heritage. There is no better means to instill in the minds of people their duties and the fundamentals of their government than education. It is essential that the people apply individual self-discipline for the correct functioning of a democracy. Without this factor it would become necessary to keep the people under the care of guards or disciplinarians. All of these things are all important to democracy and without any one of them, this form of rule would be void.

The functions of democracy might well be compared to the function of an automobile. All the parts must work together to produce the best performance. The four freedoms might be compared to the wheels of the car, without which the car or government would have a rough ride, and a complete break-down would be the inevitable result. The motor could be compared to tolerance and education, so vitally important to a real democracy. Next would come the steering wheel, represented by the Constitution—a device to keep us on the right road. Without this instrument, we would stray off the road into the bumpy fields of war and dictatorship. The headlights are the people's faith in their government. These lights show the way when the road is dark and obscure. The fuel is the love of freedom possessed by the people and which feeds the energy to the motor. The most important factor is the driver of the car. He represents the citizens of the government who control the movements of their form of rule as the driver controls his car.

Democracy permits a man to be free, and a freeman is a happy man. This is the reason why democracy works.

Statement of James A. Tawney

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks heretofore granted, I am inserting the following statement of James A. Tawney, a distinguished attorney of Washington, D. C., before the Committee on the Judiciary, Subcommittee No. 1, United States House of Representatives, at hearings on House Joint Resolution No. 2, proposing an amendment to the Constitution of the United States with respect to the election of the President and Vice President, March 31, 1949:

Mr. TAWNEY. Mr. Chairman and members of the subcommittee, my name is James A.

Tawney. I am a legal resident of San Francisco, Calif., presently engaged in the practice of law in the District of Columbia. I am appearing before you entirely in my own behalf.

House Joint Resolution No. 2 proposes an extremely important amendment to the Constitution of the United States. Upon its ratification by three-fourths of the States, the present system of electing the President and the Vice President would be replaced by a modified version of that system calling for election of these officers by the direct popular vote of the people of the several States. As a matter of fact, it is somewhat difficult to say, from reading the resolution, exactly what the new system would be or how it would operate because it calls for electors and electoral votes without specifying how the electors are to be chosen.

Mr. WALTER. I direct your attention to page 2, line 5: "The electoral-college system for electing the President and Vice President of the United States is hereby abolished."

Mr. TAWNEY. That is correct, Mr. Chairman. The electoral-college system is abolished, and on line 8 of the same page, reference is made to the electors in each State.

Mr. GOSSETT. May I suggest to the gentleman that the word "elector" is used in this resolution as in the Constitution, as being synonymous with "voter."

Mr. WALTER. Many of the authorities on the Constitution have held that an elector and a voter are synonymous as used in the Constitution.

Mr. TAWNEY. That is true, except that in the case of members of the so-called electoral college, we have created a certain class of electors which is not identical with electors generally or with voters at large. By common usage the word elector when used in reference to the electoral college is regarded as synonymous with the term "presidential elector."

At any rate, the proposed amendment would clearly abolish the electoral college system as we know it now, and set up a device for presidential and vice presidential balloting on a State unit basis with the votes so cast allocated proportionately among the several presidential and vice presidential candidates.

It is commendable that we should be seeking to improve our system of Government but I honestly cannot see where such an amendment would offer any improvement in our present presidential elective system.

Despite the abuse that has been heaped on the electoral college, which I feel is not wholly justified, I still would prefer to see the present system retained. I wish to enter my vigorous protest, feeble though it may be, to abolishing the present system altogether and introducing proportional balloting in presidential elections for the following reasons:

1. It would contribute to the disintegration of the Federal Union concept underlying our entire system of government.

2. It would invite confusion and uncertainty by making a 266 vote majority, in the so-called electoral college, more difficult to obtain by any single presidential candidate.

3. The proposed change is thoroughly illogical.

4. The proposed change is wholly unnecessary.

We would all do well, Mr. Chairman, to bear in mind that the United States is precisely all that is implied in that name. In other words, we are a union of independent sovereign States. We are not a mere confederation of States existing under a compact that depends merely upon the good faith of the contracting parties. Our union, too, was never purely an artificial, arbitrary relation. It grew out of common origin, kindred principles, and similar interests and was confirmed by the necessities of war. Yet, despite the firm bonds of our national union, each State, within a certain sphere of jurisdictional authority, is an independent sovereign entity apart from the Federal Government, which, in turn, is a derivative of the several State sovereignties. It is this very separation of the component parts of our American system of government which has contributed so largely to our stability and our strength as a nation.

Let me quote briefly from Madison's Journal of the Constitutional Convention, in which James Madison, during the debates on the method of choosing the President, recorded the views of John Dickinson, a delegate from Delaware, in these (Madison's) words:

"If ancient republics have been found to flourish for a moment only, and then vanish forever, it only proves that they were badly constituted; and that we ought to seek for every remedy for their diseases. One of these remedies he conceived to be the accidental lucky divisions of this country into distinct States; a division which some seemed desirous to abolish altogether."

The present electoral college, consisting of electors, that is to say, of men and women qualified by their election or appointment, to cast their ballot for President and Vice President of the United States, and previously chosen under State auspices by the people of the several States, gives full recognition of the Union concept and of our dual system of separate and distinct State and Federal Governments. It permits the people of the several States by a popular vote within their States, to determine how that State's allocated number of electoral college votes shall be cast in a presidential election.

The electoral college in late years, however, has become a stranger to most people. The constantly growing public ignorance of the functions of government, in general, and the lack of understanding with respect to the fundamentals of the American system in particular, has resulted, very largely, in this deplorable attitude. The electoral college makes its appearance every 4 years clothed, it is true, in the ruffles and lace of a period almost forgotten by young and old alike. Its quadrennial appearance induces the mirth, even of some persons in high public office. Cartoonists, columnists, and other writers currently are having a field day portraying the electoral college as an antiquated piece of junk. It is looked upon as grotesque.

The present electoral-college system is not grotesque, Mr. Chairman. Rather, it is we who have become grotesque in our present failure to do more than we have done to preserve the two most fundamental principles underlying our dual system of government—the principle of State sovereignty and the concept of a Federal Union. Far too many of our citizens, however, know nothing of these principles, if, indeed, they have ever heard of them. Far too many other citizens, if they have heard of them, ignore them.

The present electoral-college system of indirect presidential elections, however, is linked to these principles by an indissoluble bond. It was because of them the present elective system was devised. We may laugh it out of existence if we choose, but in doing so we will only be destroying our two greatest national resources. Like the ancient republics mentioned by Mr. Dickinson in Madison's quotation above, our scorn for the rights and integrity of the States and their independent existence will only invite the same diseases that destroyed the republics of old.

Even though the present electoral-college system is retained, except for the proportional system of distributing electoral votes, I see no merit whatever in that step as applied to a presidential election. There is no more logic to the proportional system of electoral voting than there is if each Member of Congress served only a proportionate part of his term measured by the percentage of votes cast for the candidates seeking a seat in Congress. Why not choose Congressmen that way so as to make the votes for minority candidates count for something just as it is proposed to make minority votes in the electoral count for something? If 60 percent of the voters in a given congressional district voted for candidate A, and 40 percent for candidate B, then, on the theory that losing candidates have not completely lost, or missed the boat, so to speak, perhaps the loser ought to horn in for part of the boat ride anyway, just as we propose in House Joint Resolution No. 2 to recognize minority runners-up in presidential elections by making their electoral votes count for something. The idea is preposterous, of course, but no more so than proportional voting for President and Vice President.

Election by a majority of votes would no longer be mandatory if this resolution were to be ratified by the required number of States. Here again, another fundamental principle of government would be discarded. Rule by majority is deeply imbedded in our system of elections. It permeates every organized activity of public and private groups. It is a fair rule. I fail to see, however, how that rule is strengthened or even supported by a system of appeasing losing candidates or the minorities who voted for losing candidates. Rule by the majority is positively essential, I believe, in the interests of complete fairness to everyone.

Elections are not unlike any game of chance, Mr. Chairman. The winner by a majority wins. The loser loses. The loser made his bid. He lost. And that should end it until he can get the majority behind him in the next election. The proportionate system of allocating votes, or the so-called preferential elective system, is clearly contrary to this conception of political justice. In local elections, the preferential system is frequently found, and outside the expense and annoyance of run-off elections, is relatively harmless. I cannot imagine a run-off election in a presidential election, which would probably be required in a close contest.

On the question of the necessity for amending the present electoral college system, I have seen no clear proof. One might ask: Wherein has the present system failed to reflect the will of the majority of voters, or the people at large? Where is the injustice of the present system? After all, what more can we ask of any method of choosing a President and Vice President than that it permits the people of the several States to express their choice for presidential and vice presidential candidates? This is exactly what takes place under the present system.

It is true, the people of the several States do not vote as, or in the capacity of, citizens of the United States, but as eligible voting citizens of the States. At any rate, they vote. They have an absolutely free choice in deciding how their State's vote shall be cast. Unless we are determined to create a completely nationalized system of government, by adorning national citizenship with national suffrage, and otherwise centering public attention on national interests, national requirements, and a completely national life, we ought not change the present Presidential elective system. The danger of a completely nationalized government is inherent in the apparently innocuous proposal to do away with an electoral college system, simply because it is old, and is easily caricatured as an ancient and decrepit jalopy.

It is no defense to say that we are guarding against the threat of nationalism by retaining the electoral vote, as House Joint Resolution No. 2 provides, because the electoral vote as we know it now is not going to be preserved if the resolution becomes a

part of the Constitution. Contrary to the existing authority of the Constitution, the States, if this proposed amendment is ratified, would be prohibited from prescribing the method of appointment or selection of the Presidential electors, who would be acting, not for the States, as independent sovereignties, but for the individual voters living within each State's boundaries. At present the Presidential electors are the voice of the several State's speaking in accordance with the will of the majority of voters within such States. That would not be the case under this proposed amendment.

I have refrained, Mr. Chairman, from approaching the subject of the resolution from either a statistical or historical viewpoint. Nothing much can be proved by statistics of past elections. To me the proposed amendment involves, primarily, very fundamental theories and concepts of our republican system of representative government. If the proposed amendment is right in principle, I would say let the statistics fall where they may. I, for one, do not believe it is right in principle. Since the final decision will be made by the States, however, I think there is no harm in submitting the proposed change to them.

By not dwelling on the history of the present electoral-college system, I do not mean to infer that its history is not important. On the contrary it is of the utmost importance. But the committee is undoubtedly well versed on this subject, and I am sure will give the most thoughtful consideration to the reasons for the adoption of the present system in the first place. The fact that it may have been inspired by a similar system employed in the State of Maryland, prior to the adoption of our Constitution, and subsequently abolished, has been advanced by some to prove that we should also abolish the electoral college as applied to national elections. That kind of argument, Mr. Chairman, is nothing but nonsense. The analogy between the early Maryland situation and our present national requirements is completely false.

In studying the debates on this subject in the Constitutional Convention, and in giving full weight to the writings of experts on government in the early days of our history, I am sure the committee will find that most of the original reasons for adopting the present method of indirect presidential elections by the vote of the several States, cast according to the will of the majority of voters in those States, are as valid today as they were then. Times change, of course, Mr. Chairman, and people change their attitudes to things, but the fundamental principles and concepts of our American system of government are too right to be wrong at any particular time in our history. They are timeless. Our present electoral-college system of choosing a President, having been conceived as a projection of these ageless rules should not be disturbed, and cannot be disturbed without irreparable damage to the foundations of our American system of government.

Thank you, Mr. Chairman.

House Roof and Chamber Project

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement from the Architect of the Capitol:

ARCHITECT OF THE CAPITOL,
Washington, D. C., March 30, 1949.

Hon. JOHN W. McCORMACK,
Majority Leader,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN McCORMACK: In compliance with your request of March 27, 1949, I am sending you, herewith, in duplicate, report which I have today prepared for your use with regard to the reconstruction of the roof over the House wing of the Capitol and the remodeling of the House Chamber.

Yours very truly,

DAVID LYNN,
Architect of the Capitol.

HOUSE ROOF AND CHAMBER PROJECT

This project, authorized by the acts of June 27, 1940, July 17, 1945, and the pending First Deficiency Appropriation Act, 1949, provides for the reconstruction of the roof over the House wing of the Capitol and the remodeling of the interior of the House Chamber, including the cloakrooms, lobbies, and similar areas, and is estimated to cost, in all, $2,567,000. Acting under the direction of the special House committee appointed under the act of July 17, 1945, in charge of the House project, a general cost-plus-a-fixed-fee contract will be formally negotiated for the house roof and chamber improvements by the Architect of the Capitol with the Consolidated Engineering Co. of Baltimore, Md.—the general contractor for the Senate roof and Chamber improvements—immediately upon approval of the First Deficiency Appropriation Act, 1949, passed by the House February 16, 1949, and now pending before the Senate.

The Consolidated Engineering Co., acting under informal instructions of the Architect of the Capitol has, insofar as possible, made the necessary arrangements for placing the subcontracts for the various branches of work involved, in order that the required materials may be on hand when the actual construction work starts during the coming summer months.

The construction work will be done in two stages—the first stage during the recess period July to December 1949, and the second stage during the recess period July to December 1950. During the first stage, the old roof over the House wing, including the exterior cast iron and glass skylight over the House Chamber, will be replaced with a new steel and reinforced concrete roof, and the interior alterations within the Chamber will be completed above the gallery floor level, including replacement of the existing cast-iron and glass ceiling of the Chamber with a new stainless steel and plaster ceiling, together with all related mechanical and electrical work wherever located. During the second stage, the interior alterations in the Chamber will be completed below the gallery floor level, together with improvements in other areas not included in the first stage—such as the cloakrooms and lobbies. All work in connection with the House project is to be completed by January 1951.

ORIGIN OF PROJECT AND WORK DONE TO DATE

This project had its origin in engineering surveys made under the direction of the Architect of the Capitol in 1938–40 by experts specializing in this field of construction, which disclosed that the wrought-iron and cast-iron roof framing of the House and Senate wings, constructed in the 1850's, were obsolete and far short of present-day safety requirements, and should in the interests of safety be replaced without delay because of serious deficiencies in the roof trusses. Funds and authority for reconstructing the roofs and skylights over the House and Senate wings were provided in the Second Deficiency Appropriation Act of June 27, 1940.

That war made it impossible to proceed with the permanent project as planned. As a temporary expedient, the Architect of the Capitol in the fall of 1940 installed temporary steel supports under the ceilings of both Chambers to relieve the old trusses of the dead-weight load of the ceilings, thereby removing the danger of a collapse of the roofs, pending their permanent reconstruction. The installation of these temporary supports has in no way corrected or remedied the defective structural conditions. No changes, whatsoever, have been made in the roof structure, skylights, or cast-iron and glass ceiling of either Chamber. The structural defects still exist. The temporary supports, while providing an element of safety, do not alter the original need for structural changes. If the supports were to be removed without carrying forward the proposed permanent reconstruction work, the hazard of collapse would become imminent.

The 1940 legislation provided for the retention of the existing cast-iron and glass ceiling in the House Chamber and for a new skylight above the Chamber. The act of July 17, 1945 enlarged the scope of the project to provide for improvements to the interior of the Chamber and further modified the original legislation by providing, as a part of such improvements, for the elimination of the skylight over the House Chamber and its replacement with concrete roof slab, and the elimination of the cast-iron and glass ceiling of the Chamber and its replacement with an acoustically treated plaster ceiling or ceiling of other suitable material.

DEVELOPMENT AND APPROVAL OF PLANS FOR HOUSE IMPROVEMENTS

The plans for improving the House Chamber, as finally approved by the special House committee appointed under the act of July 17, 1945, represent designs developed by Francis P. Sullivan, of Washington, D. C., associate architect, and Harbeson, Hough, Livingston, and Larson, of Philadelphia, Pa., consultants, in collaboration. The designs have the approval of the Commission of Fine Arts and the Architect of the Capitol, and they are acceptable to the several consultants on air conditioning, lighting, and acoustics, and to the structural engineers. They are the result of the combined efforts and ideas of all concerned with their preparation.

The Commission of Fine Arts, whose advice was sought by the House Committee, in expressing their formal approval of the plans stated that their approval was predicated on the ultimate carrying out of the entire approved plan for the House Chamber. The Commission stressed the importance of carrying out ultimately the plans for both the upper and lower portions of the Chamber in order to obtain a unity of design, which they advised would not obtain if only the upper parts of the Chamber were to be improved.

The plans for the new roof construction represent designs developed by Thomas W. Marshall and James M. Gongwer, of Washington, D. C., retained as engineering consultants for the project.

The plans for the House roof and chamber improvements, proposed to be carried into effect during the summer-fall recesses of 1949 and 1950, were formally approved by the special House committee, June 14, 1946, and formally reported by the committee to the House, June 24, 1946, House Report No. 2321, Seventy-ninth Congress.

In accordance with instructions of the House committee, set forth in House Report No. 2321, the Architect of the Capitol kept the House Chamber plans on exhibit in the

Office of the Architect of the Capitol from June 24 to July 8, 1946, for inspection and comment by any Members of the House who wished to examine them.

When the First Deficiency Appropriation Act, 1949 was considered by the House in February 1949, an amendment proposing to retain the existing skylight and the existing cast-iron and glass ceiling of the House Chamber containing the State seals was rejected by the House, and the act, as passed by the House, provides for carrying out the plans as approved June 14, 1946.

The House was also advised, while this legislation was under consideration, that the State seals, when removed, will be preserved, and that it is the recommendation of the special House committee that the seals be taken care of according to the will of the various State organizations.

DESCRIPTION OF PROPOSED HOUSE IMPROVEMENTS

Reconstruction of House roof

The present roof construction over the House wing, with its skylights and iron trusses, will be removed and replaced by reinforced concrete slab and structural steel beams supported on steel trusses. The skylights in the connection between the central portion of the building and the House wing will likewise be eliminated and replaced by a concrete-and-steel roof. The new roof structure will be fireproof throughout. The roof will be insulated and covered with sheet copper. New air-conditioning ducts will be run below the new roofs, eliminating the old ducts which are now on top of the roofs, thereby materially improving the air view of the building.

House Chamber improvements

At the time the remodeling of the House Chamber was authorized in 1945, the special House committee directed the Architect of the Capitol to redesign the ceiling of the Chamber, and to plan all other required improvements, with prime emphasis on lighting, acoustics, and air conditioning.

The plans, as developed and approved, provide for elimination of the existing cast-iron and glass ceiling of the House Chamber and its replacement with a new ceiling constructed of decorative painted plaster and stainless steel perforated for distribution of air conditioning and for acoustical purposes.

It is the central portion of the ceiling which will be of stainless steel. This area constitutes about one-third of the total ceiling area and is the most important area from the standpoint of correct lighting, acoustics, and proper distribution of conditioned air.

In the center of the stainless steel portion of the ceiling will be an ornamental feature of carved shatterproof glass and bronze, illuminated from above, to furnish a visible source of direct light for the appearance of the Chamber.

The State seals, when removed, will be preserved and, as previously indicated, will be disposed of in such manner as the House may direct. A detailed description of the proposed improvements follows:

The design of the House Chamber has been studied with motives derived from classic architecture from the same sources as used by the architects of the earlier portions of the Capitol and of other buildings of the early Republic. The design has been developed to harmonize with the architecture of those portions of the Capitol Building of the period of the early Republic, insofar as this can be done while providing for modern lighting, air conditioning, and acoustic treatment.

In remodeling the House Chamber, the flag will be hung behind the Speaker's chair, framed in a columned motif and flanked by sculpture symbolizing the Nation's lawmaking body. The oil paintings of Washington by Vanderlyn and Lafayette by Ary Scheffer will be placed on the same wall of the Chamber, centered between the doors, and suitably framed.

The base of the Chamber walls and the base of the Speaker's rostrum will be of marble; the rostrum proper and the rostrum desks will be of wood; the lower walls of the Chamber and the cornice are also to be of wood. A clock, with a suitable sculptured group, will be located over the rostrum.

In order to obtain adequate space in the Press Gallery, the south of the Chamber wall will be brought forward about 1 foot and the north wall will be brought forward to correspond.

The Members' seats on the floor of the Chamber will be replaced with new and more comfortable seating, and the seating arrangement will be improved. By a reduction in the number of floor aisles from seven to five, those seats nearest to the south wall, as well as all other seats, will be rearranged and brought forward more directly in line with the Speaker's vision. The new arrangement makes it possible to increase the number of seats from 444 to 448.

The seven portrait busts, now in the gallery wall niches, will be removed from the Chamber and relocated in the rotunda of the Old House Office Building.

The present public-address system will be redesigned and the equipment now suspended from the Chamber ceiling will be concealed behind grilled panels over the doors leading to the Speaker's lobby.

The existing gallery seats will be replaced with an improved type of noiseless seats, with especially designed arms and ends. The existing desks in the Press Gallery will be replaced with new desks and this section of the gallery will be enlarged.

The existing gallery floor construction will be replaced with fireproof material arranged in steps, the face of which will be of marble, and the platforms covered with a rubber-tile floor.

The gallery door frames and wainscot will be of marble. Sculptured marble plaques will be located over the doors; and the wall panels between the doors will be covered with acoustical fabric.

The main cornice of the room and the coffered border of the ceiling will be of painted plaster. Conditioned air for the galleries will be introduced through semicircular outlets located in the ceiling border nearest the wall. Light for the galleries will be provided by flush-type ceiling fixtures located between the air-conditioning outlets.

The treatment of the ceiling contemplates a relatively flat portion extending outward from the walls in which will be incorporated a series of decorative coffers, and a higher curved section in the center springing from a concealed cove. The central portion will be constructed of painted stainless steel, perforated with small holes for the introduction of conditioned air. The rest of the ceiling will be of plaster. The entire area over the perforated stainless steel portion will be treated acoustically.

In the center of the stainless steel portion of the ceiling will be an ornamental feature of carved shatterproof glass and bronze, illuminated from above, to furnish a visible source of direct light for the appearance of the Chamber. The lighting of the floor will be accomplished by indirect light reflected from the ceiling, the source of which will be light fixtures concealed in the cove around the perimeter of the center section.

The simplified design of the Chamber and the reconstruction of the gallery floor and supporting wall make it possible to increase the cloakroom width by approximately 18 inches and to provide improved accommodations.

The reconstruction of the roof and the remodeling of the Chamber, when completed, will provide improved lighting, seating, air conditiong, and acoustics, and the Chamber will be a room of simple architectural dignity.

Truman's Wonderland

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jackson (Miss.) Daily News, appearing March 28, 1949:

TRUMAN'S WONDERLAND

Once upon a time there was a kind, generous king who lived in a gleaming white castle surrounded by marble palaces. He had a storehouse of treasure which was the wonder of all the world. It was stacked with bulging chests of gold and silver and contained row upon row of bins heaped with precious stones.

One day the king summoned his counselors and addressed them as follows:

"My heart bleeds for my people," he said. "There are so many things they lack which only I can give them. They ought to have more medical care and more savings for old age, sickness, and unemployment. They should have better and wider roads to travel upon. They ought to have more steel, more electricity, and more irrigation. They ought to build better houses and more of them. They ought to have more schools and more teachers. The city workers need more wages because food is so expensive. The farmers need more storage space so they can hold their products off the market and get higher prices for them.

"So I shall share my treasure with my people. Let all of them come to my storehouse and each help himself according to his wants."

When the people heard these tidings, they praised their king for his kindness and generosity. According to the decree, each of the king's subjects went to the storehouse and took from it the amount of treasure necessary to fulfill his desires. And the people rejoiced, because they were getting something for nothing.

The next day the king went to his storehouse and found it bare. Again he summoned his counselors and spoke thus:

"So that I may continue to minister to the needs of my people, it will be necessary to replenish my storehouse," he said. "In addition to payments necessary to safeguard the welfare of my people, the expenses of government have become very burdensome, and I have also promised to send gold and silver and arms to the people across the sea so that they may protect themselves from the barbarians who threaten them.

"Therefore, I have decided that all my subjects shall be taxed, each according to his means. From those who have little, little shall be taken. But from those who have much, much shall be taken, until all people are equal in the possessions they retain."

And so the tax collectors went forth and came to the houses of the people and demanded payment. And they gathered up the gold and silver and precious stones the people had taken from the king's storehouse, save that the poor were permitted to keep a small part of the king's bounty, while from the rich they took in addition their household goods and other possessions until they had left only as much as the poor.

The tax collectors kept some of the treasure themselves since, not being producers of wealth, they had no other source of livelihood, and gave the rest to the king. Soon the storehouse was full of treasure again,

and the king was pleased, saying: "Have I not dealt fairly with my people?"

Some of the people were pleased and some were not. The poor said: "Why should we work any more? The king will take care of us." The rich said: "Why should we work any more when the king takes away from us the wealth we produce?"

And so the people worked less and produced less, and every time after that when the tax collectors came among them there was less wealth to divide. Instead of everybody getting more, everybody got less. But the tax collectors were happy, because they always got their share, and the king was happy because his storehouse was always replenished. "I have given everybody a fair deal," the king said.

This is not as fantastic a fairy tale as it sounds. As Henry Hazlitt wrote in a recent issue of Newsweek, the Government cannot distribute more under President Truman's fancy hand-out program than the people produce. And it is not the Government which produces wealth, but private enterprise. But before the Government can give part of this wealth to some of the people, it must take it away from others.

This is true of every instance in which the administration proposes to distribute Federal largesse. The money first must be taken from some people before it is given to others. Frequently it will be taken from the same people who are intended to be the ultimate beneficiaries.

But in no case do the people get back all that is taken away from them. The Federal Government gets a rake-off on every pot to pay the costs of administration and, incidentally, to support an ever-growing Federal bureaucracy.

Such financial legerdemain eventually must lead to a tax burden which will devour the rewards of prudence, thrift, industry, skill, and foresight and destroy the incentives to work and produce. We are further along that road than we think.

Benefits for Soft-Coal Miners

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 29, 1949:

UMW FUND GRANTS $2,000,000 WEEKLY—LEWIS SEEKS RISE IN BENEFITS FOR SOFT-COAL MINERS—EXTRA $200,000 ANTHRACITE AID—PLAN BASIS IS QUESTIONED—LACK OF RESERVES CALLED PERIL IN FACE OF MOUNTING COSTS AND DROP IN MARKET

(By A. H. Raskin)

The United Mine Workers welfare and retirement fund, most ambitious of all union welfare projects, is paying out $2,000,000 a week in benefits to soft-coal miners and their families. The companion fund for hard-coal miners is distributing another $200,000 a week in pensions, death and disability payments and medical fees.

The UMW funds will have to spend much more before they achieve the full program sketched out by John L. Lewis, but they already are straining against the limits of the royalty of 20 cents a ton on each ton of coal mined from which the benefits must be paid.

Officials of the UMW are not concerned about the possibility that the intake will be too small to keep benefits up to the Lewis standard. They are confident that the UMW chieftain will be able to win all the money that is needed to fulfill the program, even if it takes a new strike to do it.

Coal operators, who have been convinced from the start that the benefits were too high to be maintained, expect that Mr. Lewis will seek a royalty of at least 40 cents a ton in the June contract negotiations. Mr. Lewis is keeping his own counsel on this score, but his aides do nothing to discourage such speculation.

Federal social security and labor experts applaud the aims of the UMW welfare experiment but question the soundness of its financing. They fear that its lack of reserves will make it impossible to keep pace with mounting pension, disability, and medical costs, especially if the market for coal drops precipitately.

COURSE HELD FORWARD

No one seriously expects that Mr. Lewis will turn back from the course he has charted. In the words of his associates: Mr. Lewis knows only one way to move—and that is forward. Moreover, the enthusiasm for the welfare program is so universal and so deep-rooted in the mine districts that it would be suicidal for any union leader to suggest that it be whittled down or even that it abandon plans for future extension.

Mr. Lewis has made his own position clear. He contends that caring for the human element in the mining industry should be considered as part of the cost of production, to be paid for by the industry and the consumers of coal.

"The United Mine Workers of America has assumed the position over the years that the cost of caring for the human equity in the coal industry is inherently as valid as the cost of replacement of mining machinery or the cost of paying taxes or the cost of paying interest indebtedness or any other factor incident to the production of a ton of coal for consumers' bins."

That is the way Mr. Lewis summed up his viewpoint in presenting the first pension check to a 62-year-old miner last September. Mr. Lewis added his belief that it was not fair to expect the general taxpayer to take over the burden of caring for human wastage in an industry as hazardous as coal mining.

"For that reason," he declared, "the United Mine Workers believe they are setting up a definite goal for others to follow to relieve the State of the necessity for caring for the extraordinary cost of industries which are particularly hazardous."

MINERS TELL OF AID

The files of the UMW in Washington bulge with letters from aged and disabled miners and widows and orphans who are being helped by the welfare fund. They tell how they have been rescued from dependence on the charity of relatives or of public relief authorities. In many cases they tell of strength restored to bodies shattered by mine accidents and of approaching self-support.

Miss Josephine Roche, former Assistant Secretary of the Treasury, who is now director of the UMW welfare and retirement fund reports that more than a quarter of a million coal miners and members of their families have been aided by the bituminous fund since it paid its first benefits in June 1947. More than $85,000,000 has been distributed from the fund.

Fifteen thousand miners past the age of 62 and with 20 years or more of mine work behind them are receiving retirement payments of $100 a month. The average age of those who have retired is 66. Miss Roche said that most of them were suffering from permanent disabilities resulting from mine accidents or mine-contracted illnesses.

"Even though the UMW benefits are added to Federal old-age insurance payments, which average about $30 a month for miners leaving the pits at 65, only 'a negligible percentage' of the able-bodied miners past the retirement age have taken advantage of the pension provisions," Miss Roche said.

"Even with only 2 or 3 days' work in the mines, most of our people would rather keep working as long as they can," she noted. "We know of several past 80 who are still at work."

GRANTS AND DEATH BENEFITS

In addition to the $100 pensions, the fund provides disability grants ranging up to $60 a month for incapacitated miners, with additional allowances of $20 for the miner's wife and $10 for each child or other dependent. Widows receive a maximum of $60 a month and orphans are allowed $25. Death benefits of $1,000 have been paid to the families of 10,500 miners.

The area in which the fund is just beginning to make itself felt is in the provision of complete medical, hospital, and health care for mine workers and their families. As projected by Dr. Warren F. Draper, formerly chief medical officer at Supreme Headquarters, Allied Expeditionary Forces, and now the fund's medical director, the program would meet every health need, extending even into the fields of preventive medicine and public-health work.

In this field the fund finds its resources taxed by "the great backlog of human neglect" that requires attention before it can turn to setting up the comprehensive program of current care that Miss Roche and her associates are planning.

"We have started out with the cases of most shocking neglect that had gone untended for years and years," Miss Roche said. "We will keep extending the coverage of our program as rapidly as we can make arrangements with hospitals and physicians."

Two hundred and eighteen paraplegics—men paralyzed from the waist down as a result of spinal injuries—have been sent to rehabilitation centers in this city, New Jersey, California, and other places equipped to help restore them to a measure of social usefulness after months and years of bedridden idleness.

HOSPITALS COOPERATING

Dr. Draper said the Mayo Clinic, Johns Hopkins Hospital, and similar institutions throughout the country were cooperating with the fund in providing facilities for the treatment of miners whose medical needs demanded more specialized treatment than their home areas afforded.

The aim of the fund is to enter into contracts with local doctors and hospitals in the 26 mining States and with specialized institutions elsewhere to provide the highest standard of service at the most reasonable cost for UMW members and their families.

The American Medical Association has given its blessing to the project and has recommended that State medical societies set up liaison committees to work with the 10 UMW medical field offices to see that the charges established by physicians and hospitals are fair and proper.

When the program is operating fully, the welfare fund will pay all the bills. At present it is doing that for miners, widows, and children in most urgent need, but not for the rank and file of miners and their families. Most miners still pay $3 or $4 a month under company check-off systems for medical services and some pay another $3 or $4 on a monthly basis for hospitalization. These payments will disappear when the UMW fund assumes full responsibility for medical and health services.

NEED SEEN AS MEASURE

Miss Roche made it plain that the UMW felt the degree of human need in the mine fields would be the measure of the program's ultimate extent, and not the availability of funds.

"This is about the soundest, most commonsense program for the public welfare that I know of—and Mr. Lewis has made it possible," Miss Roche declared.

"I have a feeling that the care of the United Mine Workers members and their families is going to be adequately followed through. We will advance—we will not stop. We will move forward on the basis of experience and not of blueprints."

She hailed the whole program as a model for the rest of the labor movement and as the greatest contribution to our economy and the preservation of our way of life. She contended that its benefits were not confined to the miners but extended to all Americans in terms of reduced tax burdens and improved citizenship.

From the industry's standpoint, she maintained that the fund was a factor for increasing productivity and for attracting young men to the mines. She told of one youth who operated a high-speed coal-cutting machine and who told her that he mentally calculated the fund royalty collections as his machine piled up ton after ton of coal.

"Whenever he was putting on brushings, he resented the fact the fund was not making money as fast as it would if he were working at the face," Miss Roche recalled.

"Our coal industry would have been the story of England all over again were it not for Mr. Lewis, with his emphasis on mechanization, increased output, and protection for the human element in the industry."

ADMINISTRATION OF FUND

The fund is administered by three trustees, with Mr. Lewis representing the union, Ezra Van Horn, of Cleveland, representing the operators, and Senator STYLES BRIDGES, New Hampshire Republican, representing the public.

Senator BRIDGES, who has served as trustee for nearly a year, said he felt the fund was performing a very fine function and that Miss Roche, Dr. Draper, and the rest of the administrative staff were doing an excellent job of applying its resources in keeping with the policies laid down by the trustees.

"I am opposed to socialized medicine," Senator BRIDGES observed, "and I feel we must have something to take its place, such as Blue Cross and Blue Shield and private welfare funds, of which this is an outstanding example."

The Senator said he did not believe the fund had been operating long enough to permit final judgment as to whether it could afford to supply additional benefits or whether those now in effect were too generous.

"We are pioneering in a new field," he declared. "I feel this is an answer to much of the pressure for governmental action to take care of all human needs, but we are going to have to feel our way. I am always going to predicate any stand I take on the right to change it in the light of experience."

COMMENT OF OPERATORS

Mr. Van Horn, who has been at odds with Mr. Lewis and Senator BRIDGES on most issues of policy within the board of trustees, declined to comment in any way on the fund's operations. Other coal operators asserted that Mr. Lewis' ability to shut down the coal mines, to enforce his views, made a mockery of the whole trustee system, and put him in the position of making all the decisions himself.

They contended that the idea that human costs should be counted as a charge on production, ran contrary to the concept of Federal social security as a device for meeting the social hazards of old age, unemployment, and disability. They asserted that unions would seek to outdo one another in winning special benefits for their members, thus making a hodgepodge of social security.

The operators also challenged the argument that the fund should find out how much human need was to be met and then demand that the full amount be assessed against the cost of the product. If coal were to stay within the price reach of the public, Mr. Lewis would have to limit the extensiveness of his program to some reasonable estimate of the funds available, these industry spokesmen declared.

GOVERNMENTAL ATTITUDE

In Government circles fear was voiced that a declining coal market might prevent the UMW fund from maintaining its schedule of benefit payments and bring proposals that the whole program might be taken over by the Government.

Federal experts asserted that a somewhat similar development had taken place in the 1930's in the railroad insurance and disability programs, then privately administered, with the result that the companies and unions joined in requests that the Federal Railroad Retirement Board be established.

The estimated intake of the UMW fund this year on the basis of a 600,000,000-ton production of soft coal is $120,000,000. The anthracite fund is expected to take in about $12,000,000 on the basis of 60,000,000 tons of production. The anthracite fund has paid out about $8,000,000 since its inception 2½ years ago. There are about 400,000 soft-coal miners and 80,000 hard-coal miners covered by the two funds.

Reply to "Good-by Christ"

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, on February 3, 1949, I extended my remarks and included a poem by a Communist entitled "Good-by Christ." It was anti-Christ, of course, and it was brought to the attention of thousands of my constituents, who were astounded by its content.

Today, Mr. Speaker, I received a letter from a young minister, Rev. Louis G. Poppe, who replies to the poem referred to. He has entitled his poem "Good-by Mr. Hughes." Under permission granted to extend my remarks, I include Reverend Poppe's reply:

GOOD-BY MR. HUGHES

Good-by, Mr. Hughes!
I'm leaving you soon
So you can take over,
I hope you have a good time,
Running things—
You've been making good progress
And your superstate is coming along fine—
And Stalin, what a superman!

I thought I'd drop you a line
To ask a few questions
Before I go.
Tell me, who made the atom?
Or who gave man wisdom
To release its power?
If a mother lose her child,
Will she find comfort in the gospel of Lenin
In the Communists' bible?
Or will she find spiritual strength
In the Molotov cocktail?
Tell me, self-sufficient superman!

And while you are busy,
Rebuilding the concept of power,
I'll be watching from within the shadows.
I will watch the faces of Judas,
And Pilate, and Herod the Tetrarch,
As they cringe at your foolishness,
And theirs;
While I wait in the company
Of the Fisherman, of Gandhi and Francis.

When the sands of the desert of time
Have covered your hammer and sickle
The Cross will still be standing
High on Calvary.

Sure I'll go—now!
But, I'll be back
To heal the wounds you leave.
I have been dismissed before,
Only to return again,
When other selfish men
Had learned,
As you will learn,
That justice,
And love,
And mercy and humility
Are eternal,
And unconquerable.

Good-by, Mr. Hughes.

—*Louis G. Poppe.*

MARCH 28, 1949.

Russian Control of Hungary

EXTENSION OF REMARKS

OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. McGRATH. Mr. Speaker, nations have appeared, lasted for awhile, and then became but a memory. Empires have risen, held the attention at the center of the stage, only in a period of a century or so to make their exit into oblivion. Haughty autocrats crushing under their heels of authority the poor and the weak have vaulted to positions of power only in time to be forgotten, or if remembered, remembered only with scorn. The world is a changing place, but fundamentals and true concepts never change; and the divine rights of man are such that no empire, no dictator, and no nation can take them away from him due to the very fact that those rights have been divinely bestowed.

Today a power has appeared, outdictating the dictators of yesteryear, outruling the haughty kings of centuries past, and more cruelly scourging the people, and more unconscionably ignoring the concept of natural law in an attempt to outrage the sanctity of the Deity. That power is communistic Russia and the poor, weak nations that it has overpowered; and so, when we talk today of Hungary, we mean the Russian-dominated Hungary, where only recently we have seen again the infamous manifestations of the Russian determination to destroy religion. There are no exceptions in their attack. Protestant and Jewish groups take their place alongside of the heroic and broken body of Cardinal Mindszenty.

It might be well to pause for a moment and see by what authority this alleged government takes control over the people of Hungary. Law is a rule of action,

mandatory in form, established and promulgated by competent authority for the common good. Suarez says, "Law is a common, just and stable precept." Before a law can have any sanction, it must come from competent authority. The Communist regime in Hungary assumed its power by dubious means, and its means was the disenfranchisement of the opposition, so that a court, which has been so well described by our President as a "kangaroo" court, can have no authority or sanction for its findings. And where has this "kangaroo" court ever established its legality? The evidence is of a most compelling nature to support the findings that the present regime in Hungary is not one which rose to power through valid means; nor can it be said that it has either actual or implied consent of the people.

And now, in Budapest, Cardinal Mindszenty and six others with him remain doomed. They went from accusation to their doom of life imprisonment in 5 days. What a contrast with our American justice. Certainly the Communist regime in Hungary cannot claim to be for the common good in such an action where the citizen receives no protection, where every human right is violated, and attempts are made to destroy the body and the will; the very dignity of the human being.

The Cardinal has been a great source of courage to his people always. He was born among the peasants in his native Hungary of a family of German ancestry that had settled in Hungary some 300 years ago. Even when Cardinal Mindszenty became a prince of the church he never lost contact with his own people.

This case will stand forever as a monument to man's intolerance of man. Seldom, if ever, in the history of the world has there been such a ruthless crusade to destroy an individual because he dared to exercise rights that belong to him as a human being. The American people denounce this great miscarriage of justice.

Flood Control Record of Army Engineers

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Shreveport Times, Shreveport, La., of March 29, 1949, entitled "They Never Fail." Often fine work of governmental agencies is overlooked in the bickering criticism that falls to the lot of those who fail to measure up to the proper standards. The magnificent work of the Army engineers in the handling of our flood-control problems in the lower Mississippi Basin is well presented in this fine editorial, and I hope those Members of Congress who are not acquainted with the work of the engineers in war and in peace will read this editorial carefully. It is as follows:

THEY NEVER FAIL

A Mississippi River levee opposite Baton Rouge broke last Thursday night, forming a large crevasse which resulted in flood of quite a number of square miles of land.

Working around the clock, the United States Corps of Army Engineers had the crevasse closed and the flowage of water stopped by Saturday night.

That is the way with the Army engineers. Always you can count on them. They never fail where human achievement is possible. They get far too little credit for what they accomplish not only in preventive work but in remedial work that at times approaches the miraculous.

Here in the Shreveport area there may be, at times, far too little realization of what the Army engineers have done in our own locality in protection of land, both city and rural. The municipal airport area owned by the city now is far bigger than it was when purchased—due to the fact that the Red River, instead of eating into the area, actually is enlarging it constantly.

This same revetment job of the Army engineers—$3,000,000 worth in all and extending well below Shreveport—is recognized by the Army engineers themselves, and by all unbiased and competent engineers with whom we have talked, as in every way a permanent job.

That's the way the Army engineers do things—the Corps itself has been a permanent factor in the Nation's welfare and progress for nearly 150 years and it has been a permanent factor in Mississippi Valley waterway work—which includes Red River—for well over a century.

When it installs preventive controls over river waters they are permanently preventive; and when emergency remedial work is the task at hand it fills the bill until the permanent job can be done.

Apparently what caused the Port Allen break in the Mississippi levee was the failure of some of our State agencies to be as competent as the Army engineers. Dredging firms were permitted to keep taking out sand until they undermined the levee itself.

Let's leave things to the engineers themselves hereafter where waterways, banks, and flood control are concerned. They have proved their ability and their competence.

Union Welfare Plans

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 28, 1949:

THREE MILLION FIVE HUNDRED THOUSAND WORKERS IN WELFARE PLANS—RISE TO 5,000,000 IN SUMMER SOUGHT BY UNION LEADERS NEGOTIATING CONTRACTS—EMPLOYERS PAYING COSTS—INDUSTRY IS DIVIDED ON THEORY, FINDS BANKRUPTCY POSSIBLE—AMA APPROVES PROJECTS

(By A. H. Raskin)

Three and a half million workers now enjoy the protection of union-sponsored health, welfare, or retirement plans, with their employers paying all or most of the bill.

Union leaders hope they can push the number of workers under welfare plans past the 5,000,000 mark this summer. Liberalization of existing benefits and increased employer contributions are also part of the union program in forthcoming collective bargaining negotiations.

A survey by the New York Times indicated that union officers and members were generally enthusiastic about the operation of welfare plans now in effect, while employer reaction varied from approval of the basic idea to belief that the whole problem should more properly be met through governmental action on social security.

In no case was there any suggestion that the huge sums being collected for welfare purposes were being dishonestly administered or that unions were using them as war chests. However, many employers expressed fear that rivalry among union leaders might touch off a competitive race in the welfare field of such dimensions as to bankrupt industry.

The survey also disclosed that the American Medical Association, which opposes governmental steps toward compulsory health insurance, was well pleased with the way union health programs were working. Dr. James McVay, of Kansas City, Mo., chairman of the association's council on medical service, said none of the plans now in operation ran afoul of its concept of what a sound medical program should contain.

UNITED MINE WORKERS LEAD

Biggest and best-known of the present plans are the two United Mine Workers welfare and retirement funds, which are taking in $120,000,000 a year in soft-coal royalties and $12,000,000 a year more in hard-coal royalties. Both funds are spending the money almost as fast as it is collected and are still far from providing the full list of benefits John L. Lewis feels the funds must supply.

The International Ladies Garment Workers Union, AFL, and the Amalgamated Clothing Workers, CIO, which were in the welfare field even before Mr. Lewis, have piled up nearly $110,000,000 in reserves in their welfare funds. The ILGWU, which includes a pooled vacation fund in its welfare program, expects to distribute more than $20,000,000 in benefits this year. The Amalgamated will pay out about $6,000,000 on the basis of current estimates.

Hundreds of thousands of truck drivers, longshoremen, millinery workers, building craftsmen, utility employees and workers in scores of other industries receive protection through group insurance or pension systems, but there is a wide deviation in the range of welfare services provided and in the percentage of employer contribution.

Retirement benefits vary from a straight dollar-for-dollar matching of Federal Social Security payments, which currently average about $26 a month, to the Lewis figure of $100 a month, in addition to social security. On the health side there is little uniformity of benefits. A few programs protect workers, and sometimes their families as well, by providing full insurance against medical, surgical and hospital bills. Most have fixed limits on the cost and duration of benefits.

PERCENTAGE OF PAY ROLL

Employer contributions usually take the form of allocation of a specified percentage of pay roll or a certain number of cents an hour for welfare purposes. Most employer-financed funds run from 2 to 5 percent of pay rolls, with a few even higher. In the Philadelphia garment industry employer contributions total 8 percent, but 3½ percent of this goes into a unique fair income fund intended to safeguard workers against some of the hazards of seasonal unemployment.

The United Mine Workers funds derive their income from a royalty of 20 cents a ton

on all coal mined in the bituminous and anthracite fields. With the aid of new high-speed mining machinery, the average soft-coal miner accounts for a production of 6½ tons a day. This brings the royalty collection to about 8 percent if measured on a pay-roll basis. In anthracite, where mining conditions make the per-man yield much lower, the royalty amounts to 3 percent of pay roll.

In steels, automobiles, electrical manufacturing, rubber, and other industries, in which union welfare funds are still rare, several factors have combined to make unions feel that 1949 is the year to make the big push for expanded health and pension programs.

Chief among these is the adverse impact of the declining cost of living on union demands for fourth-round wage increases. Even though labor leaders argue that higher wages are necessary to promote a higher standard of living and to fortify purchasing power, they expect to win more popular support on the welfare front than the wage front this year.

Another factor has been the demonstrated effect of existing welfare funds in building up union morale and membership loyalty. Under most programs workers lose benefits when they leave the industry or quit the union. From both standpoints the existence of insurance and pension provisions operates as a stabilizing element. This may become a particularly important factor if industrial conditions become worse.

Recent decisions by the National Labor Relations Board requiring employers to bargain collectively on pension and other welfare programs have strengthened the union position in this year's negotiations. In past years many employers have declined to accept the view that such matters were proper subjects for bargaining. The new NLRB rulings are being contested in the courts, but unions do not intend to put off their demands until final rulings are handed down.

Employers faced with new welfare demands take the view that any assumption of new labor costs, whether in the form of higher wages or of welfare payments, will force prices up at a time when consumers are refusing to buy because they feel prices are already too high.

Another frequent employer argument is that the plans of the Truman administration for liberalizing and broadening the Federal social security program will entail a substantial rise in pay-roll taxes. With social security taxes likely to reach a combined employer-employee level of at least 8 percent if all phases of the Truman program are approved, many industrialists contend that allocation of further funds for union welfare programs would undermine the national economy.

Union spokesmen retort with a double-barreled argument. In the first place they see little basis in the record of the Eighty-first Congress to expect favorable action on any substantial part of the Truman social-security recommendations. In the second place they maintain that there will continue to be need for auxiliary programs to supplement and reinforce benefits available through social security.

Some major welfare agreements include provisions for reconsideration of employer contributions and employee benefits if social-security taxes are increased or Federal services liberalized. Others are subject to change only when new basic wage contracts come up for negotiation.

The 3,500,000 workers now under welfare plans represent a little less than one-quarter of the country's organized workers. Most of the plans are jointly administered by union and employer representatives, but some of the pre-Taft-Hartley programs are exclusively in union hands.

In most cases the employers are content to exercise an advisory function in fund operations. Their main concern is that the fund be applied honestly and economically. There have been virtually no complaints of dereliction on either of these counts. The employers re also concerned that there be no undertaking of functions that would necessitate expanded financial contributions on their part.

One fund recently negotiated by the United Automobile Workers, CIO, in a Muskegon, Mich., foundry calls for an employer contribution of 7 cents an hour, with a proviso that the union and its members are to be responsible for making up any shortage that may develop in meeting the cost of providing agreed-upon health and welfare services for the workers.

With the business outlook uncertain, such clauses may be widely demanded by employers this year If plants introduce short workweeks, it may become necessary to provide welfare services to an equal number of workers with only half the money originally expected. Income in some funds has already dropped 10 to 20 percent since the beginning of the year.

Union lay-off policies will probably be influenced to some extent by welfare considerations. Where there is a choice between laying off some employees entirely or putting all on a reduced work schedule, the need for protecting the welfare fund may induce a decision to favor lay-offs so that the reduced pay-roll contributions will be adequate to cover the smaller number of workers left in the program.

When the Kaiser-Frazer Corp., which pays 5 cents an hour into a UAW welfare fund, cut back operations in January, the union gave its support to a program of lay-offs instead of a reduction in the workweek. As a result, there are now some 3,500 fewer workers eligible for insurance protection and there has been no need to scale down benefits for those still on the pay roll.

However, the determining factor in the Kaiser-Frazer decision was not the welfare fund but the fact that under the Michigan unemployment insurance law there is no provision for unemployment compensation to persons who are not totally idle. In New York and other States days of unemployment are taken into consideration, but in Michigan the workers would have drawn no benefits from the State unless some were laid off entirely.

The AMA's views on union health and medical programs was set forth by Dr. McVay in a telephone interview last week. He gave special praise to the program provided by the ILGWU through its union health center in this city.

Dr. McVay said he favored the general approach being taken by Dr. Warren F. Draper, medical director of the UMW welfare and retirement funds, in setting up a comprehensive medical program for miners. In general, Dr. McVay remarked, the union welfare programs were successfully avoiding the objections the AMA has directed against socialized medicine.

"We are interested in encouraging the development of any program that will provide a high standard of service to the patient, safeguard the traditional patient-doctor relationship, and meet the other requirements of the AMA," Dr. McVay declared. "Thus far our study of the various plans established under collective bargaining leads us to believe that they are functioning satisfactorily in all respects."

Problems of the Atlantic Pact

EXTENSION OF REMARKS
OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, March 31 (legislative day of Friday, March 18), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the Senator from Ohio [Mr. TAFT] last night over the Mutual Broadcasting System on the subject Problems of the Atlantic Pact. I point out that the Senator's address bears out the statements which have been made by the junior Senator from Utah that there are many problems connected with this pact which are hard to understand, and which should be thoroughly studied and debated before the North Atlantic treaty is ratified and approved by the Senate of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On April 4, the North Atlantic treaty will be signed in Washington by the United States and most of the important western European nations. Thereafter, it will be submitted to the Senate for ratification by a two-thirds vote.

I doubt if any measure affecting more vitally the problems of the future security and peace of the American people has been before the Senate in my time for serious consideration. The pact has been widely acclaimed by many newspaper editors, column writers and radio commentators, even before its text was made public. The Secretary of State has issued statements and broadcasts to the Nation setting forth effectively the merits of the pact. Public opinion polls have announced a large majority of the people in favor of the pact, but with little evidence that they have given serious consideration to the problems involved.

SENATOR WANTS FACTS

As a United States Senator, I have not made up my mind, and I do not propose to do so until I know more facts and hear more discussion of the problems involved. It has been tacitly assumed that the pact would be approved as a matter of course in a short time, but I think my feeling of uncertainty is shared by a large majority of the Senators, and I look forward to the debate in the Senate as a historic event which can still determine public opinion as well as as the opinion of the Senate.

To my mind, the foreign policy of the United States should be directed, first, toward the maintenance of the liberty of our people against foreign attack, and second, toward the maintenance of peace so far as is consistent with the preservation of our liberty. The making of this Atlantic treaty at this time is justified by its proponents on the ground that this country would be threatened by the military power of Russia if it were extended over western Europe. It is argued with force that if we make known our willingness to go to war in case of an attack by Russia on western Europe, it will deter such an attack and thereby contribute both to our security and to the peace of the

world. It is argued on the other side that the pact will not in fact protect western Europe from occupation if the Russians choose to go to war, that our security depends on other factors than the occupation of western Europe by the Russians, and that this pact will tend to provoke Russia to war rather than discourage such action.

WHAT IS FACT?

What is the Atlantic defense treaty? Like the United Nations Charter, the pact deals with the problem of preventing or punishing aggression by one nation against another. Both pacts contain an agreement to settle disputes by peaceful means and to refrain from the threat or use of force. Under the United Nations Charter, we have agreed to provide armed force to the United Nations on action of the Security Council calling for such forces to prevent international aggression. Since, however, we can veto any action by the Security Council, we have reserved the right in that agreement to decide for ourselves whether our forces shall go to war. In the Atlantic defense treaty, our agreement is much more direct. We agree in article 5 that an armed attack against one or more of the signatories in Europe or North America shall be considered an attack against them all, and consequently we agree that, if such an armed attack occurs, we will assist the party or parties so attacked by taking forthwith, individually and in concert with the other parties, such action as we deem necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area. While the treaty is obviously aimed at aggression by Russia, it appears to cover aggression by any nation, member or nonmember, against any other nation signing the pact, and the obligation is to be in force for 20 years. This evening I can hardly do more than state the problems which confront anyone charged with the solemn duty of passing on the wisdom of the treaty.

1. Is this a definite moral or legal obligation to go to war if any nation attacks a member in Europe, or is it subject to a choice by the Congress which, under our Constitution, is given the power to declare war?

The language certainly suggests that we are obligating ourselves to go to war if we consider that necessary to restore and maintain the security of the North Atlantic area. I suppose the language is sufficiently indefinite so that we might refuse to go to war, but I hardly think we would be acting in good faith if we did refuse. The language certainly justifies the other nations in concluding that we have assumed at least a moral obligation to use armed force to defend them against Russia and to restore their freedom if Russia has invaded them. It is true that article II says that the treaty shall be ratified and its provisions carried out by the parties in accordance with their respective constitutional processes. That seems to indicate that a declaration of war by Congress is necessary, but even this is not certain. The President of the United States undoubtedly has the constitutional right to use our armed forces against an armed attack on the United States without a congressional declaration of war. Article 5 says that an armed attack against any other nation shall be considered an attack against us. If a treaty can modify provisions of our Constitution, the President might be able to use armed forces without congressional action to protect the territory of one of the European participants against armed attack. Under Article 6 of our Constitution, treaties are given an independent status equal, in some respects, to the Constitution itself, and the Supreme Court has so held in Holland versus Missouri and other cases. It is at least doubtful, in my opinion, whether a congressional declaration of war will be necessary.

Of course, it is true that Congress might prohibit action by our Army and refuse to carry out the obligation of the pact. All treaties are subject to repudiation, but certainly we should not enter into a treaty unless we intend to carry it out, including a declaration of war by Congress.

I am inclined to believe, therefore, that if we adopt the treaty we should do so with the frank admission that we are committing ourselves to go to war if Russia attacks one of the western European nations.

I myself have not felt that this is a conclusive argument against the treaty. Certainly as long as we maintain armed forces in Germany we would be drawn into war, anyway, if Russia attacked western Europe. I am somewhat concerned about the fact that the obligation is to last for 20 years, and that it may well apply to much smaller and less important attacks by one nation on another, even though Russia has returned to an entirely peaceful status, and make us a policeman for all western Europe.

2. Does the pact carry out the purposes of the Vandenberg resolution adopted by the Senate on June 11, 1948? I was not myself able to vote on that resolution, but it was adopted by a large majority of the Senate. Undoubtedly that resolution advised the association of the United States with a regional agreement providing for the exercise of the right of collective self-defense under article 51 of the United Nations Charter should any attack occur affecting its national security. The resolution approved the general theory of an Atlantic Pact, but there is still a question whether the pact does not go further than then contemplated.

Senator VANDENBERG at that time, in explaining his resolution, said: "It declines automatically military alliances. It declines all peacetime renewals of the old open-ended lend-lease formula. It declines unilateral responsibility for the fate of western Europe. It is none of those things; it is the exact opposite. * * * Our cooperation must be a supplement and not a substitute for the adequate and continuous defensive activities of others. It is a paraphrase of the Rio treaty which the Senate overwhelmingly approved. * * * It never steps outside the United Nations Charter. It never steps outside the Constitution of the United States. It never steps outside the final authority of Congress."

Comparing the pact with the Rio treaty, we find it has much more the quality of a military alliance than that treaty. Under that treaty, in case of an armed attack, we are free to determine the measures which we desire to take, and all of those measures are referred to an organ of consultation which meets without delay for the purpose of agreeing on measures of a collective character. The obligation assumed in the Atlantic Pact seems to me much stronger than that contained in the Rio treaty.

I don't mean to conclude that we should not enter into such strong obligations in view of the Communist threat, but we certainly are not bound by the Vandenberg resolution to approve the Atlantic Pact as now drawn.

3. Is the pact in accord with the United Nations Charter? Article 51 of the Charter provides that "nothing in the present Charter shall impair the inherent right of individual or collective self defense if an armed attack occurs against a member of the United Nations until the Security Council has taken the measures necessary to maintain international peace and security." I believe this recognizes the validity of such a pact, but it is hard to claim that it is in pursuance of the general theory of the United Nations.

A pact is permitted to exist and to operate in case the United Nations machinery fails to work. I had hoped that the pact might be a small United Nations within the larger one, setting up much more definite rules for the application of law and justice between those nations which were prepared to agree within the pact. I hoped we might have a model on which international agreements based on law and justice could be developed, which could later be applied to a modification of the United Nations Charter. But this pact is strictly limited to a supplementary military alliance for collective self defense.

4. Furthermore, if the pact involves an obligation to arm all of the nations of western Europe, I have some doubt whether the recognition in article 51 of "the inherent right of collective self defense if an armed attack occurs" justifies the arming by one nation of a great many other nations. From the statements of Secretary Acheson and other sources, our Government seems to have agreed as part of the Atlantic Pact to provide arms for all the nations of Europe. I seriously question whether such an agreement is consistent with our obligation to the United Nations. True, the United Nations has not yet prohibited the building up of armament by any member, although the Charter contains proposals looking to that result. But it is hard to reconcile with the general purposes of the United Nations the deliberate arming of a large number of smaller countries by one large and powerful state.

This arms proposal, which has not been definitely submitted to Congress as yet, raises one of the most serious problems we have to consider. It is said that we could approve the pact and then turn down the proposal for a lend-lease of arms. Technically, that is true, but I am inclined to think that the European nations have been given to understand that the arms are part of our Atlantic Pact obligation and would regard such action by us as a repudiation of our obligations right at the start of the pact. Therefore, we must consider the pact and the providing of arms as one proposition. This raises my principal doubt, and frankly I do not have enough facts to resolve it.

From the point of view of national security it is claimed that Russia could overrun western Europe today and that no rearming of those countries could be effective to prevent such action for the next 2 or 3 years. Therefore, our national security is not immediately increased. From the point of view of peace, we may give the Russians the impression, at least justified to themselves, that we are ringing them about with armies for the purpose of undertaking aggressive action when the time comes. They may feel that if war is to come, they had better undertake it before these armaments are built up. Under such circumstances the pact, instead of being a deterrent to war, might becomes an incitement to war, and makes it more probable instead of less. This seems to be the fear of Mr. John Foster Dulles. On March 8, he warned the negotiators of the proposed Atlantic Pact to avoid all commitments that might be construed by the Soviet government as bringing United States military might directly to Russia's Scandinavian border. He obviously felt that the including of Norway in the pact was a particular incitement which might lead the Red army leaders to feel that their homeland was immediately and seriously threatened.

5. Some of its opponents raise the question whether the Atlantic Pact is not really in effect a defensive and offensive military alliance. There are certain commentators who

feel that we should enter into that kind of an alliance because of the tremendous seriousness of the Communist threat. I cannot go that far. Certainly, the State Department and our Government are not admitting that the pact has any offensive implications whatever. I hope that they may be able to prove to us that that is the fact. We should not give Russia any reasonable grounds to believe that this is an offensive alliance.

6. I have one other question. How far do our military arrangements commit us to conduct a land war in Europe? We are told that military plans are being made. Do they involve our sending millions of men to fight on European soil against Russia? Many experts feel that our part in any war should be confined to the air and that we should not try to march to Moscow as did Napoleon and Hitler. Many feel that the tremendous manpower of Russia will make a land war on the European Continent a contest fought exactly as Russia would like us to fight it, on their chosen ground. Whatever may be our final decision in case of war, I certainly do not feel that we should commit ourselves at this time to any particular military plan or character of operation.

On the problems I have discussed, I have come to no conclusion myself. I urge very strongly that the people of the United States come to no conclusion until there has been complete revelation of our plans and obligations and a complete discussion of the fundamental issues involved, both in the Senate and throughout the United States. The decisions we make involve the very lives of millions of our citizens and the future of free government.

Russians in the Holy Land

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, a very important news article has just come to my attention. It puts all of Christianity on notice of the activities of Godless Communists in the Holy Land. Every church member should be aroused to action. Mr. Speaker, as part of my remarks, I am including an article by George Weller, that appeared in the Chicago Daily News on February 21, 1949, under the heading, "Russians 'capture' church in Holy Land."

PRELATE FROM MOSCOW ASSUMES FULL CHARGE—TRIAL OF CARDINAL CALLED SMOKE SCREEN FOR MANEUVER

(By George Weller)

ROME.—While the democratic powers were roaring protests over the Communist inquisition in Hungary and Bulgaria, the Soviet Union was using the opportunity to steal for itself another safe, easy victory in the Middle East.

At the very moment Cardinal Mindszenty was facing his accusers, a Russian priest, safe behind the blur of the Balkan smoke screen, was taking over the valuable properties of the Orthodox Church in Palestine.

Moreover, the deal, obscured by Middle East censorship, was so deftly managed that it passed almost unnoticed, except here in Italy.

The entire Communist antichurch offensive in Hungary and Bulgaria was timed, it is recognized here, as a diversion to draw attention away from Russia's own capture of the Orthodox Churches and monasteries in strategic Palestine.

This capture gives Moscow two main conduits instead of only one to pipe more communism into the state of Israel and broaden Moscow's new foothold in the Mediterranean.

The political conduit is in Israel's traffic of dollar-purchased arms from the Communist Skoda plant in Czechoslovakia and in the Israeli Government's amnesty granted last week to the members and leaders of the Communist-controlled Stern gang.

The religious conduit, which is new, is the orthodox church, which until last week was free of Soviet control.

Here is how the Soviets tricked the western powers, while America was glowering over the Balkan fence at Hungary:

The orthodox church is split roughly between its Greek clergy, few and prodemocratic, and its Slavic clergy, numerous and pro-Russian. In the Balkan satellite countries the orthodox church is protected as an arm of Moscow's power. In Bulgaria the national archbishop is on the Communist government pay roll.

Stalin's instrument is the pliable patriarch Alexis of Moscow. He sent Alexis on a foresighted tour of the Palestine missions in 1945, before the cold war began. Alexis' mission was to spearhead the effort of Stalin to recover old czarist rights in the Holy Land.

Under the czars Russia had been the protector of Christian orthodoxy in the Middle East, by the same right as France was protector of Christian Catholicism. Having taken back at Yalta more than the czar's empire in the Far East, Stalin set out to duplicate the trick in the Middle East, using the church as a wedge.

In the Middle East, however, the hardheaded British and French rather than the Americans stood in his way. The British Army held Palestine and the French the Levant of Lebanon and Syria.

The French fumbled their Arab relations and stumbled into colonial war and finally into retreat. The British were gunned out of Palestine by Zionist forces financed by United States sympathizers.

With Israel's birth the coast became clear for the Soviets and only the matter of timing remained uncertain.

The Orthodox churches and monasteries in the Holy Land, worth tens of millions of dollars, were under the custodianship of the Archimandrite Anthony. For 25 years they had been held by White Russian prelates, but there was a disposition to meet Stalin's seeming wish to tolerate religion. When the Stalinist patriarch toured the Middle East, the Palestine custodian recognized his authority.

The break came when the Palestine prelate changed his mind and recognized a new anti-Soviet prince of the church, the Metropolitan of Munich. The Kremlin perceived that it must expel the Palestine prelate or lose his churches and monasteries to the west. The buildings are strategically valuable and a priestly robe is a matchless cover for entrance of Soviet agents.

To replace the anti-Communist clergyman, the Stalinist patriarch sent the Soviet Archbishop Leonidas of the Church of St. Gabriel at Moscow.

When Bulgaria's 15 Protestant ministers were confessing and Mindszenty was tottering before his Communist accusers, a quite different scene was being enacted in a church near Jerusalem. Moscow's priest was taking over all the most valuable Orthodox properties in Israel.

As soon as the Communist coup was complete, the Israeli Government, on February 10 made a pact with Russia to provide working funds for the new sovietized church. The Soviet Union agrees to balance the account by sending Israel exports from Russia—nature unspecified.

How valuable the Palestine foothold is to Stalin is gaged by the fact that atheistic Soviet communism for the first time not only captures a religion administratively but arranges openly and officially to pay for its support. The Orthodox Church overseas thereby becomes the kept official faith for a state whose schoolbooks still term religion "the opium of the masses."

Stalin's prelate, Alexis, has set himself another job for the world's fastest growing empire: To capture the keystone arch between Moscow and Palestine, the patriarchate of Constantinople.

Alexis, a sort of fulfillment of the ex-theological student, Josef Stalin, has announced that the Orthodox patriarch in Turkey, who lives in seclusion at Fanar, on the Straits, must be liberated. No one would be surprised if the Straits themselves, Russia's prize target, also gained a Soviet freedom.

Alexis also says that the great Orthodox Church of St. Sophia, now a Turkish national museum, should be the patriarchal seat when liberation comes.

What Does a Contribution Actually Cost a Taxpayer?—How Much Is Paid by the Taxpayer and How Much Is Paid by Uncle Sam?

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. PATMAN. Mr. Speaker, lobbying organizations are raising money by the millions of dollars for the purpose of trying to convince Congress and the people of the Nation to believe and think a certain way. In other words, a group that is interested in favoring or opposing any particular legislation is out to do everything within its power to get public sentiment molded that way.

It is an easy matter to raise money for lobbying purposes. Under our internal-revenue laws passed by Congress, taxpayers are encouraged to make contributions, not only to religious and charitable organizations, but also to scientific, literary, or educational organizations that use the money for educational purposes or for prevention of cruelty to children or animals, or to organizations of war veterans. This money can be raised and charged to Uncle Sam in several ways:

First. A business firm, partnership, or corporation can purchase pamphlets, books, and literature in huge quantities and have them transmitted through the mails, or otherwise, throughout the United States, and the cost of purchase, handling, and transportation charged up to business expense of the concern.

Second. An individual may contribute up to 15 percent of his gross income for the year and it is deductible from his income tax.

Third. Under section 120 of the Internal Revenue Code, it is possible for certain individuals to make unlimited contributions which are deductible for Federal income-tax purposes.

By using one or more of these methods, a lobbying concern has little difficulty in getting all the money that it needs or wants for most any purpose because Uncle Sam pays most of the bill.

Al. gifts for the purposes heretofore mentioned from income, including wages or salaries, income from rents or securities, or business or professional earnings, are exempt from Federal income tax up to 15 percent of the adjusted gross income for the year in which actual payment of the gift is made. You can, as a matter of fact, in many cases effect a substantial tax saving by making such a gift.

There is another novel way of making a gift for the purposes heretofore mentioned that will actually benefit the taxpayer and cause Uncle Sam to pay, in some cases, all the value. For instance, you can make a gift to one of these organizations in stocks. The value of the gift will be the present market value at the time of delivery. The effect of the gift is that the taxpayer escapes entirely the tax on the appreciation. In other words, the taxpayer gets the benefit of the deduction at the higher value, yet he is not taxed for the appreciation.

STOCK TRANSFER CAN BE MOST HELPFUL

Suppose for instance, that a taxpayer owns stock that he bought for $1,000, and that its present value, on account of an increase in price, has risen to $2,000. The taxpayer may give this stock as a $2,000 gift. He will not be required to pay any capital gains tax on the unrealized profit of $1,000. The cost of the gift is only the $500 which the taxpayer originally paid, less a tax reduction for the benefit of the taxpayer—not $1,000 which he paid but on the full $2,000.

I am inserting herewith a table which shows the actual cost of a contribution:

What does a contribution actually cost?

TAX SAVED BY INDIVIDUAL'S CONTRIBUTION

If the taxed income less exemptions for		The tax saved per dollar by taking a deduction for charitable or educational contribution is—	Leaving net cost after tax per dollar contributed of—
Single person is up to—	Married couple is up to—		
$2,000	$4,000	$0.17	$0.83
4,000	8,000	.19	.81
6,000	12,000	.23	.77
8,000	16,000	.26	.74
10,000	20,000	.30	.70
12,000	24,000	.33	.67
14,000	28,000	.38	.62
16,000	32,000	.41	.59
18,000	36,000	.44	.56
20,000	40,000	.47	.53
22,000	44,000	.49	.51
26,000	52,000	.52	.48
32,000	64,000	.55	.45
38,000	76,000	.57	.43
44,000	88,000	.61	.39
50,000	100,000	.63	.37
60,000	120,000	.66	.34
70,000	140,000	.69	.31
80,000	160,000	.71	.29
90,000	180,000	.74	.26
100,000	200,000	.77	.23
150,000	400,000	.81	.19
200,000	400,000	.81	.19

All these organizations claim to be organized under laws that will permit tax deductions. In other words, they claim to be either religious, charitable, scientific, literary, or educational, which brings them within the law permitting tax deductions.

FREEDOMS ABUSED

I sometimes wonder how it is possible for a democracy established upon the will of the people to continue to function under our very liberal and, in fact, loose system of freedom of expression and freedom of press. It is not my purpose to advocate the restriction of either. I believe in both, but they are being abused now to the extent that it is very difficult for even a Member of Congress to get the truth about important proposals upon which he must vote. I think it is a great tribute to Members of Congress and to people generally that a majority of them are so seldom fooled or misled by disguised and deceitful arguments presented by selfish, greedy people.

PRESENT MISLEADING PROPAGANDA

It is not unusual for a business corporation to place whole-page newspaper advertisements in the principal daily newspapers of the country and charge the costs of them to business expense when the advertisements are devoted solely to propaganda, giving the biased and prejudiced views of the management of the corporation. Such advertisements are charged up as business expense and the cost is tax-deductible.

In the case of one huge corporation that is owned by two brothers, who are so wealthy that they are in the 81 percent income-tax bracket, the business expense would cause the Government to lose $3,800 on every $10,000 expended by the corporation. If, instead of spending the $10,000 for advertising, the corporation had paid $3,800 on it in taxes and had paid the two brothers the remainder of $6,200, each would have received $3,100, upon which a tax at the rate of 81 percent would have been paid to the Government, amounting to $2,511. In other words, the Government would have received $3,800 in corporation plus $5,022 in individual taxes, making a total of $8,822; so the charging of such business expenses amounting to $10,000 would have actually cost the Government $8,822 in this case. This can be multiplied millions of times a year.

The mails are filled with such advertising all the time, not advertising items, goods, or commodities, but advertising views, notions, and suggestions for the purpose of trying to get the people to think a certain way. Such efforts are naturally selfish because the private-enterprise system is selfish, and it is expected that views will be presented for the purpose of causing the people to believe in a way that the greedy interest of the concern is benefited.

STEEL CAPACITY

One of the most untruthful, misleading, and harmful campaigns that is being carried on today is by the "big steel" interests. They have the finest, best, and most highly paid professionals in our country to attract the minds of the people in a way that the cause of "big steel" is presented in the most favorable light and its failures to perform in the public interest successfully hidden.

It is well known that we must have an increased capacity in steel of at least 10,000,000 tons per annum in order to maintain full employment and production, yet the big steel companies are doing everything within their power to make the people believe that they are expanding adequately to take care of their needs.

Recently, Dr. Louis H. Bean, economist for the Department of Agriculture, pointed out in a letter published in Business Week, that we are now producing 88,500,000 tons of steel per annum when it will be necessary for us to produce 100,000,000 tons by 1950 in order to maintain full employment and production.

Dr. Bean also stated:

The danger we face today of even greater shortages in the 1950's is clearly borne out by the recent McGraw-Hill survey (BW, January 22, 1949, p. 54) which shows that while all manufacturing industries expanded 56 percent during the past 10 years, the steel industry expanded only 3 percent, and that over the next 5 years all industries expect to expand another 13 percent while the steel industry expects to expand only 3 percent.

If any of your readers are interested in seeing how the depression of the 1930's resulted in a halt to steel-capacity expansion and laid the basis for the wartime and current shortages in steel, the brief statement entitled "What About Steel (the Battle of Steel Statistics)" is available on request and will give them that information.

PROPAGANDISTS ANSWERED

If by chance, some public-spirited, patriotic employee of our Government answers a misleading and untruthful statement being used by the propagandists and lobbyists, a great cry goes up at once something like this, "I was advised that this release was typed on Government paper, on Government time, on a Government machine, and in a Government office." This is typical of the objections that are urged against any answer given by anyone in authority.

The propagandists and lobbyists do not stop there. They contact the Appropriations Committees of the House and Senate and make sure that language is written into the next appropriation bill that will make it impossible for Government money to be spent for such purpose, even if it results in telling the people the truth and giving them information that would prevent them from being misled and deceived.

Aids for Mine Victims

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from United Mine Workers Journal of March 15, 1949:

FUND AIDS MINE VICTIMS TO FIND NEW VOCATIONS

Four days before Christmas, 1943, Pershing Smith walked to his working place in a mine

at Ethel, W. Va., for the last time. The injuries that befell him that December day left him permanently paralyzed from the waist down.

After more than 5 years—three and a half of which were a total loss economically, divided between bed and wheel chair—Pershing Smith is now the proprietor of a small food establishment in the little mining community of Blair, W. Va. It affords him a modest income on which to support his wife and two young children.

Smith, who was among the first seriously disabled West Virginia miners to be sent by the UMWA welfare and retirement fund to the Permanente Hospital in California for physical rehabilitation, was launched in a new vocation geared to his physical capacity, interests and abilities through the cooperative efforts of the State vocational rehabilitation division, the UMWA local at Ethel, friends, and fellow citizens in the community. Coal-miner friends gave their time and talent to help erect the small building which houses the Smith store. The local union made a substantial contribution to the building fund. Within 5 months his business was netting him an average of about $50 a week.

Although Smith had previously been rejected for hospitalization by the State on the ground that "physical restoration should not be considered beyond attempting to provide the client with suitable braces and instructions for using them," his physical condition was greatly improved by medical treatment under auspices of the welfare fund and his vocational usefulness increased accordingly.

Pershing Smith is one of the hundreds of disabled miners that the welfare fund has undertaken to restore to physical health, to assist in qualifying for and finding employment in a new vocation that will enable them to function once again as self-sustaining citizens.

There are scores of similar cases demonstrating plainly that given the opportunity, the disabled miner readily equips himself to carry on, to stand on his own feet economically to the maximum extent possible.

Take 45-year-old Austin Quillion, of Gardendale, Ala., who has been paralyzed for years due to a spinal injury. Hospital treatment in New York under welfare fund auspices rendered a considerable improvement in his health, although he is still largely confined to a wheel chair.

Quillion utilizes his considerable mechanical skill in operating a general fix-it shop adjacent to his home, where he repairs washing machines and other home electrical appliances. He is taking a correspondence course in radio repairs, provided by the State rehabilitation service. He has also acquired a knowledge of drafting and has drawn plans for several houses in his community.

A. J. Grammer, Jr., of Sumiton, Ala., lost both legs as a result of a mine motor accident in May 1947. Married and the father of three children, 25-year-old Grammer was a careful, enthusiastic worker. His only experience had been in mining coal.

Arrangements were made through the State rehabilitation service to give Grammer 9 months' training in watch repairing. He applied himself with such zeal that he was qualified inside of 6 months to open a shop of his own in Sumiton, which now provides his family with a fair income.

Until the UMWA welfare fund began functioning, however, a large proportion of the men seriously impaired in the coal industry were the further victims of a combination of circumstances that too often sentenced them to a bed of affliction or wheelchair for life, left them totally dependent on meager compensation allotments or charity, and devoid of vocational usefulness.

WELFARE FUND SPURS STATE AGENCIES

The rehabilitation program of the welfare fund has not only focused attention on the deficiencies of State vocational rehabilitation agencies, due in the main to inadequate funds and widespread indifference to the plight of the disabled, but has spurred public officials into action, to set about the long overdue task of improving facilities and securing adequate funds to do the job they are supposed to do, which will of course benefit all citizens.

When a disabled miner, after the necessary medical treatment, is ready for vocational training, the welfare fund steers him to the proper authorities, who determine his aptitudes and interests and map out a program of study or training to fit him for a new means of livelihood. The welfare fund works in close cooperation with State rehabilitation services in finding suitable employment objectives and opportunities.

It is a pioneer undertaking, on a scale never before attempted for the disabled victims of industry, despite the fact that a Federal-State vocational rehabilitation program for handicapped civilians has supposedly been operating for nearly 30 years.

Aside from all the humanitarian considerations, it is a common-sense economic program. As one authority pointed out recently:

"A disabled man or woman is a dependent and is a burden on somebody—his family or the community. It costs about $300 to $600 every year to maintain him in dependency. It costs about the same to effect (vocational) rehabilitation. That cost is paid just once. So, through rehabilitation, we not only restore the citizen to his family and his place in society but we cut off a continuing loss. In most cases the rehabilitated worker's income-tax payments alone will cover the costs of his rehabilitation. And there is definite indication that the average rehabilitant will repay in taxes $10 for every $1 spent on him during the course of his working life."

Bearing this out is the fact that during the 5-year period ending June 30, 1948, West Virginia spent a total of only $487,307.32 on rehabilitating the disabled, but during the same period the rehabilitation program produced nearly that much, $456,000, in State revenue.

Men's Preferences for Fabrics in Men's Clothing

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Thursday, March 31 (legislative day of Friday, March 18), 1949

Mr. O'MAHONEY. Mr. President, this week the Department of Agriculture released a report of a survey which it recently conducted with respect to men's preferences for the fabrics to be used in men's clothing. I have just prepared a statement and made a transcription for radio broadcast throughout the country, and particularly in the wool-growing States, on this subject. I ask unanimous consent that the text of the statement may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GOOD NEWS FOR WOOL GROWERS

This is good news for the wool growers of America. It is good news for manufacturers of wool fabrics and for those who are engaged in the distribution of fabrics and clothing made of wool.

Less than 10 years ago the United States was the second largest producer of fine wools in the world. Here we grew sufficient wool to supply 65 percent of all our clothing needs even in the years of biggest demand. The remaining 35 percent was imported. Our annual domestic clip ran around 450,000,000 pounds a year and provided employment for some 500,000 people.

This year, due, among other causes, to the high cost of production, foreign competition and the unprecedented disaster which held the Rocky Mountain West in its grip for 3 months last winter, wool production will probably be not more than it was as long ago as 1867. The 1949 domestic wool clip will hardly exceed 225,000,000 pounds. In the meantime, consumption of wool has increased from a little over 600,000,000 pounds to approximately one billion pounds. And now we are meeting our wool clothing requirements by importing almost 80 percent of our peacetime needs.

While it is true that the storm losses during the winter were severe, livestock men have suffered more from a financial standpoint than from the actual loss of sheep. Their losses will range from 10 to 25 percent in the States of Utah, Nevada, Wyoming, and in parts of Kansas and Colorado. In all of the sheep-raising States, including California, it is expected that in addition the spring lamb crop will be severely reduced, and that the animals which do survive will be of inferior size and quality.

Livestock men fought heroically to save their flocks during the successive storms which swept the country. To do that they had to buy feed at double or triple the average costs. These expenditures, together with actual sheep losses and the poor spring lamb crops, which may be even smaller than today's expectations, result in making the disaster the most severe livestock raisers have ever experienced in the history of the Rocky Mountain West. No living white man ever saw anything to compare with last winter's snows.

The discouragements which wool growers have encountered from the rigors of nature and the progress of science in the development of synthetic fibers have been substantially counteracted by the revelation that American consumers prefer wool clothing. This was disclosed this week in a preliminary summary of a report now in preparation by the Bureau of Agricultural Economics of the Department of Agriculture as the result of a survey of consumer reactions to the various fibers used in men's clothing. This survey was completed in June 1948 and was made with funds provided by the Agricultural Research and Marketing Act of 1946.

The Bureau is noted for the high caliber of its statistical accuracy, and the survey is a splendid example of how Government can assist industry in assessing the size of markets, and in guiding industry in methods of increasing sales to the advantage of the producer of agricultural commodities.

A sample group of men which the BAE declares represents a total of 50,000,000 persons was questioned as to their fiber preferences in a number of articles of clothing. Opinions varied widely where shirts, bathrobes, socks, underwear, and pajamas were concerned, although the preference for wool in most of these items was surprisingly large. Cotton, that other great natural fiber, was high in favor among these items.

It was in men's summer suits that the preference for wool was overwhelming. No question was asked as to fiber preference in men's winter clothing because wool is practically the only fiber used in cold-weather clothing. Summer suits, the manufacturers tell us, have only emerged from the novelty stage within the past 10 years or so. In the deep South and in the tropics outside this

country men have worn cotton drill suits for generations, and have in fact developed typical tropical wardrobes.

Now, however, the wool grower can take satisfaction in the fact that a new use of his product is developing permanently in the lightweight, skeleton-lined tropical worsted suit which appeared first as a luxury in the central and northern parts of the United States. The use has grown until today it comprises between 15 and 20 percent of all men's suits.

The men questioned by the BAE representatives were asked if they bought and wore summer suits, and if so, what fiber they preferred and why? Here are some of their answers:

Forty percent of those questioned owned and wore summer suits.

Of this total 62 percent preferred wool and wool mixtures.

Eight percent said they preferred cotton.

Seven percent said they preferred rayon.

In other words, 9 out of 10 men prefer wool to rayon in their summer suits, and 4 out of 5 men prefer wool to both cotton and rayon.

The reasons for this preference for wool were interesting and understandable. They demonstrate again—if another demonstration were necessary—that the public acts with intelligence in buying the clothes it wears and uses, and that its choice is based on the practical purposes the fabrics serve.

The men questioned preferred wool because they like its looks; because they said it is comfortable, and because it is durable and wears well. The same reasons were given for the increasing use of wool in shirts, socks, robes, and other apparel items. They represented conclusions based on experience, and they reflected an understanding of the well-established traditional qualities which have made wool the most important fiber for the use of mankind in clothing.

These men do not prefer wool because it is the season's new color or the moment's new pattern, although these may give the careful dresser some concern. They buy wool because it makes fabrics which give them the most for their money in wear, service, and looks.

Since this country spends, for clothing, an average of 10 percent of all the wages and salaries earned by its people, and more than 20 percent of this total goes for wool clothing, it is important, first, that the prices for apparel wool be kept within reasonable price limits, to enable all of the people to buy wool clothing, and second, that we grow at least a substantial percentage of the wool we need.

The Department of Agriculture, which just completed this valuable survey, recently joined with the Wool Bureau, a joint organization comprising the American Wool Council representing American wool growers, and the International Wool Secretariat representing wool growers of the British Dominions, in a long-term wool-research project. This project is based at the Textile Research Institute at Princeton, N. J., and the Western Research Laboratories of the Department of Agriculture at Albany, Calif.

This research project is devoted to learning how to make better textures of all grades of wools, particularly those medium grades which are in greatest world supply. The successful results which are anticipated will widen all wool markets, and help in stabilizing wool prices in all grades, thus providing the public with a larger supply of those wools which this country demands in its clothing.

Here again is a splendid example of practical cooperation between government and agriculture, conducted for the benefit of industry and the public. It has in addition the further advantage of being a practical lesson in international cooperation in which everyone benefits to their mutual profit.

Webster County's Great Native Son

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, March 31 (legislative day of Friday, March 18), 1949

Mr. STENNIS. Mr. President, the late Senator Thomas P. Gore was a great Oklahoman, but we in Mississippi claimed him as one of our most distinguished native sons. The people of the fine county of Webster, from which has come some of the foremost citizens of our State, consider Senator Gore to have been the greatest of them all.

One of the foremost editors of my State, Mr. Ned Lee of the Webster Progress, has reviewed Senator Gore's career in a very interesting editorial, and I ask that it be published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WEBSTER COUNTY'S GREAT NATIVE SON

Death at the age of 78 on March 16 in the Nation's Capital ended the career of former United States Senator Thomas Pryor Gore of Oklahoma, born and reared at Walthall, Webster County, Miss.

Not only was he the most distinguished native son in this country's history, but he was one of the greatest men in the world. His home people here in Webster County are familiar with his career and we'll not essay here to review in detail his long and remarkable life. Briefly, it might be said that he was one of the first two United States Senators from the State of Oklahoma; he was considered one of the world's most eloquent orators (William Randolph Hearst termed him America's greatest after-dinner speaker), and many of his speeches made on the floor of the United States Senate are considered masterpieces of literature and included in the classics destined to live for generations to come. But more impressive even than his great mental faculties was his intrinsic honesty, his willingness to sacrifice his Senator's mantle for the sake of his convictions. Twice in his career, astute politician that he was, he knew that he was destined for defeat unless he bowed to public opinion and to the powers that held sway at the time. But never did he recede from his stand which he sincerely considered right and proper. In other words, he was a statesman first and a politician second.

Eighteen years ago, when he made his first visit back to his native Webster County after gaining world-wide fame, this humble writer was privileged to meet him, associate with him, and gain that which we are so vain as to believe a rare and precious friendship which held firm through all the remaining years of his life. Since that time he has made several trips to Mississippi and of course we are proud that he would have his automobile driven into the writer's yard where he would greet us in his inimitable cheerful manner and leave with us a glow of friendship which warmed the heart for many days.

When he first came back home 18 years ago, it marked a memorable occasion not only for him but for scores of his boyhood loved ones and friends. Here is what the Webster Progress, his little home-county newspaper, published about his historic return to the scenes of his boyhood in its issue of May 28, 1931:

"Forty years ago on the last day of December 1895, a young man was a passenger on a train going from Mississippi into Memphis. He was blind but yet was reading Mill on Liberty. Between the little town of Elizabeth and this Tennessee metropolis he made a vow. His native State of Mississippi had been the scene of keen disappointment. His burning ambition had been thwarted. But his will had not been conquered. On this train while going into Memphis while reading this little book he vowed that he would never return to his native State until he had attained the office of United States Senator.

"He came back without breaking his vow.

"This dauntless fellow, this great man, United States Senator Thomas Pryor Gore from Oklahoma, was a visitor to his native Webster County Thursday and Friday of last week. He with his cousin, the Reverend E. M. Shaw, of Iuka (another Webster man who has gained great prominence, he in the Methodist ministry), first went to the home of Dr. W. W. Gore, uncle of the great Senator, where they were entertained overnight; then on Friday to the home of Mrs. Fannie Gore, his aunt, at Walthall for a few hours' association with relatives. After lunching there they came to Eupora where in the office of the Webster Progress hundreds of friends greeted them throughout the afternoon."

GLAD TO GET BACK

"'In my first race for the Senate,' said Senator Gore recalling the vow noted above, 'I was more concerned about being able to return to the home of my boyhood than gaining the office. And the visit this time seems sweeter than ever. I have in my pockets now rocks from the old chimney—the only thing remaining of the old house where I was born. I shall take them with me to Washington—to Oklahoma—as souvenirs, reminders of the days of my childhood where I shall treasure them ever."

"When told that hundreds of Webster Countians were anxious to hear him make a speech, Senator Gore said: 'I have not prepared. I would not want to disappoint, here among my home people. Anyway, I am like a clock, the only time I can make a noise is when I am a-running.'

"One of the first to greet him was W. N. Cartledge, Eupora merchant, who with Senator Gore composed the class when the Senator, then affectionately known as 'Gov,' graduated from the high school at Walthall. It is said that Mr. Cartledge played a big part in the Senator's early education, reading to him for hours. Of course their attachment had held through all the years and their reunion was inspiring.

"Then came Joe Embry. 'Joe Embry, the strongest boy in all of the countryside,' said the Senator, 'it is good to see you again. How I envied you at one time. Not for your strength of muscle which was enormous, but on another occasion. You went to Memphis and came back and told how you had seen President Grover Cleveland. How I envied you the opportunity to observe the President of the United States.'

"Others of his boyhood crowded 'round him, G. E. Childs, reared by the Gore family, Albert Eudy, George Few, Sim Hightower, Billy Reed, Cicero Latham, Miss Carrie Ray, and a host of others. Then came men who were children when he visted the home of their fathers. Apropos of his marvelous memory Senator GORE would recall with each greeting some pertinent incident. The afternoon was an occasion of delight for scores of local people who were continually laughing in gay good humor with each brilliant witticism from the Senator. Then touched by the review of some incident told of his boyhood. Then impressed as Senator Gore gave his views on national questions."

THE DEMOCRATS ARE COMING

" 'I was proud of my native Mississippi in 1928,' said he, 'when the Presidential returns were tabulated Mississippi returned the strongest Democratic vote of any State in the Union.

" 'Next year the Democratic Party will be victorious if it doesn't act the fool and commit suicide. As a failure the President has no equal. You know the only thing he really knows how to do is administer charity. He got his experience in Europe during the war in Belgium, Italy, and France dispensing millions to war-torn sufferers. Coming back home and finding himself President he was at a loss to know what to do. So he brought on the depression in order that he might be employed at the only work with which he is acquainted.

" 'Now there is a great Democratic sentiment sweeping the Nation, and victory next year will be easy unless we act the fool.' "

ROOSEVELT LIKELY NOMINEE

"When asked who the Democrats would nominate at the coming convention, he said, 'Whoever beats Franklin D. Roosevelt will win.'

"The subject of prohibition was brought up and the Senator said, 'I do not think it incumbent upon a party platform to instruct Congressmen and Senators how to vote. The country is now dry. The drys have the laws and the wets have their liquor. Everybody ought to be happy.' "

CONCERNED FOR FARMER

"Senator Gore showed a keen interest in farming conditions, but said that relief could never be legislated in agriculture. 'It behooves the farmer to work out his own salvation. Legislative relief measures are sometimes helpful, but only tomorrow, and accomplish little permanent good. Did you know,' continued Mr. Gore, 'that 20 percent of the farmers in this country do not have a hen or hog.' "

RAN LIKE A JACK RABBIT

"The scores of people greeting him declared their delight in the fact that he had made a comeback and had won in the recent election. Details of the election had never been heard by most of them and the Senator was showered with questions. How he managed to beat the millionaires? What were the results? And so on. Mr. Gore said, 'You know I was like a jack rabbit. In the primary elections I was running along comfortably on three legs, but in the general election against the Republicans I put the other foot down and really showed them some running.' "

NOTICED OUR ROADS

"Senator Gore said that he was especially surprised at the speed with which one could negotiate distance in Webster County. The trip from Embry to Bellefontaine, in the old days rather a goodly distance, was accomplished almost before we knew it."

GUEST OF EXCHANGE CLUB

"Senator Gore and the Reverend Shaw were honor guests of Eupora Exchange Club at dinner in the dining room of the local hotel. After the meal he consented to make a little talk. Famed as one of the best after-dinner orators in the United States his discourse, which was humorous in the main, suddenly turned near the end to boyhood memories at Walthall. Turning to Mr. Cartledge who sat next to him at the table Senator Gore recalled their companionship. His sentence was never finished. His heart was so full he could not speak. For over a minute he stood there speechless, with a tear on his cheek. His natural good humor suddenly returned and he finished his talk with a smile, but the men around the table were deeply touched by his emotional silence more eloquent than possible words."

DEPRESSION ALMOST OVER

"In the course of his talk Senator Gore said that darkness always preceded the dawn, and that economic conditions were similar to the old maid, who, when asked how her campaign for matrimony was progressing said, 'I'm on my last lap now.'

" 'Bet on America and you will win,' advised the Senator.

"In closing he said of his visit to Webster County, 'Every moment has been a jewel of joy.'

"The Reverend Shaw responded to a request of President Maddox and made a splendid talk on Webster County, how he loved the people here, and how he dreamed of coming back some day to a little cottage among his own people to live out the remainder of his days in peace and joy.

"Senator Luther Latham's introduction of Senator Gore was also a bright feature of the hour.

"The Reverend W. C. Newman in a short, touching talk, said that although he was a comparatively young man and had many years ahead of him in the ministry with a view of being drifted around from place to place, he, too liked to dream of some day coming back to the hills of Webster to finish his earthly existence in a little cottage.

"After the dinner Senator Gore motored to Mathiston with Eupora friends, where he boarded a midnight express for Gulfport. On Sunday he delivered a commencement address to the graduating class of the military college there of which his son is a member.

"The love and best wishes of his homefolk in Webster will go with "Governor" Gore to his seat in the world's greatest deliberative body—the United States Senate. And there are those of us here who believe the Democratic Party would do well in considering his nomination for President. He is a great statesman and fully equipped in heartiness, sympathy, and mentality to administer the executive affairs of this great Nation."

The Fundamental Objections to the St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. VAN ZANDT. Mr. Speaker, the economically unsound St. Lawrence seaway and power project is again threatening the jobs of coal miners and railroaders in my congressional district.

If the Congress of the United States wants to dry up a source of employment for thousands of railroaders and coal miners, let it give approval to the economic monstrosity known as the St. Lawrence seaway which will cost the taxpayers of this country billions of dollars.

The following article appearing in the November 19, 1948, issue of the Maritime Exchange Bulletin furnishes food for thought. The article is as follows:

A WARNING—THE FUNDAMENTAL OBJECTIONS TO THE ST. LAWRENCE SEAWAY AND POWER PROJECT—ECONOMICALLY UNSOUND—IN THE EVENT OF WAR, A MENACE TO THE NATIONAL SECURITY

The New York State Power Authority has petitioned the Federal Power Commission to authorize the development of the St. Lawrence hydroelectric power in conjunction with the Canadian Province of Ontario without the seaway.

The Federal administration is definitely on record that legislation for the canalization of the St. Lawrence seaway, together with the power project, will be resubmitted to Congress next year, and that the petition of the New York Power Authority will be denied.

The Maritime Association of the Port of New York, embracing within its membership all the steamship owners and operators, and all other branches of the marine industry, has for the past 15 years been the most formidable opponent of the seaway feature. This association has advanced irrefutable reasons why the proposed St. Lawrence seaway would be ruinous to the merchant marine operating from the Atlantic and Gulf ports and, as a result, ruinous to the national economy.

The project submitted in the past called for a 27-foot waterway for a distance of about 1,350 miles from the western head of Lake Superior through the Great Lakes and St. Lawrence River to Montreal, including the widening and deepening of the St. Lawrence River between Lake Ontario and Montreal—about 183 miles—for the development of hydroelectric power in the international section.

The vital weakness of the proposed seaway is the limited period when safe navigation is possible—only 7 months during the year.

The steamship services presently operating from the Atlantic and Gulf ports definitely require all the traffic originating from the Great Lakes ports and the central freight territory in order to maintain a 12 months' service to world's ports.

It would be a serious mistake to the economic welfare of the Nation to divert from the steamship services along the seaboard sufficient traffic to justify a prohibitive cost for maintenance of a 27-foot seaway into the Great Lakes. In the face of such a diversion of traffic, many steamship owners and operators would be compelled to reduce or abandon sailings to avoid bankruptcy.

With a curtailed steamship service from the Atlantic and Gulf seaports, all American import and export trade would be ruinously affected, and with drastically reduced steamship service, the markets of the world would be more available to competing nations.

The exporters and importers in the Great Lakes ports, and their hinterlands, should realize the serious injury to their commerce which would result from diverting the traffic necessary to maintain the 12 months' services from the seaports during the 7 months of open navigation. These shippers and importers, who have been clamoring for a deeper waterway to enable the larger sized ships to reach their ports, must seriously consider that they cannot expect to have the same steamship services available for their commerce from the seaports in the proposed seaway's 5 months of closed navigation. During this 5-month period, they would be completely dependent upon the frequency of services from the seaports which, owing to the diversion of traffic, as outlined, could not be maintained for purely financial reasons.

The Great Lakes and Central Freight Territory have an abundance of transportation facilities:

1. Railroads.
2. Water transportation from Chicago to New Orleans.
3. Water transportation via the New York State Barge Canal from Great Lakes ports to New York.
4. The over-the-road trucks, which are ever increasing in number, transporting materials to the steamship companies in the South and the East.
5. The large number of foreign-flag ships (Scandinavian, Dutch, Norwegian, etc.), carrying 2,000 to 3,000 tons from the West Indies, South America, and Europe on the 14-foot channel.

It is difficult to understand how any Federal Agency, or any Federal official, can maintain that the canalization of the St. Lawrence seaway is a necessity to the national defense.

During World War II, owing to its facilities, the great port of New York played an important part in the safe and uninterrupted

flow of men and war materials through the port in the dispatch of more than 40,000 ships and 1,500 convoys transporting troops and military equipment and supplies to the battle fronts and bases through the New York gateway.

One high official paid tribute to the Maritime Association stating that "the movement of thousands of ships through this great port to battle fronts all over the world, proved to be one of the vital components in this Nation's invincible drive to victory."

The facilities of New York were indispensable and greatly contributed to the winning of the war. New York, with its 600 miles of waterfront, with its numerous railroads, lighterage and towing facilities, the longest chain of warehouses in the world, were all indispensable factors in serving the Nation in its hour of peril. These facilities have proven their essentiality in every national emergency and under no circumstances should they be allowed to deteriorate or in any way lose their potency.

The most outstanding factor of all the features of this port was the fact that the piers where the ships were loaded were a distance to the sea of only 17 miles, and with this short distance there was no waste of time for the convoying vessels.

In fearful contrast to this tremendous contribution to the winning of World War II would have been the possibility of loading a portion of this flotilla of ships in the Great Lakes ports, where such ships would have had to navigate from the head of the Lakes to the sea, down the St. Lawrence River, a distance of some 2,400 miles. It is needless to say that in these vulnerable waters no ship could have moved with military supplies without a military convoy escort for every mile of the dangerous route.

If an attempt had been made to move a large number of ships during World War II, over the proposed seaway, it would have been impossible to prevent sabotage or the blocking of the Great Lakes by the sinking of one or two ships across the channels in the St. Lawrence River.

While the port of New York rendered the major services in the war effort, all the other ports along the Atlantic and Gulf coasts also played an important part. But the Great Lakes, on account of their extreme distance to the sea, could not have been used to any appreciable extent, and certainly could not have been used at all except under conditions fraught with danger to both the ships and to their precious cargo. In time of war, is there any conceivable justification to such a hazardous route?

We, therefore, maintain that the 27-foot channel would not have been helpful in the national defense, but quite on the contrary could easily have been the means of a national disaster.

The executive vice president of this association, who has had many years of practical maritime experience, has been directed to contact individually all steamship owners and operators, and all other branches of the marine industry, not only in the port of New York but in other ports along the Atlantic coast, and the Gulf, and all allied associations and other interests throughout the country, to oppose a seaway for the following reasons:

Commercially and economically unsound.

Imposition of inordinate tax burdens without corresponding benefits.

Diversion of traffic from railroads, steamship lines and inland waterways.

Permanent detrimental effect upon banking, industry, employment, and purchasing power.

Impairments of property and rental values resulting in diminution of tax returns to the Federal Government, States, and cities.

Dangers of navigating the proposed waterway.

Cost underestimated.

Will increase unemployment affecting a vast army of railroad employees, miners, seamen, longshoremen, and labor in many industries.

Will impair the fulfillment of the policy of Congress to foster the development and maintenance of a merchant marine for the transportation of the commerce of the United States on essential trade routes.

Excise Tax Upon Telegraph Messages

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, March 31 (legislative day of Friday, March 18), 1949

Mr. STENNIS. Mr. President, a constituent of mine, Mr. B. S. McClane, of Winona, Miss., has written me very lucidly and forcefully in regard to the present excessively high excise tax upon telegraph messages. I ask that his letter be printed in the Appendix of the RECORD for the information of my colleagues.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WINONA, MISS., *March 21, 1949.*

Hon. JOHN C. STENNIS,
United States Senator,
Washington, D. C.

MY DEAR SENATOR STENNIS: As an employee of the Western Union Telegraph Co., and as a citizen of the United States, may I address you briefly in respect to the present Federal excise tax which is currently being imposed upon telegraphic communications?

The matter is of an urgent nature, both in connection with the particular industry with which I am employed, and also in reference to the general welfare of the country.

This is so because the tax is an injustice and an unnecessary imposition on the telegraph company; and the results of same are detrimental to that company, insofar as the tax is causing a loss of telegraph business that would ordinarily be obtainable were this tax not existent.

If the prosperity and sound industrial position of the telegraph company is endangered by any means that would be a threat to the welfare of the country, inasmuch as this special industry—the telegraph industry—is a vital necessity, not only in time of peace but also in time of war.

Won't you, therefore, considering that the tax is injurious and unfair—and particularly I urge that you so consider the tax, because of the fact that the Government is in competition with the telegraph industry by handling low-rate air-mail communications by subsidized air-line companies—do all you can to have this tax removed entirely from telegraphic communications.

It should not be the prerogative of this great Government to impose a tax of 25 cents on every dollar expended by anyone to send a telegram by a vital industrial agency, whereas the Government itself will carry an air-mail letter anywhere in the country for the small minimum charge of 6 cents.

Thank you for your attention to this urgent matter, and be assured of my highest regards and good wishes.

Sincerely yours,

B. S. MCCLANE,
Manager.

Repair of Mississippi River Levee in Louisiana

EXTENSION OF REMARKS

OF

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 31 (legislative day of Friday, March 18), 1949

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mission Accomplished," which appeared in the Commercial Appeal, of Memphis, Tenn., on Sunday, March 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MISSION ACCOMPLISHED

The crevasse in the Mississippi River main-line levee near Port Allen, La., has been closed by Army engineer crews and a new record in flood fighting has been made. Their performance was superlative.

The break occurred before daylight last Thursday. By Saturday night 1,600 feet of rock and sandbag temporary levee had been constructed and the flow was shut off. To achieve that, operations had been conducted around the clock and the more than 400 men engaged had to work in water knee deep or worse.

The many congressional friends of the Corps of Engineers will miss an extraordinary opportunity if, in their efforts to prevent transfer of flood-control operations from the Corps of Engineers to the Interior Department, they fail to inform their colleagues in detail of what has been done at Port Allen. It was Army engineer performance at its best.

While they were effecting closure of the break, the engineer crews were also building a temporary loop levee as reserve protection against the closure works. This morning they will start construction of a permanent main line set-back levee.

The whole performance is the more remarkable because there had been no pre-break mobilization. There had been no main-line failure since 1927. A falling river, 172 feet deep at that point, had made an unseen and undetected attack under water against the bank. The flood fight which began after bank and levee slid into the Mississippi had to start from scratch. Huge earth-moving equipment had to be moved into the area, labor recruited, and supplies of rock, timber, sand, and bags moved in.

It was a military operation involving mobilization, transportation, supply—all for the purpose of flood combat.

Only military engineer leadership could have done it successfully in so short a time.

The closure of a main-line crevasse has been something rare in the history of American flood fighting. It involves such a tremendous gamble that, heretofore, it has generally been regarded as tremendous waste of time, effort, and money.

A standard textbook of the Mississippi River Commission, issued in 1932, sets out that: "After a levee has been broken nothing can normally be done until the flood plane behind the levee has built up to such a point that the slope through the break is very flat and currents are correspondingly gentle."

They threw the textbook away at Port Allen and waded in immediately against a swift current. They didn't wait for the flood plane to build up. They didn't give it a chance. They choked the river off before it could build up.

They made the first big crevasse closure in a main-line levee since the one at Beulah Lake, across the river from the mouth of the Arkansas, in 1912.

The Hoover Commission says military engineer direction of flood fighting is not essential. The lower valley insists it is. The world's mightiest river flows between hundreds of miles of great earthen embankments. Held within them, it is a beneficent friend. Once it breaks out, it becomes one of the most destructive forces known to man.

The control standpoint requires that the military engineer regard it as an enemy. He deals with it as he would any combat force, constantly shifting its points of attack. Where possible those are anticipated. It is not always possible. The MRC and its district engineers and their forces are the defending army. The Mississippi River is an always advancing, always retreating, sometimes flanking, never inactive, enemy. And every shift it makes does damage of some sort.

Sometimes this enemy, personified in "Ole Man River," achieves the completely effective surprise attack through an undermining operation, as it did at Port Allen. When that happens a large section of protective position goes into the river, the enemy breaks through, and has to be driven back.

But homes are destroyed and the land is scarred before he leaves.

All of the elements of what is unequaled American military engineering skill go into the decades-old control fight against the lower Mississippi River. This is their training and the proving ground, and the men who have fought the river have built to the glory, renown, and safety of the American people—the Panama Canal, Wilson Dam, Alcan Highway, Persian Gulf supply line, Ledo Road, a synthetic harbor on the Normandy beaches—a fuel-oil line from the French coast to advanced combat lines in Germany.

It was said of all those things: "It can't be done." But it was.

An Army engineer officer who had helped in the building of the Normandy invasion harbor and the combat fuel-supply line half across Europe stood in back of a crumbling main-line levee in Louisiana last Thursday, forgot the book, and ordered a river throttled. And again was the impossible done.

The Hoover Commission recommendations do not suggest a better, easier, or less expensive way of doing the impossible. The lower valley knows it cannot be done by substituting political control for Army engineer know-how.

Small Business Suffered Through Use of Basing-Point System—Cement Dealers Forced To Purchase Without Benefit of Competition—Moratorium Will Again Subject Small Cement Dealers to Mercy of Cement Trust

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. PATMAN. Mr. Speaker, basing-point proponents claim that destination prices, prior to the Supreme Court decision, at which shipments were invoiced to dealers often differed from what would be expected from the automatic operation of the basing-point system. This claim is baseless and far, indeed, from the truth.

I recently revealed the startling information that practically 97 percent of a total of 13,858 individual bids to governmental agencies for delivery of cement at 1,277 destinations were made identical by systematic observance of basing-point pricing. In other words, with an average of 11 bidders per destination, practically every bid was identical.

The bulk of cement, however, is sold to dealers rather than on Government contracts. So let us examine the facts as they related to purchases of cement by dealers during a period of absolute dominance by the Cement Trust.

DEALER INVOICES SHOW UNIFORM DESTINATION PRICES

The Federal Trade Commission examined more than 66,000 invoices, covering 21,649,667 barrels of cement shipped by 51 producers to cement dealers in 21 cities. Deviation from the basing-point system of pricing occurred in only 6 percent of these invoices. The percentage of adherence to the basing-point system in each of the 21 cities was as follows:

Manufacturers' sales of cement to dealers at formula delivered prices

[Source: FTC Price Bases Inquiry: Basing-Point Formula and Cement Prices, p. 58]

Destination	Total sales reported			Sales at formula prices			
	Invoices	Shippers	Barrels	Invoices	Shippers	Barrels	Percent of total
Baltimore, Md.	2,117	13	536,305	1,868	13	474,591	88.49
Birmingham, Ala.	3,633	9	657,348	3,633	9	657,348	100.00
Buffalo, N. Y.	2,752	15	681,866	2,750	15	681,366	99.93
Chattanooga, Tenn.	1,333	5	257,745	1,226	5	239,038	92.74
Chicago, Ill.	14,881	9	4,420,930	12,129	9	3,612,137	81.71
Cincinnati, Ohio	2,071	14	438,899	2,070	14	438,699	99.95
Cleveland, Ohio	8,716	17	2,392,887	8,716	17	2,392,787	100.00
Detroit, Mich.	6,069	14	2,224,298	4,988	14	1,960,618	88.15
Ensley, Ala.	773	7	137,374	773	7	137,374	100.00
Hedona, Ala.	608	7	128,833	608	7	128,833	100.00
Indianapolis, Ind.	2,797	11	732,244	2,766	11	724,878	98.99
Madison, Wis.	1,319	11	352,182	1,319	11	325,182	100.00
Minneapolis, Minn.	1,879	11	877,555	1,242	11	729,420	83.12
New York, N. Y.	6,457	17	5,367,916	6,547	17	5,367,916	100.00
Norfolk, Va.	430	5	67,930	430	5	67,930	100.00
Philadelphia, Pa.	3,296	15	813,803	3,296	15	813,803	100.00
Pittsburgh, Pa.	93	7	23,451	93	7	23,451	100.00
Richmond, Va.	753	7	129,346	753	7	129,346	100.00
St. Louis, Mo.	4,494	7	907,990	4,494	7	907,990	100.00
Washington, D. C.	1,295	10	426,412	1,295	10	426,412	100.00
Wilmington, Del.	391	7	101,453	391	7	101,453	100.00
Total	66,157	[1] 51	21,649,667	61,297	[1] 51	20,340,572	93.95

[1] Exclusive of duplications.

The same destination price was charged on every invoice to dealers in 13 of the 21 cities. Invoice prices were identical for 99 percent or more of the tonnage shipped to four of the cities.

This striking price identity in 17 cities was no accident. It was the result of the systematic use of the basing-point method of pricing by each of the individual producers. Errors in billing might well account for the slight deviations as shown in the table.

In some instances the apparent nonconformity to the basing-point system was due to deliveries made on old contracts, which were lower than the market prices prevailing at time of shipment. Therefore, the showing that 94 percent of all invoices were billed at basing-point prices actually understates the degree to which the system was observed. This means, in short, that the degree of price identity for dealers was no different than for Government bids. Again, the facts refute the spurious arguments advanced by the basing-point apologists.

Small business includes thousands of cement dealers. If the basing-point system is revived by legislative hiatus, these thousands of small dealers will once more be subjected to monopolistic hazing by the Cement Trust.

The Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. HERTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Quarterly Journal of Economics for February 1949:

THE TAFT-HARTLEY ACT

(Summary: I. Basic American labor conditions and distinctive characteristics of American trade unions, 1.—II. Efforts of the Government to protect the right to organize and some of their unintended results, 6.—III. Provisions of the Taft-Hartley Act, 8.—IV. Areas where the law has not brought about important changes, 12.—V. Areas where the law has produced important changes, 21.—VI. Good features of the law, 20.—VII. Provisions of the law which deal with the right problems, but which are poorly worked out, 23.—VIII. Bad provisions in the law, 28.—IX. Basic characteristics of a good law, 29.)

The Taft-Hartley Act will soon be replaced by another law. It is therefore especially worth while to examine the brief experience under it. What is to be learned from this experience? What are the merits and weak-

nesses of the act? Which provisions should be kept, which modified, which discarded? What problems dealt with by this act must be dealt with also by any successor law?

I

The Taft-Hartley Act, like the Wagner Act before it, attempted to modify habits of behavior which have been deeply rooted in the American community. In order to understand the law and the problems of drafting a successor act, one needs to understand certain characteristic American labor conditions. Five of these conditions are particularly important:

1. The reluctance of American workers to become union members. This has been one aspect of American individualism. It has been reinforced by the rapid growth of population and the rapid expansion of industrial employment (as much as one-third in a decade during a good part of the nineteenth century) which gave individual workers a good chance to advance. Even as late as 1930, less than 20 percent of the industrial workers were union members. The growth of trade unions has been largely concentrated in a few periods—such as 1886, 1897–1904, 1916–1920, and 1933 to date—when conditions were unusually favorable.

2. The fierce opposition of American employers to trade unions. The same individualism which has made the American worker hard to organize has led employers to oppose unions with great vigor. Discharge of men for union activity has often been routine business management, and the use of spies and undercover men in unions has been far from unusual. Only those unions survived which defeated the attempts of employers to destroy them.

3. The frequent failure of American workers to maintain a united front during strikes. In America it has been common for some men to refuse to strike, for some to dribble back to work before a settlement had been made, and for some to be strikebreakers. This lack of solidarity, another facet of the community's individualism, is also pronounced among employers. When a strong union strikes against a group of enterprises individual employers have usually been willing to make settlements without consulting the group.

4. The reluctance of workers to pay union dues after their immediate demands have been met. The "free rider" is a well-known problem of the American union.

5. The reluctance of workers to participate in the day-to-day affairs of the union and to take an interest in its ordinary business. The members expect the officers to run the union and do not wish to be bothered by union affairs. They are reluctant to attend meetings. A well-established union in a recent election of national officers had only 40 percent of the members voting, although there were contests for the presidency and for other important offices. The alleged lack of democracy in American unions has long been a favorite criticism of Socialists and left-wingers. As a matter of fact, the members usually get the kind of unions they desire.

These underlying conditions left their mark on American trade unions—on the structure of the trade-union movement, on the way in which unions conduct their business, and on the methods and policies which they pursue. Of these characteristics of American trade unions, the following are of particular interest to us:

1. The dominant position of the national unions in the movement. In the beginning, of course, the trade-union movement was a "grass roots" affair. The indifference of many workers to organization and the strong opposition of employers, however, gradually caused organizing at the grass-roots level to diminish in importance, and led independent locals to join national unions. Nearly all of the union members in the United States belong to large or fairly large national unions. At present there are about 200 such unions. Britain, by contrast, has many small, independent local or regional unions. With only about half as many union members as the United States, there are in Britain nearly 1,000 independent unions, of which about 750 have less than 2,500 members each.

2. The dominance of professional officers, especially national officers. This is in large part a result of the desire of the rank and file not to be bothered about union affairs. The presidents of American trade unions do not have as much authority as presidents of corporations, but their authority is great and has been increasing. An examination of the constitutions of 88 A. F. of L. unions and of 36 CIO unions gives the following results: In 36 A. F. of L. national unions and one CIO union, the appointment of national representatives or organizers of the union is the exclusive responsibility of the president; in eight A. F. of L. unions the president may remove any national officer, and there is no appeal from his decision; in 13 A. F. of L. unions he may suspend and revoke charters without appeal; in 12 A. F. of L. unions and 3 CIO unions, he may discipline and replace local officers without appeal. In other cases, the president may appoint national representatives, suspend or revoke local charters, and discipline or supplant local officers, with the approval of the executive board. In still other unions these decisions are left to the national executive board, sometimes with right of appeal to the union convention but often without appeal.[1] In a few unions, contests for national office are usual, but these unions are the exception. In a study of 764 elections to national office in seven unions between 1910 and 1941, Professor Taft found that in 634 elections there was only one candidate.[2] Unions quite typically assert broad authority to discipline their members. Among 81 unions, Professor Taft found discipline authorized for the following offenses: Slandering an officer, 29 unions; creating dissension, 15 unions; undermining the union or working against its interest, 20 unions; action that is dishonorable or which might injure the labor movement, 25 unions; circulating written material dealing with union business without permission of the general executive board, 21 unions.[3] The reluctance of the rank and file to participate in union affairs and the dominance of the officers have been convenient in some cases for Communists or racketeers who wished to control unions. On the other hand, the dominance of professional officers has not meant that these men typically lacked support of the rank and file.

3. The absence of class feeling and the lack of strong concern on the part of national unions for the interests of the wage-earning class as a whole. Not only have employees and employers in America been individualistic, but so also have the national unions. Each has been jealous of its own independence, and unwilling to accept much guidance or restraint from federations, such as the A. F. of L., which seek to represent trade unions as a whole.

4. Development by the trade-union movement of the principle of exclusive jurisdiction. This principle means that there may be only one legitimate trade union in a given area—an occupation or an industry. It also means that the trade-union movement asserts the right to determine which union is the legitimate one—that is, which union employees shall join. The preferences of the men do not count. Obviously, such a principle could not prevail where the trade-union movement was a grass-roots affair. It fits a community, such as the United States, where the professional union officers are dominant. In Britain, where the influence of the rank and file is strong, the trade unions operate on a principle quite the opposite of the principle of exclusive jurisdiction, for in Britain no union has the exclusive right to organize any occupation or industry.[4]

The principle of exclusive jurisdiction has not prevented serious conflicts between unions about jurisdiction over men, for, as I have pointed out, American individualism has produced self-assertive unions which do not readily concede the claims of rival unions or accept the decisions of federations, such as the A. F. of L. Nevertheless, until the rise of the CIO, the principle of exclusive jurisdiction was fairly effective in preventing the rise of dual unionism in the United States. This is indicated by the fact that only 13 out of 52 unions founded by secession between 1852 and 1933 survived as independent unions. Twenty-three rejoined the parent union, 10 joined other unions, and 6 expired.

5. The use of short-cut methods of organizing. American unions have not always considered it necessary to get the consent of employees before signing an agreement on their behalf with their employer. Strong unions may approach the employer directly and ask him to sign a union-shop agreement for unorganized employees under threat of a boycott or strike. Then the union approaches the men and signs them up. In a community in which employees were easier to organize and took greater interest in union affairs, such organizing methods would not

[3] Philip Taft, "Judicial Procedure in Labor Unions," this Journal, May 1945, pp. 370–385. These vague offenses were created to help unions protect themselves from employer agents. This is one of the many ways in which the employers' opposition to unions has made for centralization of authority in the hands of the national union.

[4] The British Trades Union Congress does not, however, concede to the rank and file the full right to determine what union they will join. In 1939, the Bridlington Trades Union Congress, in order to control competition of unions for members, revised the "main principles" of "good trade union practice" adopted by the Hull Congress in 1924. The revision included the recommendations that all unions shall:

(i) Consider the possibility of joint working agreements with unions with whom they are in frequent contact. * * *

(ii) Not accept a member of another union without inquiry.

(iii) Adopt the inquiry form provided by the general council in the case of all inquiries under (ii) above, * * *

(iv) Not accept a member of another union where inquiry shows that the member is (a) under discipline; (b) engaged in a trade dispute; (c) in arrears with contributions.

(v) Not commence organizing activities at any establishment or undertaking in respect of any grade or grades of workers in which another union has the majority of workers employed and negotiates wages and conditions, unless by arrangement with that union.

The attitude toward joining a union is somewhat different in Britain from that in the United States. Here unions put strong pressure upon people to join. There one makes formal application for membership.

be tolerated by the workers themselves—nor would they be necessary.

6. The use of strikes and boycotts as methods by one union to fight another over members and over jobs, and the willingness of one union to raid another. Raids by one union on another do not mean that the principle of exclusive jurisdiction is not accepted—they mean simply that unions have their own ideas about proper boundary lines and are quite ready to enforce their claims by economic means. In a trade union movement in which either the rank and file or the federations had more influence, interunion warfare would rarely be carried to the point of strikes or boycotts.

7. Reliance upon the closed shop or the union shop. Both the closed shop and the union shop are distinctive American institutions. Occasional use of them is found in other countries, but they are not prevalent except in the United States and Canada. The closed shop and the union shop are devices partly to deal with the problem of the "free rider," partly to prevent employers from disrupting unions, partly to protect unions from raids, and partly to make internal union discipline more effective.

II

American labor conditions, and particularly the difficulties of organizing workers, led eventually to the demand by unions that the Government protect the right to organize. The first laws prohibiting employers from discharging men because of membership in unions were held to be unconstitutional. The War Labor Board during the First World War gave temporary protection to the right to organize, but the Board's principles and decisions were not legally binding. The Railway Labor Act of 1926 protected the right to organize, but only within the railway industry. With the National Industrial Recovery Act of 1933 and especially the Wagner Act of 1935, however, the Government embarked upon the general policy of encouraging organization. The effect of these acts was far reaching and, in important respects, unintended.

The basic principle of section 7a of the National Industrial Recovery Act, and of the Wagner Act, was that workers are entitled to be represented by bargaining agents of their own choosing. This was a radical departure from well-established American trade union principle and practice—because unions had never conceded that unorganized workers were entitled to join any union which they saw fit.[5] Section 7a of the National Industrial Recovery Act and the Wagner Act were not intended to undermine the principle of exclusive jurisdiction, but that is precisely what they did. Each act gave to the employees in the bargaining unit, rather than to the trade union movement, the right to determine what union, if any, should represent the workers.

Government protection of the right to organize caused a temporary revival of grass roots organizing activity. In the years 1933 and 1934, when the National Industrial Recovery Act was in operation, 18 new national unions were formed. Eleven of these were dual unions in the sense that they covered areas of employment already claimed by existing unions. In the 2 years 1936 and 1937, shortly after the passage of the Wagner Act, 26 new national unions were formed—nine of them by secession from existing unions. No one of these nine has rejoined the parent union. When men became relatively easy to organize, the jurisdictional claims of established unions were widely challenged; the American Federation of Labor, committed to defending these claims, was split; and the challenging unions, together with others which had grown up independently, formed the Congress of Industrial Organizations.

The encouragement of organization by the Government increased competition between unions for members, and this competition encouraged high-pressure organizing methods. Some employers were confronted with strikes and boycotts designed to compel them to violate the law by ceasing to deal with the certified union and dealing instead with another union which claimed jurisdiction. Interunion rivalry increased the interest of unions in the closed shop and the union shop as devices to prevent raids by rival organizations. Interest in the closed or union shop was also stimulated by the rapid influx of new members who were not used to paying dues. During the Second World War the War Labor Board, unwilling to grant the demands for the closed or the union shop, developed the maintenance-of-membership clause. This clause required workers who joined the union to keep in good standing during the life of the contract.

The Second World War delayed the emergence of problems created by the rise of unions, but when the fighting stopped, the country suddenly found itself confronted with new and formidable labor problems. Trade-union membership had increased about fivefold between 1933 and 1945 and about twofold between 1940 and 1945. About one-third of the members were concentrated in six large unions—the teamsters, the automobile workers, the steel workers, the carpenters, the machinists, and the miners. About 7,000,000 jobs were covered by closed-shop or union-shop contracts (about three times the entire A. F. of L. membership in 1933), and 4,000,000 more were covered by maintenance-of-membership clauses. This meant that large areas of American industry were open only to union members or to persons whom the unions were willing to admit, and that in these areas loss of good standing in the union meant loss of one's job. The most powerful unions are able to cut off the community from essential materials, such as coal or steel, or to shut down the ports of the country, or to deprive cities of essential transportation. In 1946 the time lost by strikes reached an all-time high—113,000,000 man-days, or three times higher than in the previous year or in 1937, the two worst years up to that time. On four occasions during the year, Nation-wide strikes deprived the country of essential commodities and services, and threatened it with disaster. In February and March 1946, the steel industry was shut down for 4 weeks; in April, the country was cut off from virtually all supplies of bituminous coal; in May, the railroads were shut down for nearly 2 days; and in November, 1946, the bituminous coal industry was again shut down.

III

Against this background in the Taft-Hartley Act was passed. It is a long law, covering 29 pages of 8-point type; and an ambitious one. It must be regarded as an attempt to provide a comprehensive code to cover the multitude of issues and problems produced, on the one hand, by the traditional hostility of American employers to unions and, on the other hand, by the rapid growth and great power of unions and by the recent breakdown of some well-established institutions of the trade-union movement. Most of the provisions of the law may conveniently be summarized as dealing with five basic subjects:

1. Relations between unions and individual workers.
2. Relations between unions and unions.
3. Relations between unions and employers.
4. Relations between unions and the community as a whole.
5. Administrative arrangements for enforcing the labor policy of the community.

Some provisions of the act fall under more than one of these headings, and different persons would make different classifications of the several parts of the law. The following is an incomplete summary of its most important provisions.

1. Relations between unions and individual workers: These provisions fall under six principal heads:

(a) The act specifically recognizes the right not to organize and the right not to strike, as well as the right to organize and to strike; and undertakes to protect all of these rights from interference by either employers, unions or the agents of unions. This means that coercive activities by either unions or employers in connection with organizing activities, strikes, or lock-outs are made unfair labor practices.

(b) The act, like the Wagner Act, recognizes the right of employees to choose their bargaining agent; and attempts to protect this right from interference by employers or unions.

(c) The act attempts to protect the freedom of workers to enter any occupation or industry by forbidding the closed shop, and by permitting the union shop only when approved by a majority of the workers in the intended bargaining unit.

(d) The act contains a number of provisions designed to make elections more representative. Some of the provisions merely convert into statutory form practices of the National Labor Relations Board in its later years. Others require changes in practice. The act directs that professional employees shall not be put in the same bargaining unit as nonprofessional employees unless such inclusion has been voted by a majority of such professional employees. It denies the right to vote to economic strikers who are not entitled to reinstatement. It provides that the ballot in run-off elections shall be limited to the top choice and the runner-up on the first vote—thereby assuring (contrary to Board practice) that the choice of "no union" appear on the run-off ballot in the event that "no union" was the first or second choice in the inconclusive election.

(e) The act attempts to protect the right to join a union by forbidding employers from discriminating, in hiring, against employees who are denied membership in a union on the same terms generally available to other members.[6] It also forbids unions which have union-shop contracts to cause employers to discriminate against employees who have been denied membership (except for failure to tender the regular initiation fees and dues), or to collect initiation fees which the National Labor Relations Board "finds excessive or discriminatory under all the circumstances."

(f) The act attempts to protect the right to remain in a union, by forbidding employers who have negotiated union-shop contracts to discharge employees because of loss of good standing in a union (except for failure to pay regular union dues), and by forbidding unions to cause employers to discriminate against employees who have lost their membership for some reason other than failure to pay the regular fine.

[5] The National Industrial Recovery Act and the Wagner Act even gave broader freedom of choice to the rank and file than does the practice of the British Trade Union Congress. Although the British practice concedes the right of unorganized workers to join the union of their choice, it does not concede full freedom of one union to organize groups of workers within which a second union has members.

[6] Section 8 (a) (3), while permitting employers to enter into union-shop contracts under certain conditions, states that no employer shall justify any discrimination against an employee for nonmembership in a labor organization (A) if he has reasonable grounds for believing that such membership was not available to the employee on the same terms and conditions generally applicable to other members. * * *"

(g) The act forbids the National Labor Relations Board to consider representation or unfair-labor-practice cases which originate with unions that do not provide their members with certain financial reports.

2. Relations between unions and unions: The act attempts to deal with conflicts between union over either jobs or members. It makes it an unfair labor practice for a union to use the strike or boycott (1) to require an employer to assign particular work to employees in a particular labor organization or in a particular trade, craft, or class, unless the employer has failed to conform to an order of the Board determining the bargaining representative for the employees doing such work, or (2) to compel an employer to recognize the union as a bargaining organization when another union has been certified. Refusal to manufacture, transport, or handle goods, for the purpose of forcing an employer or another person not to handle the products of any other producer, is made an unfair labor practice, and also a basis for the recovery of damages by injured parties. This provision forbids strikes or boycotts against one employer for the purpose of controlling the union affiliation of the employees of another.

3. Relations between unions and employers: Some of the provisions of the act which pertain to relations between unions and individuals or between unions and unions also constitute important regulations of relations between unions and employers. In addition, some of the other regulations of relations between unions and employers are:

(a) The exclusion of supervisors from the protection of the act.

(b) The broadening of the right of employers to express themselves about unions and of unions to express themselves about employers, provided the statements contain no threat of reprisal or promise of benefits. Many people have assumed that this change was simply in the interest of employers, but it may limit the effect of some sections of the act upon the activities of pickets.

(c) The authorizing of employers to ask for an election to determine whether a union which seeks bargaining rights represents the employees.

(d) The imposing upon unions as well as employers of the obligation to bargain in good faith, provided the union is the certified representative of the employees.

(e) Provisions making it an unfair labor practice for a union to cause or seek to cause an employer to pay for services which are not performed, or are not to be performed.

(f) Restrictions on financial contributions by employers to representatives of their employees. There are exceptions to the general prohibition. For example, check-off of union dues is permitted on written assignment of the employee and so also are contributions to health and welfare funds, provided the contributions are held in trust for the payment of specified types of benefits to employees, and provided employers and employees are equally represented in the administration of the trust fund, with an impartial umpire to decide disputes.

(g) Provisions authorizing suits in the Federal courts for the violation of contracts between an employer and a labor organization without respect to the amount in controversy or the citizenship of the parties.

(h) Provisions modifying the usual rule of agency, by providing that any determination of responsibility of one person for the acts of another, shall not be controlled by the question of actual authorization or subsequent ratification. The Norris-LaGuardia Act went to the other extreme, by making unions and their officers immune from the illegal acts of their members and officials except upon clear proof of actual participation in, or actual authorization of, such acts, or of ratification of such acts after actual knowledge thereof.

4. Relations between unions and the public: In three principal respects the law deals with certain public interests in the activities of unions. It endeavors to discourage Communist leadership in unions by prohibiting the National Labor Relations Board from handling representation cases or unfair labor practice cases originating with a union unless each officer has sworn that he is not a member of the Communist Party or affiliated with it, and is not a member or supporter of any organization that believes in or teaches the overthrow of the Government by illegal measures. The act attempts to deal with the problem of political expenditures by unions, through extending the Federal Corrupt Practices Act of 1925 to apply to trade unions as well as to corporations. Finally, the act provides arrangements by which the Government may deal with strikes or lock-outs which threaten to imperil the public health or public safety. Strangely enough, until the act was passed, the President had no authority to deal with such emergencies, except temporary authority given by wartime legislation, and special authority given by the Railway Labor Act.

5. Administrative arrangements: The most important administrative change is the separation of the investigating and prosecuting functions of the National Labor Relations Board from its judiciary functions. This is accomplished by making the general counsel an appointee of the President instead of the Board, placing the regional offices of the Board under his direction, and making him responsible for investigations and prosecutions. Other administrative changes include the requirement that the proceedings of the Board and its agents shall be guided, insofar as practicable, by the rules of evidence followed by the Federal courts in civil cases, and the provision of slightly broader powers for the courts to review appeals from the Board. Of considerable importance is the authority given the general counsel to seek injunctions in some cases of apparent unfair labor practices, and the requirement that he seek injunctions in other types of cases—those in which a secondary boycott has been organized.

IV

What have been the results of the act? The law has operated only in a period of high employment—hence the experience under it has limited significance. Certain principal facts, however, stand out. The results may be conveniently reviewed under two main headings: (1) Areas where the law has not brought about important changes or where the changes have been temporary only, and (2) areas where the law seems to have produced important changes. Let us first consider where the act has had little effect, or only temporary effects.

1. The act has had little effect upon trade-union membership. Between 1937 and 1945 membership more than doubled. Hence, a slowing up was expected. This began in 1945. The slow rise which has been going on since 1945 continued after the passage of the Taft-Hartley Act. In the fall of 1948 trade-union membership in the United States was approximately 15,070,000, in comparison with 14,841,000 in the fall of 1947.[7]

[7] These estimates are derived as follows:

	1947	*1948*
A. F. of L	7,578,000	7,220,000
CIO	6,000,000	6,000,000
Independent unions	1,836,000	2,450,000
Total	15,414,000	16,670,000
Less Canadian members	573,000	600,000
Total	14,841,000	16,070,000

The figures for 1947 are the estimates of the U. S. Bureau of Labor Statistics in Release LS-48-1865. The figures for the A. F. of L. in 1947 and 1948 are based upon the number of members on whom the affiliated unions paid a per capita tax. The actual membership may have been slightly larger. The drop in the membership of the A. F. of L. between 1947 and 1948 is entirely the result of the withdrawal of the United Mine Workers on December 12, 1947. In 1947, the United Mine Workers paid a per capita tax on 600,000 members. The withdrawal of the United Mine Workers also accounts for most of the increase in the membership of independent unions. In both 1947 and 1948, the CIO has claimed 6,000,000 members, but it makes no detailed report of membership.

The deduction for members in Canada is an estimate of membership in Canada of international unions whose headquarters and principal activities are in the United States. According to the Thirty-sixth Annual Report on the Labor Organizations in Canada, published by the Canadian Department of Labor, 573,258 Canadian workers were members of international unions in 1946.

The Taft-Hartley Act interfered temporarily with the organizing activities of unions because it compelled the national representatives to devote much time for several months to union-shop elections. Not all of this time and effort, however, was lost from the union point of view, because the union-shop campaigns helped unions to sign up new members and to bring delinquent members up to date on their dues. Some union leaders blame the act for the disappointing results of the southern organizing drive. The unions might wisely have postponed the drive until after the union-shop elections had been held and after the public relations of unions had had an opportunity to recover from the unfavorable effects of the great strikes of 1946. The act can hardly be blamed for the disappointing results of a drive which was poorly timed and which was conducted with inadequate personnel.

Is the fact that the Taft-Hartley Act had no observable effect upon trade-union membership attributable to the strong sellers' market for labor which has existed since its passage? I think not. There is no reason to expect it appreciably to limit the ability of unions to gain members, even in a buyers' market. It contains the same protections against discrimination and economic coercion by employers which are found in the Wagner Act. It does outlaw short-cut organizing methods (such as attempts to force men to join by refusing to handle their products or to service the plants where they work), but these methods have never accounted for a large part of the gains in union membership. The act gives employers more freedom to talk against unions, but this is a result difficult to criticize. Union leaders have usually expressed themselves quite frankly about employers.

2. The act temporarily interfered with the attempts of unions to win recognition through representation elections, but this effect appears to have been the result of special conditions. Some unions could not decide immediately whether to qualify under the act. Furthermore, there was delay in ascertaining what unions needed to do in order to qualify. Finally, the personnel of unions and of the National Labor Relations Board was busy for months with union-shop elections. For these reasons representation elections dropped by more than half in the year ending June 30, 1948, as compared with the preceding year, and petitions for such elections dropped by almost as much.[8] This

[8] In the year ending June 30, 1947, 10,677 petitions for representation elections were filed, and 6,920 elections were held; in the year ending June 30, 1948, 6,579 petitions for elections were filed, and 3,211 were held,

was the first drop since 1940 in the number of petitions filed and the first drop since 1943 in the number of elections held. As the year advanced the number of petitions and elections rapidly increased. In the last quarter of the year ending June 30, 1948, there were 2,483 petitions for representation elections (virtually the rate of 1947) and 1,261 elections were held.

3. The act has not affected the percentage of elections lost by unions. This percentage (27.3 for the period August 22, 1947 to June 30, 1948) was the highest since 1936, but the act has had nothing to do with this figure. There are cycles in the public relations of unions. For example, the proportion of elections lost was at an all-time low in 1937, when it was only 5.7 percent. It rose gradually to 23.1 percent in 1939, dropped slowly to 13.7 percent in 1942, and has been rising ever since. There are similar cycles in the percentage of votes against unions—except that the antiunion peak (24.2 percent) occurred in the year ending June 30, 1946, undoubtedly reflecting the great strikes of that year. In the year ending June 30, 1948, the percentage of votes against unions had dropped to 23.1.

4. The act caused a temporary drop in the number of unfair labor practice cases filed against employers. Between August 22, 1947, and June 30, 1948, the number was 2,548 in comparison with 4,232 in the previous fiscal year and 3,815 in 1945–46. The drop was due partly to the fact that some unions had not complied with the law, and partly to the preoccupation of unions with union-shop elections. In the 6 months ending October 31, 1948, 1,694 complaints were filed against employers. This was almost at the 1945–46 rate. The drop in complaints against employers originating with unions was partly offset by a sharp rise in complaints originating with individuals. There were 1,174 of the latter during the year, but they declined rapidly as the unions themselves became able to file complaints. During recent years the number of unfair labor practice cases filed has fluctuated. It reached an all-time high in the fiscal year 1937–38 when 6,807 cases were filed, declined steadily to 2,427 in the fiscal year 1944–45, and increased in the first 2 years after the war.

5. As a general rule employers have not refused to deal with noncomplying unions. This is notably true of enterprises which have contracts with the United Steelworkers, the United Miners, the United Electrical Workers, and the International Typographical Union—the principal noncompliers. The attempt of the Waterfront Employers' Association of the Pacific Coast to force the leaders of the International Longshoremen and Warehousemen's Union to take the anti-Communist oath was defeated after a long strike.

6. Hiring arrangements in previous closed shops throughout the country have been little changed by the law. Unions and employers have adapted themselves to the prohibition of the closed shop in various ways. In some cases a union shop has suited both parties as well as a closed shop. In these cases and in others where the union shop existed, the union sought union-shop elections. The Board held an enormous number of these elections—17,790 between August 22, 1947, and June 30, 1948. The union shop won in nearly all cases with a total vote of 6,164,322, and an opposition vote of 93,938.

The union-shop elections have covered less than half of the employees working under closed-shop or union-shop contracts. In the construction industry, the great stronghold of the closed shop, there was only one union-shop vote, largely because of the virtual impossibility of determining who is eligible to vote in that industry. In other cases unions and employers have worked out ways of evading the closed-shop prohibition. These include mutual discharge provisions which permit unions to require the discharge of "disharmonious" persons, special seniority arrangements which assure that preference in hiring will be given to men of long service in the industry, probationary clauses which permit the employment of a new worker to be terminated by either an employer or the union without an appeal under the grievance machinery of the agreement, and clauses permitting employees to refuse to continue to work with any employee of the employer whose continued employment is a source of friction among the employees of the employer. In some instances arrangements were worked out by which employers agreed that nonunion men would not be hired unless they passed an examination for competency given by a joint employer-union committee.[9] In the main, however, employers and unions have met the anti-closed-shop provision of the law simply by ignoring it.

This part of the law imposes no penalties and is not brought into operation unless some one charges an unfair labor practice. Hence, unions and employers can easily continue previous arrangements as if no law had been passed.[10] In some cases there was doubt as to whether the employer's business was sufficiently in interstate commerce to come under the act. In other cases, such as the bituminous coal industry and the Pacific coast stevedoring industry, the act has been deliberately defied by continuation of arrangements which conspicuously violate the law—a blunt challenge to the Government to enforce the law, if it dares.[11]

7. The act has had little effect upon discriminatory or burdensome impediments to union membership.

8. Unions have not been deluged with damage suits because of violations of contracts or other violations of law. The number of damage suits filed against unions is not known, but the Joint Committee on Labor-Management Relations reports that, up to near the end of 1948, 32 suits had been brought against unions by employers, 19 against employers by unions, and one by an employee against an employer. This is not surprising because the law in reality makes virtually no change in the right of employers to sue unions for breach of contract. Employers have long had this right in the courts of the United States and in nearly all of the States. The Taft-Hartley Act merely removes the previous restrictions that the suit must be for more than $3,000 and that in the Federal courts there must be diversity of citizenship. Employers have not used the right to sue unions because managements which wish to get the production from a group of men do not find it helpful to engage in law suits with the bargaining representatives of these men.

9. The anti-make-work provision of the Taft-Hartley Act has had little effect and, if kept in its present language, is not likely to have much effect in a new law. It is easily evaded. The problem is important because unions in declining industries or in industries where employment is intermittent have a strong tendency to develop make-work rules which tend, of course, to keep down the standard of living of the country.

V

In some areas the Taft-Hartley Act has produced important effects. Twelve of the consequences of the act seem to me to be particularly significant:

1. The act has greatly invigorated the trade-union movement. Both the Wagner Act and Government controls during the war tended to diminish the self-reliance of the unions. Furthermore, the preferred position of unions in the administration for 14 years caused them to forget that they could incur the anger of the community and that it might have serious consequences for them. The Taft-Hartley Act has gone far to make union leaders aware that they must not lean too heavily on the Government, and that they must avoid too flagrant a disregard for the welfare and convenience of the community. The act has not had time to produce much effect upon organizing methods of unions, but if the rule against coercion in organizing men is kept in the new law, one may safely predict a great improvement in organizing methods—improvement from the standpoint of unions as well as of the community.

2. The union-shop elections have demonstrated the overwhelming desire of union members for the union shop, or probably for the closed shop. Furthermore, they have increased the power of unions by helping them to gain union shops where previously they had had only maintenance-of-membership clauses.

3. The withdrawal of the protection of the law from foremen has seriously impeded the growth of independent foremen's unions. After conversion to peacetime production, the impetus of foremen to organize substantially diminished. Fear that managements would make arbitrary decisions in selecting foremen for demotion or lay-off at the termination of war contracts had stimulated foremen to organize in the later years of the war. Even in the absence of the Taft-Hartley Act, the organization of foremen would have slowed up, but the act accentuated this tendency.

4. The provision of the law authorizing employers to ask for elections has caused a considerable increase in such requests. The Wagner Act did not prohibit the National Labor Relations Board to hold elections at the request of employers, but it did not specifically authorize such elections. In the first year of the Taft-Hartley Act, 472 requests for elections were received from employers or individuals, in comparison with 158 received during the preceding year and 82 in the year 1945–46.

5. The provision for decertification elections resulted in 154 such elections up to October 30, 1948. In 105 of these cases the bargaining representative was decertified. This record seems to indicate that the law has been useful in eliminating bargaining agents which had ceased to be active or which had lost the confidence of the employees.

6. The act has produced a moderate number of unfair labor practice charges against unions. No such charges were possible under the Wagner Act. From August 22, 1947 to October 31, 1948, 1,110 unfair labor practice charges were filed against unions in comparison with 4,930 filed against employers. The number is large enough to indicate that protection against unfair labor practices by unions is needed. Over half of

---

Fears have been expressed that employers could get elections postponed indefinitely by trumping up unfair-labor-practice charges against unions, thus taking advantage of the practice of the National Labor Relations Board against holding elections while charges are pending. See Archibald Cox, "Some Aspects of the Labor-Management Relations Act, 1947," Harvard Law Review, November 1947, p. 34.

[9] This arrangement, originally suggested by a representative of employers in the printing industry, has since been held discriminatory by the courts.

[10] In a large middle western city a union in the printing trades and the employers adopted the following clause: "Both parties have been operating for nearly 50 years under contractual relationship and the traditions and understandings they have developed and are prevailing shall continue as far as possible within the laws."

[11] Twelve States have declared closed-shop agreements to be illegal, but virtually no effort is made to enforce the laws. Some State anti-closed-shop laws contain no sanctions.

these cases (631) were brought by employers; but 421 were brought by individual workers, and 58 by unions.

7. The provisions for damage suits against unions for breach of contract have led some unions to limit their liability by clauses in their contracts specifically exempting them from liability for strikes which no union officer called or which the union had not ratified. The most famous of these is the clause in the bituminous coal agreement which states that the contract "shall cover the employment of persons employed in the bituminous coal mines covered by this agreement during such time as such persons are able and willing to work." This clause weakens the contract seriously from the standpoint of the public and of the operators.

8. The act may be credited with the establishment of machinery to settle jurisdictional disputes in the building trades. Its purpose has been to prevent these disputes from going to the National Labor Relations Board. On two previous occasions in the last 30 years the building trades unions set up machinery for adjusting jurisdictional disputes, but in each case it broke down after a few years because some unions refused to comply with decisions which went against them. The third attempt to set up the machinery, directly attributable to the Taft-Hartley Act, is the most promising one that has been made.

9. The provisions forbidding the National Labor Relations Board to hear cases which originate in unions whose officers have not taken the anti-Communist oath has weakened the influence of Communists in the trade-union movement. The deterioration of relations between the United States and Russia has had the same effect. Consequently, one cannot determine the precise influence of the Taft-Hartley Act. Some locals in New York and St. Louis have seceded from the United Retail, Wholesale, and Department Store Employees' Union, and there have been secessions from other noncomplying unions, such as the United Electrical Workers, the United Public Workers, and the Farm Equipment Workers. Aggressive steps against Communist-led affiliates of the CIO were authorized by the convention of the CIO in November 1948.

Opinion concerning the anti-Communist provisions of the law has undergone considerable change. At the outset union officers were strongly critical of these provisions, but at the convention of the A. F. of L. in Cincinnati, there was sentiment for strengthening the anti-Communist provisions of the law and for applying them to representatives of management as well as to representatives of unions.

10. The act has greatly stimulated the interest of unions in political action, has caused them to organize more effectively for this purpose, and has led them to make substantial increases in their expenditures for political action. This has occurred in spite of the provision of the act against these expenditures—indeed, it has occurred partly because of this prohibition. The act is easily evaded by the device of setting up organizations for political education.

11. The attempt to narrow the area of industrial conflict by making the secondary boycott unlawful has not been thoroughly tested. Between August 22, 1947, and October 31, 1948, a total of 343 charges alleging secondary boycott were filed. Of these charges, 256 were withdrawn, adjusted, or dismissed in the regional offices of the Board. Secondary boycotts have thus far produced few damage suits.

12. Considerable use has been made of the national emergency provision of the law. In six cases boards of inquiry were appointed; in two, a strike vote on the employer's last offer was held (both votes were in favor of a strike); and in two cases, strikes occurred after the machinery of the law had been used. In two other cases, strikes had started or were about to start when the law was invoked.[12] In a part of one of the maritime disputes (the longshoremen and the stevedores on the Pacific coast) the National Labor Relations Board attempted to hold a vote of the employees on the employers' last offer. The union ordered its members not to vote, and from Canada to the Mexican border not a single ballot was cast.

VI

How good is the Taft-Hartley Act? What are its good points and what are its bad ones?

Perhaps the most important generalization about it is that it attempts to deal by statutory law with many issues which the courts have been handling by common law, and that it provides Federal policies in areas where policy has heretofore been left pretty much to the States. It would not be accurate to say that the policy had been laissez faire—although in reality the only effective public policy in much of the area covered by the act was laissez faire. However, the Wagner Act had replaced laissez faire in a considerable area also covered by the Taft-Hartley Act. Furthermore, the State courts had been struggling for years with important issues covered by the Taft-Hartley Act—with the problem of what kinds of strikes and boycotts and strike activities were legal and what kinds illegal. The courts, it is true, are not well prepared to deal with these issues and have lacked effective instruments for enforcing the law.[13]

The problems covered by the Taft-Hartley Act are better dealt with by statutory law than by common-law methods; a national policy is preferable to 48 separate State policies, and the machinery for enforcement which is available under the Taft-Hartley Act is superior to that available to the courts. In all these respects the act is an important step forward. One should observe that, although the act sets up a uniform national policy, it does not in all cases preempt the field and require that the Federal policy supersede State policy, even where interstate commerce is materially affected. Nevertheless, the foundation for this ultimate step has been laid.

The provisions of the Taft-Hartley Act may be conveniently divided into: (1) Those which seem predominantly good; (2) those which deal with the right problems, but which are poorly worked out; and (3) those which are unqualifiedly bad. Among the features of the act which seem predominantly good, nine are of particular importance.

1. Protection of employers against strikes or boycotts designed to compel them to violate the law. Under the Wagner Act an uncertified union might strike or picket an employer to compel him to deal with it rather than with the duly certified union. The employer had no effective redress—although in some States he undoubtedly was entitled to damages against the union.

2. Protection of employees against coercion from any source in the exercise of their rights to organize or not to organize, to strike or not to strike. Until the passage of the Wagner Act the prevention of coercion in connection with organizing campaigns and strikes was mainly the responsibility of local governments. These did not give protection against economic coercion; and their enforcement of the laws against physical coercion was lax. Under the Wagner Act the Federal Government undertook to prevent economic coercion originating with employers, but not with unions. The Taft-Hartley Act extends the protection to economic coercion originating with unions as well as with employers, and goes even further to make physical coercion an unfair labor practice. It is a close question whether or not the Federal Government should undertake some responsibility for the policing of organizing campaigns, strikes, and lock-outs. In favor of it is the poor record of the localities in controlling mass picketing and violence. If the Federal Government limits its protection to economic coercion, that protection should be given, regardless of whether the source of economic coercion is an employee or a union. A serious defect of the act is its failure to define or limit clearly the meaning of "coerce" or "restrain," as used in section 8 (a) and (b). As a result, too much discretion in defining the words is left to the National Labor Relations Board and to the courts.

3. Comprehensive protection of employees in their right to choose their bargaining agents without interference. The Wagner Act gave only partial protection, for it permitted unions to influence elections by threatening to refuse to handle the product of the plant if the workers chose the wrong union.

4. The provision in the law safeguarding freedom of speech. Some think it goes too far in forbidding the Board to consider as evidence of an unfair labor practice statements which do not contain threats or promises of benefits. The question is a close one, but it is well to decide the doubt in favor of freedom of speech. As I have indicated above, this provision affects unions as well as employers.

5 Changes in the election rules designed to help employees select bargaining agents who represent their real choices. Most of these changes are desirable. Certainly the professional employees should not be put, against their will, in the same bargaining unit as nonprofessional workers. It is difficult to defend the Board's refusal to include the "no union" choice on the run-off ballot when this choice received the largest or second largest number of votes in an inconclusive election. Quite controversial is the question as to whether economic strikers who have been replaced should be allowed to vote. The act says not. There is an obvious difficulty in giving votes to men who will never again be employed by the company. Against this view it is argued that denial of voting rights to displaced men will encourage employers to break unions by replacing strikers. The rule of the Taft-Hartley Act seems, on the whole, to be sound, but the danger of abuse exists. The Board can probably prevent abuses by refusing to hold elections soon after strikers have been replaced by nonstrikers.

6. Authority for employers to request an election in cases of disputes over representation. This provision may not mean much

---

[12] The boards of inquiry were appointed as follows:

On March 5, in connection with a dispute between the Carbide & Carbon Chemical Corp. and the Atomic Trades and Labor Council at Oak Ridge.

On March 15, in connection with a threatened strike of the United Packinghouse Workers against Swift & Co., Armour & Co., Wilson & Co., Cudahy & Co., and Morrell & Co.

On March 23, in connection with an alleged strike in the bituminous coal industry.

On May 18, in connection with a dispute between the long-lines department of the American Telephone & Telegraph Co. and the American Union of Telephone Workers (CIO).

On June 11, in connection with a dispute between seven unions in the maritime industry and a large number of shipping companies and stevedoring employers.

On August 18, in a dispute between the Atlantic Coast Stevedoring Employers and the International Longshoremen's Association (AFL).

[13] This has been particularly true of the Federal courts after the Norris-LaGuardia Act limited the use of injunctions in labor disputes. As a result of this act, the Federal courts might be unable to issue injunctions against admitted violations of law simply because the violation was occurring in connection with a labor dispute.

change in practice because the National Labor Relations Board has in late years considered requests for elections from employers. In the early years, however, it did not. The act does not require that the Board grant the employers' (or the unions') requests.

7. Removal of the ambiguity found in the Wagner Act as to whether the Government's policy of protecting the right to organize applies to supervisors. First, the National Labor Relations Board held that the Wagner Act applied to supervisors, then that it did not, and finally again that it did. This question should be settled by legislation rather than by administrative decisions. Many persons think that the Taft-Hartley Act should have included foremen among employees. I believe that the provisions of the law on this point are sound. The great stake of the country in efficient management is better promoted if foremen are not given special encouragement to form trade-unions. If conditions in a plant are bad enough to make foremen keenly desire a union, they are in a good position to organize.

8. The requirement that unions as well as employers bargain in good faith. The provision will probably have little effect because unions which are strong enough to refuse to bargain on certain subjects are also strong enough to reject successfully all proposals which employers may make with respect to these subjects. Nevertheless, the development of good industrial relations was hindered when employers found themselves compelled to bargain on any proposal made by a union, and yet were unable to get the union even to discuss certain matters which were covered by its constitution.

9. Limitations on the financial payments by employers to trade-union representatives. These limitations, which carry criminal penalties, are a useful protection against extortion and shake-downs. The regulation of so-called health and welfare funds is needed to prevent abuses of these funds and to keep union politics from affecting their administration, since thousands of employees rely on these funds for a substantial pension which will not become payable until after 20 or 30 years. On the other hand, the Taft-Hartley Act does nothing about the highly dubious method of financing welfare funds by imposing a private sales tax on coal, records, or other products.

VII

Some provisions of the Taft-Hartley Act which attempt to deal with the right problems—that is, important problems which need attention—are poorly worked out and will not accomplish the intended results.

1. Provisions designed to protect the right to join a union. If the closed shop or the union shop is permitted (and they fit American conditions), the right to join a union needs to be safeguarded. It will be recalled that in 1946 about 7,000,000 jobs were covered by closed-shop or union-shop contracts. Organizations which seek to determine who may pursue a trade or who may enter an industry are no longer purely private and their admission requirements are affected with a public interest. Keeping the doors of unions open is no academic matter. About 20 unions have provisions in their constitutions against the admission of Negroes, and other unions practice discrimination without requiring it. A few decline to admit women, and many impose high initiation fees. Among 300 locals affiliated with A. F. of L. unions, Professor TAFT found that 65 charged initiation fees of $100 or more, and 24 charged fees of $150 or more.[14]

The provisions in the act designed to protect the right to join a union are unsatisfactory. As I have pointed out, the act forbids employers to justify discrimination against employees for nonmembership in a union on the ground that the union itself discriminates, and makes it an unfair labor practice for a union "to cause or attempt to cause an employer to discriminate against an employee" because of membership or nonmembership in a trade-union. These provisions presuppose that the initiative in enforcing the act will come from employers. Few employers are likely to incur the risk of a strike or a lock-out by challenging the admission policies of a union, because employers usually have little or no stake in unions' refraining from discrimination.

Likewise of little use is the declaration that it is an unfair labor practice for unions to require employees covered by a union-shop agreement to pay an admission fee in an amount which the Labor Relations Board "finds excessive or discriminatory under all the circumstances." Complaints are not likely to be initiated either by individuals or by the Board. Furthermore, no definite yardstick is given to the Board as to what fees are excessive. The Federal Government would do well to set a maximum—say $75 or $100. These amounts would protect men in intermittent trades from losing employment to persons who do not regularly pursue the trade, and yet would be small enough not to be a severe hardship to persons who wished to enter the trade permanently.

2. Provisions designed to protect the right to remain in a union. The union shop, the closed shop, or the use of maintenance-of-membership clauses require that the right to remain in a union be protected; but the provisions in the act on this point are unsatisfactory. The law makes it an unfair labor practice for the employer to terminate the employment of a worker covered by a union-shop contract if the employer "has reasonable grounds for believing that membership was denied or terminated for reasons other than the failure of the employee to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership." The law also makes it an unfair labor practice for a union to cause an employer to discriminate against an employee whose membership in the union has been terminated on some ground other than his failure "to tender the periodic dues and the initiation fees uniformly required as condition of acquiring or retaining membership." This is too narrow. There are many offenses for which a union may wish to discipline a member, and if he can leave the union and still hold his job, the union loses the chance to impose effective discipline. A better arrangement would permit unions which have union-shop or closed-shop contracts or maintenance-of-membership clauses to require employers to dismiss men who lose their good standing, regardless of the cause; but would require also that the worker be permitted to continue to hold his job while exhausting his rights of appeal within the union, and would provide for an appeal from the highest union authority to a neutral agency—preferably the National Labor Relations Board.[15] If a man lost this appeal, the employer should be required to dismiss him. If he won, he should be permitted to keep his job, but the union should be permitted to exclude him from membership.

3. Provisions designed to discourage Communist control of trade unions The Communist problem in American trade unions, where actual Communist membership is very small, is a reflection of the unwillingness of American wage earners to concern themselves with union affairs. The use which Communists have made of trade unions in other countries indicates that the discouragement of Communist control of unions is an appropriate object of public policy It is reasonable to require the officers and key employees of unions to declare (under penalty of perjury) whether they are or recently have been members of the Communist Party. Both union members and employers are entitled to know this. The Taft-Hartley Act does not go far enough when it permits union officers and key employees to refuse to declare whether or not they are Communists; but it goes too far when it deprives noncomplying unions of the benefits of the law—although the latter disadvantage is diminished by the opportunity of individuals to initiate complaints. It is not sound public administration to make the benefits of a law available only when union officials have taken a given oath because the rank and file frequently have little control over their officials. Some people, however, believe that denial of the benefits of the law to Communist-led unions is necessary in order to force the members to take sufficient interest in union affairs to rid themselves of Communist officers.

4. Provisions designed to control the political expenditures of unions. Some control of the political expenditures of unions is sound in principle. Unions are essentially bargaining organizations, hence they need to admit all those in an occupation or industry regardless of political preferences. There are obvious objections to allowing organizations which impose union-shop or closed-shop contracts to collect money from Republicans to help elect Democrats or from Democrats to help elect Republicans. The provisions of the Taft-Hartley Act designed to limit the political expenditures of unions are ineffective because, as I have pointed out, they can be evaded by calling the activity "education." I know of no way of making these provisions effective. Nevertheless there is some merit in applying the same restrictions on political expenditures to both unions and corporations.

5. Provisions for dealing with disputes which imperil the public health or safety. The procedures of the act are initiated when the President believes that a strike or lock-out, or a threatened strike or lock-out, is likely to imperil the national health or safety. The first step is for the President to appoint a board of inquiry to report on the facts and on the position of the parties. The report must be made public, and the board is specifically enjoined not to make recommendations. The appointment of such a board does not affect the right of the parties to initiate a strike or lock-out. On receiving the board's report, the President may direct the Attorney General to seek an injunction enjoining the strike or lock-out. If the district court finds that the strike or lock-out would imperil (or does imperil) the national health or safety, it may issue the injunction, and the board of inquiry is thereupon reconvened. If the dispute is unsettled at the end of 60 days, the board reports to the President the current position of the parties and the efforts which were made to settle the dispute. This report must also be made public. Within 15 days after the second report, the National Labor Relations Board is directed to take a secret ballot of the employees of each employer involved in the dispute on the question of accepting the final offer of the employer. Within 5 days after the vote the National Labor Relations Board must certify the results to the Attorney General who must then move for dis-

[14] Taft, Philip, Dues and Initiation Fees in Labor Unions, this Journal, February 1946, p. 222.

[15] Of considerable importance is the status of a union member during appeal from a penalty imposed by a local union. Professor Taft found 5 out of 126 unions in which the penalty is vacated during appeal, 9 in which the penalty imposed by a local is not enforced in event of appeal until it has been approved by a general officer or the general executive board (which may not be the ultimate appeal body), 52 in which appeal does not suspend the verdict, 42 in which the status of the appellant is not defined, and 18 in which miscellaneous arrangements prevail. Philip Taft, "Status of Members in Unions during Appeal from a Penalty Imposed by the Local Union," this Journal, August 1948, pp. 610–616.

charge of the injunction. The court must grant the motion. The parties are then free to initiate a strike or lock-out. The President, however, is directed to make a full report of the proceedings to Congress.

Certainly the provisions for obtaining a postponement of a strike or lock-out which would imperil the national health or safety are reasonable. But the other provisions for dealing with national emergencies are seriously defective.

To begin with, the arrangements create the danger that two rival agencies will simultaneously be attempting to settle the same dispute. Thus the act plainly contemplates that the Conciliaion Service will be attempting to settle it while the board of inquiry is ascertaining the facts; but it leaves the role of the board uncertain, since it does not forbid conciliation by it. Nothing is more likely to prevent successful conciliation than rival efforts to settle a dispute. Under the Railway Labor Act, by contrast, the so-called emergency boards, which are similar in some respects to the boards of inquiry authorized under the Taft-Hartley Act, do not come into existence until the mediators have formally withdrawn from the case.

If boards of inquiry are used, they should be made subordinate to the Conciliation Service—that is, appointed only at the recommendation of the Director of Conciliation—and they should either be prohibited from conciliating or not be permitted to come into existence until after the Conciliation Service has confessed failure and dropped the case. If boards of inquiry are made a second step in handling disputes which create national emergencies, the prohibition against their making recommendations should be removed.

The worst features of the act for dealing with so-called emergency disputes come into operation if the dispute is still unsettled after the injunction has been in effect 60 days. The National Labor Relations Board must then take a vote of the employees on the employer's last offer. The framers of the act apparently assumed that this vote would be a genuine expression of the willingness of the employees to strike, and that the employees would terminate the dispute by accepting terms which their leaders had rejected. There is no evidence to support this naive notion. Experience under the Smith-Connally Act during the war indicated quite the opposite: obviously men will not desert their leaders at a time of crisis for the union. In two votes held under the act, the union members stood behind their leaders. Furthermore, in one of these cases, the members even rejected an offer which had been made subsequent to the last offer, and which their leaders had accepted. In a third case the men, under instructions from the union, refused to vote.

The provision that the Government conduct a vote on whether or not the men shall imperil the national health and safety puts the Government in a ridiculous position. The vote implies that a strike is permissible provided only that the men authorize it; hence the Government is tolerating an attack on the community's health or safety. Obviously the only role which the Government can decently play is one of defending the community—not of sanctioning strikes against it.

Particularly bad is the provision that after the vote has been taken, the injunction shall be vacated. Consider the psychological effect of the sequence of events—a vote rejecting the employers' last offer immediately followed by vacating the injunction which up to that moment has prevented the strike. Certainly these arrangements are well designed to convince the men that they have met all conditions and are now free to strike regardless of the consequences. As a result, the dispute has been made more difficult to settle. At precisely this point the act stops. It provides no additional steps by which the dispute may be postponed or settled, stating merely that the case may be referred by the President to Congress, in case Congress happens to be in session. This is an ideal way of getting industrial relations into politics.

It is obvious that if interruption of production or service would imperil the national health or safety, the Government must have authority to assure that production or service continue—at least in amounts required to prevent disaster. One arrangement might be to authorize the President to require the parties to observe the recommendations of the board of inquiry (this assumes that the board is permitted to make recommendations) for a limited time—say 6 months, or long enough for the parties to make a fresh start on bargaining over their differences; another arrangement might be to authorize Government seizure and operation of the enterprise; still another might be to authorize the President to arrange for a limited amount of service at the previously existing terms of employment subject to retroactive adjustment when the dispute is settled.

6. The provision authorizing the general counsel to apply for injunctions to stop apparently unfair labor practices, pending final determination of the issue by the Board. There are likely to be many cases in which justice is best advanced by maintenance of the status quo pending a decision on the legality of a given action. Only the general counsel may seek injunctions, and the court, of course, may not see fit to grant his petition. As of November 1, 1948, 6 permissive applications and 31 mandatory applications had been made. Two of the discretionary applications were against employers. As a result of one of these the General Motors Corp. was restrained from installing an insurance plan without negotiating with the union.

Although the provisions for injunctions improve the enforcement machinery, they have two important defects. One is the requirement that the general counsel seek an injunction in certain types of cases (secondary boycott). Surely this should be left to his discretion. The other is an ambiguity as to whether the general counsel must show that the practices which he would restrain would cause irreparable damage and cannot adequately be remedied at law. One district court has held that these traditional standards in granting injunctions do not apply.[16] Yet there seems to be no good rea-

VIII

Of the features of the act which are completely bad, the two most important are the prohibition of the closed shop and the requirement that union-shop contracts be approved by a vote of the employees.

The closed shop is a well-established American institution which fits conditions here and which serves useful purposes, especially in occupations where much of the work is intermittent. It creates problems and is subject to abuse. Nevertheless, public policy should aim at making the closed shop work better, not at abolishing it. The fact that the Railway Labor Act imposes criminal penalties on managements which sign closed-shop (or even union-shop) contracts is not in point. The closed shop has never existed in the railroad industry, and the anti-closed-shop provision of the Railway Labor Act was actually put in at the demand of the unions, although they now demand its removal.[17]

It was a mistake to require that union-shop contracts be approved by a vote of the employees. Such votes serve no useful long-run purpose. Employers are not willing to sign closed-shop or union-shop contracts unless they believe that their employees strongly desire such a contract. Since managements are not easily convinced of this fact, there is little danger that closed-shop or union-shop contracts will be imposed upon unwilling workers. In a few industries, such as the building trades, compliance with the law is virtually impossible because no one can determine who is eligible to vote.

IX

What kind of a labor law should the country have? It would not be appropriate in this article to attempt to spell out the details of a successor to the Taft-Hartley Act. The comments already made have given some indications on particular matters and a few broad generalizations may now be set forth:

1. The law should be comprehensive. This does not necessarily mean that it should be long and detailed. Nevertheless, there is a wide range of problems on which public policies are needed—problems of relations between unions and individual workers, between unions and employers, between unions and unions, and between unions and employers, on the one hand, and the community, on the other.

2. It should take account of the fundamental characteristics of industrial relations in the United States—those which are the product of the American environment and which cannot easily be changed. This does not mean that no attempt should be made to change them, but the principal objective should be to protect the essential institutions of American industrial relations against abuse, and to make them work more satisfactorily. For example, it would be a mistake for public policy to attempt to undermine the dominant position of the national union in the American trade union movement, or to attempt to convert the movement into a grass-roots affair in which union officers have much less influence and the rank and file more influence than is now the case. The strong national union fits American conditions, and American employees wish their officers to run the unions. These conditions, to be sure, create certain problems. Public policy should attempt to deal with these problems rather than to change the nature of the trade union movement itself.

3. It should attempt to narrow the area of industrial conflict. Certain uses of strikes and boycotts are not appropriate, and it is high time that trade unions and the community dropped the naive notion that the unlimited right to strike is an inherent and necessary right of freemen. In general, it is inappropriate that the strike should be used by unions to battle other unions, or that strikes or lockouts should be used to coerce the Government or to compel changes in public policy.

4. It should attempt to deal with certain specific problems. The following six are particularly important:

(a) It should protect the right to organize. If this right is not protected, employers will use discharge and other forms of economic coercion to break up new unions. Protection of the right to organize should include protection against economic coercion by unions as well as by employers. Otherwise, some unions will attempt to control men's choices by boycotts, strikes, or other short-cut methods. There was a good case for tolerating such methods so long as employers were free to discharge men for joining unions. But now that coercion by employers is unlawful, public policy should also prohibit the use of economic coercion by unions to force men to join or to leave a union. It is anomalous for the legality of economic coercion to depend upon who uses it.

(b) It should protect the right of workers to pick their bargaining agents free of interference from any source. The Wagner Act

[16] *Dowd's* v. *Local 294, Teamsters Union* (75 F. Supp. (N. D. N. Y.)).

son why they should not.

[17] Since some of the railroad unions discriminate strongly against Negroes, the closed shop should not be permitted on the railroads until Negroes are adequately protected against discrimination.

destroyed the effective operation of the principle of exclusive jurisdiction, and a new arrangement must be developed to take its place. The British principle of tolerance will not do because it presupposes more influence of the rank and file in the trade-union movement than has been traditional in the United States. The trade unions themselves are not capable of providing a solution because the largest and most powerful unions, which do not wish interference from any source, have too much influence within the labor movement. Hence interunion rivalry over members can be controlled only by public policy. The very growth of unions makes such control imperative. When two powerful unions battle for the control of workers, as did the carpenters and lumbermen in the Northwest several years ago, or as have the teamsters and brewery workers in some cities, or the longshoremen and the teamsters, the costs to the community may be intolerable.

(c) It should permit closed-shop contracts where the union represents the majority of the employees in the bargaining unit. The Federal Government would do well to preempt this field and to forbid States from outlawing closed-shop contracts in plants engaged in interstate commerce.

(d) It should safeguard the right to become a member of a union and the right to remain in a union wherever closed-shop or union-shop contracts exist.

(e) It should make strikes over the jurisdiction of unions an unfair labor practice, unless the employer has denied work to members of the union which has the bargaining rights for the job.

(f) It should safeguard the health and welfare funds which are being set up and which are likely to be set up in increasing numbers. It would be desirable to reduce the incentive to establish such funds by greatly increasing the tax base and benefit base in the Government scheme of old age and survivors insurance. The pension which a man receives should not depend too much upon whether he happens to work for a generous employer, or to belong to a strong trade union. Furthermore, private health and welfare funds are likely to reduce the willingness of employers to hire men above 45, and thus seriously to limit the mobility of labor.

(g) It should provide arrangements for handling disputes which imperil the national health and safety.

Almost as important as the provisions of the law are the way in which it is drafted and the sponsorship which it receives. A great forward step would be taken in industrial relations if representatives of employers and of unions could reach agreement on the basic provisions of a successor to the Taft-Hartley Act. Unfortunately, the prospects for such agreement are not bright. Some years will probably be required for the country to develop a well-considered and well-balanced industrial relations act. Nevertheless, with the experience of the Wagner and Taft-Hartley Acts as a guide, the new Congress should be able to draft a law which is substantially better than either one of them.

Lincoln Ordnance Depot, Springfield, Ill.

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter which I have received from the Honorable Edward J. Barrett, secretary of state of the State of Illinois, and the copy of House Joint Resolution 27 of the Sixty-eighth General Assembly of the State of Illinois, concerning the Lincoln Ordnance Depot at Springfield, Ill.:

STATE OF ILLINOIS,
OFFICE OF THE SECRETARY OF STATE,
Springfield, March 30, 1949.

Hon. PETER F. MACK, JR.,
Representative in Congress,
Washington, D. C.

DEAR SIR: In compliance with House Joint Resolution No. 27 of the Sixty-sixth General Assembly, I have the honor to enclose herewith photostatic copy of said resolution.

Very truly yours,
EDWARD J. BARRETT,
Secretary of State.

House Joint Resolution 27

Whereas the Lincoln Ordnance Depot was established in the Springfield metropolitan area in 1942 and has ever since formed an integral part of the economic life of this community; and

Whereas the recent deactivation order came as a complete surprise in view of the disturbed international situation and general state of preparedness which prevails throughout the Nation; and

Whereas we would be remiss in our duty to our State and Nation if we supinely submitted to this apparently unwarranted action without voicing a vigorous protest: Therefore be it

Resolved by the House of Representatives of the Sixty-sixth General Assembly of the State of Illinois (the senate concurring herein), That we respectfully urge the Secretary of the Army, Kenneth C. Royall, and Maj. Gen. Everett S. Hughes, Chief of United States Army Ordnance, to reinvestigate the factors that prompted the deactivation order, and that copies of this preamble and resolution be sent by the Secretary of State to President Harry S. Truman, Secretary Royall, Major General Hughes, Senator Scott W. Lucas, Senator Paul H. Douglas, Representative Peter F. Mack and each of the other Illinois Members of Congress in order that they may take such action as may seem necessary.

Adopted by the House, March 29, 1949.
PAUL POWELL,
Speaker, House of Representatives.
CHAS. F. KERWIN,
Clerk, House of Representatives.

Concurred in by the Senate, March 29, 1949.
SHERWOOD DUER,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Foreign Policy—Keep It Bipartisan

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News for March 31:

KEEP IT BIPARTISAN

Republican members of the House Foreign Affairs Committee, dissenting from the majority report on the European recovery program, are sharply critical of certain trends in American policy. Their views can't be dismissed as mere expressions of partisan bias.

Leaders in the revolt against what they contend has become only a me-too policy for Republicans are Representatives JOHN M. VORYS, of Ohio, and WALTER JUDD, of Minnesota, two of the best-informed House Members on foreign issues.

They object, and properly so, to the piecemeal presentation of foreign-aid legislation. They say funds for ERP, Chinese aid, Greek-Turkish military assistance, and the International Children's Fund should be wrapped in one package, which seems elemental to sound budgeting.

They consider the proposed aid to China inadequate, which may be debatable. They hold that "American policy in China has collapsed," which is not debatable. Our dismal failure in China may prove the Achilles' heel of American foreign policy as a whole.

And they complain that the Truman administration has tried to "take credit for achievements, in which our party deserved at least equal credit." Certainly it is true that the 2 years when the Republicans controlled Congress were a crucial period in foreign policy, and that the administration owes generous recognition to the loyal and effective support then given by Senator VANDENBERG, Representatives VORYS, JUDD, EATON of New Jersey, and other Republicans. Mr. Truman needed such support then, and may need it again; the present large Democratic majorities may not be present in the next Congress.

It is tremendously important that American foreign policy shall continue to have bipartisan support in Congress. The President would do well to make it clear that he appreciates the past contributions of Republicans, and that he does not intend to ignore their views in the future.

Nothing New on the Western Front—Analysis of the Reorganization of the German Coal, Iron, and Steel Industries as Planned Under Law No. 75 of the AMG

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that appeared in the March-April issue of the magazine published by the Society for the Prevention of World War III:

NOTHING NEW ON THE WESTERN FRONT—ANALYSIS OF THE REORGANIZATION OF THE GERMAN COAL, IRON, AND STEEL INDUSTRIES AS PLANNED UNDER LAW NO. 75 OF THE AMG

The State Department Bulletin of December 5, 1948, published the text of law No. 75 and an outline of decisions relative to the reorganization of the coal, iron, and steel industries of the western zones of Germany.

1. The outline of decisions hereafter called outline, states: "Before these decisions were reached (reorganization of iron, steel, and coal industries) the views of the various interested German authorities and organizations which are well known to military government were given full consideration and as far as possible, and as far as it is compatible with military government policy, these views have been incorporated in the plan."

This statement is a frank admission on the part of the occupation authorities that the so-called reorganization program has not been independently arrived at by the occupa-

tion authorities. On the contrary, the interests and influences of the Germans and their organizations have been substantial in the formulation of this policy. Thus, the occupation authorities have disregarded the basic mission of the Allied occupation which presupposed that the treatment of the German economy would be based first on the security requirements of Germany's victims and, second, on the requirements to whittle down Germany's economic preponderance for purposes of effectuating a more equitable balance of the productive forces in Europe.

In other words, these standards which were to have guided our occupation policy have been secondary to German consent, as admitted in the statement mentioned above.

2. In the preamble of law No. 75 it is declared that the policy of the AMG is designed "to decentralize the German economy for the purpose of eliminating excessive concentration of economic power and preventing the development of a war potential." However, a careful study of the law and the outline shows that this objective is hardly realized. For example, the law declares that a "German Steel Trustee Association shall be established for the purpose of assisting in decentralizing and reorganizing the iron and steel industry" (art. 3, par. 8). However, in that very same law (par. 10) the German Steel Trustee Association is empowered to draw up plans for the reorganization of the iron and steel industry. The plan shall provide for the formation of new companies to which shall be transferred assets seized as provided in paragraph 8 hereof and may provide for the merger or amalgamation of such assets and for the absorption of additional assets which may include assets outside the field of the iron and steel industry.

In clarifying this provision the outline states, in part, that the German Steel Trustee Association's primary task is to adopt measures for the further reorganization of the iron and steel industry with the object of combining the assets now held by the steel-producing companies into a fewer number of companies in order to obtain production units of optimum efficiency.

The German Steel Trustee Association can partially achieve this objective by including additional assets of the former iron and steel and coal complexes in order to provide further economic units of a size and range capable of sustaining the steel-fabricating industry in competition with world markets. Such additional assets may include colliery assets (assets pertaining to the coal-mining industry) and particular attention will be directed to the treatment to be accorded to the iron-ore-mining industry.

Thus, it is very clear that while there will be a reshuffling of the iron and steel industry of Germany, it will not eliminate excessive concentrations of economic power. It will, in fact, achieve the opposite. Significantly, the law does not define what is excessive concentrations of economic power. This will be left to interpretation by the German trustees.

In discussing the reorganization plan in the November 27, 1948, issue, Business Week declares that the United States opposed decartelization measures which would break down the vertical integration of the coal and steel industries. Commenting on this point as it affected law No. 75, Business Week states: "The United States has won its point."

In this connection, it must be pointed out that the vertical integration of the coal and steel industries of Germany has been, in the past, the pattern of their cartel organization. Moreover, Business Week in this same issue declares that the German Steel Trustee Association will provide the steel-producing units with their normal adjuncts—such as power plants (in some cases coal mines and coke ovens) but some steel-producing plants will have to be recombined.

In an earlier issue of this well-informed magazine, November 20, 1948, it is frankly admitted that the German steel industry "will be reorganized but will not lose the advantages of vertical integration."

As seen from the plan itself, this is definitely the case; the German steel cartel is reshuffled, but it remains a cartel.

A recent editorial in the London Tribune adds some interesting data: "In July of this year came the first unilateral American intervention. Officially unrecognized by the British authorities, eight directors of the United States Steel Corp., accompanied by a representative of the Congress Committee for Marshall Aid, toured the Ruhr for 3 weeks in Goering's special train. The United Steel Corp. is the largest horizontal steel trust in the world, employing 175,000 workers. Thus it is hardly surprising that a recartelization of that part of the steel industry already decartelized was recommended. The military governors are expected shortly to implement the United States Commission's recommendation in a plan providing for the recartelization of the 28 new companies into 12 larger concerns."

3. The outline bluntly declares that the sole criteria for the reorganization of the steel industry will be purely economic. By "economic" it is meant those measures and requirements which will make possible Germany's recovery.

It should be borne in mind, however, that the occupation authorities have sought the Germans and their organizations for advice as to what measures and requirements should be considered for making possible Germany's economic recovery. By using criteria which are purely economic, the AMG admits ignoring the security requirements of Germany's neighbors. By consulting the Germans—and not the victims—on the reorganization of these industries, the occupation authorities have ignored the economic interests and well-being of Germany's neighbors. This is a departure from the statements of the highest American officials who have declared that the German economy must be adjusted to the security and economic needs of all of western Europe and not vice versa.

4. Under Law No. 75, the coal industry is handled in approximately the same fashion. There is a reshuffling but essentially the coal cartel remains intact. Business Week of November 27, 1948, admits: "The Ruhr coal industries are in for a similar overhauling. The joint United States-British control group will attack the problem in the same manner and in collaboration with the new steel group."

Law No. 75 empowers the control group to define the assets of each new coal company. It will also be empowered to combine the coal mines with power and transportation facilities as well as byproducts units such as hydrogenation and nitrogen plants. Such a combination will be established as a new operating company. After this initial reorganization, German trustees will take over the new companies.

In the Outline it is stated: "In grouping these colliery interests for the future, care will be taken to group in accordance with the requirements of efficient operation and to avoid undue dislocation."

Thus, as in the case of the steel industry, only economic criteria will govern.

5. Law No. 75 stipulates that "those persons who have been found or may be found to have furthered the aggressive designs of the Nazi party will not be permitted to return to positions of ownership and control of the German iron, steel, and coal industries." The law omits any practical measures that would preclude the return to power of the men mentioned above. There is no provision that specifically takes the ownership of these properties away from such individuals.

It is true that German trustees are set up for these industries and they will exercise ownership functions. However, the Outline declares that the shares held by the trustees shall be "on behalf of the owners." This is the pattern of ownership in the coal industry. The same relationship of actual owner to trustee obtains in the so-called reorganization of the steel industry.

As stated in the Outline, the German Steel Trustee Association "will exercise the functions of ownership except that they shall not be entitled to distribute earnings or to dispose of either the shares or the assets * * *." In neither the reorganization for the coal or steel industries is there found specific provisions regarding the eventual ownership of these assets. Dummy corporations and other cloaking devices which could preserve the power of the present owners are not discussed at all.

Thus, we repeat that the law does not contain a definite statement that the actual ownership of the industries concerned will be taken away from those "who have been found to further the aggressive designs of the Nazi Party." As a matter of fact, these very people are in the saddle in those industries at this very moment and the AMG knows it.

The same editorial of the London Tribune above referred to, declares: "But more significant than the elaborate maneuvers of the German Ruhr magnates, in league with American businessmen * * * is the speedy German line-up which has taken place within the heavy industries and at Frankfurt. Heinrich Kost, one of Hitler's war-economy leaders, and former managing director of Rhein-Preussen, is in charge of the provisional coal administration; Wilhelm Zangen is back on the board of Mannesman; Rohland, one of Speer's right-hand men in the Armaments Ministry and a member of the SS, has returned from internment to the board of Vereinigte Stahlwerke. So have Sohl and Schwede, also wartime directors. Hugo Stinnes has been acquitted of all political guilt by a German denazification court and is active behind the scenes. Herman Reusch has emerged with enhanced prestige from his battles with the unions and the British authorities. Henle of Klockner, together with Pferdmenges, the Frankfurt banker, are faithful representatives of the combines in the Frankfurt Economic Council."

In conclusion, Law No. 75 declares that the ultimate ownership of these industries "should be left to the determination of a representative freely elected German Government." This is an unprecedented statement, for nowhere have we seen that our military authorities were directed to determine who shall decide the ultimate ownership of the German iron and steel industries of the Ruhr. There is no official directive known to the American people, nor is there any official inter-Allied agreement which justifies this unilateral decision by the AMG. The significance of the reorganization plan is clear. It is the plan for the so-called international control of the Ruhr.

Thus, Law No. 75 reminds us of the French proverb "Plus cela change plus c'est la même chose." In plain English: the more it changes the more it is the same thing.

A Commemorative Stamp Honoring the Workers and Contributors of the Nation's Community Chests

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. KEATING. Mr. Speaker, today I have introduced a bill to commemorate

the unselfish work done by those who volunteer their services to advance the cause of the Nation's community chests and the contributions made by generous donors in all walks of life to this great Nation-wide effort.

In proposing that a special postage stamp be issued as a tribute to the community chests of America, I am not asking that a single small locality be honored, nor that a small group of citizens be singled out for special recognition.

This special commemorative postage stamp would honor more than a thousand cities and villages where community chests are now established. It would encourage and applaud a million chest volunteers in those communities who give not only their money but uncounted days and even weeks of their time for an unselfish, community-wide civic undertaking. And it would be a significant token of thanks and appreciation to some 20,000,000 community-chest givers, upon whose interest and generosity the effectiveness of local red-feather services ultimately depends.

Finally, it would honor the red-feather services themselves. It would salute the uncounted volunteer board members who direct red-feather hospitals and clinics, homes for the aged, homes for neglected children, Boy Scout and Girl Scout councils and troops, settlements and other youth services, family counseling agencies, agencies for the handicapped. It would honor the devoted, highly competent and, I regret to say, often underpaid social workers, nurses, therapists, and other skilled employees who make up the staffs of the red-feather services in a thousand communities.

While it carries forward the tradition of helpfulness that was the strength of the pioneer American neighborhood, the community chest is a money-raising device of fairly recent origin.

Back in 1877, in Denver, Colo., two Protestant ministers, a Catholic priest, and a Jewish rabbi called a public mass meeting and launched the first joint drive in America to raise funds for a group of local social agencies. Cleveland, in 1913, introduced the technique of budgeting, now almost universally adopted. My own city of Rochester, N. Y., in 1918, combined the annual appeals of local philanthropies with those of all recognized war-relief agencies to form the first community and war chest, and in 1919 first used the now universal term of "community chest."

I would like to emphasize that there is no national chest. Each chest is a local institution, a grass-roots institution. Each community raises and collects its own funds, and distributes those funds to its own local red-feather services. And these services are not charitable organizations in our generally accepted use of that term. Relief of actual destitution is largely carried on by public agencies supported by tax funds. The voluntary red-feather health and welfare services have an equally great responsibility—to make life fuller, happier, healthier, more worth living. The users of those services are not the underprivileged alone, but the general rank and file of our citizens. Nearly every individual, a member of nearly every family, at one time or another needs and uses these services. I know that in my own community there is a fine and healthy cooperation between the red-feather services and the public welfare agencies, a cooperation that promotes the welfare of the average citizen and taxpayer.

The typical community chest unites in a common purpose all economic and social groups, all professions, all creeds. In the campaign and in the year-round operation of a chest, the executives of great industries work shoulder to shoulder with representatives of organized labor. Chest workers and givers include factory workers, farmers, villagers, city dwellers. It is a powerful force for unity. It is local democracy in action.

I must confess that a certain amount of local pride in the pioneer work done in this movement by my own city prompted my introduction of this bill. But it is definitely not a local measure. I am not going to burden the membership by offering the list of those cities which have community chests of widely recognized excellence. Believe me, the list is a long one, and I am sure that each of my colleagues would find in that list one or more communities with which he is more than casually familiar. In their behalf, I ask favorable action on this resolution.

Barring Reds' Tour—United States Action Is Legal, But It Might Be Well To Let Communists See Country

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Thomas L. Stokes, which appeared in the Washington Star:

BARRING REDS' TOUR—UNITED STATES ACTION IS LEGAL, BUT IT MIGHT BE WELL TO LET COMMUNISTS SEE COUNTRY

(By Thomas L. Stokes)

The State Department has the strict letter of the law on its side in keeping 18 Communists who came here for the so-called Cultural and Scientific Conference for World Peace in New York from making a projected tour across our country.

There's no doubt about that. They came here as official visitors from Russia, Poland, Yugoslavia, and Czechoslovakia with visas only for New York City and the conference there last week end. It was only because they were official visitors that they were admitted at all. That's the only way Communists can get into this country legally—as official visitors to a specified locale for a specific purpose.

It may be recalled that this procedure was adopted a couple of years ago in the case, first, of a French Communist newspaperman who came to this country to cover the United Nations sessions in New York. The Justice Department found a World War I statute still on the books.

This was the first appearance of our own iron curtain which was lowered just a bit this side of the Statue of Liberty.

LEGALLY ON FIRM GROUND

Technically and legally the State Department is on firm ground. It should perhaps get some credit, in the first place, for admitting these Communist musicians, scientists, and writers at all, in view of the temper of some people in our country, undoubtedly a minority, who protested their admission in the first place. The eye-for-an-eye, tooth-for-a-tooth case was put by a couple of Members of Congress, Senator MUNDT, Republican, of South Dakota, formerly of the House Un-American Activities Committee, and Representative WOOD, Democrat, of Georgia, its present chairman, who objected that Russian Communist visitors should not be allowed in our country until they dropped their iron curtain for visitors from the United States.

Logical enough, one might suppose.

And yet the attitude seems not only unlike us, but it all seems an affront to the sound sense of the American people to fear the quick passage through our country of only 18 Communists, all of whom work in the arts and not politics, and therefore are a bit naive about politics. They would, it is presumed, have the local police watching them wherever they went, so we would be protected, and they would feel at home.

If they said from the platform elsewhere what they said in their New York meetings, we need have no qualms that any of our people would become tainted or indoctrinated. And while they very likely would get delegations of pickets wherever they went, that being an old American custom, it is probable that the folks out in the country, who are courteous and hospitable, would raise far less ruckus than some in New York did.

COULD LOOK AROUND

On the other hand, it might be a good thing to have even this small group of foreign Communists, only seven of whom are Russians, take a good look at our country and our happy and prosperous and free people and get rid of lots of notions they read in their newspapers and hear over their radios. It would be a fine opportunity for us to do some proselyting and merely by giving them a look.

It might help our own people to see some Russians, and see that they do not wear long black whiskers or horns or shoot fire out of their mouths, but are people just like ourselves. That might help us to distinguish between the Russian people and the rulers in the Kremlin and bridge the gap that is growing wider and wider every day between peoples of the world.

The peoples of the world want peace and it is high time they let their political masters everywhere know that. To do that effectively, people must have contact with each other. As it is, we are shutting ourselves behind barriers, behind iron curtains, if you please.

This is the spring season, the season of building, flowers, and good will, and the time when the circus comes around.

It is doubtful that 18 Communists would be nearly as exciting as the bearded lady or the thin man or those daring souls who climb up on each other's backs and balance on poles as the gentleman underneath the whole pack rides a bicycle across a wire way up at the top of the tent.

An afternoon at the circus would help the whole world.

Only a Paper Pact?

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial, Only a Paper Pact?, which appeared in the April 2 issue of America:

ONLY A PAPER PACT?

As a diplomatic document, the North Atlantic Pact may indeed, as many are claiming, be a classic of its kind. But of and by itself it is far from being what Senator Vandenberg would have us believe it is, "the greatest war deterrent ever devised." We should know by now that the rampaging Reds will not be deterred from aggression by pacts on paper. They will be convinced that the Atlantic community means business only when it actually and adequately implements the treaty to be signed next week.

Like the Russians, we are waiting to see what the Congress of the United States does about the supplementary arms program which is a necessary corollary of the pact. Legislation permitting the shipment of arms to the treaty countries has been prepared by the administration and in due time will be presented to Congress.

Already a weird coalition of penny-pinchers, administration-haters, and isolationists is gathering its forces to defeat any move to put teeth into the treaty. Senator HARRY F. BYRD of Virginia is for the pact, provided it contains no commitment to arm participating nations. Senators WHERRY of Nebraska, WATKINS of Utah, and DONNELL of Missouri may be expected to support him. Senator TAFT of Ohio grumbles that the treaty is so worded that it appears to be inseparable from the issue of supplying arms to Europe.

Secretary of State Acheson denied during a radio address March 18 that the treaty binds the United States to any arms program, but added, "We all know that the United States is now the only democratic nation with the resources and the productive capacity to help the free nations of Europe to recover their military strength." The arms-shipment program prepared by Assistant Secretary of State Ernest A. Gross is simply an acknowledgment of that fact of first importance.

It is disappointing to note that the administration is paying so much attention to the small coalition which threatens to oppose its proposals. Under threat of that opposition, the administration has already given a number of assurances, some of which the realities of the cold war may force it to repudiate later. It undoubtedly inspired the story that its "modest rearmament program" for the fiscal year July 1949–July 1950 would cost only $1,500,000,000. It announced that the European recovery program will have top priority on United States money and materials sent to Europe. And it declared that the United States would provide arms and munitions only for "existing western European military formations." More comforting to the Russians than to the few infantrymen and fliers of the west—that news.

Such reassurances will have little effect on people like Senators BYRD, WHERRY, WATKINS, DONNELL, and TAFT. They may prove distinctly disturbing to those who, finally reconciled to the unavoidable necessity of seeking peace through strength since cooperation by agreement has failed, want the West to mobilize forces sufficient to deter the Russians from aggression.

No one can reasonably object to Senators who, like Senators VANDENBERG, CONNALLY, and HICKENLOOPER, reserve their positions on the arms legislation until its details are explained to them. We are sure they act out of prudence, not parsimony. And we are sure they will face this unpleasant fact frankly: the details will add up to a staggering amount of armament, which cannot conceivably be supplied out of surplus.

No one, of course, can tell at this date what adequate rearmament of the treaty nations will cost. One thing we should have no illusions about. To be adequate it must cost as much as is required to create a Western defense system which will overawe the Russians. Unless it costs enough to do that, there is no point in spending a cent on it. If we seriously want the pact to be the "greatest war deterrent ever devised," we must expect to pay, and to pay far more than the administration now pretends will be necessary.

This cost will be compounded by the dual nature of the rearmament job to be done. The treaty nations must be armed against both direct and indirect aggression, against a full-fledged attack by Russian armies, and against coups by native Communists. It seems evident now that the most immediate threat lies in the latter.

Administration spokesmen have been giving the impression, foolishly, we think, that the treaty nations have no intention of expanding and strengthening the Western military forces so that they could defend the Rhine against a Soviet onset. If the arms program is to mean anything, and especially if it is to have any uplifting effect on the morale of the Western peoples, rearmament with that objective will have to be provided.

Perhaps because they sense this costly necessity, the opposition bloc in Congress, which abhors any rise in taxes, is beginning to argue that any arms shipments in peacetime would provoke the Kremlin. A sufficient answer to them should be that the Kremlin will be provoked whenever it wants to be provoked, and anyway, who said that this is peacetime? Of all the illusions that are grasped as weapons against preparedness, that is the most dangerous. It is time we Americans realized that Soviet Russia is waging a new and terribly effective kind of war. To our way of thinking, the proposed arms legislation is wartime legislation. Much as we deplore its necessity, we cannot avoid it, and we cannot avoid paying the price it entails. Costs cannot be considered in time of war—hot or cold.

Alaska, Hawaii, and Puerto Rico

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I invite the attention of the Members of the House to a letter written by the late Dr. Nicholas Murray Butler, for many years president of Columbia University and one of the Nation's most distinguished citizens.

The letter is as follows:

MARCH 7, 1947.

Hon. JULIUS A. KRUG,
Secretary of the Interior,
Washington, D. C.

MY DEAR MR. SECRETARY: May I call to your attention a matter which I regard of extreme importance to the Government and people of the United States. Under no circumstances, should Alaska, Hawaii, or Puerto Rico, or any other outlying island or territory be admitted as a State in our Federal Union. To do so, in my judgment, would mark the beginning of the end of the United States as we have known it and as it has become so familiar and so useful to the world. Our country now consists of a sound and compact area, bounded by Canada, by Mexico, and by the two oceans. To add outlying territory hundreds or thousands of miles away, with what certainly must be different interests from ours and very different background, might easily mark, as I said, the beginning of the end.

Think of what would happen were the vote of one Senator from Alaska or Hawaii or Puerto Rico to defeat the ratification of an important treaty affecting the policy and good order of the world. It is unthinkable that we should allow any such possibility.

On the other hand, I suggest that each one of these Territories—Alaska, Hawaii, and Puerto Rico—be set up, by treaty, as an independent and self-governing nation, subject to but two limitations. These are, first, that their relations with foreign powers should be subject to the approval of the President of the United States and the United States Senate. This would prevent any foreign power from using them to our disadvantage. The second is that litigants in any one of these countries should have the right of appeal to the Supreme Court of the United States. The effect of this would be to establish a uniform system of public and civil law in this part of the world. This privilege now exists in the case of Puerto Rico and I am told works extremely well.

I earnestly ask your most serious consideration of this proposal and the avoidance of the damage that would be done to our Government and our people by extending the United States beyond its present very compact and naturally defined boundaries.

I regret that on account of my total blindness, I cannot sign this letter myself.

Sincerely yours,

NICHOLAS MURRAY BUTLER.

Allied Veterans Council Protests Cancellation of Veterans' Hospital-Construction Program

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. SADOWSKI. Mr. Speaker, during the last several weeks I have received numerous protests from veterans and families of veterans, and also from veterans' organizations, civic organizations, cities, municipalities, and even the State legislature, against the concellation of the veterans' hospital-construction program. These organizations have all brought out the urgency and immediate need for additional hospital facilities in our State. The Governor of the State of Michigan, the Honorable G. Mennen Williams, has presented a detailed statement to the Senate committee proving beyond a doubt the extreme urgency of additional hospitalization.

There may be some differences among the Members of Congress as to the extent of aid that the veterans are entitled to when it comes to the question of pensions, bonuses, Federal loans, and so forth. I am sure, however, that there is no difference of opinion in the Congress of the United States on the question of giving full hospitalization, medical aid,

and assistance to our veterans. The Democrats at the Philadelphia convention went all out for medical aid and assistance, not only for the veterans of our country, but for all the citizens of the United States. President Truman has valiantly taken up this fight for full medical aid and assistance and hospitalization for the citizens of the country.

Now I would like to ask the question just who it is in the Veterans' Administration, or outside the Veterans' Administration, who is so powerful that he or they have been able to sabotage the veterans' hospital-construction program that has been previously approved by the Congress of the United States? Someone must have sold President Truman this vicious and inhuman bill of goods. In all probability it must be the same gang that sold President Roosevelt the economy bill which caused no end of hardship to our veterans. I think the veterans of the Nation ought to get together and smoke out this group of economizers who always try to save the country money at the expense of our veterans. In all probability it is the same gang that in a couple of weeks will be urging the Congress to shovel out seven to nine billion dollars for aid and militarization of Europe and Asia.

I have heard many arguments for economy on the home front when it comes to cutting expenditures for power projects, flood control, the St. Lawrence waterway, aid to education, public health, veterans' pensions, and all those appropriations which go for the general welfare of our own Nation and our own economy. Yes, we can always hear the economizers shouting their lungs out. Yet these same people will be in the forefront for dishing out billions for Asia and Europe.

Mr. Speaker, I submit that it is inhuman to deny proper hospitalization and medical assistance to our disabled and sick veterans. This is our first obligation. I have just received a letter from the Allied Veterans Council, Inc. In this council are included the following allied groups: United Spanish War Veterans, Veterans of Foreign Wars of United States, American Legion, Disabled American Veterans, Red Arrow, Polish Legion of American Veterans, Jewish War Veterans of United States, Military Order of the Purple Heart, Canadian Legion of Wayne County, Yankee Division Veterans Association, Canadian Corps Association, Polish Army Veterans Association, District No. 6, Marine Corps League, Regular Veterans, Polar Bears Association, Rainbow Division, the AMVETS, Catholic War Veterans, and the Army of the Philippines.

The past presidents of this council are:

Michael A. Whalen, DAV, 1934.
Thomas Barrett, USWV, 1936–42.
Carl W. Bischoff, VFW, 1938.
Harvey E. Hohlfeldt, VFW, 1940.
Frank R. Klett, DAV, 1942.
Nate M. Lerner, JWV of United States, 1944.
John E. Ciagle, PLAV, 1946.
Carl Schoeninger, VFW, 1935.
Vincent Schoeck, DAV, 1937.
Paul Tara, USWV, 1939.
John H. McPherson, Red Arrow, 1941.
Allan Steele, USWV, 1943.
Edward Rothwell, VFW, 1945.
Elmer Gettinger, DAV, 1947.
George C. Dollar, AL, 1948.

The present officers of this council are:

Eugene Sage, president, VFW.

Michael Macalla, vice president, Polar Bears.

Lester Graves, treasurer, United Spanish War Veterans.

Michael A. Whalen, secretary, Disabled American Veterans.

Now, Mr. Speaker, I wish to state that it is not only the veterans of our State that are aroused and angry over the cancellation of the veterans' hospital-construction program. All the citizens of Michigan are disappointed and bewildered. At this point I wish to include the letter that I received from Michael A. Whalen, secretary of the Allied Veterans Council, Inc., and Eugene Sage, the president of the council:

The Honorable GEORGE G. SADOWSKI,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SADOWSKI: This is to advise you that the veterans' hospital situation is becoming extremely tragic. First the administration cuts out 24 new hospitals and orders a reduction in the size of 14 others and now we have been advised that a directive has been sent out ordering Veterans' Administration facilities throughout the country to operate on an 85-percent basis. This means that 15 percent of the beds in all hospitals will remain unoccupied, at a time when there is a definite need for even more beds than are now available.

What is the meaning of this? Why is the Veterans' Administration curtailing hospital facilities 15 percent? In Michigan we have a drive on in Grand Rapids sponsored by the AMA for additional hospital space in that community and yet the Government insists there is no need for a Government hospital in that area, with a very heavy veteran population. We have a $19,000,000 program in Detroit for additional hospital beds and the Government says there is no need for additional facilities for veterans here and on top of this they are now rumored to be curtailing the facilities now available by 15 percent.

The American people are insistent that our disabled veterans shall be cared for. Who then is responsible for this undercover attempt to curtail the most essential of all services—hospitalization? Veterans of World War II are being confronted with the statement in seeking hospitalization: "No beds available." We, the organized veterans of Wayne County, urge that you as a Member of Congress from the State of Michigan, demand that our Government reinstate the veteran-hospital facilities to 100-percent basis and further, that the two hospitals previously allocated for Michigan, be built.

Awaiting your reaction, and thanking you for your past cooperation and support, we are,

Sincerely yours,
MICHAEL A. WHALEN,
Secretary.
EUGENE SAGE, *President.*

Universal Declaration of Human Rights

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. HÉBERT. Mr. Speaker, under permission of the House I direct your attention to the series of editorials which have appeared in the New Orleans States, to which I referred in my previous remarks of this day. These editorials sound a warning to which we cannot turn deaf ears.

William H. Fitzpatrick, editor of the New Orleans States, has rendered a public service in writing these several editorials. They are thought-provoking, logical, and alarming, considering the implications of the so-called Universal Declaration of Human Rights.

Here they are:

THE UNIVERSAL DECLARATION OF HUMAN RIGHTS

HOW IT CAN BECOME OUR SUPREME LAW

The General Assembly of the United Nations last December adopted a Universal Declaration of Human Rights.

The American people are not generally aware of this action or of what it may mean to us as a nation or as individuals.

The American delegation to the United Nations, composed of Mrs. Eleanor Roosevelt, John Foster Dulles, Philip C. Jessup, and Benjamin Cohen, voted for this declaration. America is on record as favoring its contents.

The declaration alone will have no legal effect upon the United States. But the vote of the American delegates for the proposal will be considered a moral obligation on the part of the United States by other nations to press for implementation of the declaration.

Such implementation will come in the form of a covenant which the United States will be asked to adopt as a treaty. If the Senate adopts this covenant, it will become the supreme law of the land and will supersede all State laws and all county and parish and city ordinances.

This is so because the United States Constitution provides in article II, section 2, paragraph 2, that:

"He (the President) shall have power by and with the consent of the Senate to make treaties, provided two-thirds of the Senators present concur—"

And because article VI, section 2, provides that:

"This constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding."

If the Senate should adopt this covenant, it will lead to an International Court of Human Relations.

This Court of Human Relations will have jurisdiction over each and every one of us who will be answerable to it for alleged violations of the covenant.

Frank E. Holman, president of the American Bar Association, has written of this covenant:

"In order to enforce the provisions of a bill of rights, the United Nations will have to interfere continually and minutely in the internal affairs of member nations. It will have to establish standards, and determine when and where those standards have been violated, and to take steps to correct or punish such violations."

This is among the studied conclusions of the president of an association of 40,000 lawyers in the United States.

ITS PLAN FOR WORLD-WIDE SOCIALISM

The Universal Declaration of Human Rights, adopted last December 10 by the General Assembly of the United Nations, is a document pregnant with world-wide socialism and nullification of present American laws and customs.

If the United States Senate ratifies a proposed covenant, an International Bill of Rights will become the supreme law of the

land and will be administered by an International Court of Human Rights.

Article 22 of the declaration says:

"Everyone, as a member of society, has the right to social security and is entitled to the realization, through national effort and international cooperation and in accordance with the organization and resources of each state of the economic, social, and cultural rights indispensable for his dignity and the free development of his personality."

This language is plain enough.

It can mean social security for all the world, with Uncle Sam—through international cooperation in accordance with our resources—footing most of the bill.

What sort of social security does the declaration contemplate?

This language is also plain.

Article 25 says:

"1. Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing, and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.

"2. Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection."

These two articles are typical of much of the social and economic program to be imposed upon us on an international scale by the covenant if it is adopted by the Senate.

How revolutionary it is in concept was adequately expressed by John P. Humphrey, Director of the Division of Human Rights of the United Nations, who wrote in the January, 1948, issue of the Annals of the American Academy of Political and Social Science:

"What the United Nations is trying to do is revolutionary in character. Human rights are largely a matter of relationship between the states and individuals, and therefore a matter which has been traditionally regarded as being the domestic jurisdiction of states. What is now being proposed is, in effect, the creation of some kind of supernational supervision of this relationship between the state and its citizens."

That means an International Court of Human Rights with power to enforce these regulations.

It means the nullification of many laws of the states and the institution of dangerous, far-reaching and revolutionary changes in the processes of constitutional government.

It means you.

ITS EFFECT ON OUR IMMIGRATION LAWS

Should the United States Senate ratify as a treaty the Covenant of the Universal Declaration of Human Rights, the Congress need no longer be concerned with legislation regulating admission of displaced persons.

All any will need is passage to America.

Our immigration laws will be negated, for under the United States Constitution a treaty becomes the supreme law of the land.

This will come about through article 14 of the declaration, which says:

"1. Everyone has the right to seek and to enjoy in other countries asylum from persecution."

Discussing this far-reaching program, Frank E. Holman, president of the American Bar Association, a close student of the declaration, has this to say:

"This provision, if respected in the United States, would appear to nullify immigration laws and open the gates wide to anyone claiming persecution. Certainly the majority of Americans will not favor unrestricted asylum for the persecuted from all over the world."

And should any immigration authority take issue with this interpretation of the declaration, he could be subpenaed to appear before an international court of human rights, in whatever country it might be sitting, and explain why he did so.

The International Court will be final arbiter and interpreter of the entire declaration.

Consider article 13, which provides that:

"1. Everyone has the right to freedom of movement and residence within the borders of each state.

"2. Everyone has the right to leave any country, including his own, and to return to his country."

Section 1 could easily be interpreted as meaning that anyone has the right to come into this country regardless of immigration or naturalization laws. "Everyone" is the broadest of possible terms. Had the drafters of this declaration meant only that each resident of a country had the right to freedom of movement within his country's borders, why did they fail to use that language?

Section 2 would appear to be open to this interpretation: If a person has a right to leave his country and to return to it, it seems implicit that he has the right of entry into any other country.

In any event, all he would have to do would be to leave his native state and claim persecution in order to enter this or any other signatory to the covenant.

ITS EFFECT ON LAWS, CUSTOMS, AND RELIGION

The Universal Declaration of Human Rights is not only socialistic in its implications, but if implemented by adoption of its covenant by the United States Senate in treaty form, it would strike down laws of many States and social customs of wide acceptance among the people. And in respect to at least one religion, it would contravene church law.

Article 7 says:

"All are equal before the law and are entitled, without any discrimination, to equal protection of the laws. All are entitled to equal protection against any discrimination in violation of this declaration and against any incitement to such discrimination."

Article 16 reads:

"1. Men and women of full age, without any limitation due to race, nationality, or religion, have the right to marry and found a family. They are entitled to equal rights as to marriage, during marriage, and at its dissolution."

There are on the statute books of 29 States, laws forbidding miscegenation or marriage between different races. In most other States which do not by law ban such unions, the social customs of the people forbid it.

The States prohibiting miscegenation are Alabama, Arizona, Arkansas, Colorado, Delaware, Florida, Georgia, Idaho, Indiana, Kentucky, Louisiana, Maryland, Mississippi, Missouri, Montana, Nebraska, Nevada, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, West Virginia, and Wyoming.

Seventeen States and the District of Columbia have laws enforcing segregation in either education or public places or public conveyances, or all three. They are Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

In addition, six States give discretionary powers to school boards to establish segregation. These are Arizona, Indiana, Kansas, New Mexico, New York, and Wyoming.

Article 16 of the declaration of human rights would obliterate such laws, for if the covenant is ratified by the Senate in treaty form the covenant would become the supreme law of the land under our Constitution.

Should any mother try to prevent the marriage of her child because of objections to a suitor on racial, national, or religious grounds, that parent would be answerable to an international court of human rights, wherever it might be sitting, for under article 7 she would be guilty of incitement to discrimination.

The threat to religion is also plain. An example: The Catholic Church forbids divorce to its members as part of the free exercise of its religious tenets under our Constitution. The Catholic Church forbids marriage between Catholics when one has been married by the church and subsequently divorced.

Article 7 of the declaration of human rights could hold any Catholic priest, any Protestant minister, or any Jewish rabbi in violation of the declaration for incitement to discrimination should he attempt to dissuade any persons from marriage for any religious reason whatsoever.

WHO CONCEIVED IT, HOW AND WHY

The Declaration of Human Rights, which the United States Senate will be asked to make the supreme law of the land by ratification of a covenant in treaty form, can properly be characterized as another attempt by pressure groups to change the social and economic structure of this Nation.

Its impact will be felt in every State, city, village, and hamlet in the land if it becomes law.

Every American will be at the beck of an international court of human rights, wherever it may be at the moment, to answer charges. The covenant will set up a world-wide socialistic program for all governments, and if adopted by us would radically change the customs and nullify many of the present laws of America.

The declaration is of a piece with President Truman's so-called civil-rights program. The Committee on Civil Rights, established by President Truman under Executive Order 9808, has been working hand in glove with the Human Rights Commission of the United Nations of which Mrs. Eleanor Roosevelt is chairman.

The report of the President's Committee on Civil Rights was published in 1947. In January 1948, President Truman, in a special message to the Congress demanded passage of his committee's recommendations in his force bills which so recently resulted in the Senate filibuster.

Many students of constitutional government believe his force bills to be unconstitutional. Apparently, his Committee on Civil Rights is also dubious of their legality. For, on page 110 of its report to him, it is suggested that under the Supreme Court ruling in the *Missouri* v. *Holland* case in 1920:

"That Congress may enact statutes to carry out treaty obligations, even where, in the absence of a treaty, it has no other power to pass such a statute. This doctrine has an obvious importance as a possible basis for civil-rights legislation."

The committee further reported:

"The Human Rights Commission of the United Nations is at present working on a detailed international bill of rights designed to give more specific meaning to the general principle announced in article 55 of the Charter. If this document is accepted by the United States as a member state, an even stronger basis for congressional action under the treaty power may be established."

The composition of the commission which drafted the universal declaration of human rights is worth noting.

Frank E. Holman, president of the American Bar Association, writes of it:

"It is revealing to note the make-up or personnel of the commission.

"Mrs. Eleanor Roosevelt is its chairman and the sole United States representative. She is not a person in any sense trained in legal draftsmanship. She is primarily a social reformer.

"Australia's representative is Col. William Roy Hodgson, by training a military man,

and from his biography a person whose experience has been largely confined to government service.

"The United Kingdom's representative is Mr. Charles Dukes, a trade unionist by profession.

"These are the only Anglo-Americans or representatives of English-speaking peoples on the commission of 18 members."

The other 15 members comprise 3 from the Soviets and 1 from Yugoslavia, and 1 each from Belgium, Chile, China, Egypt, France, India, Iran, Lebanon, Panama, Uruguay, and the Philippines.

This is the commission which has drafted a document that, in the words of Mr. Holman, "might be held to impair, or be a substitute for, our own cherished Bill of Rights, which protects the individual citizen."

"Plot" is not too strong a word for this undermining of our American laws, customs, and rights.

THE PLOT AGAINST THE PEOPLE

The pressure groups which so far have failed to accomplish congressional enactment of the force bills, including the so-called FEPC, are plotting to do it through the United Nations.

The United States Senate ratified as a treaty the United Nations Charter. Under the United States Constitution, the Charter of the United Nations takes precedence over our State and local laws, because section 2 of article VI provides that a treaty becomes the supreme law of the land.

The United States Senate ratified the Charter of the United Nations because this Nation wanted to become a party to an international pact the purpose of which is to insure peace in the world. The Senate did not intend the Charter to become a vehicle for socialization and law abrogation.

Article 55 of the Charter contains this language:

"With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among the nations based on respect for the principle of equal rights and self-determination of people, the United Nations shall promote—

"(a) Higher standards of living, full employment, and conditions of economic and social progress and development;

"(b) Solutions of international economic, social, health, and related problems, and international cultural and educational cooperation; and

"(c) Universal respect for, and observance of, human rights and fundamental freedoms for all, without distinction as to race, sex, language, or religion."

Senate bill 984, the FEPC bill, introduced in the Eightieth Congress, has this language in section 2 (c):

"This act has also been enacted as a step toward fulfillment of the international treaty obligations imposed by the Charter of the United Nations upon the United States as a signatory thereof to promote 'universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.'"

Note that article 55 says that these idealistic endeavors shall be promoted. There is nothing in the Charter which says any signatory shall force or demand that this millennium come about. The language is "shall promote."

The United Nations is specifically forbidden by the Charter to interfere in domestic affairs of any signatory. Article 2, paragraph 7, of the Charter reads:

"Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under chapter VII." Chapter VII provides for action with respect to threats to the peace, breaches of the peace, and acts of aggression on an international scale.

The statement in Senate bill 984 that we are obligated to impose upon this country such force bills as the FEPC is therefore not only misleading, but actually untruthful. There is no obligation under the Charter to do any such thing. There is only an obligation owed by President Truman to pressure groups which supported him for reelection to do so.

The attack upon our laws, rights, and customs is a pincer movement.

Should the President's civil-rights program be refused by the Congress it may become in much more dangerous form the supreme law of the land simply by ratification of the covenant for the universal declaration of human rights.

That this plot has support in high places in our Government is apparent from the statement of President Truman in his Proclamation on National Freedom Day, published in the Federal Register January 27, 1949; Vol. 14, No. 17, page 361.

The President's proclamation stated, in part:

"Whereas the Government and the people of the United States wholeheartedly support the Universal Declaration of Human Rights approved by the General Assembly of the United Nations on December 10, 1948—"

Frank E. Holman, president of the American Bar Association which is investigating the impact of this Declaration on this Nation has this to say:

"When the Declaration was passed last December in Paris there was no copy of the final draft available in this country. I was advised that not even the State Department of our own Government had a final copy in this country of a document which as to our basic American rights is nebulous and ambiguous and the latter portion of which sets up a collectivist concept of government for all the peoples of the world, including ourselves."

Are the American people aware that they "wholeheartedly support" this Declaration as President Truman says?

If this is adopted as a treaty by the Senate, this country may no longer be as we have known it. We will have instead a worldwide social and economic system with Uncle Sam paying the bills. We will have an International Court of Human Rights to which every one of us may be held responsible. Our immigration laws will become ineffective. Laws of many States will be thrown out. The customs of the people will be disregarded. It attacks the institution of marriage by social recognition of illegitimacy just as Nazi Germany did and Communist Russia does. It invades the rights of people to choose their own intimates and fellow workers and it would strike a serious blow at religious beliefs and tenets.

It is a far-reaching, revolutionary document which could easily drive this country to the poorhouse and its people to totalitarianism.

THE SENATE SHOULD REFUSE IT

The question whether acceptance of the Covenant of the Universal Declaration of Human Rights in treaty form by the United States Senate would conflict with the United States Constitution is one which the American Bar Association, composed of 40,000 lawyers, is presently studying.

The covenant's authority over all State laws and county, parish, and city/ordinances is unquestioned. A treaty made by the President and ratified by two-thirds of the Senate present when it is called to a vote, becomes the supreme law of the land, all State constitutions and laws to the contrary notwithstanding.

Proponents of the declaration and its revolutionary proposals point to the United State Supreme Court ruling in the *Missouri* v. *Holland* case in 1920 when the State of Missouri attacked a treaty signed by the United States and Canada protecting migratory birds.

The Supreme Court held then:

"Acts of Congress are the supreme law of the land only when made in pursuance of the Constitution, while treaties are declared to be so when made under the authority of the United States. It is open to question whether the authority of the United States means more than the formal acts prescribed to make the convention. We do not mean to imply that there are no qualifications to the treaty-making power; but they must be ascertained in a different way. * * * We may add that when we are dealing with words that are also a constituent act, like the Constitution of the United States, we must realize that they have called into life a being the development of which could not have been foreseen completely by the most gifted of its begetters. It was enough for them to realize or to hope that they had created an organism; it has taken a century and has cost their successors much sweat and blood to prove that they created a nation. The case before us must be considered in the light of our whole experience and not merely in that of what was said a hundred years ago. The treaty in question does not contravene any prohibitory words to be found in the Constitution."

Those who would enact such civil-rights legislation as President Truman has called for have pointed to the *Missouri* v. *Holland* case as the basis for such laws under treaty powers.

Their plea will be that to foster peace and justice in the world such a document as the covenant should be considered in the light of our whole experience and not merely in that of what was said a hundred years ago.

Lawyers and students of constitutional government believe that such a covenant would conflict with our Constitution in a number of ways, but mainly in article 1 of the Bill of Rights:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

Article 30 of the Universal Declaration of Human Rights reads:

"Nothing in this declaration may be interpreted as implying for any States, groups, or persons, any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein."

In other words, if the Senate ratifies this treaty and the Supreme Court upholds it, this newspaper could no longer criticize it; you could not speak against it, and the people—among them you—could not assemble to petition our Government for a change in it.

And there is no provision in this declaration for its amendment in any way, ever.

The Supreme Court will have the final say on the constitutionality of such a treaty, if the Senate ratifies it.

And it should be remembered that Charles Evans Hughes, a former Chief Justice of the highest court of the land, once said:

"The Constitution is what the judges make it."

Economic philosophy and political ideology often seem as important in Supreme Court decisions as legal interpretation.

The people of this Nation, however, have it in their hands to relieve the Supreme Court of ever having to decide whether this covenant would or would not supersede our Constitution and Bill of Rights.

The people of this Nation have this power through their elected Senators. The President can only commit this Nation to such a program by ratification by the Senate.

Write your Senators, and all your friends all over this country to write theirs in opposition to this covenant for the universal declaration of human rights. Do this because it strikes at every fireside of the Nation.

More or No More Cartels?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that appeared in the March-April issue of the magazine published by the Society for the Prevention of World War III:

MORE OR NO MORE CARTELS?

On March 13, 1948, 19 members of the Decartelization Branch in the American Government addressed a letter to General Clay in which alarm was expressed over his revision of the decartelization program. "In the opinion of the members of the staff," the letter declared, "it virtually repeals the decartelization law and contravenes the July 15, 1947, directive." Instead of replying to these grave charges, a top military government official attacked these hard-working and patriotic Americans as being disloyal. Apparently, it was felt that this smear would silence anyone who dared to question the activities of the American military government with regard to German cartels.

Upon reading the above-mentioned letter, the Society for the Prevention of World War III felt duty-bound to contact the military government directly. For months our inquiries were given the cold shoulder by those in charge of decartelization. Failure to reply to our questions made us all the more persistent because we were convinced that the American people were entitled to know the pertinent facts surrounding the decartelization program in Germany. On January 8, Mr. Lawrence Wilkinson, economic adviser to General Clay, woke up to the fact that the people back home had a right to know the true state of affairs. He sent us a voluminous report on decartelization, apparently hoping that by throwing the book at us we would forthwith hold our peace. We have a hunch, however, that one of the reasons impelling Mr. Wilkinson to meet part of our requests, was due to the growing apprehension among the people regarding the decartelization policy. Members of Congress were beginning to ask questions. The military government was alarmed.

In an ostensible effort to get the facts, Secretary of the Army, Kenneth C. Royall, appointed a commission to make an on-the-spot investigation. That commission was in the position to render a distinct service to the American people, but it did not take into account the attitude of those in military government who are running the decartelization show. Of course, the latter could not ignore the commission, but hoped that with proper persuasion and diplomacy, the commission would go home satisfied and convinced that all was well.

Unfortunately for Mr. Wilkinson & Co., a hitch developed. A former Justice Department trust-buster, Alexander Sacks, who was on the decartelization staff, was called to testify before this commission. What he said was sufficient to make his superiors froth at the mouth. Apparently, he was not briefed before appearing before the commission. Mr. Sacks submitted a memorandum which stated in part: "There is no reason at this time for speaking of a revised decartelization program because no decartelization program has ever been put into effect and practice.

"The men charged with the highest responsibility by the Commander in Chief (President Truman) have failed signally to carry out the explicit orders of the July 15, 1947, directive of the commanding general and military governor for Germany.

"By the application of extra-legal and purely personal standards of judgment they have succeeded in killing the action against the VKF ball-bearing monopoly and Henschel & Son. * * * Their actions were clearly an usurpation or abuse of their authority and function. * * *

"It is no secret that the operations of the decartelization program have been hampered by Major General Draper and his associates in military government. * * * They have done whatever they could by innuendo and misstatement to discredit a program which they either did not understand or did not like."

Sacks told the Commission that effective execution of the United States anticartel policy in Germany would require a drastic shake-up in the AMG personnel. He said: "This means the selection of public servants who will show themselves to be immune to the pressure of German business for special favors and privileges."

He accused Philip Hawkins, one of the key officials in the decartelization set-up (a son-in-law of General Draper), of ignoring and even ridiculing the policies of President Truman. He condemned recent moves to transfer responsibility for anticartel legislation and action to German hands.

Mr. Sacks' charges against General Draper are not new. As early as February 1946—that is, 7 months after Potsdam, the Society for the Prevention of World War III in No. 13 of Prevent World War III in an article entitled "The Case of General Draper," analyzed General Draper's record. We pointed out the connections of General Draper's banking house, Dillon, Read, with the German steel trust. We also charged that General Draper was anxious to preserve the sacred cow of German heavy industry.

On October 12, 1945, the Society for the Prevention of World War III wired President Truman and General Eisenhower: "We believe that no person who has had or now has business or financial interests in Germany should be allowed to act as an economic expert or in a policy-making position." We had General Draper in mind.

Though we were aware of General Draper's nefarious role for a long time, we were happy to note that Mr. Sacks has confirmed our charges. Was Mr. Sacks promoted or congratulated for his courageous exposé? Oh, no. He was suspended and his reputation smeared by that very convenient method of implying disloyalty. Mr. John E. Tromer, Chief of the AMG Civilian Personnel Branch, had the effrontery to tell Mr. Sacks that he was to be separated from the Department of the Army "for reason that your retention in an active duty status is considered to be detrimental to the interests of the United States Military Government in Germany." No attempt was made to refute Mr. Sacks' statements to the Commission. Instead, he was arbitrarily branded by those who act as though the revival of the German cartels is in the interests of the United States Military Government in Germany. Thus Mr. Sacks was penalized for his disloyalty to the German cartelists and their active helpers.

The haste with which the American Military Government put the "screws" on Mr. Sacks seems to have embarrassed the Department of the Army. Thus latest reports indicate that Mr. Sacks has been restored to active duty temporarily. But it should be noted that the Department of the Army has not rebuked those who are trying to oust Mr. Sacks from his present position. Moreover the Assistant Secretary of the Army has stated that charges against Mr. Sacks might be pressed at a future date—possibly when public indignation dies down.

If this be the strategy, then it is urgent that the people remain on their guard. We know that the American people will demand an explanation from General Draper and his friends in military government. The Drapers et al. may feel that the German cartels are O. K., but the American people have learned through bitter experience that peace and security is more important than the business-as-usual plans of these gentlemen.

Hon. Earl T. Wagner, of Ohio

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. HAYS of Ohio. Mr. Speaker, it is always the custom to criticize Members of Congress. However, when a newspaper sees fit to compliment a new Member, one of my colleagues from Ohio, I think it worthwhile to be placed where all Members may see it. I refer to the following article from the Cincinnati Enquirer of Sunday March 27, 1949:

THE WASHINGTON SCENE
(By Glenn Thompson)
NO LAZY MOMENTS IN WAGNER'S DAY

WASHINGTON.—What's it like to be a new Congressman?

Well, Cincinnati has one. So we asked him.

"It's hard work. It's fun. It's lonesome," says Representative EARL T. WAGNER, of Cincinnati.

WAGNER, to everybody's surpise—except, he says, his own—was elected from the Second Ohio District last November. That is the western half of Hamilton County. It had sent a Democrat to Congress only once in 20 years. That Congressman was Herbert S. Bigelow, and he stayed one term.

WAGNER intends to change all that. "I think the people out there woke up to the fact we can win," he says. "No; I don't even think it's going to be an uphill fight."

If work will do it—and WAGNER says, "You don't win sitting on your rear"—he might be right.

Take his day, for instance.

At his hotel here, the Hamilton, where all the labor leaders stop, he has a standing call for 7 a. m. By about 8:15 he's in his office, having shaved, breakfasted, and ridden a streetcar up to Capitol Hill.

He opens all the morning mail himself. "If I go back home and somebody comes up and says, 'Say, I wrote you a letter,' I'll remember that letter if I'm the one who opened it," he explains.

He has the mail read and the day's work outlined when his staff gets there at 9. He reads Cincinnati papers or dictates until 10. Then he goes to committee or, if there's no meeting, continues on the mail until the House meets.

That's at 12. He stays in the Chamber, except for ducking downstairs for lunch at 12:15, until it quits. Usually he lunches with TOM UNDERWOOD, of Kentucky; JOHN LYLE, of Texas; or GEORGE MILLER, of California, fellow Democrats, naturally.

Veteran Congressmen often spend little time on the floor. They stay in their offices and simply hurry over if the bell rings for quorum call or vote.

Not WAGNER. "You pick up too many tricks on how they run things by just staying there," he says.

At first he objected even to being called off the floor by reporters. Seems to have got used to that, however, probably realizing that that is part of getting elected, too.

As for the tricks he has learned, he displayed one trick this week. Some southern Democrats who had voted rather spitefully against the administration's rent-control bill last week were about to vote on a rent-control bill for the District of Columbia. This meant rent control on their own and colleagues' apartments. They wanted it. They could change colors and get away with it, if nobody demanded a roll call.

WAGNER, the freshman, got up and demanded the yeas and nays, a roll call. Some old hands in the House would have hesitated to do it. He got it.

"Some of the boys were a little red in the face," he said afterward.

Congressmen do not have regular seats in the House. They sit anywhere. WAGNER moves around, sits next to, and talks to nearly everybody. Moved 75 times, he says, in one long session.

"The result is," he says, "that I know every new Member and most of the old ones.

"It helps, too. For instance, that was the way I got to know LOUIS RABAUT, of Michigan. Well, we wanted to get that $650,000 back that the Government owed Cincinnati. And RABAUT turned up on the subcommittee handling the appropriation. I don't know how much he had to do with it, but he told me himself two or three times that he was working to get it in the bill. It got in."

Part of WAGNER's moving is probably due to nervous energy. He picked up that badge of nerves, a stomach ulcer, when going to law school and working at the same time, and still nurses it.

Contrary to many Congressmen, WAGNER says his votes don't worry him. "I know what the people want who elected me, and they know where I stand, so we both know how I'm going to vote," he says.

The way he is going to vote is pretty straight Truman Deal.

He won't admit he had any pangs about the veterans' pension bill, although a good many votes in the second district, including this one, thought it was a lousy bill.

WAGNER was a IV-F in the war, from that ulcer and arthritis, and friends say the veterans in the District would have murdered him if, under the circumstances, he had voted against pensions. He voted for 'em until final day. Then he voted to recommit, or shelve, the bill. By that time it was a patchwork of amendments.

He will say only: "Veterans, even at the best, had 4 years away from their families, four uncomfortable years. I think they've got something coming."

Ask him what is the most worrisome thing about his job and he replies: "Getting the work out at the office when they keep me late on the floor. I don't like to keep my staff after 5 o'clock."

A more experienced Congressman would smile at that, for several reasons.

When the House adjourns he goes back to the office, signs the mail and opens any late mail.

He takes this mail seriously. All Congressmen do. It is really a key to reelection.

WAGNER gets from 75 to 100 letters from individuals a day, he says. Most are from the District, and he tries to answer each one within 24 hours, a large number with personally dictated replies, the rest with information gathered by his staff.

The staff is comprised by a man, Richard Day from Cincinnati; two women here, and a part-time woman clerk in Cincinnati.

He evidently has something of a prize in one of the women here, Mrs. Nell Hamlin, a veteran of 20 years on the Hill. She seems to know somebody in every Government department, a great help when it comes to getting information.

It is she, also, who assembles that correspondence. When a bill is up, she hands him, that morning, a file containing all the letters he has received on the subject. He skims through these, reads the committee report on the bill while he is on the floor, and has a fair idea of what it is all about by the time the debate is under way.

To get back to his day, he leaves the office around 6 or 7. Once or twice a week Len Niederlehner, who used to be in Arthur Fricke's law office in Cincinnati and now is with Munitions Board here, drops by the office and they go out and get a steak.

Otherwise he eats at his hotel, picks up early editions of the morning papers at 8:30, and goes to bed at 9:30 or 10.

"SAM RAYBURN" he says, "once told me, 'Washington is the loneliest town in the world. I know what he meant."

RAYBURN is a bachelor. WAGNER's family is in Cincinnati.

WAGNER says he gets a good many dinner invitations but turns most of them down. "It's nearly always somebody who feeds you and then wants to shoot you full of propaganda all evening. Let 'em come down to the office. Then I can at least send out and get a bill and find out what it's all about."

Friday night at 6:30 he leaves for Cincinnati—by day coach.

Round trip costs him $28.90, plus 25 cents for a pillow. He says he can afford neither a sleeper nor to bring his family here.

Contrary to many people's belief, a Congressman gets Government mileage for only one round trip a session.

He gets off at Winton Place at 7 next morning and a 10-minute cab ride drops him at 2896 Grasselli Avenue, Westwood. Jean Ann, 4, youngest of his three, hears the key in the lock and greets him with: "What did you bring me?" She is permitted to rummage in his handbag until she finds it.

After a shave and breakfast, he is off again, either to call on a few constituents or for his office in the Eagle Savings Building. About 6 p. m. he shows up at Frank Ziegler's grocery on Tremont Street in Fairmount to do the week's marketing. There are usually a few constituents with problems gathered when he gets there or FRANK has saved up memorandums on the problems.

Home, finally, he and Mrs. Wagner have an evening together, while Carol, 12, and Earl W., 11, are at the movies.

Next morning it is church, dinner, maybe a drive in the afternoon, and at 6:15 the day coach back to Washington.

"You earn your money," he says, which was hardly necessary.

Next week, if we don't forget, we'll deal with the question: Why does anybody want to be a Congressman?

Fish Imports

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. MACK of Washington. Mr. Speaker, the United States in 1948 imported 472,427,000 pounds of food fish valued at $110,954,000 according to figures supplied to me by the Office of International Trade. Those imports were 40 percent larger by weight and 300 percent greater by money value than our imports of fish during 1939, the last peacetime year.

That fishermen are alarmed by the inroads on their markets from those imports from low-wage, low-living-standard countries is indicated by an editorial which appears in the Fisherman's News, published in Seattle, Wash. The editorial follows:

PERIL POINT

The Pacific Northwest fishing industry finds itself on its hands and knees this month pitifully begging for the right to a meager existence. All but swallowed up with the threat of impending imports, we find ourselves pleading that a peril point be established.

As we look closer, we find a situation without comparison. Here are a group of American citizens, humbly requesting their own elected representatives for the right of a competitive opportunity to exist.

The American fishing industry is not afraid of competition, foreign or otherwise. The entire industry is built upon competition. Fishermen competing with the fury of the sea, buyers competing with each other for the fruit of the hardy vessel's labor.

The American Government apparently places little value on its fisheries resources.

The Scandinavian countries value highly their fishing industry, not entirely as a source of food, but as a tremendous reserve of trained seamen in time of war. During the past war, the United States Navy was full of former fishermen who dropped their nets to go to war. Now these men have returned to their fishing boats only to find that their product is no longer salable.

Before the war the Japanese controlled the American domestic crab market. After Pearl Harbor, it was a little unethical, as well as impossible, for them to supply the American housewife with this product. Our fishing industry promptly met this challenge by building up a crab industry of its own. Tremendous wealth was invested in canneries, boats, and gear.

Today, just a little more than 7 years since this infamous attack, the Japanese crab industry is once more bidding for its lucrative American markets. Bidding at a price which leaves American fishermen two choices: Cutting prices, and our standard of living to coincide with theirs, which is certainly not the solution. The second choice is, of course, close up and let the Japanese have it.

The American fishermen can accept neither of these choices without a battle. But it is a lopsided battle. The American fishing industry stands alone against not only the Japanese competition, but also our own Government which is apparently more interested in international good will than the welfare of the Nation's oldest industry.

The American Government is presenting a fine example of the Golden Rule. No doubt if more of us practiced these tried and proven axioms it would be a better world. But surely, we can go too far. A man cannot be expected to help his neighbor to the extent that it will mean utter neglect of his own family. Neither can a government aid another nation's industry and thereby kill its own.

Barrett Versus Fay

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. KENNEDY. Mr. Speaker, this editorial from the News calls attention to a

situation in the District which is detrimental to its well-being.

The Committee on the District of Columbia should give it careful consideration.

[From the Washington Daily News of March 30, 1949]

BARRETT VERSUS FAY

A-FUSSIN' AND A-FEUDIN' AND A-FIGHTIN'

Washington, like other towns, has a police chief and a district attorney, each sworn to uphold the law, sworn to find and punish the transgressor. Normally, you'd expect them—if you'll pardon the expression—to be thick as thieves.

However, on the gambling question, the situation has developed to such a point that Jimmy Lake, the perennial emcee of local fights, could say:

"In this cornah, at 200 pounds, the champeen, Robert J. Barrett, chief of police, and in this cornah, at 162 pounds, the young challenger, George Morris Fay, United States attorney for the District of Columbia."

In fact, though neither will admit it publicly, they've been fighting for a year over the prosecution of what Mr. Fay insists is a $100,000,000 yearly gambling racket in Washington.

Each has a morning newspaper to back his views. The Times-Herald bangs the drum for Chief Barrett. The Washington Post sides with Mr. Fay. The Post violently crusaded against the chief when a Post employee was arrested as a molester of women. It claimed he was abused and beaten by police. It turned out no abuse or beating by police was ever proved, although the Post employee was later fined for beating a woman.

The News tried to take a fall out of Barrett's police, but didn't, in the case of a Mr. Bunch. Mr. Bunch was arrested for being drunk, later died, was found to have a lot of injuries. He could have gotten them in his cell. It was never proved one way or the other. The FBI investigated, but pretty much exonerated police of any brutality or even carelessness. The police chief instituted certain reforms in the handling of drunks.

The Star seems to be in neither Mr. Fay's nor Mr. Barrett's corner. Neither is the News. We opposed Barrett's appointment, on his record. But having said our piece, that's that.

As to Mr. Fay, he was apparently hurriedly dug out of a hat at the last minute when this newspaper revealed that Col. James (Jiggs) Donohue, Milton Kronheim's lawyer, was being considered for the DA's job by Milton's good friend, Attorney General Tom Clark.

Sometimes, when we look at Mr. Fay, we think maybe we should have left bad enough alone, but at any rate, being in neither man's corner and not reaching for any stick to beat the other man's dog, and under obligation to neither man, nor to anyone else, we herewith present the background of the current squabble between the police chief and the district attorney.

Mr. Fay, on April 28 last year, announced as a fact, the existence of a huge gambling ring here, and demanded a special grand jury investigate it.

The implications were obvious. Of itself, the statement meant if there was such a racket, the police must either say they know of it, or admit incompetence. If the Police Department admitted knowledge of the racket, the statement implied they were either powerless to stop it, or didn't want to stop it.

There was another implication in the statement, a loophole for the police, that if the police were powerless, maybe a Federal grand jury, with ability to cut across jurisdictions, could do the job.

Major Barrett immediately offered the full cooperation of his department to aid Mr. Fay's grand jury. He said, in a letter, that he would have any given number of policemen available on 2 hours' notice. But at the same time, he said he knew of no specific gambling places in the District. Major Barrett offered to be a witness himself before the grand jury.

The next day Mr. Fay wrote back, thanking Major Barrett, but suggesting it was up to the grand jury to ask for witnesses, not up to him, Fay, to request the appearance of any policemen. His letter very effectively held the police at a gingerly arm's length—a fact which Major Barrett doubtless realized.

Interestingly enough, Major Barrett and Mr. Fay—whose offices are just across Indiana Avenue from one another—saw fit to communicate by letter, releasing each letter to the press, instead of just sitting down to talk things over.

It was a curious situation for two men who each hold the same ultimate goal—control and punishment of crime in Washington.

The letters grew acidly polite. Major Barrett turned over 138 names of "big shot" gamblers to Mr. Fay. Mr. Fay said the list wasn't definite—it contained no specific addresses, and that much of the list was an accumulation of stray nicknames, last names, or just phone numbers.

Major Barrett wrote back, asking Mr. Fay just what did he expect the Police Department to do, whether he really wanted to use the police in investigating local racketeers, and what had become of the special squad he'd put at Mr. Fay's disposal?

Mr. Fay's reply was to the effect that Major Barrett should re-read his mail. The last letter from Major Barrett drew an "acknowledgement" instead of a "reply" from Mr. Fay.

About this time, Daniel B. Maher, special assistant corporation counsel, entered upstage, left, through the door labeled "D. C. Commissioners." He's supposed to be the big "hot potato" man for Commissioner Russ Young, buddy of Police Chief Barrett.

Mr. Maher's position as a sort of trouble shooter was, and is, curious. He'd been an assistant district attorney to Mr. Fay before the Commissioners got him for their private use.

First, Mr. Maher paid little private visits to the newspapermen who covered district court. He would sit down with each, separately, sort of cozy, with an air of one about to impart a great confidence, suggesting that he, Mr. Maher, had the real, inside dope on the gambling situation. There wasn't really a $100,000,000 yearly racket, Mr. Maher would whisper, and you couldn't blame police for not making arrests, anyway.

Nobody bit.

So, Mr. Maher drew up a report for Major Barrett, culled, he said, from police statistics.

The gist was that police had been making arrests, but the courts kept refusing to uphold them. Many cases fell through because the courts decided there was insufficient evidence or because the circumstances of the arrests were illegal, and in many instances Mr. Fay's office had refused to prosecute, Mr. Maher's report indicated.

The Times-Herald spread the report on its front page. It accused Mr. Fay of wanting to be a judge. It charged that his only interest in Washington's gambling was his personal ambition.

The Post, on the other hand, thought the report implied bad police work, Chief Barrett, not Mr. Fay, was to blame for the "big-shot" gamblers' immunity.

The News and the Star just went rollin' along, reporting the facts.

Pyramid Clubs had been cooking up, right about then, and Mr. Fay had indicted a bricklayer. The News took a good-naturedly dim view of the indictment, and asked editorially what had become of Mr. Fay's big gambling investigation of a year ago?

Well, what do you know? We had hardly got this printed when last Friday Mr. Fay led a force of United States marshals and former FBI men on a series of raids here and in Maryland. However, the coincidence, we are sure, was purely coincidental, and is not an example of the power of the press.

After Mr. Fay's raid the Post thought the raids proved that Major Barrett should be fired.

The Times-Herald, however, said on page one that Major Barrett's sleuths had furnished the necessary information for the raids. (Just to confuse things a trifle the Times-Herald, on its editorial page, said Mr. Fay had masterminded the raids.)

Two things were immediately significant. No policemen were in the raiding parties. They weren't asked to take part, and they weren't tipped off. The inescapable inference was that Barrett's gendarmes were not to be trusted in these matters. It carried with it the nasty suggestion of police and underworld collusion.

Second, the raids proved there were gambling establishments functioning here, which most persons supposed anyhow, but certainly the raids posed the question publicly: "Where have the cops been all this time?"

However, despite the publicity, these raids apparently didn't net any bigger shots than the police have been pulling in for some time. At least, not yet. Of the 33 men arrested, some 28 have police records. Of these, a good many have records of arrests for gambling. Again, many of these arrests failed to win convictions in court.

A police official yesterday said the evidence Mr. Fay's men collected in last week's raid wasn't any better than the evidence police get in their raids. He said he'd be interested to see whether the fact that Mr. Fay made the arrests would have a greater weight with the courts.

At the same time, up popped the ubiquitous Mr. Maher. He's making another report. Indications are it will be like his last report to Commissioner Young on the same subject. Chief Barrett said he specifically asked Mr. Maher to draw up the report because he felt Mr. Maher knew what the Commissioners wanted.

Today the Post printed a picture of Bernice Franklin, a waitress who gave Mr. Fay information. In the picture, she is attending a party. And surprise, surprise. A couple of alleged gamblers, a policeman, and a couple of Times-Herald employees are among those present. The Post's restraint in the caption under the picture was overwhelming.

Back of all this are two different philosophies on the gambling problem. Major Barrett's seems to be that people will gamble. You can't stop it. So the thing to do is to keep gambling within bounds. Don't let it get away from you. If there's a nice quiet syndicate monopolizing the trade that may be better than rival mobs shooting it out.

Mr. Fay's theory seems to be that gambling, by its illegal nature, flourishes in an atmosphere of crime, encourages crime, and should be reduced to insignificance.

Actually, neither man believes gambling can be completely wiped out. Both aim at its control.

But there is that ominous absence of policemen on Mr. Fay's raids. Mr. Fay, asked point-blank if the grand jury was considering any specific cases of bribery of police officials, said, "no comment," rather than "no."

Meanwhile, in a nook in the new Municipal Building sits Mr. Maher, friend of Russ Young, who in turn is Bob Barrett's friend, writing out reports.

Want to place a small bet? A bet that Mr. Maher's reports are going to show that the police have arrested just about as many alleged gamblers as Mr. Fay's raiders, and of

comparable unimportance, because, as Chief Barrett says, Danny Maher was appointed because Mr. Maher knows "what the Commissions wanted."

Present Postage Rates on Books

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. MACK of Washington. Mr. Speaker, in 1942 the postage rate on books was 1½ cents per pound. Since then it has been raised to 8 cents for the first pound and 4 cents for each additional pound.

The House Committee on Post Office and Civil Service is now considering again increasing these rates to 9 cents for the first pound and 6 cents for each additional pound.

The future of our democracy depends upon a well-informed and intelligent electorate and nothing does more to develop that intelligence than good books. It may be that handling books costs the postal service a little more than the book buyers pay, but how better can the Government invest a few millions than by spending it to encourage greater book reading by our people? The more the people read, the better equipped they will be to understand and act intelligently on the many diverse and complicated problems now confronting our people.

I append an editorial on this subject from the Portland Oregonian, of Portland, Oreg., one of the largest and most influential newspapers on the Pacific coast:

A PENALTY ON BOOKS

For the second time this year, Congress proposes to raise the postal rate on books, from 8 to 9 cents for the first pound, from 4 to 6 cents for each additional pound. This is hardly in keeping with the avowed policy of the United States, which has been to favor by every possible means the diffusion of knowledge. One way to accomplish this has been by permitting books of all kinds to be carried cheaply through the mails. What matter it if a Forever Amber be carried for the same rate as A Study or History; the over-all result has been good.

The present proposal is the fourth of its kind since 1942, when the postal rate on books was raised from 1½ cents to 3 cents a pound. Other rises since have brought the rate to its present 8 cents for the first pound, 4 cents each for subsequent pounds.

This fourth rise now proposed seems to penalize in a most drastic way the diffusion of knowledge, especially in relation to schools and libraries, students and scholars. It will also, if passed, make an aggregate increase in the book rate, since 1942, of 500 percent on the first pound, 300 percent on subsequent pounds. Even in these days of unprecedented costs this would be a tremendous increase. Compared to other rates, to cite an example, it would work out thus: A book weighing 2 pounds mailed from Portland to Seattle or to Medford would require 15 cents postage. Two pounds of rich, fruity, and prehensile chewing gum could be sent to those cities for a mere 11 cents. And while this might be all very well for another branch of the arts, that of the motion picture, it is surely a penalty on books and also a commentary on the stage of civilization we live in.

A Bill for the Release of Mineral Rights on Certain Lands Situated in Bates County, Mo.

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. CHRISTOPHER. Mr. Speaker, this bill is introduced and sponsored to correct a rank injustice that exists in my home county of Bates, in the State of Missouri.

The Missouri Defense Relocation Association, Inc., a Government sponsored agency purchased the old English Scully estate holdings of some 40,000 odd acres of land, which it later liquidated to individual purchasers in Bates County, Mo.

These farms range in size from 160 acres to several hundred acres and are of value only for agricultural purposes.

When sale of these lands was first contemplated, appraisals were made by competent appraisors, who were appointed to appraise and establish the value for the purpose of sale to farmers and to be sold without mineral reservations.

The first sales were made but not completed when a decision was made that the principles and policies of section 44 of the Bankhead-Jones Farm Tenant Act pertaining to public lands be made applicable to defense relocation corporations to reserve at least three-fourths of the mineral rights.

The appraisers were recalled and again went over the lands to determine if there was any evidence of minerals or any existing mineral value and to determine the mineral value to be deducted from the original appraisal by reason of the three-fourths mineral reservation now required, and the appraisers after investigation made their report that the mineral rights had no value and nothing was deducted and sales were made on the original appraisal basis.

Some 30,000 acres was sold to individual citizens with a 75 percent mineral reservation and then Public Law 731 with section 9 was passed by the Seventy-ninth Congress which was in content as follows: "Any conveyance of real estate by the Government or any Government agency under this act shall include all mineral rights." The remaining 10,000 acres was then sold with no change of appraisal value and without mineral reservation.

Here, gentlemen, is where the injustice arises. We definitely know as did the appraisers, who were trained in this kind of work, that there is no mineral value to this land but three-fourths of the purchasers have paid full value for their lands with an existing 75 percent mineral reservation which is a blot on their title.

I have in my office files a statement from one of the leading insurance companies making farm loans, and I quote, "Our company looks with disfavor on making loans on lands where the mineral rights are gone. We can consider applications in such cases only on outstanding farms, where we have a wide margin of security and where the applicant can make a strong financial statement." I am sure that this reflects the attitude of other companies as well. And also when the same is considered under aforementioned circumstances the applicant is required to purchase title insurance in addition to these other requirements.

Also in the case of a forced sale this injustice is again used as a club on the seller, due to the blot on his title.

I earnestly solicit your support for a correction of this gross injustice.

Achievement of Israel Parallels Moses

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Achievement of Israel Parallels Moses," by Ralph W. Page, appearing in the Philadelphia Evening Bulletin of March 28, 1949:

ACHIEVEMENT OF ISRAEL PARALLELS MOSES
(By Ralph W. Page)

The appearance of Aubrey S. Eban, the representative of Israel to the United Nations, at the Bulletin Forum brought home to the citizens of Philadelphia one of the most remarkable episodes in all history.

Eban's appointment to the UN signalized the birth of a nation.

His account of this achievement by his people and their ambition to contribute to the culture and welfare of the Near East and the peace of the world was a modest understatement. Such a demonstration of courage and faith in overcoming insuperable difficulties in pursuit of an ideal has hardly a parallel since Moses led his people out of bondage to the Promised Land.

A handful of Jews, scarce half a million, consisting of a third of the population of a semidesert surrounded by populous hostile states and armies, and representing a little, decimated and persecuted race scattered throughout the planet, undertook to defy not only the Moslem world but the British Empire and conflicting interests of great dynasties to establish their own independent government. To the utmost astonishment of creation, single-handed they defeated all opposition in the field of battle, negotiated honorable peace with their neighbors, kept a unique balance between the conflicting ideologies in the world, and proclaimed a program of cultural, scientific, social, economic, and spiritual cooperative development of the entire region between the Suez Canal and the Persian Gulf.

There is every reason to have confidence both in the intent and in the ability of these talented people to further this ambitious

design. Within the limitations of the old regime they have already demonstrated their capacity to revive agriculture, inaugurate industries, establish centers of learning, religion, health, and recreation. And no people can draw upon greater sources of moral convictions, engineering, industrial, scientific, and philosophical knowledge and training.

They believe with reason that they can satisfy their Arab citizens and neighbors of their friendly intentions and show the way for a mutual development of natural resources and social reforms that will revitalize and unify all these seats of ancient civilization.

British Health Plan

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 31, 1949

Mr. MULTER. Mr. Speaker, on March 30 I placed in the RECORD the sixth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 24, is the seventh of the series:

INCOMES OF BRITISH DRUGGISTS DOUBLE UNDER HEALTH PLAN—200,000,000 PRESCRIPTIONS FILLED YEARLY

(By E. J. Delaney)

(Seventh in a series)

LONDON, March 24.—British druggists are harvesting a financial windfall under the free National Health Service, and to such an extent the Government this minute is finding ways to clip their incomes. Druggists do not want to talk about it much; it is a touchy subject, but it is certain their net business incomes, before taxes, have jumped on the average from about $3,000 a year to about $6,000 per annum.

Most druggists do not want to get into this field of discussion at all, and besides, they are too busy compounding medicines to stop for a chat. They are working much longer hours, are pleased over their rise in the economic ladder, think they are doing the best job of any facility engaged in national health work, and do some worrying about what their future may become.

The total number of prescriptions filled in this land in 1 year climbed from 80,000,000 to 200,000,000. The pay per single medicine order is lower, but the volume is what counts. When a druggist will mellow a bit, he will chuckle, admit things are wonderful, and hope he will not be quoted because he would not want to say anything that might interrup this flow of pounds over his counters.

WON HIS FIGHT

The chemist, as he is known here, is a whole-hearted supporter of the National Health Service, even aside from the vast income improvement it has brought into his life. He thinks the people are being helped by it.

One of his great joys is that the druggists have won an age-old fight against the physician who does his own medicine-dispensing. Some 75 percent of British doctors have dispensed their own medicines, to the chagrin of the corner chemist. Now if the doctor does so it is at his own expense, because he cannot collect from the Government for medicines. The Ministry will pay only druggists for such services.

In his elation, though, over the results of setting up a State Health Service, the druggist has a dread that eventually the Government will have its own medicine-dispensing service and he will have to accept a full-time salaried job and like it.

However, that's for the future and everything is rosy now. Let's struggle against that when it comes over the horizon, says one druggist, "maybe there is no dark cloud in back of this pleasant atmosphere in which we have zoomed."

HOW FEES WERE SETTLED

How were the fees for prescription settled upon, one asks. "Well," says a druggist, "we didn't press for any specific rates, the Ministry sent out a committee of investigation, it toured the country checking on the normal income of druggists and we said we would take what it would recommend.

"We suggested that the Ministry wants a first-class service and the way to have it is to pay the going rates, the average that the committee found existed. The committee's report was entirely satisfactory to us and it is so ample that they are looking for some way to cut us down."

"The Government's estimate of the national medicine bill was grossly inadequate," says our druggist, "our service has cost twice as much as was figured and naturally the Ministry finds itself in a vulnerable position as a result. But maybe they wouldn't have gotten the bill through Parliament so easily if the real prospective cost were known. I think even the labor side would not have gone so far. The service might not have become so broad."

"The sequel may be awkward for us," the druggist goes on. "For the last 3 weeks they have been inquiring how they can reduce the cost of this wretched service. The bills really are frightening. Dentists are making $40,000 a year, the same goes for the optical lads and they are going to be cut. Our turn has come up and this very week they are conferring with our representatives to see what can be arranged."

PRESSURE OFF HOSPITALS

One shop owner sees a chance to take a little of the pressure off the hospitals. He figures that if they will let the family doctor order anything he thinks is right, without sending a patient to a hospital for certain unusual kinds of things, the hospital will have that much less to take care of. When some things can be gotten only when one goes to a hospital, the result is the doctor sends you in and you are one patient the hospital need not have received.

The British druggists do not sell a line of general merchandise, as in the United States. They have no soda fountains or lunch bars. They stock medicines, cosmetics, films, and not much more. A few have cigarettes.

They rely on the medicine business. There has not been a sharp drop in their sales of patent medicine, or proprietaries, which is considered strange.

The boom in medicines has created a shortage of journeymen chemists and drugstore managers and the pharmacy schools are being largely attended. A manager of a good drug store receives $2,600 a year and the ordinary pharmacist collects $2,200 a year, both of which salaries are higher than they ever were before. A big chain will pay $4,000 for an especially good store manager.

The government requires the drug stores to be open from 9 in the morning till 6 at night, those are the minimum hours, but most druggists are working later to get out the prescriptions received during the day. In nearly every section a rota plan is in operation. Under it one shop in an area is open at least until 6 p. m. every night for a week. Then another store in the neighborhood does the same for another week.

Address of Rt. Hon. Winston Churchill

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. HOBBS. Mr. Speaker, one of the great voices of all time and one of the leaders of sound thought in peace as in war, Hon. Winston Churchill, spoke to a listening world last night from Boston.

All of those whom the RECORD may reach will be grateful for the opportunity of reading this challenging message.

His address follows:

I am honored by your wish that I should take part in the discussions of the Massachusetts Institute of Technology. We have suffered in Great Britain by the lack of colleges of university rank in which engineering and the allied subjects are taught. Industrial production depends on technology and it is because the Americans, like the prewar Germans, have realized this and created institutions for the advanced training of large numbers of high-grade engineers to translate the advances of pure science into industrial technique, that their output per head and consequent standard of life are so high. It is surprising that England, which was the first country to be industrialized, has nothing of comparable stature. If tonight I strike other notes than those of material progress, it implies no want of admiration for all the work you have done and are doing. My aim, like yours, is to be guided by balance and proportion.

The outstanding feature of the twentieth century has been the enormous expansion in the numbers who are given the opportunity to share in the larger and more varied life which in previous periods was reserved for the few and for the very few. This process must continue and we trust at an increasing rate. If we are to bring the broad masses of the people in every land to the table of abundance, it can only be by the tireless improvement of all our means of technical production, and by the diffusion in every form of education of an improved quality to scores of millions of men and women. Even in this darkling hour I have faith that this will go on.

I rejoice in Tennyson's lines:

"Men, my brothers, men, the workers, ever reaping something new;
"That which they have done but earnest of the things that they shall do."

I was however a little disquieted that you find it necessary to debate the question, to quote Dr. Burchard's opening address, "Whether the problem of world production yielding at least a minimum living to the whole population can be solved, and whether man has so destroyed the resources of his world that he may be doomed to die of starvation." If, with all the resources of modern science, we find ourselves unable to avert world famine, we shall all be to blame, but a peculiar responsibility would rest upon the scientists. I do not believe they will fail, but if they do, or were not allowed to succeed, the consequences would be very unpleasant because it is certain that mankind would not agree to starve equally, and there might be some very sharp disagreements about how the last crust was to be shared. This would simplify our problem in an unduly primordial manner.

I feel somewhat overawed in addressing this vast scientific and learned audience on

the subjects which your panels are discussing. I have no technical and no university education, and have just had to pick up a few things as I went along. Therefore I speak with a diffidence, which I hope to overcome as I proceed, on these profound scientific, social, and philosophic issues, each of which claims a life-long study for itself, and are now to be examined, as schoolmen would say, not only in their integrity but in their relationship, meaning thereby not only one by one but all together.

I was so glad that in the first instance you asked me to talk about the past rather than to peer into the future because I know more about the past than I do about the future, and I was well content that the President of the United States, whose gift of prophecy was so remarkably vindicated by recent electoral results, should have accepted that task. We all regret that his heavy state duties prevent him from being here tonight. I shall therefore presently have to do a little of the peering myself.

For us in Britain the nineteenth century ended amid the glories of the Victorian era, and we entered upon the dawn of the twentieth in high hope for our country, our empire and the world. The latter and larger part of the nineteenth century had been the period of liberal advance (liberal with a small "l" please). In 1900 a sense of moving hopefully forward to brighter, broader, and easier days was predominant. Little did we guess that what has been called the century of the common man would witness as its outstanding feature more common men killing each other with greater facilities than any other five centuries together in the history of the world. But we entered this terrible twentieth century with confidence. We thought that with improving transportation, nations would get to know each other better. We believed that as they got to know each other better they would like each other more, and that national rivalries would fade in a growing international consciousness. We took it almost for granted that science would confer continual boons and blessings upon us, would give us better meals, better garments, and better dwellings for less trouble, and thus steadily shorten the hours of labor and leave more time for play and culture. In the name of ordered but unceasing progress, we saluted the age of democracy expressing itself ever more widely through parliaments freely and fairly elected on a broad or universal franchise. We saw no reason why men and women should not shape their own home life and careers without being cramped by the growing complexity of the state, which was to be their servant, and the protector of their rights. You had the famous American maxim "governments derive their just powers from the consent of the governed," and we both noticed that the world was divided into peoples that owned the governments and governments that owned the peoples. At least I heard all this around that time and liked some of it very much.

I was a minister in the British Liberal Government returned with a great majority in 1906. That new Liberal government arrived in power with much of its message already delivered and most of its aims already achieved. The days of hereditary aristocratic privilege were ended or numbered. The path was opened for talent in every field of endeavor. Primary education was compulsory, universal, and free, or was about to become so. New problems arising from former successes awaited the new administration. The independence of the proletariat from thralldom involved at least a minimum standard of life and labor and security for old age, sickness, and the death of the family breadwinner. It was to these tasks of social reform and insurance that we addressed ourselves. The name of Lloyd George will ever be associated in Great Britain with this new departure. I am proud to have been his lieutenant in this work and also as a Conservative Chancellor of the Exchequer and later as head of the wartime national coalition to have carried these same themes further forward on a magnified scale.

Science presently placed novel and dangerous facilities in the hands of the most powerful countries. Humanity was informed that it could make machines that would fly through the air and vessels which could swim beneath the surface of the seas. The conquest of the air and the perfection of the art of flying fulfilled the dream which for thousands of years had glittered in human imagination. Certainly it was a marvelous and romantic event. Whether the bestowal of this gift upon an immature civilization composed of competing nations whose nationalism grew with every advance of democracy and who were as yet devoid of international organization, was a blessing or a curse has yet to be proved. On the whole, I remain an optimist. For good or ill air mastery is today the supreme expression of military power, and fleets and armies, however necessary, must accept a subordinate rank. This is a memorable milestone in the march of man.

The submarine, to do it justice, has never made any claim to be a blessing or even a convenience. I well remember when it became an accomplished military fact of peculiar significance to the British Isles and the British Navy, there was a general belief even in the Admiralty, where I presided, that no nation would ever be so wicked as to use these underwater vessels to sink merchantmen at sea. How could a submarine, it was asked, provide for the safety of the crews of the merchant ships it sank? Public opinion was shocked when old Admiral Fisher bluntly declared that this would be no bar to their being used by the new and growing German Navy in a most ruthless manner. His prediction was certainly not stultified by what was soon to happen.

Here then we have these two novel and potent weapons placed in the hands of highly nationalized sovereign states in the early part of the twentieth century, and both of them dwell with us today for our future edification.

A third unmeasured sphere opened to us as the years passed, which, for the sake of comprehensive brevity I will describe as radar. This radar, with its innumerable variants and possibilities, has so far been the handmaiden of the air, but it has also been the enemy of the submarine and in alliance with the air may well prove its exterminator.

In the first half of the twentieth century, fanned by the crimson wings of war, the conquest of the air affected profoundly human affairs. It made the globe seem much bigger to the mind and much smaller to the body. The human biped was able to travel about far more quickly. This greatly reduced the size of his estate, while at the same time creating an even keener sense of its exploitable value. In the nineteenth century Jules Verne wrote Round the World in 80 Days. It seemed a prodigy. Now you can get around it in four, but you do not see much of it on the way. The whole prospect and outlook of mankind grew immeasurably larger and the multiplication of ideas also proceeded at an incredible rate. This vast expansion was unhappily not accompanied by any noticeable advance in the stature of man, either in his mental faculties or his moral character. His brain got no better, but it buzzed more. The scale of events around him assumed gigantic proportions while he remained about the same size.

By comparison, therefore, he actually became much smaller. We no longer had great men directing manageable affairs. The need was to discipline an array of gigantic and turbulent facts. To this task we have certainly so far proved unequal. Science bestowed immense new powers on man and at the same time created conditions which were largely beyond his comprehension and still more beyond his control. While he nursed the illusion of growing mastery and exulted in his new trappings, he became the sport and presently the victim of tides and currents, of whirlpools and tornadoes, amid which he was far more helpless than he had been for a long time.

Hopeful developments in many directions were proceeding in 1914 on both sides of the Atlantic and seemed to point to an age of peace and plenty when suddenly violent events broke in upon them. For more than 40 years there had been no major war in Europe. Indeed, since the Civil War in the United States, there had been no great struggle in the west. A spirit of adventure stirred the minds of men and was by no means allayed by the general advance of prosperity and science. On the contrary, prosperity meant power and science offered weapons. We read in the Bible, "Jeshurun waxed fat and kicked." For several generations Britannia had ruled the waves—for long periods at less cost annually than that of a single modern battleship.

History will say that this great trust was not abused. American testimony about the early period of the Monroe Doctrine is upon record. There was the suppression of the slave trade. During our prolonged period of naval supremacy undeterred by the rise of foreign tariffs, we opened our ports freely to the commerce of the world. Our colonial and oriental empire, even our coastal trade, was free to the shipping of all the nations on equal terms. We in no way sought to obstruct the rise of other states or navies. For nearly the whole of the nineteenth century the monopoly of sea power in British hands was a trust discharged faithfully in the general interest. But now in the first decade of the twentieth century with new patterns of warships, naval rivalries became acute and fierce. Civilized governments began to think in dreadnaughts. It would in such a setting have been very difficult to prevent the First World War.

There was, of course, one way—one way then as now—the creation of an international instrument, strong enough to adjust the disputes of nations and enforce its decisions against an aggressor. Much wisdom, eloquence, and earnest effort was devoted to this theme in which the United States took the lead, but we only got as far as the World Court at The Hague and improvements in the Geneva Convention. The impulses toward a trial of strength in Europe were the stronger. Germany, demanding her place in the sun, was faced by a resolute France with her military honor to regain. England, in accordance with her foreign policy of 300 years, sustained the weaker side. France found an ally in the Russia of the czars and Germany in the crumbling empire of the Hapsburgs. The United States, for reasons which were natural and traditional, but no longer so valid as in the past, stood aloof and expected to be able to watch as a spectator, the thrilling, fearful drama unfold from across what was then called "the broad Atlantic." These expectations were not borne out by what happened.

High hopes and spacious opportunities awaited the victorious Allies when they assembled at Versailles after 4½ years of hideous mechanical slaughter, illuminated by infinite sacrifice, but not remarkably relieved by strategy or generalship. War, stripped of every pretension of glamour or

romance had been brought home to the masses of the peoples in forms never before experienced except by the defeated. To stop another war was the supreme object and duty of the statesmen who met as friends and allies around the peace table. They made great errors. The doctrine of self-determination was not the remedy for Europe, which needed above all things, unity and larger groupings. The idea that the vanquished could pay the expenses of the victors was a destructive and crazy delusion. The failure to strangle bolshevism at its birth and to bring Russia, then prostrate, by one means or another, into the general democratic system lies heavy upon us today. Nevertheless the statesmen at Versailles, largely at the inspiration of President Wilson, an inspiration implemented effectively by British thought, created the League of Nations. This is their defense before history, and had the League been resolutely sustained and used, it would have saved us all.

This was not to be. Another ordeal even more appalling than the first lay before us. Even when so much else had failed we could have obtained a prolonged peace, lasting all our lives at least, simply by keeping Germany disarmed in accordance with the treaty and by treating her with justice and magnanimity. This latter condition was very nearly achieved at Locarno in 1926, but the failure to enforce the disarmament clauses and, above all, to sustain the League of Nations, both of which purposes could easily have been accomplished, brought upon us the Second World War. Once again the English-speaking world gloriously but narrowly emerged, bleeding and breathless, but united as we never were before. This unity is our present salvation, because after all our victories, we are now faced by perils, both grave and near, and by problems more dire than have ever confronted Christian civilization, even in this twentieth century of storm and change.

There remains, however, a key of deliverance. It is the same key which was searched for by those who labored to set up the World Court at The Hague in the early years of the century. It is the same conception as animated President Wilson and his colleagues at Versailles, namely, the creation of a world instrument capable at least of giving to all its members security against aggression. The United Nations organization which has been erected under the inspiring leadership of my great wartime friend, President Roosevelt, in place of the former League, has so far been rent and distracted by the antagonism of Soviet Russia and by the fundamental schism which has opened between communism and the rest of mankind. But we must not despair. We must persevere, and if the gulf continues to widen, we must make sure that the cause of freedom is defended by all the resources of combined forethought and superior science. Here lies the best hope of averting a third world struggle and a sure means of coming through it without being enslaved or destroyed.

One of the questions which we are debating here is defined as "the failure of social and political institutions to keep pace with material and technical change." Scientists should never underrate the deep-seated qualities of human nature and how, repressed in one direction, they will certainly break out in another. The genus homo—if I may display my Latin—is a tough creature who has traveled here by a very long road. His nature has been shaped and his virtues ingrained by many millions of years of struggle, fear, and pain, and his spirit has, from the earliest dawn of history, shown itself upon occasion capable of mounting to the sublime, far above material conditions or mortal terrors. He still remains as Pope described him 200 years ago:

"Placed on this isthmus of a middle state
A being darkly wise and rudely great
Created half to rise and half to fall,
Great lord of all things, yet a prey to all.
Sole judge of truth in endless error hurled,
The glory, jest, and riddle of the world."

In his introductory address Dr. Burchard, the dean of humanities, spoke with awe of "an approaching scientific ability to control men's thoughts with precision." I shall be very content if my task in this world is done before that happens. Laws just or unjust may govern men's actions. Tyrannies may restrain or regulate their words. The machinery of propaganda may pack their minds with falsehood and deny them truth for many generations of time. But the soul of man thus held in trance or frozen in a long night can be awakened by a spark coming from God knows where and in a moment the whole structure of lies and oppression is on trial for its life. Peoples in bondage should never despair. Science, no doubt, could, if sufficiently perverted, exterminate us all, but it is not in the power of material forces in any period, which the youngest here tonight need take into practical account, to alter the main elements in human nature or restrict the infinite variety of forms in which the soul and genius of the human race can and will express itself.

How right you are in this great institution of technical study and achievement to keep a dean of humanities and give him so commanding a part to play in your discussions! No technical knowledge can outweight knowledge of the humanities in the gaining of which philosophy and history walk hand in hand. Our inheritance of well-founded, slowly conceived codes of honor, morals, and manners, the passionate convictions which so many hundreds of millions share together of the principles of freedom and justice, are far more precious to us than anything which scientific discoveries could bestow. Those whose minds are attracted or compelled to rigid and symmetrical systems of government should remember that logic, like science, must be the servant and not the master of man. Human beings and human societies are not structures that are built or machines that are forged. They are plants that grow and must be tended as such. Life is a test and this world a place of trial. Always the problems or it may be the same problem will be presented to every generation in different forms. The problems of victory may be even more baffling than those of defeat. However much the conditions change, the supreme question is how we live and grow and bloom and die, and how far each life conforms to standards which are not wholly related to space or time.

Here I speak not only to those who enjoy the blessings and consolation of revealed religion but also to those who face the mysteries of human destiny alone. The flame of Christian ethics is still our highest guide. To guard and cherish it is our first interest, both spiritually and materially. The fulfillment of spiritual duty in our daily life is vital to our survival. Only by bringing it into perfect application can we hope to solve for ourselves the problems of this world and not of this world alone.

I cannot speak to you here tonight without expressing to the United States—as I have perhaps some right to do—the thanks of Britain and of Europe for the splendid part America is playing in the world. Many nations have risen to the summit of human affairs, but here is a great example where new-won supremacy has not been used for self-aggrandizement but only for further sacrifice.

Three years ago I spoke at Fulton under the auspices of President Truman. Many people here and in my own country were startled and even shocked by what I said. But events have vindicated and fulfilled in much detail the warnings which I deemed it my duty to give at that time.

Today there is a very different climate of opinion. I am in cordial accord with much that is being done. We have, as dominating facts, the famous Marshall aid, the new unity in western Europe and now the Atlantic Pact. How has this tremendous change in our outlook and policy been accomplished? The responsible ministers in all the countries concerned deserve high credit. There is credit enough for all. In my own country the Foreign Secretary, Mr. Bevin, who has come here to sign the Atlantic Pact, has shown himself indifferent to mere party popularity in dealing with these great national issues. He has shown himself, like many American public men, above mere partisan interest in dealing with these national and world issues. No one could, however, have brought about these immense changes in the feeling of the United States, Great Britain, and Europe but for the astounding policy of the Russian Soviet Government. We may well ask, "Why have they deliberately acted so as to unite the free world against them?" It is certainly not because there are not very able men among them. Why have they done it? I offer you my own answer to this strange conundrum. It is because they fear the friendship of the west more than its hostility. They cannot afford to allow free and friendly intercourse to grow up between the vast area they control and the civilization of the west. The Russian people must not see what goes on outside, and the world must not see what goes on inside the Soviet domain. Thirteen men in the Kremlin, holding down hundreds of millions of people and aiming at the rule of the world, feel that at all costs they must keep up the barriers. Self-preservation, not for Russia but for themselves, lies at the root and is the explanation of their sinister and malignant policy.

In consequence of the Soviet conduct the relations of Communist Russia with the other great powers of the world are without precedent in history. Measures and countermeasures have been taken on many occasions which in any previous period could only have meant armed conflict. The situation has been well described by distinguished Americans as the cold war. And the question is asked are we winning the cold war? This cannot be decided by looking at Europe alone. We must also look to Asia. The worst disaster since our victory has been the collapse of China under Communist attack and intrigue. China, in which the United States has always taken a high interest, comprises an immense part of the population of the world. The absorption of China and India into the Kremlin-controlled Communist empire, would certainly bring measureless bloodshed and misery to eight or nine hundred million people.

On the other hand the position in Europe has so far been successfully maintained. The prodigious effort of the Berlin air lift has carried us through the winter. Time, though dearly bought, has been gained for peace. The efficiency of the American and British air forces has been proved and improved. Most of all the spectacle of the British and Americans trying to feed the two million Germans in Berlin, while the Soviet Government was trying to starve them, has been an object lesson to the German people far beyond anything that words could convey. I trust that small and needless provocations of German sentiment may be avoided by the Western Powers. The revival and

union of Europe cannot be achieved without the earnest and freely given aid of the German people.

The air lift has fully justified itself. Nevertheless fear and its shadows brood over western Europe today. A month ago in Brussels I spoke to a meeting of 30,000 Belgians. I could feel at once their friendship and their anxiety. They have no Atlantic Ocean, no English Channel, between them and the Russian Communist armored divisions. Yet they bravely and ardently support the cause of united Europe. I was also conscious of the hope and faith which they, like the Greek people, place in the United States.

We are now confronted with something quite as wicked but in some ways more formidable than Hitler, because Hitler had only the Herrenvolk pride and anti-Semitic hatred to exploit. He had no fundamental theme. But these 13 men in the Kremlin have their hierarchy and a church of Communist adepts, whose missionaries are in every country as a fifth column, awaiting the day when they hope to be the absolute masters of their fellow countrymen and pay off old scores. They have their anti-God religion and their Communist doctrine of the entire subjugation of the individual to the state. Behind this stands the largest army in the world, in the hands of a government pursuing imperialist expansion, as no czar or kaiser had ever done.

I must not conceal from you the truth as I see it. It is certain that Europe would have been communized and London under bombardment some time ago but for the deterrent of the atomic bomb in the hands of the United States.

Another question is also asked, Is time on our side? That is not a question that can be answered except within strict limits. We have certainly not an unlimited period of time before a settlement should be achieved. The utmost vigilance should be practiced. But I do not think myself that violent or precipitate action should be taken now. War is not inevitable. The Germans have a wise saying, "The trees do not grow up to the sky." Often something happens to turn or mitigate the course of events. Four or five hundred years ago Europe seemed about to be conquered by the Mongols. Two great battles were fought almost on the same day near Vienna and in Poland. In both of these the chivalry and armed power of Europe was completely shattered by the Asiatic hordes. It seemed that nothing could avert the doom of the famous continent from which modern civilization and culture have spread throughout the world. But at the critical moment the Great Khan died. The succession was vacant and the Mongol armies and their leaders trooped back on their ponies across the 7,000 miles which separated them from their capital in order to choose a successor. They never returned till now.

We need not abandon hope or patience. Many favorable processes are on foot. Under the impact of communism all the free nations are being welded together as they never have been before and never could be but for the harsh external pressure to which they are being subjected. We have no hostility to the Russian people and no desire to deny them their legitimate rights and security. I hoped that Russia, after the war, would have access, through unfrozen waters, into every ocean, guaranteed by the world organization of which she would be a leading member; that she should have the freest access, which indeed she has at the present time, to raw materials of every kind; and that the Russians everywhere would be received as brothers in the human family. That still remains our aim and ideal. We seek nothing from Russia but good will and fair play. If, however, there is to be a war of nerves, let us make sure our nerves are strong and are fortified by the deepest convictions of our hearts. If we preserve steadfastly together, and allow no appeasement of tyranny and wrongdoing in any form, it may not be our nerve or the structure of our civilization which will break, and peace may yet be preserved.

This is a hard experience in the life of the world. After our great victory, which we believed would decide the struggle for freedom for our time at least, we thought we had deserved better of fortune. But unities and associations are being establishes by many nations throughout the free world with a speed and reality which would not have been achieved perhaps for generations. Of all these unities, the one most precious to me is the fraternal association between the British Commonwealth of Nations and the United States. Do not underrate the strength of Britain. As I said at Fulton, "Do not suppose that half a century from now you will not see seventy or eighty millions of Britons spread about the world and united in defense of our traditions, our way or life and the world causes which you and we espouse." United we stand secure.

Let us then move forward together in discharge of our mission and our duty, fearing God and nothing else.

Academic Freedom Versus Communist Indoctrination

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, April 1 (legislative day of Friday, March 18), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Academic Freedom Versus Communist Indoctrination, which I delivered today to the graduating class of the Federal Bureau of Investigation National Academy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Hoover, members of the law enforcement graduating class, ladies, and gentlemen, I consider it a great honor to be invited by the Director of the Federal Bureau of Investigation to speak to the graduates of the fortieth session of the Federal Bureau of Investigation National Academy. I extend to you my sincere congratulations.

I am familiar with the origin and history of the FBI National Academy and I know, as you do, that it was born out of the inspiration and law-enforcement statesmanship of J. Edgar Hoover.

The Federal Bureau of Investigation National Academy is but one of the examples which the Director of the Bureau of Federal Investigation has set showing that our Federal Government can cooperate with State and local governmental departments without in any way diminishing local self-government responsibilities or substituting Federal jurisdiction and domination for local governmental prerogatives. The record of cooperation of the Federal Bureau of Investigation with State and local law-enforcement agencies has been responsible largely in recent years for greater public support in all of our States for improved law-enforcement services.

The standards and examples set by the FBI with respect to the direct relationship between high standards of qualifications for personnel and efficient law enforcement have caused many State legislatures, city councils, and county boards throughout America to reorganize their police administration in the interest of a more scientific law-enforcement program. The demonstration by the FBI that law enforcement on a Federal level should be, can be, and must be kept free of political influences has done much to encourage law-enforcement administrators on local governmental levels to win public support for the sound position that political patronage and political fixing should have no place or recognition in police administration.

For a good many years I served as dean of the State university law school in my State and taught criminal law and criminal procedure. It was my view that a law school should work in close cooperation with the law-enforcement agencies of the State if its graduates were to perform with understanding their duties as officers of the courts.

It has always seemed to me that too many lawyers practicing in our criminal courts, be they prosecutors or defense lawyers, fail to fully appreciate the fact that in the first instance they are officers of the court charged with the professional responsibility of helping the court and jury do justice in accordance with American principles of justice as set out in the law. I am afraid that too many prosecutors assume that their primary duty is to convict defendants charged with crime and too many defense lawyers assume that their primary duty is to acquit defendants charged with crime. Both groups of lawyers too frequently overlook the fact that their primary duty is to serve as officers of the court in establishing the facts involved in the alleged crimes so that the court and jury can render justice as determined by the facts.

It is this desire of prosecutors to convict and defense attorneys to acquit which so frequently gives rise to those abuses and questionable tactics on both sides of the case for which the legal profession is so often criticized. In their desire to either convict or acquit too many lawyers too frequently come to look upon police and law-enforcement officers as forces of opposition in specific cases if they discover that the evidence to be offered by the law-enforcement officer does not accord with their theory of the case. Such lawyers forget that the police and law-enforcement officers, too, are officers of the court charged with the same solemn obligation of assisting the court in doing justice.

I think, and I say it advisedly, that the Federal Bureau of Investigation, under the leadership of Mr. Hoover, has been the greatest educational force in the country in improving the understanding of the legal profession as to its inseparable partnership with law-enforcement agencies in aiding our courts to administer justice in accordance with the facts. I could enumerate many examples in my own State of the educational services to the legal profession which the FBI has rendered. I remember, as a member of the Oregon Crime Commission, the close cooperation which we received from the FBI on police administration phases of our work. Never did the FBI fail to cooperate with us in connection with any law-enforcement program put on by the law school or by our State and county bar associations.

I know that the emphasis of the FBI upon scientific police methods and incorruptible law-enforcement procedures has won the admiration of the legal profession not only in my State but throughout the Nation. What is more it has made prosecutors and defense attorneys more appreciative of their primary public duty as officers of the court to see to it that justice is done in accordance with facts involved in individual cases.

This Federal Bureau of Investigation National Academy is one of the signal educa-

tional services for improved law enforcement rendered by the Bureau. However, I hope that during your course of training in the FBI National Academy you have been inspired by the fact that it symbolizes more than improved law enforcement. I hope that you appreciate the fact that it offers more than a professional course of training in police problems and their solution. I trust that your work and study in the Academy has broadened your vision and understanding of the essential elements of American justice.

If you will reflect for a moment upon the course of study you have just completed I think you will agree with me that underlying it all has been an emphasis upon the basic principle that American justice flows from the constitutional rights of the individual person. Further, I think you will agree with me that the FBI National Academy sought to instill in you a much deeper appreciation of the rights, privileges, freedoms and obligations of American citizenship. Thus, rather than talk to you today about any technical phase of police administration I want to discuss very briefly one phase of the threat of communism, to the freedom of the individual in America.

I would entitle my remarks, "Academic Freedom Versus Communist Indoctrination." As you know, a controversy is raging in American educational circles today over the issue, Does academic freedom entitle Communists to teach in our schools?

To my way of thinking it doesn't make any difference whether the individual is a policeman, a farmer, a factory worker, a professional man, or a citizen in any other walk of life, we all in America are confronted today with the obligation of rededicating ourselves in support of the principles of our system of justice which protect the rights of the individual but at the same time place upon him the duty of respecting the rights of others.

There unquestionably is a clash of ideologies in the world today which threatens its peace. Great world forces are organizing against the threat of communism because they know that the rights of the individual existing in a free state are shackled in a totalitarian state.

I am afraid that too many people have forgotten that our economic system and our political system are inseparable. We cannot have individual rights and liberties as set out in our Constitution under any totalitarian economy. We cannot maintain the foundation principle of democratic government under a totalitarian economy.

When we speak in our country about the importance of the principle of self-government which is basic to our political philosophy, namely, that the people are the masters and not the servants of the state, we speak of a principle which rests on the concept that the individual is all-important in our American way of political thinking. On the other hand, under the Communist form of government, the individual is but an item of human fodder with which to feed the totalitarian appetitie of the state. It is very difficult to reconcile in the interest of peace the political philosophies of communism and democracy, but we must try to find some basis on which the two philosophies can live in peace in the world. I say that because if we are going to avoid a war which would result in the killing of millions of human beings, living under both Communist and democratic governmental systems today, we must face the cold, hard fact that some mutually satisfactory understanding for peaceful relationships must be reached.

I am not one of those who believe that the Russian people are being held in complete subjugation or in involuntary servitude by the Russian leaders. The evidence is very much against such a point of view, although there are those in this country who are trying to convince us that the Russian people are entirely out of sympathy with the Communist regime.

It would be rather reassuring and hopeful if one could believe that the Russian people are anti-Communist. The facts, however, point to the contrary. The facts indicate that the Russian leaders have succeeded with a program of indoctrination and propaganda since the Russian Revolution in convincing the Russian people generally that the communistic form of government offers the only hope of survival for the Russian people.

We Americans need to remember that the Russian people have been convinced that we intend to make war upon them and that they must proceed as rapidly as possible to prepare for that war no matter what the personal sacrifice and hardship may be. It appears evident that the Russian people are making tremendous sacrifices and undergoing great hardships in carrying out the propaganda dictates of the Russian Politburo.

Part of the Russian strategy is a program of infiltration into the free governments of the world so that in case of another war the Communists will be in a position to do internal damage to those free governments, including our own. This tactic of infiltration is characteristic of totalitarian techniques as used by Hitler as well as by the Russians. We cannot ignore the fact that a spread of the communistic philosophy in America is itself a threat to the great spiritual values of our form of government.

Although we must recognize this danger we must be careful at the same time not to become alarmists. We must be careful not to become Red-baiters in the negative sense. But on the other hand we must not close our minds to evidence and proof of Communist infiltration into our American institutions.

In discussing infiltration tactics I would caution you to remember that we must try to lean over backward in controlling our emotional attitudes toward communistic activities. Keen perception and cool-headed statesmanship are better weapons to use against the infiltrating techniques of Communists than is the adoption of police-state methods on our own part in an attempt to combat an ideology which seeks to destroy us. It is very difficult to remain coldly analytical of the tactics of Communists but it is only by cold analyses that we can properly appraise the nature and methods of our Communist opposition.

What are some of the American institutions through which the Communists may be expected to infiltrate and spread their insidious propaganda against the spiritual values of democracy? We may be sure that they will attempt to infiltrate into every American institution which offers them any opportunity for the creation of a Communist cell. That they have tried and are trying to infiltrate their propaganda into the educational systems of America is self-evident. Under the name of academic freedom they seek to carry out an indoctrination program.

Now, I would caution you to watch out for witch hunts in our educational systems conducted by those who do not believe in academic freedom. We will defeat the purposes of democracy if our counterattack on communistic infiltration takes the form of police-state methods which destroy an untrammeled search for the truth in the halls of learning of our educational institutions.

Twenty-one years of my life have been spent as a teacher in university classrooms, and I know that one of the greatest obstacles to academic freedom is the attempt from time to time, on the part of prejudiced groups, to stifle the untrammeled search for the truth in our halls of learning. The great Biblical tenet of American free education, "Ye shall know the truth, and the truth shall make you free," is too precious to be shackled by academic censorship or the right of free minds to search out the truth no matter what shibboleths or existing prejudices must be pierced in finding the truth.

However, academic freedom is not synonymous with license to destroy that freedom. I fail to follow the logic of some of our educators who are arguing these days that the preservation of academic freedom in the colleges of America requires the recognition of a right of teachers to become Communists and retain their teaching positions. I say that I cannot accept that argument for the obvious reason that true Communists do not possess free minds but rather are indoctrinators of a philosophy which seeks to promote revolution and reduce our people to the dictates of a totalitarian form of government. Such teachers are not teachers at all, seeking to lead students through an objective analysis of governmental philosophies. Such teachers do not possess the devotion of the scientists to the findings of the facts but rather such Communist teachers, in order to carry out their indoctrination objectives, must necessarily slant their teachings away from the facts.

Granted, that looking at the problem from the standpoint of an isolated case here and there, the danger does not seem to be too alarming, nevertheless when one looks at the Communist strategy pattern as a whole, it is impossible to ignore the fact that the danger is a very real one. I am not one who believes that students in political science, philosophy, economics, and other courses taught in the social sciences, should not study the Communist philosophies, because obviously we cannot have an intelligent, educated point of view in regard to the dangers of communism if we do not have an informed and enlightened public opinion in regard to the nature of communism. However, that is quite a different thing from taking the position that the taxpayers should pay for the teaching of communism in either a veiled or unveiled form by Communists on our college faculties.

I see no principle of academic freedom involved in a refusal on the part of university administrations or boards of education to allow Communists to teach on their faculties. To the contrary, it seems obvious to me that we would soon lose academic freedom in our country—as it has been lost in Russia if a Communist educational policy should ever come to prevail in our school system.

In other words, I don't think it is necessary to have a Communist on a faculty in order to make certain that the students will be given an opportunity to analyze the Communist philosophy.

Therefore, it seems to me that any attempt to pervert academic freedom into a license for Communists to teach in our schools should be rejected. I say that fully appreciating the fact that undoubtedly there are some American teachers who are sincere critics of the abuses of capitalism and of social and economic injustice in America and who are falsely accused of being Communists or fellow travelers simply because they present to their students critical analyses of some of the shortcomings of our own system of government. However, false and unwarranted attacks against liberal teachers in our American educational system can be answered and the teacher concerned can be protected in his academic rights without taking the extreme position that academic freedom immunizes teachers from any examination of what they teach or of any consideration of their loyalty to our form of government.

Academic freedom certainly should not become a sanctuary for propagandists. Academic freedom certainly should not become

a refuge and protector of indoctrination. It is to be granted that drawing a line between freedom and license is always a difficult one and requires the exercise of tolerant and exceedingly intelligent judgment. However, the difficulty of the task of determining what falls within the realm of academic freedom and what endangers academic freedom by way of perversion through indoctrination does not justify either school authorities or our citizenry generally in throwing up their hands in surrender when confronted by any attempt, subtle or otherwise, of Communists and Fascists to infiltrate into our educational system. Any such challenge to freedom of education presented by indoctrination tactics must be met head-on. Thus, I do not share the point of view that the President of the University of Washington, acting through the board of regents of that great institution, violated academic freedom by removing from the faculty any avowed Communists.

I do not take the position that students should not hear speeches by Communists because I do not believe in thought-control tactics or in police-state methods. It must be granted that we do not answer or rebut communistic fallacies by refusing to listen to them. That is quite a different thing from impressing upon students through a teaching position a constant bombardment of indoctrination of Communist propaganda presented in the name of academic freedom. It is one thing for students to go voluntarily to a lecture by a known Communist or Fascist-minded person out of intellectual curiosity or desire to try to analyze and understand the point of view of the speaker but it is quite a different thing to impose in the name of academic freedom a subversive teacher on the students of any school.

Therefore, it is one thing to take the position, as I take the position, that true academic freedom forbids us from excluding from critical analysis and study in our schools any of the political, social, and economic philosophies which throughout history have contested for the support of peoples and quite a different thing to take the position that academic freedom permits any classroom in our free-school system to become a propaganda rostrum for the indoctrination of totalitarian doctrines. The proposition is unacceptable to say in the name of academic freedom that in order to give students a background and an understanding of the philosophy of communism, for example, we ought to put on our teaching staffs teachers who are seeking to lead them by way of propaganda into accepting the notion that the American systems of political democracy and economic capitalism are a failure in that they deny basic human rights.

As a liberal in American politics I hold to the view that any form of totalitarianism, communistic or otherwise, is incompatible with individual liberty and with protecting the spiritual value and dignity of the person. Our American system of a political democracy combined with a capitalistic economy has advanced human rights and provided for human needs to a degree far superior to that which has been developed under any other political and economic system in all history.

As citizens in that democracy I trust that as you go back to your local communities your experiences here in Washington will have inspired you to a renewed faith in the basic principles of individual liberty on which American justice rests. I trust that you will have a better understanding of the fact that personal freedom does not mean license to undermine through indoctrination of totalitarian objectives our American system of self-government.

A London Longshoreman in California

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, April 1 (legislative day of Friday, March 18), 1949

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by a Los Angeles Times correspondent and an editorial commenting on the article, appearing in the Los Angeles Times.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times of March 24, 1949]

A LONDON LONGSHOREMAN DOESN'T MISS CALIFORNIA

(By Waldo Drake)

LONDON.—California is far from being the land of opportunity for the British workingman, according to Don Cooper, a London longshoreman.

Cooper ought to know. He and his family of four are back home in Dagenham, Essex, after 3 months in Los Angeles County. They didn't like it.

Just a year ago, Mr. Cooper, who is 54, and his wife Maud, with their daughter May, 26, their son Bill, 23, and a family friend, Joe Buckingham, 38, sailed from London to live in Bellflower, where they had a brand-new house waiting for them.

During the war their daughter Grace, 27, had married an American soldier, Thomas D. Massey, 42, who now has a flourishing meat market in Long Beach. When Grace persuaded her family to come to California she and her husband built another bungalow alongside their own home at 15416 Clark Avenue, Bellflower. It was ready for them when they arrived, after crossing the Atlantic in the Cunarder *Queen Elizabeth* as tourist passengers for $165 apiece and the transcontinental rail trip for $72.

ALL GOT JOBS

Mr. Cooper, the elder, who has a disarming sense of humor, was lucky enough to get a visitors' card from the International Longshoremen's and Warehousemen's Union, at San Pedro, and went to work handling cargo on the Los Angeles waterfront. Son Bill and Joe Birmingham also quickly landed jobs as bricklayer's helpers on a power-plant installation at Wilmington.

All three were joyful at the outset. Don was to get $1.50 an hour, with abundant overtime, and the youngsters would get $1.75 an hour, three times their rate of pay in London. But their hopes were quickly dashed. They had to work too hard.

"British workmen wouldn't stand for the things that happen in California," said Don. "Those longshore foremen are real 'drivers,' and if you even answer them back, they can 'sack' you—just like that."

QUOITS CHAMPION

Don Cooper is a strapping 6-footer, with a ruddy, lean face, reminiscent of a Sioux chieftain. He looks 10 years younger than his 54 years and is still one of Britain's leading quoits players. He was Australian champion in 1916, and all-England champion in 1927 and 1932. But he found the cargo-handling pace too strenuous and the weather too hot, he says.

"The Yanks do get through a lot of cargo and they make more money," Don admitted, "but what does it get them? It makes them old men before they know it.

"They handle more goods than we do here at Tillbury because they are willing to use mechanical loaders and gadgets like them. Our dockers won't go for those machines, because they put men out of work."

Mr. Cooper complained that the California longshoreman is a slave of the hiring hall system. He had to get up at 5 o'clock in the morning, he explained, in order to be in the Wilmington hiring hall in time for the morning call for men for the 8 a. m. shift.

GET PAID ANYHOW

"If your name wasn't called that morning, you had to stick around all day and night, or lose your turn," he said, "In London, the dockers wouldn't stand for that. We report twice a day and get some pay even if we aren't called."

His son Bill and Joe Birmingham had a similar doleful tale as bricklayer's helpers.

"We had to keep the bricklayer supplied with bricks," said Bill, "and did he make us work. He kept us on the dead run—in that heat and sun—and kept shouting at us for more bricks. That's the trouble with American labor. Everybody is on piecework and trying to make too much money.

"Over there the workers get paid for a lot of overtime," Bill admitted, "but the British workman doesn't want overtime pay. He would have to pay most of it back as income tax. The Americans were complaining to us about heavy taxes to feed the British. We told them they didn't know what taxes meant. The British worker gives back a third of his pay as income tax."

UNCERTAIN EMPLOYMENT

At this point, the elder Cooper interceded to say that the main reason the family voted to return to England, after 3 months, was not the arduous labor, but uncertainty of employment. The ILWU refused to renew Don's visitor's card after 3 months. Bill and Joe also preferred their steady jobs, at a third the pay, at Gamages Department Store in London.

Mrs. Cooper said the five members of the family subsisted in California for less than $80 a week, but that back in Dagenham they are living on $30. They pay only $30 rent for their tiny, doll-like, two-story cottage in Dagenham, one of a thousand little "peas-in-a-pod" houses near London's Tilbury docks on the Thames.

Don Cooper admits California workers get more—and better—food than British laborers' drab and scanty fare. But, he says, they don't appreciate it.

BIG CAR CRAZE

"Every California longshoreman thinks he has to have a big automobile," he said, "but all a British docker wants is a home and food for his family and plenty of leisure."

"Working people are much better off in England," cut in young Bill, "because the social-security plan insures them against want and gives them free care when they are sick."

Bill thinks Britain's nationalized medicine is a great forward step in socialism. He said the workingman isn't concerned that the scheme so far is being largely supported by public funds.

"All we know is that it only takes a dollar a week out of your pay," he said. "In California many doctors and hospitals won't even take a workingman's case unless he can pay in advance."

Don Cooper is sure that Britain's Labor Government will be retained by next year's elections, provided there is continued American aid to support economic recovery.

HOMESICK FOR PUB

"Poor old Churchill!" said Don. "He's traveling with the wrong crowd."

Don said the whole family was homesick for Dagenham's long summer evenings, but that he particularly missed his neighborhood pub, the Anglers.

"I'm not really a drinking man," he explained, "but you don't feel at home in an American bar.

"Down at the Anglers Bill Goffe will let you make a night of it with one glass of stout. But in a place in San Pedro the bartender clanged a big bell if a fellow didn't finish off his drink straight away. I've never been so embarrassed in my life."

[From the Los Angeles Times of March 24, 1949]

IN SPITE OF ALL TEMPTATIONS

Times Correspondent Waldo Drake interview with Don Cooper, a London longshoreman returned to Tilbury docks after an unsatisfactory interlude in southern California, ought to be required reading for bleeding hearts who think the whole world yearns to live in the American way.

As he tells it, Cooper didn't have such a bad go. His American son-in-law built him a house here, the water-front union gave him a visitor's card, and he and his two sons went immediately to work at wages unheard of in Great Britain. They made far more money, paid less taxes, ate better food than ever before.

But they didn't like it. After 3 months they packed up and went back to England. Any American who has seen both countries finds this well-nigh impossible to explain. Cooper doesn't.

In the first place, says Cooper, Americans work too hard. They make a lot of overtime but they don't have any leisure. They use a lot of machines that British trade unionists taboo because they supposedly put men out of work. Of course they do move a lot of cargo, but who cares about that?

"Every California longshoreman thinks he has to have a big automobile," he complains, "but all a British docker wants is a home and food for his family and plenty of leisure."

Here is pointed refutation of much prattle about the solidarity of the working class. The goals of labor in Britain obviously are not identical with the wants of American labor, although culturally and historically the two classes are about as close as any.

Don Cooper is not a lazy man, but he is an Englishman. His experience bears out W. S. Gilbert's familiar lyric:

> "But in spite of all temptations
> To belong to other nations,
> He remains an Englishman."

Other Englishmen, conservatives and capitalists, rared up with vigor when it was suggested that American production experts, in connection with ERP, might share some know-how with their backward English brothers.

For his part Cooper thinks Americans are incredibly backward in such matters as socialized medicine and cradle-to-grave security. He points out that London dockers get paid something even when they get no call to work.

Drake reports that Cooper is confident the Labor Government will be retained in power so long as there is continued American aid to support England's recovery.

A similar conclusion, from another viewpoint, was given in Los Angeles by visiting British Publisher Cecil Palmer.

"Our standard of living under socialism is lower, I am sorry to admit, than it has ever been in my lifetime," said Palmer. "If it were not for your generosity * * * we would be faced in 3 months with 1,500,000 unemployed."

There seems to be no doubt that American dollars are sustaining Britain's Socialist experiment, in what Winston Churchill calls a fool's purgatory.

But the key to Cooper's personal preference for London over Los Angeles lies, we suspect somewhat deeper than his Socialist leanings. The highly touted California sunshine bothered him; he sighed for the very climate Americans regard as the world's worst. Nor did he care for San Pedro's garish saloons; he was homesick for his old pub, the Anglers, "where Bill Goffe will let you make a night of it with one glass of stout."

Men cannot be made all in the same pattern; it would be a dull world if they were. Call it provincialism if you will, the attachment to familiar ways and places is an important part of human happiness, and if Mr. Cooper is happier in Essex, why, we wish him well.

What's Right With America—Radio Commentary by W. Earl Hall

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 1 (legislative day of Friday, March 18), 1949

Mr. MUNDT. Mr. President, assorted and sundry critics and cynics these days utilize the slightest of provocation to find fault with what goes on in America. They criticize our American enterprise system, our balance of powers, our legislative procedures, our political independence, our private initiative and private profit system, and virtually every social, political, or economic process or condition in this Republic. I have no fault to find with those whose specialty is criticism or with those who deem it their mission in life consistently to focus attention upon the things which are wrong, and never speak up for the things which are right with America.

On the other hand, I earnestly believe it would be good for us all if we could have a "What's right with America" week in which all of us for that week alone would concentrate without exception or reservation upon pointing out and emphasizing the many things which are right with this Republic and the reasons why we have unquestionably become the leading country of this earth.

Consistent with what I consider to be the increasing need to focus attention occasionally upon what is right with America, I have secured much inspiration and gratification from a radio-editorial written by an old friend of mine, W. Earl Hall, editor of the Mason City (Iowa) Globe-Gazette. I am placing this bit of writing—entitled "It's Time To Speak Up for Democracy"—in the CONGRESSIONAL RECORD with the hope that it will stimulate still others to speak up, and that each and all of us may do our part to stress and publicize some of the fundamental concepts and procedures which, after all, have made America great and kept it strong. So I ask unanimous consent that this, his commentary, may be published in the RECORD.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION—IT'S TIME TO SPEAK UP FOR DEMOCRACY

(A radio commentary by W. Earl Hall)

One day not long ago a crowd of 150 youths swooped on the Illinois State Legislature, denouncing and ridiculing the American way of life and loudly and proudly proclaiming, "We are Communists." They were from two college campuses, the University of Chicago and Roosevelt College, also in Chicago.

A member of the Illinois Legislature in reporting to me on the incident, had this to say:

"As I watched the antics of these juvenile termites as they took over Springfield, blocked traffic, insulted citizens, and littered State house and other public places with seditious literature, I could not but wonder how youths favoring free enterprise would be treated if they attempted a demonstration in Moscow. You know the answer."

THE GANG THEY'RE BACKING

The answer, of course, is contained in this recent report by Chief Justice George W. Maxey, of the Pennsylvania Supreme Court:

"In 12 years of the Communist rule in Russia there were executed 28 bishops, 1,219 priests, 6,000 teachers, 9,000 doctors, 54,000 officers, 200,000 soldiers, 70,000 policemen, 12,950 landowners, 355,250 intellectuals and professional men, 193,280 workers, and 815,000 peasants. Some 15,000,000 are in slave camps in Siberia."

In the face of such a record, one may well ask, "Why is a Communist?" Undoubtedly many of these youngsters who descended on Springfield were mentally unbalanced, proper subjects for a psychiatrist if not an asylum.

But many others not quite classifiable as mental cases are enamored of the Russian system. Henry Wallace, for example. Maybe we aren't doing quite good enough a job of selling our form of government, in comparison with communism or socialism or any other form of national rule.

SOME WIDESPREAD UNTRUTHS

Thousands, and perhaps, millions, of Americans not yet ready by any means to march under the Communist banner as these half-baked collegians did over at Springfield have been taken in by such untruths as these:

The poor get poorer and the rich get richer.

A few wealthy families own the greater part of the wealth of the Nation.

Most business concerns make unreasonably large profits.

Big corporations take advantage of their customers, of their employees and of small businesses, and should be drastically controlled by Government.

The owners of business get the larger share of the income produced; the employees get the smaller share.

Corporations are owned by a handful of people in contrast to the millions of employees on the pay rolls.

These are just plain unadulterated falsehoods and anybody who entertains such notions just hasn't been truthfully informed.

IT'S MADE AMERICA GREAT

It isn't even debatable that the American system of government and economics has brought more well-being to more people over a longer period of time than any other system ever conceived in the mind of man.

Let there be comparison with communism or socialism or fascism. The facts are all in favor of our way of life. Claims regarding

the accomplishments and the expected accomplishments under socialism or communism are glib promises.

There is no evidence in history, or in the contemporary world scene, that either communism or socialism ever eliminated poverty, brought about equality of incomes, improved the living conditions of the masses or increased personal liberties.

It's an amazing paradox that some Americans accept these unsupported indictments of our system of government and economics at the very time when our over-all wealth, our productive power, our standard of living, our personal freedom are the envy of the people of every country in the world.

WHO WOULD IMAGINE IT?

Dr. Virgil Jordan, in his article, "Life or Death of the Free Economy," had something pertinent to say about this paradox not long ago:

"Who would imagine that such a people [meaning the Americans], emerging from these immense achievements [twice within a generation saving the world from defeat by Germany], would be impelled, as if driven by some profound inferiority complex, to abandon the basic conditions and ideals by which it did these things?

"Who would imagine that such a people would wish to copy the pathetic example of the European and Asiatic peoples whose creative power has been destroyed by centuries of war, struggles for power, political plunder, exploitation, conspiracy, and oppression?

"Who would suppose that such a people, or any of them, fresh from these colossal accomplishments, could be persuaded to believe that a poor, primitive, predatory despotism like Soviet Russia provided for them and the world a model of freedom, or democracy, or economic progress—a mentor whose sterile ideas, methods, and institutions we should imitate or emulate?"

WE MUST KNOW THE WHY

If America is to remain American, it is essential that our people must know and appreciate how much better off they are than the people of any other country. But that isn't all. That isn't enough. Our people must know and appreciate why this is true and be prepared to preserve the fundamentals of our way of life.

Too many Americans seem not capable of recognizing the approaches to collectivism as such, or understand what collectivism is, or the ends to which every collectivist economy inevitably leads.

Somebody has made this observation: "No people ever entered the compulsory state through a door on which the price of admission was plainly posted." But in America there have been side doors bearing no mention of the price of admission.

IF IT'S SUGAR-COATED

In recent years many Americans who disapprove of socialism and communism when marked as such have fallen for every type of socialistic legislation that has been proposed—so long as it has been sugar-coated and disguised with an American label.

Put to a vote—which, of course, communism never is—neither socialism nor communism would command any sizable support in our land. This was manifest in the vote for Norman Thomas and Henry Wallace last November.

But we can, as other nations have, arrive at the same destination through such well-camouflaged entrances in the form of promises often held out by political demagogs—rosy pictures of a never-never land where there's security and contentment for everybody—and almost no work to be done.

It wasn't in this manner that America became great.

FREEDOM FOR SECURITY

In our contemporary world and in the past centuries, nations have withered and decayed when their people were willing to trade their freedom for ease or contentment, or even for security. That danger faces us in our too-common disposition to look to Washington for the answer to all of our questions.

After a century or so in which mankind's march was in the direction of democracy, our generation has seen a reversal of the trend. We've seen totalitarianism rear its ugly head, under two labels—fascism and communism—but totalitarianism nonetheless.

The mark of totalitarianism is the dominance of state over people. Human dignity has no meaning when there are smothering curbs on religious freedom, free speech, free elections, and the other freedoms guaranteed to us in our way of life by our Bill of Rights.

HYPNOTIZED BY WORDS

In Russia's double talk for world consumption her form of government is referred to as democracy rather than communism, the name applied to it by Karl Marx, its atheistic inventor. Actually, of course, it is no more democratic than Mussolini's fascism or Hitler's nazism.

Here, as Walter E. Spahr has pointed out, is a warning to Americans who unthinkingly are drawn to any proposal bearing the label of liberal. Many a wholly un-American proposal is handed to us in that untruthful package.

By the same token, capitalism, has come to bear an unfavorable connotation in too many unthinking minds. Karl Marx of last century and the Russian Communists of today have sought to make it a term of opprobrium when as a matter of fact it's as honorable a word as democracy itself.

CAPITALISM MEANS DEMOCRACY

Capitalism in the truest sense means free enterprise, sovereignty of consumers in economic matters and sovereignty of voters in political matters. It rests upon individual planning, freedom of competition, prices determined in free markets, equitable taxation for the common good.

In assuming an apologetic attitude with respect to our dynamic capitalism, Americans are playing into the Communists' hands. They want us to believe that capitalism is something iniquitous, which it is not.

I wouldn't want to leave the impression that I think our system of government, including capitalism, is perfect. Of course it isn't. And that's another fact in favor of our way of life. We're free to seek perfection; the Communists are not.

WE'RE FREE TO CRITICIZE

A great writer, Philip Wylie, recently pointed this out in these words:

"Every forward step is achieved by some individual who sees a flaw in things as they stand, and by some individual who then works out an improvement. American freedom is designed to take advantage of public self-criticism and personal ingenuity.

"The Communists, on the other hand, believe their theory to be flawless as it stands. Criticism is therefore discouraged, with guns and concentration camps. Original Communist thinking is impossible, since potential thinkers are allowed access only to the old Communist doctrine.

"Philosophically, then, communism is the most hide-bound and conservative form of government on earth, no more progressive than ancestor worship."

ANOTHER YOUTH VIEWPOINT

I started this commentary with a reference to a group of harebrained students who invaded the Illinois State capitol proclaiming themselves to be Communists. I'd like to close it with this definition of democracy by a 17-year-old Minnesota youth:

"I speak for democracy and so I speak for men everywhere * * * the creators of wealth, the masses that are the power and glory of the world * * * those to whom all leaders are accountable. Only under democracy can men find their hopes fulfilled, whether it be to speak without fear or own a piece of land, to go to church or stay away.

"Democracy is many things—the right to trial by jury or to travel where you will; to take a ride in the country or to see a ball game, to be an engineer or a ditch digger."

THE PRICE OF FREEDOM

"There is a price for everything. The price of freedom is responsibility. Your responsibility is that of voting, of seeing that justice is done, of doing your best to abolish racial and religious prejudice, of upholding your Nation's laws and her ideals.

"And the common man knows that democracy at its finest can be the only path to world union and the ending of war. Let us hope that with the grace of God, we will win through to make on earth a true brotherhood of man."

Supreme Court Decision Forces Real Competition in Cement Industry—Bids After Decision Produce Varied Destination Prices—Victory for Small Business If Moratorium Defeated

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. PATMAN. Mr. Speaker, subsequent to April 26, 1948, the date of the Supreme Court decision in the Cement case, competition appeared among members of the Cement Trust. The pattern of identical destination prices through the use of the basing-point system gave way to bid prices based on lawful published freight rates.

The deceptive basing-point system of pricing as practiced by the cement industry made a sham of competition. No purchaser of cement could look at a table of identical prices and arrive at a conclusion that anybody had competed for his business. To the contrary, the purchaser was neatly fenced in by a well-drilled team of robot prices. There was no escape from the artificial methods used in the distribution of cement. No escape, that is, until the Supreme Court decision outlawed the system. Valid illustrations of varied destination prices are now a matter of public record.

Bids on cement for use by the Reclamation Service of the Department of the Interior reflect real competition. I desire to include at this point tables assembled from abstracts of bids on two projects under the Reclamation Service, which were received after the Supreme

Court decision on April 26, 1948. The tables follow:

TABLE I.—*Specification No. 2243, 2,500,000 barrels of portland cement in bulk for the Hungry Horse project; bids opened May 20, 1948—destination Coram, Mont.*

Bidder	Per barrel price, f. o. b. mill	Freight rate	Per barrel destination price
Permanente Cement Co.[1]	[2] $2.65	$3.0456	$5.6956
Spokane Portland Cement Co.	2.90	1.2784	4.1784
Lehigh Portland Cement Co.	3.20	1.2784	4.4784
Ideal Cement Co.	3.30	1.44384	4.74384

[1] Net price, others 10 cents per barrel discount.
[2] In paper sacks, 40 cents extra; others, 30 cents.

NOTE.—Maximum price increase at time of delivery: Spokane, 60 cents; Lehigh, 15 cents; Ideal, 15 cents; Permanente, indefinite.

TABLE II.—*Specification No. 2356, 70,000 barrels type II portland cement for the All-American canal project; bids opened August 19, 1948, various destinations*

Bidder	Per barrel price f. o. b. mill	Freight rate	Per barrel destination price
Riverside Cement Co.	[1] $2.55	$0.3883543	$2.9383543
Southwestern Portland Cement Co.	2.60	.3883543	3.0783543

[1] In paper sacks, 40 cents extra.

NOTE.—Maximum price increase at time of delivery: Riverside, 20 cents; Southwestern, none.

These tables tend to show that not only is it possible to secure competitive prices when the basing-point system is abandoned, but competitive prices which are unwatered by phantom freight. It will be noted in table I that the Spokane and Lehigh companies had the same destination freight rate but very different destination prices. In table II the freight rate to the fraction of a cent is the same but competition produced different destination prices.

Small business will reap the benefit of free and open competition in the cement industry if a moratorium on the basing-point system is not declared. There is nothing to be gained by hasty or injudicious legislation. It only dams the streams of progress and causes discontinuity in the orderly determination of antitrust-law violations.

I hope Members who are interested in the strengthening and preservation of small-business enterprise, will join with me in defeating any attempt to give the Cement Trust a blank check by way of a moratorium on the Supreme Court decision.

Canada Cuts Taxes

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 1 (legislative day of Friday, March 18), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington (Pa.) Observer, relating to the tax situation in Canada and in the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CANADA CUTS TAXES TO HALT RECESSION

Canadian Finance Minister Douglas Abbott is convinced that inflation in the land of the maple leaf is a thing of the past. He thinks that at least another year of unexcelled prosperity lies ahead. Therefore, he is passing along some of the benefits of this happy situation to the paying customers, the Canadian people.

Canada is taking realistic action to head off depression. Income taxes will be reduced by approximately 32 percent. Taxes on the earnings of small businesses will also be reduced, and import restrictions on a long list of commodities will be relaxed. Taxes on jewelry will be reduced by half to 10 percent. Many other levies and luxury taxes will be wiped out altogether.

Not only is a 32-percent reduction in income taxes something to gloat over, but for the first time in history taxes in Canada will be lower than in the United States. Income-tax rates on middle-bracket incomes in Canada will be one-half those in effect in the States.

Canada's come-back from the gloomy vistas of a tight war economy has been nothing short of phenomenal. It shows good management and a will to live in the sunlight of a free economy. Canada has achieved the state which citizens of the United States looked forward to fondly at the end of the war—a prosperous era with drastic reduction in wartime taxes.

Senator GEORGE, Democrat, of Georgia, advocates adoption of a policy similar to that ordered in Canada by the United States. Chairman of the Senate Finance Committee, he has long specialized in public fiscal matters.

He referred to the fact that Canada is adopting such a policy even though that Dominion has a public debt which is comparatively greater than that of the United States. He made this reference in citing that reduction of public debt is one of the reasons advanced by advocates of higher taxes.

There is no good reason why the spending of the United States should not be reduced to make a payment on the public debt possible under even present conditions. Even with all the talk of recession, business activity is still at a very high rate. A leveling off is inevitable but even so the outlook for business for some months ahead is still good.

Conditions will be somewhat different but the need for things still exists and there are many who want them.

Perhaps Congress should appoint a joint committee to tour Canada and learn how it was accomplished there. Perhaps the White House should send a representative on a similar mission.

Child Labor Carriers?

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. SCUDDER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the San Rafael Independent for February 21, 1949:

[From the San Rafael Independent of February 21, 1949]

CHILD LABOR CARRIERS?

A vicious, unwarranted, and ill-founded insinuation that the newsboys of the Nation—the carriers for instance who deliver your copy of the Independent-Journal to you—are the victims of unscrupulous child-labor exploitation is made in the February issue of the Woman's Home Companion.

The article deals generally with child labor in various industries—working in agriculture, in restaurants as waitresses and soda jerkers and so on—and then on page 88, after a number of alleged abuses of child labor have been quoted, contains the following paragraph:

"Almost as unregulated is the occupation of newsboy, another job generally thought to be good for children. Not a single State has adopted in entirety the standards recommended by the National Child Labor Committee, a voluntary organization which since 1904 has endeavored to protect working children.

"These are: no carrier ought to be under 14—or 12 if he has an afternoon route in a residential neighborhood; newsboys should not work earlier than 7 a. m. nor later than 7 p. m. and not for more than 3 hours a day or a maximum of 18 hours a week during school terms."

The statement that the recommendations of the National Child Labor Committee in respect of newsboys have not been adopted by any State, followed by a listing of these recommendations, is, of course, a left-handed method of accusing newspaper proprietors generally of ignoring these recommendations and, in short, of using sweated labor to get their product on the market.

Such an accusation, the more potent because the arguments in support of it are skipped over as if obvious to be superfluous can best be dealt with by fact rather than by bluster, by an examination of things as they are rather than by a justified condemnation of such an unfounded charge.

So let's look at the facts.

First, as to the insinuation that perhaps the occupation of newsboy, another job generally thought to be good for children is not so good for children.

What does a newsboy do?

First of all, he is in business for himself. He gets newspapers from the publisher and sells them on an appointed route. He takes his own profit on these sales and turns over the cost of purchase of his wares to the publisher who supplied them.

In the course of this conducting of his own business, he learns many valuable things which are not taught in any school.

Here's a partial list: dependability, salesmanship, management of money, experience in extending credit, the need for credit in marketing, ability to meet the public, the need for keeping books, the thrill of increasing his own business and reaping a proper return from his efforts, independence, honesty, an understaanding of human strength and weakness, and the importance of thrift. A not unimpressive list, we believe.

We cannot find in all of these, recalling even the most jaundiced approach, anything of detriment to the boy; anything which suggests in the least way that his work is harmful. Furthermore, his work is not carried out in a confined space, but in the open air and among his own neighbors. We submit, then, that the type of work is not harmful to youth, but on the contrary, is most beneficial.

Now, how about the conditions of work—perhaps it is in this that we, and the newspaper publishers of this Nation who have campaigned for years for a better life for the people, are the blackguards, preaching

the greater freedoms in our paper while grinding the very soul of youth in our own business.

It is maintained that boys under the age of 12 should not be employed as carriers on afternoon newspapers. We do not know why the arbitrary age of 12 was picked, and we have no such untenable and artificial standard. We select our carriers on the basis of intelligence and health and initiative. It has long been established that age is no criterion by which to judge human beings. We do not employ infants but boys, and do not bar one because he is only 11 years, 11 months old.

The time the boy works is largely up to the boy. He can deliver his papers in an hour or he can take 3 hours over it if he wishes. It's his business and he's running it. And the same goes for newspapers everywhere in this country.

Finally, there is the recommendation that newsboys should not work for more than 3 hours a day or a maximum of 18 hours a week. This is covered in the statement that our newsboys work an average of an hour to an hour and a half a day—depending largely on their own desire.

No mention is made of the remuneration received. The minimum adult wage in the country is about 60 cents an hour. Being liberal and assuming that the average Independent-Journal newsboy works 10 hours a week, he earns an average of 70 cents an hour—or 10 cents above the minimum wage.

From this it can be seen that quoting newsboys as a class of sweated child labor is a baseless and unwarranted statement, and if the author of this dubious article were to succeed in ruling out the employment of boys as paper carriers, the result would operate to the disadvantage of the boys themselves, and not to that of the publishers.

In our own instance, we use some 134 boys to deliver our papers. We could accomplish the same delivery for perhaps less money, and certainly no more, by employing men. But we would be denying to these 134 boys a chance to earn some money and get some business experience which will stand them in good stead later on.

And we wonder whether the writer of this vicious piece has thought what would happen to these boys in their leisure time if they had no newspaper route to cover? Some would probably find something else to do. The rest would be left to their own devices, possibly getting into trouble from sheer idleness.

We are ready to step down now from this witness stand, into which we have been thrust, and let you, the jury, decide whether we are guilty of running our business by sweated labor.

But perhaps before you reach your verdict, you might like the evidence of a prime witness—your carrier.

Why not ask him whether he is being abused and overworked?

We think he'll probably pop his bubblegum and say cheerfully, "Who, me? Shucks, no."

Pressing Needs of America's Children

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article compiled by the American Parents Committee Education Fund, Inc. This document is in a sense a statistical and factual report showing the most pressing needs of the Nation's children as regards their education, health, and welfare, as well as the shocking neglect of children who are without the means or assistance to help themselves.

A SUMMARY OF THE MOST PRESSING NEEDS—EDUCATIONAL, HEALTH, AND WELFARE—OF AMERICA'S 46,000,000 CHILDREN 17 YEARS AND UNDER

There is great inequality of health, educational, and welfare facilities among the States. In the poorer States the citizens have not enough income that can be taxed by the State or by the towns in which they live to provide adequate schools and health and welfare services. Furthermore, in the poorer States there are as many as 50 percent more children per 1,000 adult population than in the richer States. So children unfortunate enough to be born in the poorer States are getting a particularly raw deal. They are growing up without adequate schooling, without proper health facilities, and without decent welfare services such as are provided in the more prosperous communities and States. Even in the richer States many schools are overcrowded and unsafe, and the child health and welfare services pitifully inadequate. Can the United States afford such shocking neglect of children?

Children are our most precious and promising national asset. They alone can assure our future as a democratic people. And yet we are subjecting them to the conditions described below:

EDUCATIONAL NEEDS OF CHILDREN

More than 4,000,000 children of school age do not attend school at all either because there are no schools or because school attendance laws are laxly enforced. Many children go to school only 6 months a year. In many communities there is no schooling beyond the eighth grade. Many schools are fire-traps. There are still about 100,000 one-room wooden schoolhouses, where one teacher teaches children of all ages. Seventy-five thousand teaching positions remain unfilled; 110,000 emergency teachers are being employed without proper qualifications. Money for education is not only too little but is unequally distributed; some communities spend 60 times as much on education per child as others do.

Schools are already overcrowded. In some communities children have to attend two-shift, even three-shift schools. Because of the sharp rise in the birth rate during and since the war increasing numbers of children will be flooding the schools. In three years (1951) school enrollments will be up 2,400,000 more than in 1948; in 8 years (1956) 8,000,000 over 1948. The estimated cost of needed new school construction between now and 1956 is $6,800,000,000 or $850,000,000 a year above present school expense budets.

HEALTH NEEDS OF CHILDREN

Every hour 12 babies die. And many, many mothers also die needlessly. At least one-half the maternal deaths and one-third the infant deaths are preventable. Although the national death rate for babies under a year old has been reduced to 34 per 1,000 births, yet in one State 28 babies out of 1,000 died, while in the State at the other end of the list, 100 out of 1,000 died. Nearly a quarter of a million mothers and babies have no medical care at childbirth and during the first few days of life.

Seventy-five percent of American school children need dental care; 10,000,000 have defective vision; 4,000,000 have hearing defects. Half a million have orthopedic and plastic defects. 175,000 have active tuberculosis. Rheumatic fever and diseases of the heart cripple 500,000 children.

Forty percent of our counties have no hospitals. Twenty-five percent of our children live in areas where no full-time public health services are available.

Only 50,000 out of the 200,000 school units have a school lunch program. Approximately two-thirds of school-age children do not benefit. Growing evidence proves that the school lunch program, by providing proper nourishment, if only for one meal a school day improves health, reduces absences from school.

One out of every 20 American children is destined, as conditions are now, to be a patient at sometime in a mental institution. Most mental difficulties begin in childhood, yet 25 States have no child guidance clinic in any community. Full time clinical service for child guidance is provided in only 27 of the largest cities.

WELFARE NEEDS OF CHILDREN

Nearly 4,000,000 children are fatherless, motherless, or both. Yet 6 out of every 10 such children neither receive public assistance (grants for aid to dependent children) nor Social Security benefits (as survivors of men who have died after being in covered employment). Some 564,000 children are receiving Social Security benefits as survivors. The average monthly benefit for a family, in which a single child receives a benefit, is $13.10. Half the children whose fathers died in 1946–47 did not qualify for even this meager benefit. For 1,000,000 of the children receiving public assistance (23 out of every 1,000 under 18 years) the average grant was only $24.21 per child per month. Five-sixths of all U. S. counties have no full-time child welfare workers paid from public funds one-half are concentrated in 7 States, mainly in urban counties.

OTHER NEEDS OF CHILDREN

Child labor: More than 2,000,000 boys and girls 14 through 17 work, part or full time. This is twice as many as were gainfully employed in 1940. These figures do not include children under 14, many thousands of whom work in agriculture. Fifty-six percent of these children are not attending school. Federal laws protect only about 20 percent of children against harmful employment, in industries which ship goods interstate.

Juvenile delinquency: At least 250,000 youngsters annually come before juvenile courts.

Children in migrant farm families: Hundreds of thousands of children in families of migrant farm laborers fail to receive the health, education, and welfare benefits available to children of fixed residence.

The Proper Approach to Social Issues

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, April 1 (legislative day of Friday, March 18), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Bulletin of the Essex County (N. J.) Dental Society. It reviews succinctly the American Medical Association's habit of misinterpreting socio-political issues and it seeks that intelligent approach on the part of professional men which the sponsors of national health insurance have urged for years.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"LET THERE BE LIGHT"

Once upon a time, when old-age insurance was being introduced and the very radical idea of unemployment insurance was contemplated by our Government, the spokesmen for the American Medical Association declared that such action was a definite step toward either communism or totalitarianism. Organized medicine and dentistry rallied against the new "evils" but to no avail. These bills became the law of the land and subsequently were embraced by almost all groups of people comprising varied shades of political opinion. As to the advent of communism or totalitarianism, the prognosis offered by the AMA, I am very happy to say, was entirely wrong—the patient is still alive and kicking.

Ten years ago, when the Senator from New York, ROBERT WAGNER, introduced a bill authorizing Federal aid for hospital construction, we were again informed by the leaders of our allied professions that this marked the beginning of an invasion by the State into the personal life of the individual, a weakening of national caliber, and a step toward—you know what. Well, exactly 5 years later, Congress passed the Hill-Burton Act, which contained essentially the same idea as that which WAGNER had presented just a few years before. Since then, our medical colleagues have done some fine constructive work under the provisions of the very act whose contents they originally had opposed so vigorously.

When workmen's compensation laws were first introduced, all inquiry concerning its merits and all support for this social legislation was drowned out by the loud cry that medical freedom was being endangered. Today the medical profession is not only in favor of workmen's compensation laws, but is actually in control of the medical end in most of our States.

In 1932, when Dr. Ray Wilbur, a former president of the AMA and Secretary of the Interior under Herbert Hoover, released a report that favored voluntary health insurance for the American people, that report was immediately denounced as socialism and communism inciting to revolution. And when a committee under Dr. Wilbur advocated group practice they were charged with trying to set up medical Soviets. At the present time organized medicine and dentistry lends its enthusiastic support to voluntary health insurance while group practice has also been accepted.

Now comes the latest collectivist scheme, President Truman's compulsory health insurance plan. And once more the same cries of "Wolf! Wolf!" are being heard. The administration's health insurance proposal may have some merit to it and it may not, but before any reasonable appraisal can be made all the facts of the matter should be known. It is not enough to be told that it is socialism or alien or a danger to the American way of life. Name calling does not clarify issues, it camouflages them. Furthermore, such labels are strange indeed when the leading pink endeavoring to make this bill a law is the Chief Executive himself.

If there are any serious misgivings in this piece of legislature what are they? Can they be amended? Should they be amended? Many reputable civic leaders and Government officials are opposed to this bill. Why? A multitude of questions have yet to be answered about compulsory health insurance and we are entitled to know all of them. The common goal of all of us is a stronger, healthier, and more prosperous America. Does this bill bring us closer to that goal or does it make the realization of those aims more remote?

The record of organized medicine in its action against social and economic legislation has not been one in which we can or should place blind faith. Even the latest effort by the AMA to offer new opposition to the President's proposal was described by the columnist Marquis Childs as "an eleventh hour deathbed conversion, and because it is that, the sincerity and intention of the AMA will be questioned." Let's drag the compulsory health insurance bill out of the "back room" and bring it into the bright light of reason. If the AMA is right in this issue, let us find out for ourselves and then lend them our full and active support. Only after careful and detailed examination of the question can we come to any intelligent decision upon this matter, a decision that will be of vital concern to the American people as well as to the profession. If this bill is passed, of one thing we can be certain, the control of the professional aspects of this plan must be in our hands, so that it never can be used as a political football or become bogged down with ward-heeled favorites or red tape.

We have heeded the cry of "Wolf, wolf" too many times in the past. This time let's take a look for ourselves, perhaps, after all, we'll only find a sheep in wolf's clothing.

M. J. TEITELBAUM, D. D. S.

Advertising as a World Force

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley at the luncheon of the Advertising Club of New York, New York City, on March 23, 1949:

I have been asked to talk about advertising, foreign markets, and politics.

At first these subjects seem completely unrelated. But when we examine them closely we may find a common denominator that ties them together. I suspect that they are all part of the same world, and that some principles apply equally to all three.

Let us begin by looking at advertising. Aggressive sales promotion is so much a part of our life that we accept it without worrying too much about the premises on which it is based.

Most advertising begins with a trade-mark. Look at an ad and somewhere you will find usually a mark that distinguishes the goods advertised.

Now what is a trade-mark? I quote Mr. Edward S. Rogers, an authority in the field. "In a nontechnical sense, a trade-mark is a name or symbol which tells where goods come from and hence, who is responsible for their identity and quality, so that if they are satisfactory they can be bought again, and if unsatisfactory they can be avoided." A trade-mark is a simple, practical device—a commercial invention of the first order. In the millions of daily transactions of buying and selling it is a symbol of an implied contractual relationship between buyer and seller that establishes the identity and responsibility of merchandise. It fixes identity and responsibility much in the same manner as your own signature at the bottom of a letter makes you its responsible author.

Again, what is the function of advertising, and how does it work? It is customary to say that advertising sells goods. I think it is more accurate to say that advertising speeds the sale of goods. In the long run, no product sells because of advertising that would have sold in a lesser degree without it. For if the product is not worthy, advertising simply hastens the day when the whole market has sampled the product and rejected it. Advertising cannot make a permanent success of any product that is not fit for success on its own.

Thus, advertising is a multiplier that broadcasts your virtues—or your defects—all the faster.

Now we know that speed—the length of time it takes to make and sell a certain number of units—has everything to do with cost and profit. The longer the time and the lower the quantity the higher the unit cost; the shorter the time and the greater the quantity the lower the unit cost.

Viewed in this light, advertising is no different from a machine tool that cuts manhours from a manufacturing operation. It is, in fact, the same thing in a different form. The final justification for advertising is not that it is customary, or that you do it because a competitor does it, but that it cuts cost. You advertise simply because it costs less to send a message to a customer through the printed word or over the air and screen than it does to send a salesman to call on everybody door to door.

Advertising is thus part of a complex system—a routine, a know-how—that includes inventiveness, organization, machine tools, and skilled labor and workmanship, and that has resulted in the more universal distribution of more goods at lower cost than the world has ever known.

When we realize this, no one needs worry about the future of advertising. It is with us to stay, because it is one of the cornerstones of our standard of living.

I have been asked whether I think the administration is for advertising or against it. I do not have any crystal ball from which to pick an answer. I do know that as far back as 1945, President Truman, in a letter to Mr. Elon Borton, of the Advertising Federation, went on record—and I quote:

"In these war years we have demonstrated our capacity to produce far beyond anything previously thought possible. That productive capacity must be maintained and used in peacetime for full employment—and for the highest possible standard of living for every man, woman, and child.

"But goods produced must be marketed—promoted, advertised, and sold—for enjoyable, beneficial use by consumers, or production will not continue. Production and distribution must go together.

"We have proved our ability to produce. Now we must demonstrate that we can sell into consumption or use the full output of full employment. This will require the complete mobilization, the thorough training, and the effective work of the millions of our people engaged in the processes of advertising and selling. I am confident that American business can and will do this."

The administration has at various times recently, and since the election, stated clearly that it is not antibusiness, and that business has nothing to fear from it.

Actually, our security is much greater than that. If we hold fast to the clear idea that advertising is a tool for cutting costs—that it is completely entwined with our standard of living—that its use makes goods cheaper—that its absence makes them more expensive—then you can be sure that it is safe, because you can depend on the innate common sense of the American public to protect it. The public, collectively, can generally be trusted to be more sensible than any one of us individually, and to stop any error before it goes too far. Take the matter of taxes and budgets. So long as we were at war, and

so long as take-home pay was on the increase, additional taxes were not too difficult to pass. Today, with the rise in wages slowed down, the public—and its servant, the legislator—have become very sensitive to tax increases. You can see this not only in Washington—but even our local chief executive, Mr. Dewey, has found it out. Mr. Dewey never compromises with his legislature—that is, scarcely ever—but on budgets and taxes he compromises too.

It is up to us, I think, to make our own case clear. Like most professions, I think we advertising people are guilty of spending too much time on how, rather than why. If you ask an advertising man how he would advertise a product, he drowns you in ideas. But ask him why we should advertise at all, and this seems so obvious to him—it is so long since he has thought about it—that he is apt to stutter a bit. It is no more true of advertising than of any other piece of merchandise that the public knows all about it. It is up to us in the business to continually promote its most important feature—that it cuts costs—as we would for any product. Therein lies our real safety.

We hear a good deal of talk these days about the need for advertising censorship and regulation. I know of no field that needs regulation less or that has disciplined itself more. There is no governmental body whose wisdom could be as great or whose discipline could be as harsh as that of the open competitive market. If we stop to think about it, competition functions in much the same way as his majesty's loyal opposition or as a minority party. State an untruth, be it ever so small, and your competitor is quick to point it out and to force you to correct it. Here and there a fly-by-night may publish an exaggeration and before competition and the public have time to catch up with him, he will be gone. But the permanent manufacturer who represents 98 percent of the products we live by has long since learned that truth and honesty in advertising are the only policy that enable him permanently to live with his public.

Politics and advertising have this in common, that they thrive best in a free society where both are subjected to the continued harsh light of publicity, claim and counter claim, criticism and opposition. About the only difference that I see between the two is that a politician is a little bit like a banker. A banker draws up a statement at the end of his fiscal year—a politician subjects himself to the approval of the public every 2 or 4 years, as the case may be. But with a piece of merchandise and with advertising, every day is election day, and every product and every advertisement is continually and completely subject to the verdict of public opinion. In both cases it is truth and character that stand out.

If we look over the field of famous trade names, the ones that are permanent are the ones that have been truthful and honest, that year in and year out have given full value for the dollar. If you stop to think of the amount of faith the average buyer puts in the merchandise he buys in the American market today, it is the finest possible tribute to the veracity of the American printed advertising word. If you will look at the politicians the world remembers, from Washington, Jefferson, Jackson, and Lincoln down to our own day—it is not the clever and expedient whom we remember but those who were known in their day for their stubborn addiction to the truth.

I do not know what your concept of a politician is. Perhaps it is as erroneous as my own idea of an advertising man used to be. I used to think that advertising men were long-haired artists who dreamed up dreams. Perhaps you think a politician is an adroit character who spends his time glad-handing in a smoke-filled room. But just as in advertising the harsh reality of sales results weeds out the impractical craftsman in favor of the dependable workman—in politics the same harsh light of public opinion weeds out the opportunist in favor of the statesman who renders a public service.

Let me give you a definition of politics that I have carried with me for a quarter of a century, written by Andrew Oliver in Boston more than 150 years ago. It goes like this: "Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures—and neither is there any in which, by a mere loss of nerve, he may do as widespread harm. There is not another in which he may so easily lose his own soul—nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all its temptations and degradations that beset it, politics is still the noblest career any man can choose."

With the change of a few words that would be an equally good definition of advertising.

To carry the parallel still further, let me give you a list of 10 rules for the making of a successful politician which I have set down for my own guidance. A politician must have a good personality. He must have what we call character—he must be a substantial human being. He must work hard. He must be able to get other people to work for him and with him. He must have active ability and must be able to see and use ability in others. He must be aggressive but not to the point of being offensive. He must have a feeling for what people want. He must be able to make decisions. He must understand the meaning of the practical compromise without loss of principle. Above all, he must be truthful. The man—or the advertisement that does not tell the truth is distrusted and shunned, and rightfully so. The dog of untrammeled ambition is usually pursued by the rabbit of conscience.

In short, I find little difference in the rules for success, whether in advertising, or politics, or any other field.

To what extent and in what countries are American advertising and promotion techniques adaptable to marketing problems? It would be nice to give a flat answer and an exact list, but either the problem is not that simple or I am not that wise.

It is obvious that advertising does not function in a vacuum, but thrives in the soil of a free economy with its characteristics of competition, publicity, criticism, continuous improvement of product, and adherence to truth.

It is likewise obvious that advertising will thrive best in those countries where conditions most nearly approach our own. In free countries we will find that it work much the same as here. In the totalitarian countries it will hardly work at all. Again the reason is clear. The essence of an advertisement is the belief and faith in it that is earned by the manufacturer.

When you get to a totalitarian country the printed word is used not as a means of examining and distilling out the truth but as prpopaganda to enforce a predetermined point of view. Here all words lose their meaning and advertising suffers—it is discounted like everything else that is said. The home of totalitarianism is also usually the home of the state monopoly and the cartel, and under these conditions you can neither advertise nor do business as we understand it. It is clear to all of us, I think, that American advertising would not pay very well in Russia even if it were possible. On this basis I think you can make up a list of countries where our advertising methods will succeed that will be as good as any I could give you.

Yet there is one saving grace. I have found people are much the same the world over, and if you treat the public with respect it will respect you in return. The public everywhere responds to quality and character to such an extent that the integrity of American products has tended to make them synonymous for quality around the globe. The public in other countries will respond likewise to quality and integrity in advertising when they find you mean what you say. Here again the respect has to be earned and in many places you start from scratch. It takes time but it works. To the newcomer in the foreign advertising field, I have only this word of advice. The temptation to be expedient and to compete with the propagandist will be very great, but like most expediency it is short-sighted and costs more in the end. It only succeeds in classifying your product as one of those that claims whatever is necessary to make a sale. Permanent sales cannot be built in that way.

In this respect, American advertising has a function to perform. It is clear to all of us by now that in the world as it is constituted today we cannot live alone. It is clear that this country can live only in a world of character, truth, faith, and honest words among neighbors like ourselves. The ERP and the Atlantic Pact are but one expression of that fact. They are merely an advance guard which must be followed up in hundreds of ways and through thousands of commonplace details in our daily contacts with the countries about us. It must be followed up by trade, by quality of product, by strict adherence to truth in the printed word—by a slow process of education. I am certain that it will be ideas rather than force that will finally succeed in showing the rest of the world what kind of people we are and thus eventually win them over to our way of living.

In this process, American advertising with its self-discipline, its policy of deliberate understatement, its sense of fair play, its respect for a competitor, and its ability to live and let live can play a vital part. It is an endeavor worthy of the best that is in us as advertising men.

The Freedom Manifesto

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. HAYS of Arkansas. Mr. Speaker, recently, at the conclusion of an adress at the University of Florida, Mr. Edward J. Meeman, editor of the Memphis Press-Scimitar, offered the first draft of a proposed freedom manifesto. This is an inspiring document and it will be received favorably wherever the love of freedom persists. Under leave to extend my remarks, I include the full statement:

THE FREEDOM MANIFESTO

For the last 100 years, the world has been dominated by the Communist manifesto, issued by Marx and Engels in 1848. True liberalism has been under attack from Marxism from without. As the democratic nations have been weakened by human fifth columns, so the democratic philosophy has been weakened from within by the poison of Marxist conceptions, and related statist conceptions.

By its fruits, shall we know this philosophy. The Marxist century has ended with half of the world in slavery and the other half in fear.

We are, in this year of 1949, starting a new century. Let us make it a century of hope.

Let us, in this year of 1949, issue a freedom manifesto. The Communist manifesto led

mankind to slavery and despair. The freedom manifesto will guide the world to liberty and hope.

Let me propose a basis for the freedom manifesto.

PROPOSED BASIS OF THE FREEDOM MANIFESTO

We proclaim the Free Society.

Let us begin with the economic, since economics is basic. We do not accept the Marxian theory that man is animated only by materialistic motives. We do not believe that ideas and ideals are only an expression of a predetermined economic system; but we do believe that ideas and ideals which do not find expression in the way we work, buy, sell, distribute, and consume are vain. So we express freedom in our economic life.

Marxism teaches that one economic system succeeds another in automatic evolution—slavery, feudalism, capitalism. Marxists claim that capitalism is destined to be followed by socialism or collectivism which is to be the final and permanent system. This we deny.

ECONOMIC DIVERSITY

There is no need to accept, or reason to choose, a society dominated by one economic form. In our free society, various economic forms exist side by side, in competition with each other, and flourish as they meet human needs and conceptions of the good life; they diminish as they do not meet these needs.

In our free society there is self-employment—the person who employs himself repairing radios, or watches, or automobiles, or making by hand, furniture, or baskets, or hats, or cookery. Perhaps we should have more self-employment; certainly it should be recognized as one of our permanent and valued economic forms, and the doors should be always wide open to it for those who like it and can make it pay.

There is the partnership.

There is the cooperative, where a group of people join forces to produce, to sell, or to buy.

There is the corporation. Corrections are needed in corporate structure and practice. Stockholders should have more voice and take more responsibility. Workers should share profits and have a sense of owning and belonging. Perhaps, even, corporations need to develop and perhaps can develop, souls. However, which of us would want to live in a society without corporations? Not everyone wants to work for himself, or in a cooperative, or for the Government, or to depend on such forms to meet all his needs. There are things which the corporation can do better than any other economic form. So the corporation is permanently one of the economic forms in our free society.

There is government or public ownership. Public ownership is sometimes inefficient, sometimes bureaucratic; but there are economic activities which government—municipal, State, or national—can do better than a cooperative or a corporation. So we will have government ownership in our free society. We shall get away from bureaucracy and inefficiency by an extension of the TVA idea. That is, through the government corporation instead of the bureau, through regionalism instead of centralization in the capital, we shall induce government enterprise rather than mere government operation. In such government enterprise, employees are under a personnel system, oppressed neither by political uncertainty nor by the dead hand of an unimaginative civil service; they may find careers, promotion, and security such as they would find with a well-managed private corporation.

However, Government operation is only one of our economic forms; it is not a social corrective of ills that may exist in other forms. Law, not collectivism, is that corrective.

NO FINAL DECISION

In our free society, we never make a final decision as to how much of one economic form we shall have and how much of another. If a Government operation is not working well, the people will not hesitate to sell it to a corporation or a cooperative. If it is indicated that a corporate activity should be under public ownership, the people will not hesitate to buy it. Experience and a sense of values, not dogmatic theory, will determine their decisions, and decisions are always subject to review. We find what is better by never-ending thought and experiment. However, changes from one form to another are made without confiscation, and without harm or loss to individuals.

PRIVATE PROPERTY

The right of private property is fundamental.

The institution of private property is not evil; it is a positive good. Property is necessary to the freedom and dignity of man. A propertyless man can have spiritual freedom and dignity, but not complete freedom of movement, activity, and enjoyment; he cannot be an effective citizen in a vigorous democracy. If property is not owned by individuals, it will be owned by the state, and the state will thereby become a dictatorship. We need to have property more fairly acquired, more widely distributed, and more securely held against loss and confiscation. High taxes from war and excessive governmental activities are one form of confiscation. A free society requires that most of its citizens shall be responsible property owners.

LABOR MOVEMENT

With such a conception of the need of private property, the labor movement will necessarily change its strategy. Instead of moving on and on in the industrial field toward the confiscation of profits, it will see them as a necessary thing. It will strive to increase the property holdings of the workers it represents. Under a system in which private property is becoming ever more widely held, the workers represented by labor unions would become owners of stocks in their own and other industries. Workers should become owners; owners should be workers. Thus we can attain a stability under which society will not move, with the inevitability of gradualness, into a centralized Socialist state.

RESERVES

Under such a system there should be few periods of recession or depression.

However, corporations should build up reserves for pensions and for employment, in order to avoid lay-offs or discharges in slack times. This will minimize dependence on government and strengthen the property system.

But no security outside one's self can equal the security of ownership of property in a system in which property is made secure.

The ownership of property by individuals, and the building up of private savings reserves should be that reliance.

DECENTRALIZATION

A healthy rural life is the foundation of a free society. A family living on its own acres is the ideal.

We favor the decentralization of property, of industries, of population. Our cities are too big. They should be remade to make possible more wholesome living. Bring the country to the city, as we have already brought urban comforts to the countryside. Eliminate smoke, smells, noise and traffic hazards. Bring to the country the interest and variety of the city; to the city dweller that self-expression that comes from working with growing and living things.

MASS PRODUCTION

Mass production should have brought man freedom from drudgery, not slavery to mechanism and to artificial appetites for un-needed things or cheap satisfactions. The object of mass production should not be something not needed or to be thrown away after a brief use.

The commercial manufacture of food and clothing outside the home, the commercial performance of services for the individual which the individual should do for himself has been carried too far. We need to do more things for ourselves with our own hands.

Exaggerated, high-pressure advertising is illegitimate. Man is not a consumer. He is not a waste container for industries whose wheels dare not stop. Industry is a servant whose wheels turn at the command of man to satisfy his needs. We are not slaves of the industrial machine.

POLITICAL DEMOCRACY

Freedom depends on a vigorous political democracy also. Citizens should take responsibility for government in their counties, towns, and cities. When citizens committees, without selfish motives, organize permanently to maintain nonpolitical county-manager government, as is done in Cincinnati, they are accepting their responsibility. Then there is no room for a boss.

UNION OF THE FREE

We do not despair of the United Nations. We wish to continue our efforts to make it ever more and more effective as the organization of our "one world." But we put freedom first. Freedom is fundamental. If freedom is to be preserved and extended in the world as a whole, then the nations which have long practiced freedom must federate. They must have a common policy in international affairs, a common defense force, a common currency, common citizenship, and a customs union. Therefore, we favor a federal union, not merely a military alliance, of the Marshall plan countries—those contributing and those receiving. Those are the United States, Canada, Australia, New Zealand, Union of South Africa, Eire, Great Britain, and the democracies of western Europe. We favor a great union of the free, and we urge that the first steps be taken now. If the present crisis which threatens freedom should pass, it will still be necessary, in order to avert or to cope with future dangers, that the free nations be permanently united with each other. To the great union should be added other states, from time to time, as they wish to join and can qualify through having established within themselves the practice of freedom and democracy.

MAN

In order to bring into being and preserve this free society, we must have men who are determined to remain free, and who know how to remain free. There is nothing wrong with the nature of man. He need only awaken to what he really is, and live in the fullness and perfection of his true nature. He was made for dominion over a self and a world which offer him satisfaction and joy. Man is the expression of God, the fulfillment of the Divine Being. When man lives at one with God, and wields God's infinite power, he will not desire any puny power over other men. He will not submit to any human being so foolish as to wish to lord it over him. Here is the key to human freedom.

How shall we get such men, such citizens for our free society? By cultivating them. The principles are laid down in all religions. Religions do not agree on the reasons why men should be good, but they substantially agree on what men should do. The need is to get these teachings practiced. This can best be done by forming groups or circles of laymen in each faith to meet with each other to study the practice of religion and to encourage each other in that practice. It is useful also to form "cells" which cut

across denominational lines for the encouragement of the practice of individual responsibility in freedom.

Thus men will be trained to live and help other men to live in the sunlight of freedom in the joy of that self-expression which belongs to all the sons and daughters of God.

ERP Nations Selling War Goods to Reds—Survey Shows Russia, Allies Get $3,000,000,000

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Times-Herald for March 24, 1949:

ERP NATIONS SELLING WAR GOODS TO REDS—SURVEY SHOWS RUSSIA, ALLIES GET THREE BILLIONS—POTENTIAL MATÉRIEL SENT UNDER 91 TRADE PACTS

(By Frank Holeman)

Soviet Russia and her satellites are acquiring through 91 trade deals with Marshall-plan countries many of the potential war matériels which this Government, through export controls, refuses to ship to the U. S. S. R. because of the cold war, a survey showed yesterday.

Statistics on the flow of trade—amounting to about $3,000,000,000 in total value—across the iron curtain came from government agencies and embassies here of our European allies.

SPIRIT OF ACT VIOLATED

Such trade deals involving heavy industrial equipment and similar war-vital goods violate the spirit if not the letter of the Marshall-plan act, and also grabs off potential markets behind the iron curtain denied American exporters by the export-control policy.

The cautious Eightieth Congress inserted in the Marshall-plan law a provision designed to prevent recipient nations from selling behind the iron curtain those goods which this Government will not export into the Communist domain.

On the other hand, an economic cooperation administration official pointed out yesterday, this trade is saving the United States money in that the ERP nations swap their exports directly for food and do not have to use dollars. If all raw materials had to be bought outside the iron curtain, the cost of the $17,000,000,000 Marshall plan would go up another $5,000,000,000 over 4 years, officials estimate.

METHOD USED BY REDS

The way in which Russia and its satellites have been able to force industrial equipment from Marshall-plan countries in exchange for vitally needed food and raw material shows up in these trade facts:

1. In fiscal 1950 Britain, France, and other western European countries are committed to sell to iron curtain countries an estimated $1,500,000,000 in goods which will further build up the Communist economy and make Russia tougher to fight if war comes. Crude rubber, tin and nickel, scientific equipment, locomotives, generators—those are some of the "hot items."

2. In exchange for this inward flow of potential war material the Communist nations are turning over approximately $1,500,000,000 in raw materials, including grain, coal, timber, potash fertilizer.

CAN'T BUY IT HERE

A Commerce Department official freely admitted that no export licenses for delivery to Russia would be granted on such items as these on the Russian-British trade list:

Ten oil refineries, 2,400 flat trucks, $600,000 worth of scientific and laboratory equipment, 1,100 narrow-gauge locomotives, 150 mobile Diesel-electric generators, 25 steam-power turbines, 18 ball mills for copper ore grading.

The strict export controls have cut our outgoing trade with Russia down to $500,000 a month, compared with $12,000,000 a month in 1947.

One top ECA planner declared:

"If we served an ultimatum, and told the western European nations to quit doing business with the Communists, or give up Marshall-plan aid, they would probably have told us to go to hell," he said, bluntly.

"They would rather have their world trade than the aid program any day."

Britain, getting the lion's share of United States aid, has besides its Russian agreement, a trade pact with Poland. This 5-year barter deal calls for Britain to supply $40,000,000 worth of wool a year, 3,000 to 5,000 tons of crude rubber a year, $500,000 worth of rubber tires for cars and tractors a year, $500,000 worth of auto spare parts, and 3,000 pounds of semimanufactured copper.

TITO GETS MACHINERY

In addition, Britain agreed to clear the way for British merchants to sell Poland 180,000 to 250,000 tons of crude oil from the Middle East every year. Also, they would help find sisal, manila, electrolytic nickel, ferrotungsten, ferrovanadium, ferromanganese, and 1,000 tons a year of tin.

None of the stuff could be exported directly from the United States, the Office of International Trade advised. Moreover, the United States Munitions Board is still buying sisal, manila, tungsten, vanadium and manganese for war stock piles, an official said.

The British-Yugoslav pact provides for Tito to get $10,000,000 worth of miscellaneous machinery, $2,400,000 of electro technical material, $140,000 worth of instruments and parts for scientific use, 3,000 tons of rolled steel, 10,000 tires, and 1,500 tons of rubber.

Other deals in the British pattern include:

France: Pacts with Finland, Czechoslovakia, Hungary, Yugoslavia, Bulgaria, and Poland. The French generally export luxury goods, wines, and light manufactures in exchange for timber and other raw materials.

Benelux countries (Belgium, Netherlands, and Luxemburg): Pacts with Finland, Czechoslovakia, Bulgaria, Poland, Russia, Soviet zone of Germany. Light manufactures and industrial goods, scientific instruments, etc., for food and raw materials.

SOVIET GETS $9,000,000

Sweden: Pacts with Finland, Czechoslovakia, Hungary, Yugoslavia, Bulgaria, Poland, Soviet zone of Germany. Sweden sells ball bearings, a wide range of industrial products, in exchange for raw materials, sending Russia $9,000,000 of stuff a year.

Italy: Pacts with Czechoslovakia, Hungary, Rumania, Yugoslavia, Bulgaria, Poland, Russia, Soviet zone of Germany. Italy sells agricultural products, wines, and industrial goods, for raw materials.

Turkey: Pacts with Finland, Czechoslovakia, Yugoslavia, and Poland. Poland has imported $166,000,000 worth of goods from Turkey and sold $106,000,000 since the agreement was signed in July 1948.

Greece: One pact, with Czechoslovakia; terms secret.

Switzerland: Pacts with Finland, Czechoslovakia, Hungary, Rumania, Yugoslavia, Bulgaria, Poland, Russia, and the Soviet zone of Germany. Switzerland deals in a wide range of industrial and agricultural products, as the middleman of Europe. Own manufactures are mainly instruments and watches.

Butter Versus Oleomargarine

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. McCARTHY. Mr. Speaker, I have listened to the debate on the butter-oleo issue for 2 days. There is general agreement that the tax on oleo should be removed. I certainly agree. The important question, the question which has not been satisfactorily resolved, is that of the proper marketing of oleomargarine. I know of no competent biochemist who will maintain that the nutritive value of oleo is equivalent to that of butter. The sellers of oleo may say that their product contains an equivalent number of vitamin units or an equivlent calorie value. These two standards do not in any way indicate the nutritive value of the two food products. The evidence of experience is that animal foods are more nutritive than vegetable foods; that healthy, progressive nations and peoples have lived on a diet which contained an adequate proportion of animal food products. There is a place for vegetable foods and for vegetable oils. But I hold that the consumer should know what he is eating. The Rivers amendment fails wholly to meet this requirement. I do not believe that the Poage amendment provides the guaranties which are necessary. The Granger bill is not satisfactory. Its approach is indirect, its effects cannot be clearly seen, but in the absence of better proposals—and it appears that this is the best measure we shall have a chance to vote on today—it has the advantage that it gives the people of the various States opportunity to protect themselves through their own State legislatures.

California Democrats and the Truman Administration

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Capital Scene," written by Frank Macomber, and printed in the Tribune Sun of San Diego, as of March 26, 1949. This article clearly depicts the controversy

between the California Democrats and the Truman administration:

CAPITAL SCENE

(By Frank Macomber)

WASHINGTON, March 26.—A bitter scrap between Democratic Party leaders in California and the Truman administration is boiling toward the surface here.

The reason? Because the Interior Department has sold California down the Colorado River, so to speak.

Top California Democrats, in the Capital and in the Golden State, are becoming more and more concerned about the treatment accorded their State by the Reclamation Bureau in the struggle between California and Arizona over the division of Colorado River water.

Some Californians who previously supported the Reclamation Bureau are backing away now and are ready to join forces with those who believe the time has come for a show-down. That must come, of course, at a conference with President Truman. No one else can resolve the differences which have created the present strained relations between California and the Reclamation Bureau.

Senator SHERIDAN DOWNEY (Democrat, of California) for months has been the only articulate foe of the Reclamation Bureau. He has stood up in committee and on the Senate floor to warn that the Bureau and its policies will ruin California's Central Valley project and block further water and reclamation development in the State if Interior officials aren't harnessed.

The senior California Senator has been accused of harping too much on the evils of the Reclamation Bureau, whose functions influence the shape of things to come in the far West, so far as water development is concerned. But DOWNEY merely has been repeating what other California legislators have found to be true in the last few weeks.

They have discovered to their dismay—and the word has been passed on out to California Democratic Party leaders—the Reclamation Bureau is firmly on the side of Arizona in the fight over Colorado River water. Like DOWNEY, lawyers and California State and local officials who have come to Washington from time to time on water problems have known this for a long time. But the California congressional delegation roster changes in some respects every 2 years—at election time. So there are many newcomers who have not been so familiar with this fight.

Now even the freshmen must realize their fight to bring California its share of Colorado River water is not only with Arizona but also with the Reclamation Bureau.

The record of the Bureau in the last few weeks—the Bureau and the Interior Department being synonymous in this essay—has proved the hostility of Reclamation officials toward California. For example, President Truman said he didn't want to see the central Arizona irrigation-reclamation project started until the 2-State Colorado River water controversy had been resolved. Budget Director Frank Pace quoted the President to this effect in a letter to Senator O'MAHONEY, Democrat, of Wyoming, chairman of the Senate Interior and Insular Affairs Committee.

Yet when Oscar Chapman, Interior Under Secretary, referred to the project in a letter to O'MAHONEY, he deleted the President's thinking. Moreover, he neglected to point out that the President had gone so far as to say the central Arizona project was not in line with his program for developing the far West at this time.

These omissions were deliberate, according to California Congressmen, and certainly they appeared to be. Chapman's letter to O'MAHONEY brought into the open the hostility between California and the Interior Department, at least the Department's Reclamation Bureau.

The criticism of DOWNEY because he had harangued so long at the Bureau has died down. Californians read into Chapman's letter to O'MAHONEY a Bureau approval of the central Arizona project which would take from California some 1,200,000 acre-feet of Colorado River water annually.

Chapman, the real villain of the piece so far as California Congressmen are concerned, has tipped his hand before, but not many noticed it. In effect, he was supporting the central Arizona project when he advocated time and again the distillation of sea water for drinking and irrigation purposes along the California coast and the channeling of surplus Columbia River water thousands of miles from the State of Washington to southern California.

These projects were proposed to show California has potential sources of additional water other than the mighty Colorado.

Both of them are years away, even if they are practical, and Californians claim neither of them are.

In at least one other way Chapman and the Reclamation Bureau have attempted to thwart California in her fight for enough water to keep the southern end of the State from turning to desert. The Under Secretary's second letter to O'MAHONEY, in effect, was an unfavorable report on a California-backed resolution to send the Colorado River water division quarrel to the Supreme Court for settlement. Chapman said this should be done only as a last resort.

This position is Arizona's position too, for its officials know full well a Supreme Court decision would split the disputed 1,200,000 acre-feet of Colorado River water between the two contesting States. Arizona must have all 1,200,000 to make its central Arizona project work.

Unfortunately, squeezed into the middle of this mounting struggle between California and the Reclamation Bureau is a former Californian who would like to support the State where he was born, but can't. He is William E. Warne, Assistant Interior Secretary.

Warne has been a great help to Californians as they come to the Capital with individual water-development problems. But when it comes to the larger issue of the fight with Arizona he must remain silent officially and must side with his superiors as far as policy goes.

Not until O'MAHONEY's committee decides what to do about the central Arizona project and the bill to let the Supreme Court be a water-rights referee will Californians make their next move. If the committee rules against the Golden State, you can look for the fight to take on partisan lines, with California Democratic leaders stepping in to blast away at Chapman and his associates through the White House.

Canadian Tax Reduction Reflects on United States

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Merryle S. Rukeyser:

CANADIAN TAX REDUCTION REFLECTS ON UNITED STATES

(By Merryle S. Rukeyser)

The newly announced tax-reduction program revealed by Douglas Abbott, Finance Minister of Canada, provides a yardstick for measuring the incompetent management of the finances of the Federal Government in the United States.

Exemptions in Canada have been raised in connection with the personal income tax, and rates have been lowered. In addition, the tax rate has been substantially cut for small corporations, though increased slightly for large ones. The net over-all effect will be substantial tax relief.

Numerous wartime excise taxes in Canada have been eliminated and others have been reduced. In addition, there has been relaxation of import restrictions, and numerous price ceilings have been removed.

SEEK STABILITY

In contrast to the policy of the Truman administration in proposing this year net increases in regular Federal taxes of $4,000,000,000 and $2,000,000,000 additional in pay-roll taxes the Canadian fiscal policy nearly 4 years after the end of the shooting phase of the war is to readjust Dominion affairs to more stable conditions.

Even in regard to price ceilings, the Canadian approach has been more orderly. On the other hand, the Truman administration backed and filled. The administration was anxious to beat the gun early on removal of war controls, and then later changed its mind and wanted to restore them.

But in respect to taxation, the Canadian attitude seems more healthy than that of the Keynesians and other doctrinaire policymakers in the Fair Deal.

These American theorists appear to be contemptuous of the taxpayer. They lean to the totalitarian view that the total national income belongs to the Government, and that the politicians in their generosity decide how much to release after taxes to the earners.

TAX RELIEF

Thus, they are reluctant to concede, as the Canadians have, that the time has come for tax relief.

Shortly after the Republican congressional sweep in November 1946, the counter-propaganda to the effect that the time has not yet come for tax relief began.

This was carried so far that Secretary Snyder took the view that even correction of admitted tax inequities should be deferred.

It resulted in a veto by President Truman last year in the personal income tax reduction schedules passed by the Eightieth Congress. The bill was, of course, repassed over the Presidential veto.

But through the campaign of 1948 the tax-reduction measure was castigated as a rich man's tax law.

That characterization was a Hitlerian lie because the 1948 revenue law primarily relieved low-income groups, removing several millions from the bottom of the tax rolls.

WRONG SLANT

In addition for the fiscal year to date, that is, since July 1 last, collections under the new law have resulted in a loss of revenue primarily from the low brackets only. The workingmen, including those on pay rolls subject to the withholding tax, have paid in during the current fiscal year $1,185,000,000 less than in the previous year. On the other hand, collections from the so-called rich men, those not in the withholding tax groups, have paid out in Federal income taxes substantially the same amounts as under the previous law.

Another difference between the Canadian and the Fair Deal bloc approach is that the latter evidently regards unprecedently heavy peacetime Federal spending as an instrument in economic planning for the welfare state.

Whatever the notivation, high taxation and a big Federal budget add to the social overhead, and are reflected in the cost of all goods and services produced.

Israeli Veterans

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. JAVITS. Mr. Speaker, the whole world has hailed Israel's fight for her own independence and her resistance to aggression. The courage and skill shown in this struggle have been convincing evidence of the fact that the Jews of Israel know how to fight in the cause of justice. A group of Israeli veterans are about to tour the United States in the interests of the United Jewish Appeal and to thank the American people for their sympathetic consideration of Israel. There is appended hereto the invitation to a reception to these veterans held in the Capitol, sent to interested Members by the Honorable EMANUEL CELLER, of New York, and myself:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 30, 1949.

DEAR COLLEAGUE: You are cordially invited to be present at a reception for soldier veterans of Israel's fight for independence on Friday, 1 p. m., April 1, in Statuary Hall in the Capitol. This contingent of from 7 to 12 Israeli veterans under the leadership of Lt. Col. Mati Dagan, Lt. Herzala Shalfon, Capt. Geyra Gershon, and Maj. Ben Arzi, is leaving from Washington on a train called the Caravan of Hope, one of seven different train units which will visit more than 100 cities in 41 States from April 3 to April 27 sponsored by the United Jewish Appeal to thank the United States for past help and as part of the current campaign to raise $250,000,000 for Jewish refugees and rehabilitation work in Europe, north Africa, and Israel.

Also present at the reception will be the military attaché of the Israeli Embassy (Col. Efraim Ben Arzi) and officials of the United Jewish Appeal. National and local press services are being invited to be present and to take photographs.

Will you be good enough to telephone extension 450 or 1974 to advise that you will be present.

Sincerely yours,
J. K. JAVITS,
Member of Congress.
EMANUEL CELLER,
Member of Congress.

Among the Members of the Senate and House present were: Senator IRVING M. IVES, New York; Senator CLAUDE PEPPER, Florida; Representatives WILLIAM A. BARRETT, Pennsylvania; GORDON CANFIELD, New Jersey; EMANUEL CELLER, New York; ISIDORE DOLLINGER, New York; HERMAN P. EBERHARTER, Pennsylvania; WILLIAM T. GRANAHAN, Pennsylvania; T. MILLET HAND, New Jersey; EDWARD J. HART, New Jersey; JAMES J. HEFFERNAN, New York; LOUIS B. HELLER, New York; JACOB K. JAVITS, New York; BERNARD W. KEARNEY, New York; KENNETH B. KEATING, New York; ARTHUR KLEIN, New York; HENDERSON LANHAM, Georgia; HENRY J. LATHAM, New York; JOHN DAVIS LODGE, Connecticut; HAROLD O. LOVRE, South Dakota; RAY J. MADDEN, Indiana; ABRAHAM J. MULTER, New York; HARRY P. O'NEILL, Pennsylvania; JAMES T. PATTERSON, Connecticut; WILLIAM L. PFEIFFER, New York; ABRAHAM A. RIBICOFF, Connecticut; R. WALTER RIEHLMAN, New York; PETER W. RODINO, JR., New Jersey; ADOLPH J. SABATH, Illinois; KATHARINE ST. GEORGE, New York; GEORGE A. SMATHERS, Florida; ANTHONY F. TAURIELLO, New York; SIDNEY R. YATES, Illinois.

The Lacrosse (Va.) High School

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. ABBITT. Mr. Speaker, it gives me great pleasure today to welcome to Washington, the seat of government of our great country, the senior class, its teachers and sponsors, of the Lacrosse High School, Lacrosse, Va.

I desire to take this opportunity of commending these fine young people for the great interest they are taking in their Government. The youth of today will be the citizens of tomorrow; the failure of our country will depend upon them; they will chart its course; guide it toward its destiny.

This great Nation of ours remains the one great hope of freedom-loving people all over the world. It is the duty and obligation of the adults of today to see that our young people are given adequate, proper, and sufficient educational training, so that they may take their proper place in a fast-moving civilization. The burden is ours to impart unto them that spirit of liberty-loving, peace-seeking citizenship that will mean so much to the future of our civilization.

The schools, outside of the family, exert the greatest influence upon these, our future citizens. We have not adequately supported them; particularly is this true in my great State, and I for one desire to do everything in my power to see that equal educational opportunities are given to our boys and girls all over the country.

We who live in this great country of ours are indeed fortunate. We accept the many advantages and modern living conditions without realizing the hardships that went on before and secured for us our great heritage.

No ordinary men and women faced and suffered the harshness of the American frontier as they labored and bled to build a free society. An enterprising spirit was needed and a strength of body, industry, and daring. With it all was a willingness to serve at the same time the best interests of man, of the family, and the community in voluntary cooperation. They suffered much in sweat, blood, and tears to carve out of a vast wilderness a real civilization that remains the one last hope of democratic people all over the world.

Such men and women wanted no masters to rule over them. To the pioneer, freedom of body and soul, the right to determine his own way of life, the fellowship of neighbors and to follow his conscience in the worship of his God was sufficient compensation, and sometime the only compensation, for the hardships of the wilderness he was mastering. This freedom has been bequeathed to us. It is for us in this generation of gentler ways of living, the fruitage of earlier toil, to lose no part of the independence of spirit and the dear freedoms which our sterner age fathered.

Some Very Important Questions

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 30, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, we have witnessed the efforts of the vegetable-oil interests to substitute their oils for the greatest of all animal fats, butterfat.

Oleo is made by a combining of 80 percent vegetable oil and 15 percent skim milk, with salt, and so forth, added. A filled milk is made up of 3½ percent vegetable oil to 96½ percent skim milk.

Dr. Anton Carlson, the official spokesman for the oleo interests, stated at the National Catholic Rural Life Conference, held at La Crosse, Wis., on October 18, 1948, that skim milk was the real valuable part of milk, and attached little value to the butterfat content, as he held it could be replaced by vegetable oil. I take exception to this statement by him, as no experiment has ever been conducted that proved that a vegetable oil was equal to butterfat. When this is proven, the public may accept it, but not before. They should not accept conclusions drawn from phony experiments.

By replacing butter with oleo the savings, under normal times, would not exceed three to four dollars per capita per year. By replacing natural fluid milk with filled milk the savings would exceed $35 per capita per year.

If oleo equals butter, will you also vote to legalize filled milk? If filled milk, 96½ percent skim milk and 3½ percent vegetable oil is not nutritionally equal to natural bottled milk, how can a product with 80 percent vegetable oil and 15 percent skim milk be nutritionally equal to a 100 percent dairy product? If oleo is made legislatively equal to butter, will you accept filled milk as legislatively equal to natural bottled milk and allow it to be sold in the city of Washington? I include only Washington, as it is the only city in the United States that the Congress has direct control over the milk supply. If you accept the above substitutes, will you also accept filled ice cream, made with vegetable oil instead of butterfat, as being legislatively equal and allow its sale in the city of Washington? Will you also accept filled cheese, 32 percent butterfat content replaced by vegetable oil, as being legislatively equal to natural cheese, and allow it to be sold in the city of Washington?

The principle is the same, the formula is comparable, and if oleo is equal to butter, the other imitation products are

equal to butter, the other imitation products are equal to natural products.

Do you really wish to ruin the dairy industry? If not, support the Granger-Andresen bill, which is the real honest approach to a serious economic and nutritional problem.

Completion of John Martin Dam

EXTENSION OF REMARKS
OF
HON. JOHN H. MARSALIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. MARSALIS. Mr. Speaker, a memorable occasion is taking place in eastern Colorado this day, with the Governors of both Colorado and Kansas present; also present will be Mrs. John A. Martin, widow of the late Congressman, and an estimated twelve to fifteen thousand people to witness the completion-day ceremonies held at the site of the John Martin Dam.

Older Members of this body well remember the late John A. Martin, for whom this project was named. A long resident of eastern Colorado, he had many times witnessed this river in times of both drought and flood. He had seen its ravages at flood stage and its impotence in time of drought. Upon his election to Congress in 1932, he immediately became active in behalf of this project and after some 6 years continuous effort was rewarded by seeing its final approval. Mr. Martin died in 1940, but he lived long enough to see the construction work on this undertaking actually started.

I quote from the March 25 issue of the Pueblo Chieftain concerning the initial phases of this project:

In 1923 the dream of a dam that would take care of the irrigation needs of the lower Arkansas Valley began to shape up. In that year M. C. Hinderlier, State engineer, and H. D. Amsley, superintendent of the Fort Lyon Canal Co., made a survey of the watershed from which water would be drained if a dam should be built at Caddoa. The map of the survey covers land from Palmer Lake to Leadville and Trinidad, showing all the Arkansas River system above the dam.

In 1932 chambers of commerce throughout the valley selected men to work on a committee to promote the dam project. This committee was composed of A. C. Gordon, of Lamar; Arthur S. Dean and C. N. Troup, of Las Animas; J. D. Craighead, of La Junta; Louis Sickenberger, of Manzanola; and Miss Vena Pointer, of Pueblo.

In 1935 the Colorado State Legislature passed a flood control of water in all Colorado rivers. The Governor appointed a committee at that time for Caddoa Dam, which was composed of Miss Pointer, Craighead, Dean; M. M. Simpson, of McClave; Charles Wooden, of Lamar; and W. J. Rowe, of Wiley.

June 22 of the following year authorization for the dam came when Congress approved the flood-control act to provide for flood control and water conservation for Colorado and Kansas.

Today both eastern Colorado and western Kansas are reaping the benefits of the untiring efforts of the late Congressman John A. Martin and all these many other people who worked so unselfishly for this project. Waters of the Arkansas River, which otherwise, in a flood stage, would have caused great damage in this area, are now harnessed and made harmless. They are now stored instead and put to the beneficial use of irrigating many fertile farmlands that otherwise would, during certain periods of the year, become parched and barren.

I am certain that all who have worked so hard toward this undertaking share a great feeling of satisfaction at this time in knowing that they have helped accomplish that which has already benefited, and will continue for years to come to benefit, the people of a large area of our State and adjoining Kansas.

I extend to them my sincere congratulations on a job well done and express my deep regrets at my inability to be present on this occasion.

Two Hundred and Fiftieth Anniversary of the Oldest Settlement in the Mississippi Valley: Cahokia, Ill.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. PRICE. Mr. Speaker, on May 15, 1949, observance of the two hundred and fiftieth anniversary of the oldest settlement in the Mississippi Valley will begin at Cahokia, Ill., in the Twenty-fifth Illinois Congressional District.

Historical societies of Illinois and Missouri and a dozen or more other prominent organizations are cooperating in arrangements for this important event. The governors of all the States within the area of the old Northwest Territory have been invited by the Governor of Illinois to participate in the observance.

The story of Cahokia is best told in the article by Mr. Irving Dilliard, past president, Illinois State Historical Society. Under leave to do so, I herewith present this interesting story to my colleagues in the House. It follows:

CAHOKIA: TWO CENTURIES AND A HALF

(By Irving Dilliard, past president, Illinois State Historical Society)

The first settlement on the Mississippi River.

The oldest community in the entire Mississippi Valley.

The westernmost American defense outpost in the Revolutionary War.

The last surviving example of a French colonial church.

To possess one of these distinctions would be honor enough for any community. Cahokia, a village of 830 people at the junction of Illinois highways 3 and 157, 3 miles south of East St. Louis, enjoys all four.

Cahokia took its name from a village of Indians adjacent to the point where a mission was started in 1699. The English spelling of the name of this group of Indians passed through many forms, including Caos, Caoquias and Kaouches and finally became Cahokia.

This first permanent white settlement in the wilderness along the Mississippi was founded by priests of the Seminary of Quebec. The year, 1699, was less than two decades after LaSalle's Fort de Crèvecoeur on the Illinois River, short-lived first French fort in the West. Thus, Cahokia is 19 years older than New Orleans, 65 years older than St. Louis, 104 years older than Chicago and 139 years older than St. Paul. Perhaps the best way to date Cahokia is to say it was founded the same year as Williamsburg, Va.

Official sanction for the mission which became Cahokia was issued by Bishop Jean Baptiste de la Croix-Chevrière de St. Vallier at Quebec July 14, 1698. (Bishop St. Vallier had formerly been court chaplain to Louis XIV.) Traveling by canoe and portage via the Great Lakes and the Illinois and Mississippi Rivers, the mission party, under Father François Joliet de Montigny, was received by the Tamaroa Indians December 8, 1698. Friendly relations were established, and the priests went on to survey the valley as far south as the Arkansas. On their return, Father Jean François Buisson de St. Cosme, Capuchin monk, became resident pastor of the mission to the Tamaroas.

By May 14, 1699, a lodging had been put up, and a chapel was under way. The exact date of the first church's dedication is not known, but it followed soon, and a cross was raised "with greatest possible ceremony." It is said that some 2,000 Indians looked on.

Cahokia soon began to attract French settlers from Canada and the Gulf. As a rapidly developing fur center, it was a vital link to the West, the Canadian far North, and the Gulf coast South. Though an important trading post up to 1800, the settlement always was small. A combination of causes kept it from growing. The mission was in territory through which an occasional Jesuit had moved on calls to Indian villages. As a result, the Jesuits set up a rival mission at Cahokia. This circumstance caused the resulting controversy over mission territory to be taken to France. There it was decided in 1701. Under the ruling, the Jesuits departed 57 miles downstream in 1703. This new site became Kaskaskia, first capital of Illinois on the State's admission to the Union in 1818.

Cahokia's growth was affected also by the decision of the French to erect Fort de Chartres (1719), only 40 miles south on the river, and to make this new post the seat of civil and military government. The worst set-back, however, came after 1763, at the close of the French and Indian wars, and after the eastern side of the Mississippi was ceded to the British. About this time, Pierre Laclède Liguest decided for trade reasons to found St. Louis, on the west bank, 4 miles north.

Through the centuries Cahokia has been host to many diverse celebrities. Among these was Pontiac, the famed Ottawa chief, who was assassinated on the village street April 20, 1769. Here, during the American War of Independence, George Rogers Clark negotiated successfully for Indian neutrality in the struggle and drew aid for his successful expedition against Vincennes.

New research is bringing out the role of Cahokia as the site of Fort Bowman, whose foundation stones perhaps became the base for the old Holy Family Church. This rock fort was the westernmost bastion of the American defenses in the Revolutionary War from 1778 to 1781. With St. Louis' help, Cahokia conducted the successful defense of May 1780 which saved the whole Mississippi Valley for the colonists. Cahokia was the site of the great Indian council of August-September 1780, and Cahokians took a prominent part in the Rock River expedition and other strategic campaigns.

In the 1700's, Cahokia was the typical French village in the New World. It had a common pasture land and a large common field. The latter was divided into long strips for cultivation. Life centered around the

church. Most inhabitants were humble folk, farmers, traders, or adventurers inured to the wilderness hardships.

Today Cahokia is still an autonomous community in the St. Louis-East St. Louis metropolitan area. The village government consists of a board of trustees whose president is Ernest Sauget—a name that bears witness to the persistence of French influence.

Cahokia has had much less than its fair share of attention in our history. The two hundred and fiftieth anniversary provides the best possible opportunity for recognizing its great importance as a mission, as a pioneer settlement, as a fur-trade center, as a seat of frontier government, and as a key defense in the West when the stake was success or failure in the colonial struggle for freedom. Cahokia's many birthday candles may burn quietly, but they are steady and bright after two centuries and a half.

The British tried to persuade the white French settlers to stay and were able to keep some families, but others ferried their goods, their cattle, and even portions of their homes at night. And so Cahokia remained a village, fronting close to the Mississippi's narrow channel, between its two small streams, petite rivière des Kaohias and rivière du pont.

About 1760, there was erected at Cahokia a sturdy dwelling of French provincial architecture. This was the home of the Saucier family whose first member in the New World had come from Orleans, France, to erect Fort de Chartres. It became a St. Clair County district courthouse in 1793. Cahokia was the county seat from 1795 to 1814. At this period, St. Clair County included most of southern Illinois. After exhibition in St. Louis and Chicago, its old logs were brought back to Cahokia and in 1939–40 were set up by the State of Illinois in a careful restoration, now maintained as a public museum.

Cahokia's original Holy Family chapel was destroyed by fire. In February 1799 Father Jean Olivier came to the village, and by September a new walnut log church was ready. Hand-hewn timbers were set upright, and the eaves were built in the flaring style of Quebec. In the nineteenth century, the log and stone construction was covered with siding to protect it from the weather. Later supplanted by a stone church, the old structure is now in process of restoration. The National Park Service has announced its readiness to designate the church as one of a few national historic sites if it is restored under proper architectural guidance and opened to the public. On behalf of the diocese of Belleville, Bishop Albert R. Zuroweste has pledged $10,000 toward the restoration. Other places of historic interest at Cahokia are the large brick Jarrot mansion house, built about 1799–1805, and the old burying ground.

Who Is Behind the Move of the Veterans' Administration Medical Center From New York to Boston?

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. KEATING. Mr. Speaker, the Administrator of Veterans' Affairs has determined to move the medical center from New York City to Boston.

Following the receipt of a large number of protesting telegrams and communications, I wrote the Administrator as follows:

This letter is intended to register my emphatic protest against a proposed move of the headquarters of the Veterans' Administration from New York to Boston. Attached are a few of the professional and administrative reasons which seem to me to argue against this change in location.

I have received a number of communications from constituents vigorously opposed to this move to Boston and hope it may be possible for you to reconsider the decision which has been made.

I shall be grateful if I may have a report from you, and if the decision is adhered to that the location should be Boston, I should appreciate it if I might have a statement of your reasons for this decision.

Attached to this letter were set forth 14 professional and administrative reasons why this move appears to be a mistake, both from the point of view of the veterans to be served and the interest of the taxpayers. In my letter, as will be noted, an invitation was extended to the Administrator to set forth his reasons for this action.

To my letter I have received the following reply:

This is to acknowledge receipt of your letter of March 15, 1949, in which you outline the advantages of the location of the so-called district office in New York City.

May I state that it is not contemplated that any operative functions will be carried on in any installations other than our field stations and central office. However, in the interest of economy and travel we will have representatives with official stations at certain localities in the field. This in no sense will be a district office, but simply, as previously stated, official headquarters. The personnel on duty will be traveling the greater part of the time and these supervisory activities will bring the supervision of central office closer to the hospital and other medical activities in the field, thereby assuring the finest medical service to veterans.

It has been decided that for those representatives visiting Veterans' Administration installations in the New England and New York State area, Boston, Mass., will be their official headquarters. Of course, a large percentage of their time will be spent in the New York area, where there are a number of medical Veterans' Administration installations.

Obviously, this letter gives no reason for the change, perhaps for the justifiable reason that there is none, at least none on the merits.

The newly created region which is to be served by this office consists of the New England States, New York, New Jersey, Delaware, and Puerto Rico. It is now proposed to change the headquarters from the geographically central and most easily accessible city of New York to the relatively remote and inaccessible city of Boston. The only Members who should view this move without concern are those representing districts in and around Boston. Naturally, they are greatly pleased by this decision. Regardless of their political affiliation, however, or the political prominence of those advocating this change, the 45 Members from New York, together with the 15 from New Jersey and Delaware, as well as those representing veterans in New England districts closely adjoining New York, should register their vigorous protests.

One of the foremost doctors in the East, who has intimately studied this problem, has furnished me some interesting statistics. They were passed on to the Administrator and remain unchallenged in his reply.

Fifty percent of all veterans examined and 62 percent of all veterans treated in out-patient clinics in the proposed regional area are in metropolitan New York. Fifty-eight percent of all Veterans' Administration hospital beds located in the entire area are concentrated in metropolitan New York. The physical medical rehabilitation program and clinic activity are more fully developed in New York than anywhere else. The prosthetic shop and curative work shop are located in New York, as is the prosthetic and sensory aid service.

The New York City area contains a great preponderance of the medical schools and dental schools in the proposed region. The social service training program and the clinical psychology training program are concentrated in New York. The concentration of medical, dental, and nursing manpower is to be found in the New York area.

Fifty percent of the veteran population of the entire area is located in metropolitan New York. Of course, if there is added the veteran population of the rest of New York State and of New Jersey and Delaware, the proportion of the total number of veterans adversely affected by this surprising move reaches a figure leading one to question seriously whether, in this proposed change of headquarters, the interest of the veterans themselves has been a factor at all. Among all those who have served their country, certainly the disabled are entitled to our first consideration. I feel sure the Veterans' Administration recognizes that fact, as do the Members of Congress. The American Legion, Department of New York, should be commended for its vigorous opposition to this inexcusable and unexplained maneuver. I hope the voices of all Members from this regional area will be raised in protest, even, indeed, any who may have heretofore urged a special benefit for the few in and around Boston at the expense of the many throughout the entire area.

Should Anyone Be Misled Into Passing Legislation To Ruin the Dairy Industry?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, in a comparatively few years much progress has been made in experiments to show the true value of milk. There is nothing in a hundred pounds of milk that is not found in 5 pounds of butter and 8 pounds of dried skim; or 10 pounds of cheese, if byproducts are recaptured; or in about 50 pounds of evaporated milk.

The University of Wisconsin has been one of the leading institutions conducting experiments developing the true value of milk. Much of the work developing vitamin A was performed in the laboratory of Dr. E. B. Hart, recognized as one of the world's greatest nutritionists. Vitamin D was also discovered at the University of Wisconsin by Dr. Steinbach. Dr. Hart has always contended that there was an unknown factor in milk that he called X, still remaining to be discovered, that was accountable for some of the nutritional miracles performed by this great product, milk.

The Waupaca County Post, of Waupaca, Wis., dated March 17, shows another discovery. The article follows:

DISCOVER MILK TO BE BIG SOURCE OF NIACIN

CHICAGO.—Something new has been discovered about the nutritious quality of milk.

Science reported today that milk, because of its high protein value, is an important source of niacin, a vitamin required by the body for normal health.

Working on a 4-year research project at the University of Wisconsin under the sponsorship of the National Dairy Council, Chicago, Dr. Elvehjem and his associates point out that niacin's dietary values became known in the search for a cure for pellagra, a skin disease with a history of several thousand fatalities annually, particularly in the southern part of the United States.

Patients fed milk improved in health, but no one seemed to understand why. More recent research discloses that milk prevents early signs of niacin deficiencies which may occur even in persons who think they are well nourished.

The University of Wisconsin study provides proof that milk, generally thought to be low in niacin content, acquires an abundance of the much-needed vitamin for health from the protein in the milk through the process of synthesis in the body.

Saint Patrick's Day Address of Secretary of the Navy Hon. John L. Sullivan

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address delivered by Hon. John L. Sullivan, Secretary of the Navy, before members and guests of the Irish Civic Association, in Cleveland, on March 17:

It is always a great pleasure for me to come to Cleveland, because of the many good friends I have here and because of the enthusiasm which this community has repeatedly demonstrated toward your United States Navy.

I had the privilage of witnessing that enthusiasm on Navy Day, 1946, when I came here to take part in the day's observance and to present to my good friend, Mayor Burke, a model of one of our fightingest cruisers, the U. S. S. *Cleveland*, as a small token to the citizens of Cleveland of your Navy's appreciation of services rendered. These services included the raising of huge sums of money through war-loan drives, the manufacture of multiple types of equipment and munitions during the war, and, above all, the service of your sons and daughters in the armed forces.

It is a very special privilege for me to come here on Saint Patrick's Day to join with you leaders of this great city under the auspices of your Irish Civic Association in honoring the men and women of Irish descent who have contributed so much to the greatness of America since the very earliest days of the Western Hemisphere.

We gather here tonight as, all over the world for 1,500 years Irishmen, their descendants and their friends have gathered to pay tribute to the birthland of great ideals, the homeland of an indomitable spirit.

Tonight—wherever they may be, Irish and those like you and me—their kin in race or sentiment—pause to pay their ancient tribute to Patrick, the patron saint and the inspiration of that great land of saints, scholars, and pioneers. Tonight, once again, we realize that Ireland, often destitute in many ways, is always rich in the love and loyalty of her children and her admirers at home and abroad. Proudly we remember that for centuries she had commanded a respect, a loyalty and an affection that almost any other nation in the world well might envy.

Usually upon such an occasion, the speakers of the evening talk about the role of Irishmen in the birth of this Republic—as though we had to prove our birthright. They speak of Smith, Taylor, Thornton, and Rutledge, Carroll, McKean, Read, and Lynch—all of whom signed the Declaration of Independence. They talk of Long, Fitzsimmons, Duane, Carroll, Burke, and the others who were Members of the Continental Congress. They tell you of James Moore, Governor of Carolina in 1700—and of Dobbs, Rowan, and Burke who were Governors in the next 80 years—all Irishmen. They talk of John Barry, the father of your Navy. They remind you that in the Revolutionary War there were 327 Connors, 500 Murphys, 695 Kellys.

Now we all know the extent to which men of Irish descent have participated in every war this country has fought. But tonight I might be supposed to talk about Americans of Irish blood in the Navy in World War II. I acknowledge a temptation to talk about such heroes as Adm. Dan Callaghan, Father Joe O'Callaghan, the Sullivan brothers and many others of Irish name and blood. Tonight I resist that temptation. To be sure, there were thousands of Kellys and Murphys and Sweeneys in every type of uniform American fighting men wore in World War II. But we must remember that there were an equal number of Browns and Joneses. And a lot of Bernsteins and Cohens.

So rather than narrate the long and honorable roll of contributions to the war effort by men and women of Irish blood—both in and out of uniform—I prefer to speak more generally of all Americans of Irish blood and their hopes for America in the years to come.

We Americans of Irish ancestry know we owe as much to America as any other group, and probably much more than some. We're proud that we have been able over the last 175 years to give more than we've taken. We hope it will always be so. We have our faults and we know them. But we think we possess some qualities of the heart and some eternal principles of humane justice and charity that America and the world need.

Our own fortunate America attracted the Irish because from the very first day of the founding of the early colonies our institutions were dedicated to the protection of freedom of the spirit and the preservation of the dignity of man. The American dream of liberty under the law and of equal opportunity for all did not take long to fire the imagination of the Irish. We find woven into the third stanza of that old Irish ballad, The Wearing of the Green, these very significant words:

"I've heard a whisper of a country
That lies beyond the sea,
Where rich and poor stand equal
In the light of freedom's day.
O Erin, must we leave you, driven
by a tyrant's hand?
Must we ask a mother's blessing
From a strange and distant land?"

Our forebears who asked and received that blessing were men and women of simple and abiding faith. They came to America full of hope, and for them and for their children's children their faith and their hopes have been justified and fulfilled.

It is against their background and heritage of faith, hope, courage, optimism, and enthusiasm that we of Irish blood contemplate the international problems that beset the people of the United States.

We know full well that without a just and enduring peace the horizons and the boundaries of the human spirit will shrink ever inward, and that neither America nor any other nation will achieve its destiny. We are convinced that peace is not an accident that just happens, but rather an objective requiring and deserving the same effort and uity that is required to win a war. We know, too, that there is a price for peace—but it is characteristic of the Irish never to count the cost.

For we know, oh so well, that in this modern world no man can ever again be an island entire of itself. Henceforth, whenever forces of aggression seek to abridge liberty and disrupt the peace in however remote a corner of the globe no one will need ask for whom the bell tolls. We will know it tolls for us all, unless America, acting in concert with the other peace and liberty loving members of the United Nations exerts its full influence at once to halt that aggression.

I detest alarmists and I hope I never become one. However, it would take a very optimistic man indeed to survey the world of today and find that all was well. I believe it is possible for us to work out our differences. I pray God that we will. But only a fool could fail to recognize the potential dangers of today's international tension.

Ever since 1914 we have wondered if we would ever see a return of those conditions we usually describe as normal. Speaking to a high school forum in New York, Father I. Gannon, former president of Fordham University, said to those youngsters: "Your generation has a different point of view. You were born into chaos. It is part of the providence of God that you, who have to pick up the pieces of the modern age, should look on disorder and uncertainty as a normal condition to be faced without surprise or fear."

I completely agree with Father Gannon that the world is, and for some time has been, in relative chaos. I fear he is right when he says that we must look on disorder and uncertainty as a normal condition to be faced without surprise or fear. I am sure he would agree with me that despite our lack of surprise and fear we must in the years to come—as never before—stay alert and on guard. We must all broaden our interests and our perception. We must all learn to appreciate just what is at stake in this world today and the methods and techniques that may be used to deprive us of our birthright.

Since the beginning of this year in the trials of Cardinal Mindszenty and the Protestant clergy of Bulgaria our world has seen the most brazen and ruthless attack upon God and on religion that has been witnessed in many centuries. The significance of these trials can neither be minimized nor discounted. They were steps in the progress and development of an ideology, which since VJ-day has brought to all civilization history's greatest disillusionment.

Three and one-half years ago we settled down to enjoy the fruits of victory in a world liberated from aggression, from the dread

specter of future war and from the bestiality and oppression that brought war to Europe in 1939.

With record-breaking speed this country demobilized the world's greatest Army, Navy, and Air Force and left America with a skeletonized military organization. To our amazement we saw our international influence disintegrate in proportion to the demobilization of our military power.

Already we had seen Latvia, Estonia, and Lithuania gobbled up. We witnessed now the death of democratic processeses in Poland. We watched Yugoslavia, Hungary, Bulgaria, and Rumania fall victims to as ruthless an aggression as any country had suffered at the hands of Hitler. Then we watched Czechoslovakia die. For the second time in 10 years there was imposed upon the free people of that country a way of life to which they prefer death—even as Jan Masaryk. The tear-streamed faces of the plain people along his funeral line-of-march in Prague reminded us of those broken-hearted men and women who wept publicly when France was dismembered.

Then it was that we experienced something of the same apprehension that paralyzed us in the late thirties and early forties. But today there is one conspicuous difference. We know now that salvation cannot be found in appeasement. We know now that wisdom and vision and military strength that commands respect can help to preserve the peace, just as stupidity, blindness, and weakness can invite the very conflict we seek to avoid. The cold war in which we are now engaged is tragic, but it is immeasurably better than the hot war into which we might have been mouse-trapped by a policy of inaction.

I realize that the $15,000,000,000 budget set by President Truman for military expenditures during the coming fiscal year is a very large sum of money. I ask you to remember that it is still less than 5 percent of the $350,000,000,000 it cost us to win World War II—a war in which 400,000 fine young Americans gave their lives.

Until this world achieves a far greater stability than is apparent today, we cannot afford the luxury of reducing the premiums we pay to insure world peace.

Since our national decision to wage peace with the same vigor with which we waged war, the situation in Europe has improved substantially. Greece and Italy—almost lost to democracy 2 years ago—remain steadfast. In western Europe there has been a gradual and noticeable improvement which encourages us to believe that the Marshall plan is one of the most important paths to peaceful settlement of the problems of the postwar world. All of this, though expensive, has been well worth the price.

Since the German surrender and including the first year's installment of the European recovery program the people of America have given to the impoverished people of the devastated countries of the world assistance totaling $21,000,000,000—more than 10 times the cost of developing the atomic bomb.

As Bernard Baruch has wisely observed: "One could search vainly mankind's whole history for comparable generosity."

Were it not for these saving contributions made by the people of the United States, the condition and the future of Europe and many other parts of the world today would be indescribably chaotic.

We are now in the process of formulating an Atlantic Pact to give further assurance to the western European democracies that we do not intend again to stand idly by while they will be engulfed by totalitarianism. We do not intend again to see a fortress Europe in hostile hands. For curselves and for the friendly peoples of Europe, an ounce of true liberty now may be worth many pounds of liberation later.

Make no mistake about it. All of these acts and every move your Government is making is devised to protect and preserve the peace, not to prepare for war.

It has never been the policy of your Government to attempt to drive the Soviet system from its birthplace. Your Government has never taken the position that it cannot live in a world where communism exists. However, Communist leaders view with alarm every manifestation of freedom and repeatedly proclaim that communism and what we call democracy cannot exist together.

America has no military or imperial objective which threatens the Russian people. The Communist system has nothing we want or ever will want. Their greatest exportable product today is chaos. Their only reason for saying that communism and democracy cannot live together is because they know that tyranny, however buttressed by censorship in the cruelest police state, cannot survive so long as freedom exists anywhere in the world.

Not for long can they satisfy their own people with communism while life remains worth the living under any other system.

Why the fantastic propaganda against the four freedoms of the western world in those satellite countries where secret police sway opinion and the sword dangles menacingly over the ballot box? It is because they know that to dominate they must first confuse, distract, and divide—and then conquer. Their every effort is bent to prevent and abort the one thing they fear most—the one thing the people of the world must have—truth.

Hence, the refusal of communism to let the rest of the world see freely into their world, and their refusal to let their own people take a free look at ours. Hence the iron curtain. Hence the resolution offered to the United Nations by Vyshinski calling for world-wide censorship.

By its official pronouncements and by its every act since VJ-day, communism has made its ultimate objective abundantly clear—the complete communization of the world. For communism to flourish they are convinced that freedom must perish.

In this contest of ideologies which today threatens to divide the world, we can depend upon Americans of Irish descent to support unitedly and wholeheartedly the present American policy to prevent the spread of godless communism. Their full and undeviating loyalty to the principles and practices of American democracy has never been questioned. They have always been among our foremost champions of personal liberty, national independence, and human dignity. We know that it is but natural for an Irishman, coming as he does from the land which has had to fight for nearly 1,500 years to preserve its integrity and its culture, to join voluntarily and with all the vigor at his command into any campaign for the liberation of the bodies and spirits of men anywhere. That is why, through the centuries, Irishmen, like our United States marines, have fought in every clime and place.

Like every American of Irish blood, I share your pride in this record. I hope that in my lifetime I may prove worthy of the rich heritage of faith, hope, courage, enthusiasm, and optimism passed on to me by my forebears and of the mighty examples given me by compatriots of the past and the present.

We love America and the ideals for which she stands. We love her for what she has given us in opportunities to enrich our lives, to enjoy the freedoms we cherish. We love her for the place she holds in the affections of all mankind as the land of enlightened liberty and the champion of human dignity.

Our devotion, however, must be something more than an affectionate optimism that somehow everything will work out all right. We must face present problems with a realistic approach and with full consciousness that we must all continue to devote our best efforts to these ideals if they are to survive and prosper. We cannot close our eyes to the fact that our survival will always be threatened so long as there are destructive ideologies with aggressive tendencies abroad in the world.

We must always remember that the price of inaction may ultimately be many times greater than the costs of all the steps we can take to preserve our heritage.

The events of the past 3 years of uneasy peace and the reaction of the American people to these events hearten my confidence that all of us are ready to work as hard, as unitedly, and as untiringly for peace as we did for victory in war.

Our experiences in the last two great wars have taught us a lesson which we are prepared to heed from now on. We are resolved to make every effort while time remains to weld the strongest possible chains to keep in leash the dogs of war.

We believe that a strong America can help to prevent war. As a Nation, we will continue to take every possible practical step to preserve the peace of the world.

Our President has repeatedly pledged our support to all measures contributing to the preservation of peace.

We have done all these things because we believe we can best assure our own security and the stability and peace of the world by these means. We freely acknowledge that the problems our generation will face in the next 20 years may be as great or greater than those we face today. We must acknowledge that the sacrifices we shall be called upon to make may be greater than those we are now making.

Whatever the problems, whatever the sacrifices asked in our remaining years we gladly accept as the challenges of our destiny.

We know that everything we are, that everything we hope our children to become, is at stake. We dare not fail, lest civilization suffer its worst retrogression in all recorded history.

Here on this continent our forefathers established a system of government and a way of life which has proved to be the world's greatest contribution to human freedom and the dignity of man. It represents today civilization's brightest promise and strongest hope. It must not perish.

In the words of the poet Stephen Vincent Benet:

"We made this thing, this dream,
This land unsatisfied by little ways,
Open to every man who brought good will,
This peaceless vision, groping for the stars,
Not as a huge devouring machine
Rolling and clanking with remorseless force
over submitted bodies and the dead
But as live earth where anything could grow
* * * We made it * * * and it's ours.
We shall maintain it. It shall be sustained!"

May God give us the wisdom and the courage and the determination to do all those things that must be done to protect and preserve this America, and to help keep the world at peace.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. RAINS. Mr. Speaker, under leave heretofore granted to extend my remarks, I include an article which appeared in the April issue of Better Homes and Gardens, by Ellis Arnall, former

Governor of Georgia, on Federal aid to education:

The schools belong to children. There are 28,000,000 boys and girls of school age in the United States. Some of them have the advantages of fine buildings, adequate libraries, carefully tended playgrounds, and wholly competent teachers. Most of them do not. Perhaps your children are among the latter.

Five days each week, for more than three-quarters of the year, millions of American children go to school in slums. Their homes may be attractive, but the places where they spend many of their waking, formative hours deserve the phrase a child recently used in my presence: "I don't like to go to that dump!"

We are disseminating illiteracy all over the Nation. Americans have a right to travel freely about their country, seeking the kind of place that they want for a home. They are entitled to good schools wherever they live.

The aim of Federal aid to education is to make it possible for your child, for every child, to have a high-school education in a good school.

Washington and the debates of the United States Senate may be a long way from the school where your child spends 5 days each week, September until June. They may be a long way from your community. But the decisions made there decide the kind of neighbors you have and the kind of playmates your children have and the kind of education that they get.

To explain that, here is the story of a grammar-school class, and of four of the children attending it.

The school building is a good one. The Federal Government paid for its erection in this instance, because it is located in an area where new wartime industries swelled the population. It is a single story structure, well lighted and well heated, and more attractive than 90 percent of the school buildings in this country.

The sixth grade has 37 pupils, 7 more than desirable; but is less overcrowded than in many towns. The teacher is paid $1,890 a year, somewhat better than the national average for sixth-grade teachers. She has taught school 9 years.

In the second seat of the first row sits Robert Lee. He is attentive. He is doing fairly well in civics, reading, and geography. His spelling is poor. His arithmetic is surprisingly good; he has a knack for figures. He is almost 14, 2 years behind in school. He comes from a rural school, four rooms, each heated by a stove fed with fat lightwood knots. When the weather was bad, he had to stay out, because he lived more than a mile from the school-bus stop. His teacher was paid $75 a month, $750 a year, the highest salary she had ever received for caring for a class of almost 40.

Elaine sits in the first seat of the second row. She will be 12 this month. She has not mastered the use of the school library and its reference books. Her reading and arithmetic are both poor. She may have to drop back a grade. She came from a metropolitan city where there is an iron curtain about the operations of the schools. Its adminstration will have nothing to do with the National Education Association. Standards are locally set. The school system is the toy of politicians.

Midway in the same row sits Gertrude. She is 12. She found it hard to get along with the other children at first. Gertrude comes from the same city as Elaine. Her parents had a better-than-average income. This year is her first in a public school, because, before she moved, they sent her to a private school, a thousand dollars a year. She likes the public school better, now that she is used to the children. Her report card shows "A" all the way down.

Opposite Gertrude, in the third row, sits James. He is a home-town child. He went to the first grade in the old building, and then transferred to the temporary wooden structure that went up, complete with pot-bellied stove in the middle of the room. It burned during the Christmas holidays in 1945. That winter before the school burned was a winter of sniffles for James, a winter of dread of fire for his mother. She was relieved when the school burned down and it was safely over. He has been going to school in the new building for 4 years. James makes average grades. Jimmy's parents like their town. They like it better than the one from whch they moved, soon before Jimmy was born—in a New England State which assumed no responsibility for education. There through a very high local tax rate, the resources of the community could provide fairly good teachers' salaries, well above the average for the State; but money could never be found to replace the school building, which combined the exterior aspect of a prison with the inside climate of a cold-storage room.

Those are some of the schools of America, and some of the children who become your children's associates, children who must manage the world's affairs tomorrow.

Almost half our States cannot provide the money for decent schools. These States have exported illiteracy throughout the country.

More than half our teachers are underpaid. Less capable men and women are likely to become predominant in the school world within another 10 years. The better teachers appreciate the gratitude of the public and its recognition of the high responsibility of their calling; but they are beginning to regard gratitude as counterfeit currency and to ask for payment in cash.

The average per capita income in the United States in 1946 was $1,213. In 14 States it was less than a thousand dollars. In all but one of these 14 States, rejections for educational deficiency under selective service during World War II were more than double the national average.

These young men were illiterate because they had been deprived of an opportunity to learn. In the middle of a war, facing a manpower shortage on the battlefield and in industry, the Nation had to stop and teach young men to read and write. Federal aid is designed to equalize educational opportunity in America, end illiteracy, give every child a chance for a decent education.

Federal aid has been attacked on the grounds that it's an invasion of State and local rights to control education.

Put briefly, the Thomas bill, the same as introduced by Senator TAFT and passed by the Senate in 1948, provides that:

"The Federal Government appropriated $300,000,000 a year to be distributed to the States for public elementary- and secondary-school uses. The distribution is determined by the ratio between the average income of the citizens and the number of children attending school. Supervision of the schools remains in the hands of the States, except that the Federal Government would have to be assured that the money actually went for teachers' salaries and other legitimate purposes."

Security for Veterans

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. BOLLING. Mr. Speaker, wide consideration is being given to the proposal by the Honorable JOHN A. CARROLL, of Colorado, that our veterans and their families be given special protection within the framework of the social-security system.

Proposals now are before the Congress to increase the benefits and broaden the scope of our present social-security law. There is general recognition of the need for the passage of such legislation. We also are aware of the need to give our veterans and their families security on a fiscally sound basis.

The Carroll plan unites these two needs into a proposal which has many advantages over a so-called veterans' pension plan. Each veteran is given what amounts to a paid-up insurance policy, to which he can add by making additional contributions to the social-security fund. There is no needs test and veterans are not placed on a dole in any sense. Benefits for widows and dependent children are considerably greater than those possible under a straight veterans' pension. The total cost of the plan is estimated at 8 to 10 percent of that of the pension bill which was brought to the floor of the House recently.

The Carroll plan can be made a part of H. R. 2893, on which hearings are being held by the House Ways and Means Committee. I understand that legislation to this effect will be introduced soon.

We must approach the problem of security for our veterans on the most practical and sound basis possible. The Carroll plan certainly offers good reason for the House to delay any other action on veterans' pensions until this alternative has been thoroughly explored.

The principal features of the Carroll plan are ably explained in articles appearing in the Washington Daily News and other Scripps-Howard newspapers on March 29. I include these articles for study and consideration by Members of Congress:

[From the Washington (D. C.) Daily News of March 29, 1949]

CARROLL PENSION PLAN TIED TO SOCIAL SECURITY SYSTEM

(By James Daniel)

Representative JOHN A. CARROLL, Democrat, Colorado, has proposed to blanket all veterans of World Wars I and II under the social-security old-age insurance system, instead of putting the superannuated ones on the pension rolls.

Here's how Mr. CARROLL says his plan would work:

Each of the more than 18,000,000 veterans would be given, at no cost to him, a social-security basic credit equivalent to pay-roll taxes on an income of $3,000 a year for 10 years.

Each veteran would have this credit as a right, regardless of the duration of his military service.

The credit would entitle the veteran to minimum retirement benefits of $64 a month when he reaches age 65. He could increase the benefit to as much as $90 a month by paying the social-security pay-roll taxes on his earning from employment before reaching that age.

For a married veteran and his wife the basic-credit benefits would be $96 a month when the husband has reached age 65 and the wife has reached age 60, and these benefits also could be increased by payment of taxes on earnings while employed.

SURVIVORS' BENEFITS

If the veteran died, leaving a widow and orphans, the widow would receive $96 a month insurance if she has one child less than 18 years old; $120 a month if she has two children; $150 a month if she has three or more children. If childless, the widow would receive $48 a month at the age of 60.

These insurance features, Mr. CARROLL believes, should be of special interest to World War II veterans, most of whom won't reach retirement age for many years.

The original pension bill offered by Representative JOHN E. RANKIN, Democrat, of Mississippi, and defeated last week in the House, proposed $90-a-month pensions at 65 for all veterans who served as long as 90 days in either world war. The substitute bill now offered by Mr. RANKIN would provide pensions of $72 a month, limit them to World War I veterans, and apply a means test for eligibility.

Representative CARROLL, who is 48, served overseas in both world wars. He was one of the leaders in the House battle which resulted in defeat of the original Rankin bill by a 208-to-207 vote.

Mr. CARROLL says actuaries have estimated the eventual cost of his plan at $10,000,000,000 to $15,000,000,000. The pension proposal of the original Rankin bill would have cost over $100,000,000,000 in the next 50 years, according to Government estimates.

As one concession to practical politics, the Carroll plan would put all veterans under social-security protection without forcing an immediate decision on President Truman's request that coverage be extended to farmers, self-employed persons, and others not now in the social-security system.

[From the Washington (D. C.) Daily News of March 29, 1949]

BETTER THAN PENSIONS

Congress should give careful consideration to the plan, proposed by Representative JOHN A. CARROLL, of Colorado, for aiding aged veterans of World Wars I and II.

Mr. CARROLL, who served in both wars, believes he has something better, fairer, and much less costly than the Rankin pension bill, which he helped to defeat in the House last week. His plan is explained in an article by James Daniel, Scripps-Howard Washington correspondent, today.

A great advantage of the Carroll plan, we think, is that it would tie in with the social-security system.

Instead of putting the veterans in a special class, apart from that system, it would provide them with special benefits under that system. The Government would give each veteran without cost to him, a basic social-security credit. He could increase the value of this credit by paying social-security taxes on his earnings from employment in the years before reaching age 65.

Each veteran and, if he is married, his wife would be assured of retirement benefits. And World War II veterans, most of whom won't reach retirement age for many years, would be assured meanwhile of added life insurance protection for their families.

The basic-credit benefits of the Carroll plan would be somewhat less than those proposed in the defeated Rankin bill. But they would be much greater than those offered by the modified Rankin bill, introduced after the first one was beaten. And Mr. CARROLL estimates the cost of his plan, over the next 50 years, at only 10 or 15 percent of the original Rankin bill's more than $100,000,000,000.

Congress has voted pensions to veterans of all American wars previous to World War I. This fact is cited as a precedent for pensioning veterans of the two World Wars. But when that precedent was established there was no social-security system, and therefore no possibility of anything like Mr. CARROLL now suggests.

Because the Carroll plan is a new departure, it needs thoughtful study. But we think it could prove to be the answer to a problem which most Americans earnestly want to solve—the problem of providing adequate old-age security for millions of veterans without inviting national bankruptcy.

High Taxes—Thin Markets

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. JONAS. Mr. Speaker, under date of March 29, 1949, the Chicago Daily Tribune published an editorial entitled "High Taxes—Thin Markets." This editorial merits more than passive consideration. The subject matter so capably discussed and analyzed in the editorial is of vital importance to all American citizens. The market has been spotty and bad for some time. Since this editorial was published, the Federal Reserve Board has lowered the marginal deposit requirement from 75 to 50 percent. Business throughout the country is not good, and you might well keep your eye on the stock market if for no other purpose than as a barometer indicating the upgrade or downward trend of business in the United States.

The editorial follows:

The New York Stock Exchange, in a desperate effort to stay in business, is trying to get people in the lower-income brackets to buy stocks. The investors and speculators who used to keep the markets active have been driven out by high taxation and high margin requirements.

Investors are people looking for opportunities to put their money to work. For the most part they have been persons of substantial resources, experienced in picking good risks from many opportunities presented to them. After paying taxes and living expenses the wealthy—those with incomes above $50,000—now have little left for investment.

In a study of the Treasury Department presented to the House Ways and Means Committee last year, the Secretary of the Treasury showed that the 63,000 persons with incomes over $50,000 a year had income before exemptions of $5,600,000,000. Their taxes amounted to 3½ billions. After deducting taxes they had a little over 2 billions left or an average of about $31,000 each. Any of them who had a surplus left after meeting living expenses was discouraged from putting it in the market by the knowledge that the Government would take in taxes nearly all of any dividends received.

The other group of former stock buyers, the speculators, used to operate on a margin of 20 or 25 percent. The present requirement is that they must put up 75 percent of the price of stocks they buy. The broker or banker can advance only 25 percent. That eliminates nearly all the speculators. Any who aren't killed off by the margin rule, fall before the income tax. The speculator aims at short-term market swings. He therefore must pay the full income tax on any profits, and can use losses only to offset gains. He cannot, as formerly, deduct losses from income, except to the extent of $1,000.

With both professional investors and professional speculators on the side lines, trade on the New York Stock Exchange is down to as little as 500,000 shares a day. At an average commission of 25 cents a share for buying and the same amount for selling, this means that the key market is kept operating on an income of as little as $250,000 a day. This is the revenue available to pay for the wires, office rent, salaries of partners, salesmen, clerical workers, and other expenses. On as little as this, an institution tries to function, which is expected to keep the economy liquid by providing a market for anyone who wishes to sell stocks in leading corporations.

Without experienced buyers, security holdings of any size cannot be sold except in small quantities at declining prices. Yet, with estate taxes running up to 77 percent, stocks have to be converted into cash in these thin markets. Absurdly low prices are obtained. One of the weekly magazines recently published a list of stocks selling for less than the mere working capital, some for less than per share cash holdings. Judged by the price of stocks, the buildings and equipment of these corporations, although modern and of recent acquisition, are worthless.

Extra value of a business as a going concern no longer exists. Many families would be better situated if businessmen directed that at their deaths the enterprises which they built up be broken up and liquidated, leaving employees to fend for themselves. Such is the market for the most liquid kind of assets found in an estate.

The stock exchange will go about the program of making capitalists out of carpenters with the best wishes of those of the old regime who may have to sell some of their holdings at any time. Moreover, any prospect of finding a new source for capital with which to expand and improve production should have the encouragement of noninvestors.

The millions of potential petty capitalists have the means to succeed. People with incomes under $5,000 get 75 percent of the total incomes of the country after taxes. The new investors lack experience and are likely to make the mistake of buying cars and dogs instead of sound securities. Not only investors but society suffers when savings are dissipated in this way. However, the little man's capital is about all that society has to go on until income and estate taxes are made reasonable and margin requirements modified.

Dentists' Boom in Income Stirs British Health Plan Row

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. MULTER. Mr. Speaker, on March 31 I placed in the RECORD the seventh of a series of articles appearing in the Brooklyn Eagle, describing the British health plan. The following, which appeared in the Eagle on March 25, is the eighth of the series:

DENTISTS' BOOM IN INCOME STIRS BRITISH HEALTH PLAN ROW—ONE THOUSAND SIX HUNDRED-DOLLAR-A-MONTH RECEIPT LIMIT ANGRILY FOUGHT

(By E. J. Delaney)

(Eighth in a series)

LONDON, MARCH 25.—British dentists, whose vastly increased incomes under the new national health service are a public

scandal, are fighting angrily against a ruling by Health Minister Bevan that their gross receipts shall not average much over $1,600 a month. They are calling his attitude dictatorial, but admit they have no recourse, that he has the power under the law.

Probably the greatest criticism leveled against the health scheme is directed at the dental division, and members of the profession admit things are not good, although blaming a few scalawags, of which, they remark, there are some in every business and every profession.

Dentists are collecting $40,000 and $50,000 a year, which is tremendous in England. They estimate their expenses for their office, nurse, technician, and other needs at 52 percent of their take. Then they pay heavy taxes, almost confiscatory here after $20,000 a year.

COMPLAINTS POUR IN

Loud complaints are expounded every day by members of the House of Commons against dentists for declining to relieve people who come to their surgeries with aching teeth, because they are too busy with other folks filling their waiting rooms by appointment.

The British Dental Association denies such occurrences are general, doesn't say they are happening at all, and is scolding the members of the profession, through its journal, and reminding them of their professional and ethical duties.

Dentists were against the health plan, much more so than the medical men, and joined it only through force of economic circumstances. Now they think it is an excellent idea, although poorly planned, badly managed, and would be far superior if the Health Ministry had heeded or would listen to their suggestions.

TRY TO SERVE WELL

On the whole, the dentists are trying to give the public good service and to conduct their practices in a way that serves the general welfare. Most of them wouldn't allow a person to suffer from an aching jaw for a minute, and would do what they could at once, whether or not they had any prospect of payment by the patient or by the government.

Any of them who want to do so can, or could, make a quick fortune, within the tax-law restraints, by exploiting the plan. Enough of them have been doing so to draw fire. Their answer is that their large income shows they are working endlessly to serve the people. They cannot get it without long hours.

Out of all the distorted and deceptive charges and answers, it is possible to put together some semblance of the truth of the whole deal.

High-type practitioners and their association leaders, interested in good dentistry for the people within their means and desiring to preserve the profession from full regimentation, are striving to improve conditions, to prevent the Government from oppressing the dentists and to inspire the dentists to exercise good sense and display some idealism.

"Dentistry was a depressed profession here in the past," one of its leaders says, "and 75 percent were making less than $4,000 a year, a large number much less. The great trouble under the National Health Plan is that the cheap dentist is overpaid and the good dentist is underpaid. The Government has placed a premium on quickly done and poor quality workmanship."

GRANT-IN-AID PREFERRED

"It is true that over 90 percent of the dentists are in the plan now," he continued, "but 50 percent went in against their will. Their private practices disappeared, they had to join to eat. We would have preferred a grant-in-aid system, well controlled, and think the evils existing today would not have developed.

"The health plan does break down the dentist-patient personal relationship. The practitioner no longer is permitted to give his patient the treatments he thinks are necessary. He must wait to receive permission from a Government committee before he extracts a tooth (unless there is pain present), puts on a crown, or makes a denture. That lowers the dentist in the eyes of the patient.

"Prophylactic work and simple fillings can be provided at once without Governmental approval, but that doesn't save the dentist's standing. Sadly, we feel that there will be no improvement so long as the present Government is in power."

A Wheel for the Shoulders

EXTENSION OF REMARKS
OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Christian Science Monitor of March 29, 1949, and an editorial from the New York Times of March 30, 1949:

[From the Christian Science Monitor, Boston, Mass., of March 29, 1949]

A WHEEL FOR THE SHOULDERS

What the Hoover Commission has begun Congress and the President must finish. The eighteenth and last report of the Commission on Organization of the Executive Branch of the Government now goes to Congress.

These reports, taken together, represent a monumental work. To be sure, the several task force subcommittees have not always agreed among themselves. Nor has the Commission itself. It is true that some reports appear to spill over from the assigned field of administration into the adjoining pastures of policy (where Congress is the husbandman).

Nevertheless, the coincidence of congressional and Presidential backing, of nonpolitical expertness and experience, and of the extraordinary kind of leadership which only an ex-President and a gifted administrator like Mr. Hoover could bring offer a combination not likely to be duplicated in a generation. One does not have to endorse every detail of its recommendations to conclude that, in general, the findings of the Hoover Commission should be carried out.

Yet, Congress appears disinterested and cool. It is in the nature of political realities that organized protests from constituents back home or from officialdom in Washington who have an interest in keeping some particular activity as is, free from reorganization, may make more impression on the average Congressman than do the merits of so tremendous a plan.

The Hoover report will need strong backing from a public opinion broad enough to cancel out the conflicts of interests within it. And such a public opinion must have leadership and organization at its core. That, it appears, is in the making.

A citizens' committee is being formed around a nucleus of commission and task-force members. When this group is launched and announced, Americans who want to help modernize their archaic government will have at least one wheel to put their shoulders to.

[From the New York Times of March 30, 1949]

REFORM IN WASHINGTON

It is good news that a nonpartisan organization of some 700 well-known people in all parts of the country has been formed, under the leadership of President Robert Johnson of Temple University, to work for "far-reaching and enduring reforms in the Federal Government" on the basis of the reports of the Hoover Commission. Mr. Hoover and his colleagues have done a spectacularly good job. They have looked into every corner (including some of the almost forgotten corners) of the vast and chaotic machinery of Government in Washington. They have studied the purposes for which literally hundreds of bureaus were created and discovered the reasons why many important duties are now being performed inadequately. They have come up with pointed and specific recommendations (unanimous in most cases) which ought to be adopted promptly in the interest of more efficient and more economical government. But, good as these recommendations are, the danger is that little will be done about them unless some alert and public-spirited organization, such as that which has now been formed for this purpose, keeps pressing for reform.

That this is true is demonstrated by the experience of a long series of earlier attempts at Federal reorganization, under Taft and Wilson, under Harding and Coolidge, under Mr. Hoover himself, and under Mr. Roosevelt. Scores of worth-while recommendations have perished of neglect. To cite but one example: It is now just 26 years since the Brown committee, operating during the Presidency of Mr. Harding, recommended consolidation of the War and Navy Departments—a reform which we are just getting around to now. There is a vast inertia to be overcome in matters of this kind. The new citizens' committee will be needed, if the full benefits of the monumental work of the Hoover Commission are to be gained.

National Theater

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. JAVITS. Mr. Speaker, evidence continues to accumulate that the people support the effort to mobilize and bring to them the democratic culture of our country through the living theater. Support for House Joint Resolution 104, introduced by me in the House and by Senator IRVING M. IVES, New York, with Senator ELBERT D. THOMAS, Utah, as cosponsor, is coming from community theaters throughout the country. A typical example is a letter from the business manager of the St. Louis Community Playhouse appended hereto:

ST. LOUIS COMMUNITY
PLAYHOUSE, INC.,
St. Louis, Mo., March 23, 1949.

Congressman J. K. JAVITS,
House Office Building,
Washington, D. C.

DEAR MR. JAVITS: I have studied House Joint Resolution 104 calling for a national theatre, with great interest, and you may count on my strong support for it.

Let me tell you a little about the St. Louis Community Playhouse. I think our history exemplifies the need for support such as your resolution contemplates.

We were organized in 1927—thus, although we are comparatively young in years—we are one of the oldest if not actually the oldest continuously operated little theaters in the United States. That, I believe, depicts the hardships and the mortality of the little theater movement and why there is need for governmental assistance. And from my knowledge of the dance world, as former publisher of Dance Magazine, I know that the same is true in that art endeavor also.

During the past 3 years, partly because of our sponsorship of a children's theater, and also because of rising costs and an income frozen to the size of our theater, we have accumulated a deficit of $4,800. This, on an annual budget of $22,000 is not great, but great or small, unless we succeed in raising that sum either from our own personal contributions or aid from other interested individuals and corporations, we shall have to go out of business.

You may be interested to learn that the Community Playhouse is regarded as sufficiently important to the cultural and civic life of St. Louis for several of the larger businesses in town to offer to pick up part of our accumulated deficit. They did, however, stipulate that we not make this an annual event. I believe that these persons, important industrial leaders, would be in favor of the help your proposal would afford.

Frankly, if we should have to close our doors, St. Louis would lose greatly. Here, in a metropolitan area of 1,400,000 persons, we offer youth access to theater which it cannot get elsewhere. We have seen boys and girls come off city streets and develop an enthusiasm and talent which molded their lives for the better. We have seen half a dozen or more of our people go on to success in Hollywood or Broadway. And for our subscribers and single ticket audience, we offer an opportunity to see both hit shows and plays more of the experimental type, well performed by nonprofessionals. This latter is important because, like many American cities of today, we have only one legitimate theater in operation and naturally this compels a limited selection of presentations in a year.

Our director, who with our secretary and technical director comprises our paid staff, is a graduate of Yale's school of drama; a very talented, capable person. Because of his interest in our work, he is serving for far less than he could earn in the professional theater.

We need help. I believe our need is shared by most other comparable organizations. Therefore, I am writing our three Congressmen and our Senators, all good men, asking that they support your resolution and I shall also bring it to the official attention of my fellow directors.

Please pardon the length of this letter but I felt the matter serious and worthy enough to merit a complete statement.

Sincerely,

HAROLD HARTOGENSIS,
Business Manager.

Hundredth Anniversary of William Jewell College

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the CONGRESSIONAL RECORD I include a notable and timely address delivered by Secretary of Agriculture Charles F. Brannan at the alumni dinner at the Mayflower Hotel, Washington, D. C., last evening.

ADDRESS BY HON. CHARLES F. BRANNAN, SECRETARY OF AGRICULTURE, ON THE HUNDREDTH ANNIVERSARY OF THE FOUNDING OF WILLIAM JEWELL COLLEGE

It is always a pleasure to have a part in celebrating the hundredth anniversary of an American institution. In our young Nation—only 160 years old—comparatively few institutions have roots which go so deep into the soil of American history. You, the alumni of William Jewell College, have reason to be proud tonight.

For my part, I enjoy centennial celebrations for many reasons. They make me feel very young—and that is a good feeling. But these celebrations also are inspiring—and that is healthy for all of us. We are inspired when we look back down the corridor of time and see how amazingly far this Nation and its institutions have come—when we see the thread of continuity leading back a century and more—when we recall the handicaps our progenitors overcame and the bravery with which they faced the dangers and hardships of the frontier. It was in such circumstances that William Jewell College was established.

It is hard for me to visualize that when this college was founded the gold rush to California was just taking place. The Mexican War had recently ended, the Civil War was 12 years in the future. Indian country was dangerously close to Liberty, Mo., the site of the college. Wagon trains toiled over the prairies. The pony express carried the mail. Overland stage coaches jolted along rough roads. This was the frontier: a line extending north and south and cutting through Missouri, Iowa, and Minnesota. Small wonder that some persons of influence argued that if William Jewell College should be established in Liberty, the call of adventure would be too loud and clear to resist—and the students would desert the classrooms for the trail of gold and daring.

But it was decided—wisely—that the frontier was the place for this school. And I see in the establishment of your college on the very frontier of the growing United States of America a lesson out of the past and a warning for the future.

The lesson of the past concerns the great stress which early Americans placed upon education. In his farewell address, George Washington said: "Promote * * * as an object of primary importance institutions for the general diffusion of knowledge."

Thomas Jefferson argued that the people must be the depository of the ultimate powers of society. And he warned, if we think them not enlightened enough to exercise their control with a wholesome direction, the remedy is not to take it from them, but to inform their discretion by education.

But even long before Washington and Jefferson had thus expressed their opinions about the place of education and democracy, the Congress had stipulated in the third article of the Northwest Ordinance, as follows: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools, and the means of education, should be forever encouraged."

So it was that as the frontier moved westward, schools and colleges were close behind. In these institutions were taught the principles of free government upon which our Republic was founded. In the hearts of the students, the torch of democracy burned bright. There was a zeal for freedom in the frontiersmen—a zeal to help create a free country for generations to follow—to build the best possible future out of a present that was better than the past.

Today you and I profit by this devotion to education. Undoubtedly it is one of the forces which has made our Nation great and kept our people free.

Just 2 years before your college was established in Missouri, two German theorists issued the first public declaration of international socialism. This was the document known as the Communist Manifesto. Its authors were Karl Marx and Friedrich Engels.

Thus, at the very time that William Jewell College in Liberty, Mo., was beginning to form in the minds of its students an appreciation of the principles of democracy, the seeds of what has grown to be the most vicious doctrine of enslavement the world has ever known, were being sown in Europe.

Marx and Engels foresaw an eventual climactic struggle between the forces for and against communism. A full century was to pass before this struggle became critical—and it is critical today. But contrary to the predictions, the conflict today is not between two economic systems, capitalism and communism. The choice facing our world is between liberty and slavery; between right and might; between freedom to speak one's mind and coercion to parrot what the state dictates; between worshipping according to one's conscience or according to a state-prescribed formula. The struggle today is a struggle of human freedom against the totalitarian, dictatorial, all-enveloping state.

More and more, the true issues facing the world are being realized by American men and women. Every one of us has reason to be grateful that the base of our educational system has been broad enough to help create in the minds of most American citizens a fundamental appreciation of the meaning and value of democratic freedom.

In this land, we are sometimes told, we have sacrified educational quality to quantity. In other countries the critics say comparatively few persons are college trained—but these are more intensively trained than our average college man and woman. Be that as it may, I have the idea that the straight-thinking minds of the average American young man and woman compare very favorably with the products of other education systems. And the opportunity for higher education in this country is unequaled anywhere in the world.

In the past century the United States has changed from gangling adolescent in the family of nations to the most powerful figure on the world scene. The basis of our strength is both spiritual and physical. The spirit of our people has long been the subject of world admiration. The physical ability of our industry and agriculture to produce economic wealth has been the envy of our friends and the despair of our enemies.

In the building of this twofold strength a college such as you represent has played a role of great consequence. I sometimes wonder whether we give full credit to the role of education when we assess the wonderful capacity of our Nation.

I happen to be in a particularly favored position to witness some of the marvels scientific research has accomplished in agriculture. During the war a number of young scientists, just a few years out of school, developed important techniques and processes.

One young man, working in a regional agricultural laboratory, learned how to make a rubber substitute from soybean oil.

Another young scientist—under 30—developed a method of converting starch in wheat to fermentable sugars without the use of malt extract. This was important because malt extract was scarce during the war.

Still another young scientist, a few years ago, developed a new and effective method of ridding farm animals of a whole multitude of internal parasites.

I could take you through an average day of your lives and show you how again and again in the course of that day you are touched by the helping hand of agricultural scientists.

I could show, for example, that the cattle industry which supplied the raw material for your shoes would never have reached its present size but for the work of agricultural scientists in fighting animal disease and fostering better nutrition and care of livestock.

You might be surprised if I told you that the wool in your suit may have come off the back of Columbia sheep, a modern made-to-order breed of sheep developed by the Bureau of Animal Industry.

Going back some decades, I could show you that it was a test tube in the hand of a Department of Agriculture scientist that helped build the Panama Canal—for that test tube played an important part in enabling medical science to control yellow fever.

At this very moment, in thousands of hospitals and homes over the land, doctors are administering penicillin. The Department's Regional Research Laboratory at Peoria was largely instrumental in enabling penicillin to be produced in commercial quantities.

These are just a few of the spectacular benefits we have all reaped from education in science.

But as I said in the beginning of this talk, the history of American education holds for us not only a lesson out of the past but a warning for the future.

Never has knowledge been so important for good or evil as in this our day. Never has man been faced with such an opportunity—and such a dread responsibility—as since he found the means of releasing atomic energy.

Since knowledge can be used either for good or for evil, it is obvious that mere knowledge is not enough. It is not true, as Socrates argued some 2,400 years ago, that wickedness is simply the result of ignorance. That is why there is a special need in our day for the kind of training of the will as well as training of the mind that you received in your college days.

If this world is to be a safe place to live in the year 2000, let us say, we shall need to cling fast to our belief in human dignity, human freedom, and human responsibility.

We shall need to broaden the base of our education even further and strive for educational opportunity for all our people.

We shall need to push ahead with the social sciences—which up to now have lagged far behind progress in the physical sciences. We shall need to know how to control the ups and downs of the business cycle. We shall have to eliminate racial, religious, and national prejudices. Above all, we shall have to find the way to live in peace with mankind throughout the earth.

It would be presumptuous of me to try to chart how these goals can be reached. The most that I can do is to indicate for your consideration one or two points which seem to be of consequence.

We have all heard it said over and over that the greatest threat to the world peace and prosperity is widespread hunger. There is a rather fiery debate raging now as to whether or not the world has the resources and the know-how to feed itself. My own conviction, based upon careful estimates of our soil scientists, is that the world does have the resources—and most certainly does have the know-how—to provide adequate diets for all its population in the foreseeable future.

I say the world has the resources and the know-how. I do not say that the world will make the best use of them. Prejudices, suspicions, hatred—all these stand in the way of a full and free interchange of knowledge. These same factors hinder world production and trade today as they have throughout history. The job of wiping out malnutrition in the world can be done—but it probably will not be done without the most earnest, tireless, and determined effort humankind have ever put forth in time of peace.

Another factor of prime importance if the world is to be made a safe place in which to live is good government. This is a topic which lies close to my heart. Very few schools in the Nation prepare their students specifically for Government positions. Georgetown, here in Washington, has a school of foreign service. The University of Denver now trains students for public service. These are the proverbial exceptions to the rule. The sad fact is that in many quarters today, working for the Government is not regarded as quite dignified, if indeed it is quite honorable. Talk of waste and bureaucratic gangling, talk of kicking the American people around and feeding at the public trough, have done much to undermine the reputation of Government employment. There are people who believe irresponsible charges that the Government worker is perforce a boondoggler. This is a sad thing, and one for which the Nation must pay in terms of loss of capable men who do not wish to subject themselves to such charges. But it is sad particularly because it is false.

Oh, yes, there are inefficiencies, overstaffing here, understaffing there. Whether there is more of this in Government than in big private corporations has never been settled. But it is certainly more than a little ridiculous to build up a fence between the public servant and the rest of our society and try to separate them as the goats from the lambs.

The Government administrator went to high school and probably to college. Just as did the business executive.

The Government secretary went to business school, just as the secretary in private enterprise.

The Government professional man did his work at recognized educational institutions, just as the professional man in private life.

They all grew up in American communities. They all lived and voted and went to ball games and played golf and ate chicken on Sunday. Is there any reason why one should be less efficient than the other? If so, why should business be so all-fired eager to attract experienced bureaucrats from public to private employ at double and triple the salaries?

No; service in the Government is honorable. For the Government worker serves the highest employer of all in the Nation—he serves the people. That, of course, is the vocation of every man and woman—to serve other people—but it is especially the vocation of the public worker. His employer is not an agency chief, a Cabinet officer, or even the President. His employer is also their employer—the people. And so the Government worker is one of that great company of men and women, who will never wear sables on their Government salaries, but who can don the mantle of a good conscience for unselfish service to their fellow men.

Personally, I am proud to work for my Government, for my country. I am proud of the company it gives me, the scientist bound to his laboratory not by his salary of five or six or seven thousand dollars, but by his love for the job; the administrator, calmly and conscientiously dealing in millions of dollars and never tempted to violate in the slightest his public trust; the clerk, doing his tasks in his or her own area of responsibility.

More things are wrought by the Government worker than this country dreams of.

It is important to the Nation, and to the peace of the world, that the standard of Government service should rise even higher. President Roosevelt once said that the greatest domestic achievement of recent years in the United States was neither saving the Nation from economic chaos, nor the enactment of laws to improve social conditions, but rather "the awakening of many millions of American men and women to an understanding of their own Government."

It is in this awakening that much of our hope for a good future lies.

We do not expect Utopia overnight. We have no panacea which can make this world a pacific place.

Our best hope is to keep alive in American hearts the fire of freedom, knowledge, and morality. Our earnest desire must ever be to leave to our children, and their children, a world in which this Nation can progress as much in the next century as it has in the 100 years since William Jewell College was founded. To do that we shall need iron resolution, perseverence, and a crusading spirit to serve mankind. We shall be required, in other words, to show that we have used our inheritance of knowledge and education wisely and well.

Long Beach, Calif., Harbor Passes Los Angeles, Calif., Harbor Cargo Mark

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. DOYLE. Mr. Speaker, under authority granted me so to do, I take great pleasure and pride in calling to the attention of my colleagues and all readers of this CONGRESSIONAL RECORD the following news statement, published in the Long Beach Press-Telegram, Saturday, March 26, 1949:

PORT MANAGER TELLS LIONS CLUB SESSION OF LOCAL PROGRESS

For the first time in the history of the two ports, Long Beach harbor last month passed Los Angeles harbor in the tonnage of general cargo handled, E. J. Amar, port manager, reports.

February tonnage through the Long Beach port totaled 194,000, Amar said, while Los Angeles harbor handled only 178,000 tons.

During 1948, the Long Beach port handled 4,517,981 tons of cargo, valued at $483,000,000, the port manager said.

"On one day last week," Amar told the Lions Club Friday, "we had approximately 800 longshoremen at work here. Only 240 were at work in the San Francisco port on the same day."

BIG INDUSTRY

Long Beach Harbor is a big industry in which taxpayers are the stockholders, Amar said. Last year this industry did a $30,000,000 net business, he added.

Six times since the first of the year, ships due into the local port have had to be diverted to Los Angeles Harbor because there were no facilities here to handle them; everything was filled to capacity, Amar said.

In 1938–39, the monthly shipping through Long Beach Harbor amounted to 10,000 to 12,000 tons. Today the average is 200,000 tons a month, according to the port manager.

This month, one line alone—the Calmar Line—will ship 30,000 tons of steel. In the last 10 days, Amar said, the local port has received 16,000 tons of newsprint from British Columbia and the Pacific Northwest.

ALL IRON ORE

Long Beach is handling the shipment of all iron ore destined for Japan. To date this month, 70,000 tons have been shipped and another 20,000 tons is due out during the next 4 days.

In the past 10 years, $25,000,000 has been spent on the harbor. These facilities are now valued at $50,000,000 to $60,000,000, Amar revealed.

Five hundred and forty-six wells are pumping in the harbor area and have produced a total of more than 100,000,000 barrels since the first well was spudded in 1938, he said.

More than $30,000,000 has been impounded to await congressional action on the ownership of the tidelands, Amar added.

The port manager was introduced by Frank Hardesty, chairman. Charles L. Vickers presided.

Mr. Speaker, the recital of the facts in this article speak for themselves. They are significant, too, because, generally speaking, folks only hear of what is termed the Los Angeles Harbor; whereas, as a matter of fact, the port or harbor of Long Beach, right next door to the Los Angeles Harbor, has arrived to be one of the great harbors of the world in availability, in accessibility, in efficiency and in tonnage and shipping. This newspaper statement will be edifying to all who read it.

I am very proud that Long Beach is my home city and that it is my place of residence in my native State of California. It is the site of the great Long Beach naval shipyard and what has been, until recently, commonly known as the Terminal Island shipyard. The magnificently efficient facilities and naval and shop installations in this shipyard, during the war and since, have contributed their full share to the best interests of the American Navy and to the American merchant marine. And, by virtue of location, accessibility, strategic fitness, and need, this Long Beach naval shipyard has become, of absolute necessity, one of the imperative units for the repair and keeping in order and housing of the ships and men of our glorious American Navy. Presently it is presided over by a most beloved officer of the Navy, Admiral Paul Hendren. He and his staff have the cordial esteem of all of the citizens of Long Beach.

Relinquishment of Federal Financial Control in Locally Owned Institutions

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. BUCHANAN. Mr. Speaker, I have this day introduced a bill amending an act entitled "An act to expedite the provision of housing in connection with national defense, and for other purposes," approved October 14, 1940, as amended.

The purpose of the bill is to extend to the States, their political subdivisions, local public agencies, and nonprofit organizations the privileges conferred upon educational institutions by Public Law 796 of the Eightieth Congress, second session. Under Public Law 796, the Federal Government has been required to relinquish to educational institutions, upon compliance with the conditions set forth in that law, all contractual and property rights of the Federal Government with respect to any temporary housing located on land owned or controlled by such institutions.

Many local public agencies are operating temporary emergency projects similar to those operated by educational institutions. The city of New York, through the New York City Housing Authority, is operating eight such projects having a total of 8,600 dwelling units. The sites for these projects were acquired and improved by the city of New York, and various major repairs and alterations were made by the city, at a total cost to the city which thus far has exceeded $15,000,000. Nevertheless, under the contracts between the city and the Federal Government under which these projects are operated, the net operating revenue derived from the projects goes exclusively to the Federal Government, except for payments in lieu of taxes and for a small amount of ground rent which the city is permitted to retain. Thus the city is saddled with a substantial debt and must pay a substantial amount of annual debt service for the operation of these projects, while the Federal Government takes whatever net income is derived. To add to the inequitable nature of the present arrangements under which these projects are operated, is the fact that if the operation results in a deficit, the city must bear the burden of the deficit, despite the fact, as has already been noted, that should there be a net income, that net income goes exclusively to the Federal Government.

This arrangement is not only unfair, it is also unwieldly and difficult to administer. The commendable desire of Federal officials responsible for safeguarding the Federal Government's financial interest in these projects to derive a net income from the operation, conflicts with the equally commendable desire of local officials to recoup necessary and substantial expenses from operating revenue, with the result that controversies are bred in the allocation and apportionment of items of expense undertaken by the city, and the city is inhibited from making all but the most urgent repairs for fear that it will not be permitted to charge the cost as an operating expense. It is felt that only the termination of further Federal financial interest in these projects can remove the administrative difficulties arising as a concomitant of the anomalous situation in which the present arrangement places these projects, and free the localities to administer the projects in a manner best suited to the requirements of local conditions.

A further difficulty in which the city of New York finds itself with respect to temporary emergency projects is the necessity, under present Federal law, of removing this vitally needed housing by January 1, 1950, unless exceptions are granted from year to year. In view of the Federal requirement for early disposal of these projects, the city obtained only temporary interests in the sites of most of the projects, and is now faced with the necessity of commencing additional condemnation proceedings to obtain new interests. The 1950 deadline leaves the city in a quandary as to the term for which the new interests should be obtained. It also makes it difficult for the city to plan an over-all housing program, since it is unable to tell from year to year for how long it will be permitted to operate the temporary projects. At any rate, the disposal of these projects is a local problem determinable only on the basis of local housing conditions, and should be left within the province of the localities.

The bill would effect the following changes in section 1 of Public Law 796 as enacted by the last Congress:

First. It would extend the law generally so as to cover States and their political subdivisions.

Second. It would remove the requirement that the relinquishment of Federal rights takes effect at the end of the month in which the transfer is made. This would permit the Federal Government to relinquish rights which may have accrued prior to that time and would permit solution of many of the problems that have already arisen with respect to the determination of the amount of income in which the Federal Government is entitled under present contracts.

Third. It would remove the requirement that a request for relinquishment of Federal rights must be made within 120 days of the date of enactment of that law, since that time period has already elapsed, and would instead substitute the requirement that the request be made on or before January 1, 1950, which date corresponds with the date by which temporary housing must be otherwise disposed of.

Save the Soil by Which We Live

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. JENSEN. Mr. Speaker, on February 7, I introduced a soil-conservation bill, H. R. 2368. On March 23, I placed in the RECORD an analysis of H. R. 2368. Under unanimous consent to extend my own remarks in the Appendix of the RECORD, I now include my complete bill, H. R. 2368:

A bill to provide for establishment of a soil- and water-conservation policy, the coordination of soil- and water-conservation activities of the Department of Agriculture, and for other purposes

Be it enacted, etc., That this act may be cited as the Soil Conservation Act of 1949.

DECLARATION OF POLICY

SEC. 2. (a) That it is hereby recognized that the lack of a sound national soil- and water-conservation policy as a foundation for other agricultural programs; the wastage of soil and moisture resources on farm, grazing, and woodland of the Nation, resulting from soil erosion; failure to maintain and improve soil fertility; improper lay-out for farm- and ranch-irrigation systems and use and management of irrigation water thereon; inadequate farm drainage; improper use of land; and, development of land unsuited for sustained agricultural use, is a menace to the national welfare.

And that it is hereby declared to be the policy of Congress to provide permanently for using the Nation's land in accordance with its capabilities and the treating of it in accordance with its needs; for the control and prevention of soil erosion; for the maintenance and improvement of soil fertility; for the conservation, proper use, and management of agricultural water resources; and for the sound development and use of agricultural land resources and thereby to preserve natural resources, control floods, prevent impairment of reservoirs, and maintain the navigability of rivers and harbors, and protect public health, and public lands, and the Secretary of Agriculture, from now on, shall coordinate all activities of the Department of Agriculture with relation to soil erosion; soil fertility maintenance and improvement; conservation, use, management, and disposal of farm and ranch waters; development and changes in use of agricultural land; and shall recognize as basic the conservation of soil and water resources in the formulation of other agricultural programs, and in order to effectuate this policy is hereby authorized, from time to time—

(1) to conduct surveys, investigations, and research, in cooperation with the State experiment stations, relating to the character of soil erosion, loss of soil fertility and productive capacity, water wastage, land misuse, and the preventive measures needed, to publish the results of any such surveys, investigations, or research, and to disseminate information concerning such methods;

(2) to provide technical assistance to soil-conservation districts and other conservation districts deemed by the Secretary to be qualified in the preparation, carrying out, and maintenance of locally developed and adopted programs for soil and water conservation, preservation and improvement of soil fertility and sound land use on farms, ranches, and other land in such districts; for rehabilitation or construction of needed individual and group farm and ranch drainage and irrigation systems and in conserving, managing, and disposing of irrigation water in such districts; and for necessary guidance of a widespread application program of recurring conservation practices requiring little or no "on site" (on farm or ranch) technical assistance for those farmers and ranchmen not yet reached in the schedule for assistance in adopting a basic conservation farm or ranch plan or not desiring to participate in the comprehensive program in such districts;

(3) to provide technical guidance, supplementing the efforts of the State extension services, and the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, to landowners and operators in those agricultural areas not included in soil conservation or other districts in the widespread application of recurring conservation practices requiring little or no "on site" technical assistance. In addition, technical assistance may be provided in these areas in the preparation of a limited number of basic conservation plans on farms or ranches for demonstration purposes; and

(4) to complete, as rapidly as possible, a conservation survey of the Nation's farm and ranch lands; to analyze, publish, and distribute the inventory thus secured; to provide copies of land-use capability maps to landowners and operators for their own units of land and to assist them in interpreting and utilizing such maps; to survey and classify by capabilities for agricultural use the lands in existing, proposed, or potential agricultural development projects or the agricultural parts of multiple-purpose projects; to determine the suitability of such lands for sustained agricultural use; and to provide technical and other aids necessary to, or to clear, level, and otherwise develop project, woodland, cut-over, and other lands needed and suitable for agricultural use.

ASSISTANCE

SEC. 3. (a) In furtherance of the policy expressed in section 2 of this act, the Secretary is also authorized to cooperate or enter into agreements with, or to furnish financial or other assistance to, any agency, governmental or otherwise, or any person, subject to such conditions as he may deem appropriate. Such assistance may include, but is not limited to, financial payments, conservation materials, planting stock and seed, use of equipment, or other similar materials and aids: *Provided*, That in furnishing financial or other assistance authorized under this act to any person with respect to land situated within a soil-conservation or other conservation district which meets the standards established by the Secretary of Agriculture, such assistance shall be made available only through, or in cooperation with, such districts.

(b) In determining the nature and extent of the assistance to be furnished, the Secretary of Agriculture shall take into consideration—

(1) the recommendations of the governing bodies of soil-conservation or other conservation districts concerning the need for, and the capabilities of such districts to use effectively, the funds, materials, or equipment;

(2) the urgency and extent of the need for such funds, materials, or equipment to prevent irreparable damage to agricultural land and water resources; and

(3) the availability of technical assistance to assure the most effective use of such funds, materials, or equipment.

PAYMENTS

SEC. 4. (a) Any financial payment authorized to be made to any person under the provisions of this act shall be a class A, B, or C payment and shall be made on such terms and conditions as the Secretary of Agriculture may prescribe except—

(1) class A payments shall be made for conversion of land that has been for the previous two or more years in grain, row, and other soil-depleting crops to non-soil-depleting uses such as meadow, hay, pasture, and woodland, in order to encourage livestock and forest production and prevent permanent loss to the productive capacity of the land. The first payment shall not exceed 50 percent of the cost of converting the land to grass or trees, and payments may be made not more than five times thereafter at a rate of one-fifth of the original cost as determined by the Secretary of Agriculture on a generally fair and reasonable basis for continuing the land in nondepleting use. After June 30, 1952, class A payments may be made only when such conversion of land is initiated and carried out as a part of a complete farm or ranch conservation plan, and if such conversion of land is initiated and carried out on the basis of a cooperative agreement between a soil-conservation or other conservation district and the landowner or operator;

(2) class B payments shall be made for practices and improvements of a permanent or semipermanent nature, such as terrace systems, drainage and irrigation installations, farm ponds, range water-diversion systems, and for other practices and improvements as may be required to prevent permanent loss to the productive capacity of the land. Such a payment shall not exceed 60 percentum of the cost of such practice or improvement, as determined by the Secretary of Agriculture on a generally fair and reasonable basis, and shall be made only once. After June 30, 1952, class B payments may be made only when such practice or improvement is carried out as a part of a complete farm or ranch conservation plan, and if such practice or improvement is carried out on the basis of a cooperative agreement between a soil-conservation or other conservation district and the landowner or operator;

(3) class C payments shall be made for recurring practices that will retard depletion of soil fertility, such as liming, fertilizing, grass seeding, crop rotation, cover cropping, mulching, and prevention of stubble burning. Such payments may be made annually and shall not exceed 50 percent of the cost of performing such practice, as determined by the Secretary of Agriculture, on a generally fair and reasonable basis.

(b) Classes A, B, and C payments shall be classified according to such areas and practices as the Secretary of Agriculture may determine and announce for each fiscal year.

(c) Classes A and B payments may be made to a landowner or operator only when the governing body of the conservation district has certified to the Secretary of Agriculture through the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, in accordance with certification standards prescribed by the Secretary of Agriculture; that the work has been performed in accordance with the provisions of this section, except that prior to June 30, 1952, classes A and B payments may also be made to a landowner or operator with respect to land not within the boundaries of a soil-conservation or other conservation district under such terms and conditions as the Secretary of Agriculture may prescribe.

(d) Class C payments may be made to a landowner or operator with respect to land within or without the boundaries of a soil-conservation or other conservation district when the local committee, established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, has certified, as specified in subsection (c), that the work has been performed in accordance with subsections (a) and (b) of this section.

(e) In making classes A, B, and C payments the Secretary of Agriculture shall, insofar as practicable, utilize as his agents the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended.

SEC. 5. The members of conservation district governing bodies shall not receive Federal compensation for services rendered or reimbursement for expenses incurred under the terms of this act. This provision regarding Federal compensation and expenses, however, does not preclude their being compensated for their services, travel, and other expenses by the State, county, or district.

SEC. 6. (a) In furtherance of the policy expressed in section 2 of this act, the Secretary of Agriculture is also authorized—

(1) to provide for the employment of, and with State extension services jointly to select, necessary personnel to assist locally with conservation education activities primarily (a) in the areas critically in need of conservation treatment not now in districts and (b) in supplementing the county extension staffs in soil-conservation and other districts in preparing the way for conservation, farm planning, and application action on the land;

(2) to cooperate or enter into agreements with or to furnish financial or other aid to, any agency, governmental or otherwise, or any person subject to such conditions as he may deem necessary, for the purposes of this act; and

(3) to acquire submarginal agricultural lands, or rights or interests therein, by purchase, gift, or otherwise, and to sell federally owned lands suitable for agricultural use to neighboring landowners needing additional acreage to complete a sound farm unit, or in family-sized units to veterans and others desiring to engage in farming or ranching using procedures consistent with title I of the Bankhead-Jones Farm Tenant Act, approved July 22, 1937, whenever necessary for the purposes of this act.

SEC. 7. The acts authorized in sections 2, 3, and 4 may be performed—

(1) on lands owned or controlled by the United States or any of its agencies, with the cooperation of the agency having jurisdiction thereof; and

(2) on any other lands, upon obtaining proper consent or the necessary rights or interests in such lands.

SEC. 8. As a condition to the extending of any benefits under this act to any lands not owned or controlled by the United States or any of its agencies, the Secretary of Agriculture may, insofar as he may deem necessary for the purposes of this act, require—

(1) agreements or covenants as to the use of such lands; and

(2) contributions in money, services, materials, or otherwise, to any operations conferring such benefits.

SEC. 9. For the purposes of this act, the Secretary of Agriculture may—

(1) secure the cooperation of any governmental agency;

(2) subject to the provisions of the civil-service laws and the Classification Act of 1923, as amended, appoint and fix the compensation of such officers and employees as he may deem necessary; and any persons with technical or practical knowledge may be employed and compensated under this act on a basis to be determined by the Civil Service Commission; and

(3) make expenditures for personal services and rent in the District of Columbia and elsewhere, for the purchase of lawbooks and books of reference, for printing and binding, for the purchase, operation, and maintenance of passenger-carrying vehicles, and perform such acts, and prescribe such regulations, as he may deem proper to carry out the provisions of this act.

SEC. 10. In recognition of (1) the necessity for technical assistance in determining and applying needed conservation practices and measures, and in assuring the effective use of such grants-in-aid as may be necessary to supplement the contributions of landowners and operators in establishing such conservation practices and measures; (2) the impossibility of practically separating the responsibility for the conservation of water or the sound use of land from the responsibility for soil conservation and the prevention of soil erosion; (3) the desirability of having all technical action programs involving conservation, irrigation, drainage, water development, and flood control on farm lands, as well as the development of new agricultural lands, technically directed by one agency; and (4) the desirability of taking advantage of existing relationships and working arrangements already developed with conservation districts organized under the laws of the respective States, the Secretary of Agriculture shall utilize the agency known as the Soil Conservation Service in carrying out the powers conferred on him by sections 2, 3, and 6 of this act and the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, in carrying out the powers conferred on him by section 4 of this act, and in order that there may be proper coordination of the activities including grants-in-aid involving soil and water conservation, sound land development and use, drainage, irrigation, and other physical adjustments of farm and ranch lands, the Secretary of Agriculture is authorized and directed to transfer to the Soil Conservation Service such functions, funds, personnel, and property of other agencies in the Department of Agriculture as he may from time to time determine necessary to avoid duplication, achieve economy, and carry out the spirit of this act.

SEC. 11. There are hereby authorized to be appropriated for the purposes of this act such sums as Congress may from time to time determine to be necessary. And the Secretary is directed in presenting his first budget to Congress after the passage of this act to recommend a preliminary conservation timetable, based on currently available information, as a guide to Congress in making appropriations. On completion and analysis of the conservation survey of the Nation's land, the Secretary shall revise and improve the conservation timetable and present it to Congress for use in determining annual appropriation needs.

Brooklyn Leads the Way Again

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the Brooklyn Eagle of March 30 indicates that Brooklyn is making progress in its efforts for unified action to make America a better and happier place in which to live:

NEW BOROUGH GROUP RAISES FIRM VOICE FOR ALL CIVIC RIGHTS

The Brooklyn Citizens Legislative Conference has just met for the first time. The meeting was an event of importance.

It is the conviction of those who attended and the organizations that sponsor the conference that civil rights and freedom from discrimination are not merely the special problem of one minority or another that may enjoy those rights and that freedom less frequently than the majority of Americans but the immediate, vital and individual problems of every American.

It is their conviction that if one minority is left to fight alone while the rest sit it out smugly on the sidelines, the sitters will be refusing to stand up for what are in reality their own rights, will lose, when there is losing to be done, exactly what the minority loses. It is their conviction that all rights are the property of all Americans, that those rights are indivisible, that a wrong done one is a wrong to all. No rights can be said to exist unless every one enjoys them equally.

And so the Brooklyn citizens legislative conference is an eloquent army marching in step and composed of representatives of all sorts of Americans. Whatever it does it does for all faiths, all nationalites, all colors, and even for the protection of the rights of displaced persons still in Europe. There could be no better way for Americans to unite for the good of their countrymen and their country. The principle involved is that of Dumas' Three Musketeers—"all for one and one for all."

Joining forces in the conference are the Brooklyn Jewish Community Council, the National Association for the Advancement of Colored People, the Protestant Council, the Brooklyn Council for Social Planning, the Urban League. Any number of prominent Brooklynites and others attended. Dr. Arthur J. S. Rosenbaum, of the Jewish Community Council, opened the conference. Special Sessions Justice Matthew J. Troy, Supreme Court Justice Ferdinand Pecora, the Reverend Dr. J. Henry Carpenter, of the Protestant Council, Milton D. Stewart, of the mayor's committee on unity, former County Judge Nicholas Pinto, of the State commission against discrimination, Edward Corsi, of the State department of labor, and many others addressed the conferees.

Then the group passed pertinent resolutions. They called upon Congress to give priority consideration to fair-employment legislation, antilynching, and anti-poll tax measures, and they censured President Truman for taking his vacation during the civil-rights fight. They called for the elimination of discrimination in employment and in colleges, asked for State FEPC laws to cover all employees. They supported Negro longshoremen barred from jobs on the waterfront and urged legislation against discrimination in public-supported housing and mortgage-financed units on residential property, asked for a commission to investigate that sort of thing. And they urged Congress to pass the McGrath-Celler amendments to the Displaced Persons Act.

The Brooklyn Citizens' Legislative Conference came into existence a fine lusty baby full of life, protest, and action. It raises the firm voice of united Americans in affirmation of the rights of all, in the name of all. The work this conference can do is limitless. We hope it will go on doing it without pause or hesitation.

National Park Service Deserves More Money

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. JOHNSON. Mr. Speaker, I suggest that every Member read the article in Harper's magazine for March by Bernard DeVoto on our national parks entitled "The Easy Chair."

My interest in the national parks goes back to the time of my boyhood in Wisconsin. I enjoyed the streams, the lakes, and the forests of that beautiful State. One of my ambitions was to be able to make a trip to Yellowstone National Park and some of the other scenic places in the West. Since that time it has been my pleasure to see many of the beauty spots of our great West, such as Yellowstone, Zion, Brice, the Grand Canyon, Yosemite, Crater Lake, and other national parks, as well as many other beautiful spots that are not part of our park system. I have a conviction, that amounts to almost a mania, that it is our duty to preserve the beauty spots of nature for the pleasure and the inspiration of our people. The more urban we become and the larger our population, the more necessary is it for us to set aside for future generations these beautiful spots in all parts of our country which God has given to us.

However, I also have a very personal interest in the National Park Service. During the Wilson administration, Franklin K. Lane, a Californian, became the Secretary of Interior. He was a striking individual and in 1916 he inaugurated the National Park Service. He appointed as the first director, Stephen Mather, a gifted man, and a Californian. Mr. Mather greatly expanded the National Park Service. Mr. Lane had a secretary, a young man by the name of Horace M. Albright. Mr. Mather brought Mr. Albright into the National Park Service and Mr. Albright followed Mr. Mather as Director of the Service. Later Newton B. Drury, another Californian, became and is now our National Park Director. Mr.

Drury and Mr. Albright were classmates of mine at the University of California. The present Governor of California, Earl Warren, was also a member of that class. Consequently I have a very close association with the National Park Service through my friendship and admiration for the last two directors. I am tremendously proud of the fine records they have made as park directors.

The Park Service is suffering from a lack of funds. That is true with other agencies due to the terrible drain on our finances because of the war and postwar problems. However, I am hoping that the Park Service may get more financial recognition next year and I have every confidence that it will. The Subcommittee on Interior Appropriations desires to do something but it must trim wherever possible considering the fact that the budget today is the largest in the history of our country. I compliment the committee on its recommendation and hope it may be able to raise it next year.

It should be of interest to the Members of the House to note that the item of $180,000 for river-basin studies included in the departmental estimates, was eliminated entirely. This item was designed to cover the cost of preliminary planning for recreational facilities, and for survey and excavation of Indian remains from areas which Federal dam construction threatens with inundation.

This item was eliminated on the basis that State and Federal agencies having funds for archeological investigations should make the surveys, and excavate these remains. I should like to point out that State agencies have been participating for several years in a cooperative program with the Government, along these lines. Up to date, 17 local agencies have expended $55,000 of their own money. But they are completely unable to carry the load entirely by themselves. In some areas, there simply is no research institution which can do the job. In others, where there are several projects, the State institutions are already cooperating to the fullest extent of their abilities and could not take on a further program no matter how willing and cooperative they may be.

There are, unfortunately, no Federal agencies at all with funds for excavation work in river-basin areas. Funds of the Smithsonian Institution for archeological work are small, yet they have expended what they could in an effort to forestall a complete loss to the country of these remains. Other funds expended by the Smithsonian on river-basin programs are derived from the National Park Service under the terms of a memorandum of understanding.

Local people are interested in these Indian remains and the story they tell of the early days in America. Many of the sites have been dug into by people desirous of obtaining these old remains either for personal collections or for commercial sale. Instead of being preserved together in the regions from which they originated, these unique and interesting remains are scattered and lost all over the country. Local historical and archeological societies, universities, and many individuals are keenly interested in seeing that these remains are properly recovered before it is too late so that they may be of educational and display benefit to the areas in which they belong.

Under the Antiquities Act of 1906, the Federal Government is obligated to see to it that antiquities on Federal land are adequately preserved and protected. Yet, by the construction of numerous multipurpose dams and the flooding of large areas, the Federal Government is doing more damage to those same antiquities than all the looting and pothunting put together since this country was first discovered.

Recreational potentialities of these reservoirs should also be studied in connection with their construction. Otherwise, cheap and undesirable resorts will spring up around them, damaging the scenic aspects and antagonizing the nearby communities. Because of the National Park Service's long experience in these matters, the Government agencies building these reservoir areas have requested them to undertake the recreational planning rather than to duplicate the work of the National Park Service by setting up a separate staff. Coordination through one central agency is necessary to assure adequate facilities and prevent duplication and unnecessary effort.

We hope that in the next bill this matter may be given financial recognition.

Jewish-Catholic Relations in and Over Israel

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. MULTER. Mr. Speaker, the following article, which appeared in a recent issue of the Bulletin of the East Midwood Jewish Center, Brooklyn, N. Y., I am sure, will prove of considerable interest to my colleagues:

During the first months of the Palestine war, reports describing desecration of Christian sanctuaries by Jewish soldiers were widely publicized in the American press, particularly in Catholic publications. Needless to say, these reports had an unfavorable effect on Jewish-Catholic relations in the United States and the world over. If left unchecked, this development could have led to most undesirable results.

Eliahu Ben-Horin, well known writer and adviser on middle eastern affairs to the American Emergency Council, recently made a survey of Catholic institutions and interests. Part of Mr. Ben-Horin's tour of Catholic institutions in Israel was made in the company of Monsignor Thomas McMahon, who represented Cardinal Spellman on a special mission to the Middle East, and Monsignor Vergani, vicar-general of the Latin Patriarchate in Israel.

The outstanding feature of his report is the fact that not a single case of desecration or mistreatment of Christians has taken place since the establishment of the Government of Israel. This merely reemphasizes the truth that whatever excesses occurred, took place during the height of the Palestine War last summer and were perpetrated by irresponsible individuals. From the moment stable government was established in Israel, not one serious complaint was recorded.

In an article in the New York Herald Tribune of January 5, Mr. Ben-Horin described and analyzed the facts about the situation of the national and religious minorities in Israel and the treatment accorded them by the Israeli Government. A large-scale and costly program of education for Arab children has been adopted and put into operation by the government at the expense of the state budget. The minorities, Christian and Moslem, enjoy complete equality of civil rights, with the exception of freedom of movement for the duration of the war. As soon as peace is established, this single restriction will be removed. The special needs of the various religious communities are catered to by the government with the greatest care and understanding. Mr. Ben-Horin described a Christmas party tendered the Christian prisoners of war by the Israeli command of the camp, which he attended, along with a Catholic bishop and an Arab Catholic dignitary from Haifa. Both the prisoners and the Haifa visitors praised the Israeli authorities for the humane and considerate treatment they accorded the prisoners of war.

The mass flight of the Arabs from Palestine has left only about 100,000 of them in Israel. However, it was mostly Moslems who ran away. An equal number of Christians remained out of a total prewar community of only 125,000. Nazareth and the Christian villages in lower Galilee now hold the majority of the Christians in Israel. Their churches and monasteries were hardly touched by warfare. Most of the Christian communities are intact.

In the mixed cities—Jerusalem, Haifa, Jaffa, Acre—the Christian population has decreased in number through the Arab flight, but the communities exist, enjoy complete freedom to practice their faith, and most of the churches are in perfect condition. The same is true of the smaller towns like Ramleh, on the Tel Aviv-Jerusalem road. It was mainly in Jerusalem where a battle of artillery went on for months at close range, that churches as well as synagogues suffered damage from warfare. The Church of Dormition, on Mount Sinai, was hit by many Arab shells. The same applied to the Church of Notre Dame, which is on the border dividing the Jewish positions from the Arab. Wherever physical damage was inflicted on Christian churches it was done by Arabs, namely, by the Transjordan Legion. This fact is proved beyond doubt.

Mr. Ben-Horin stated there is no reason to expect future complications in Jewish-Catholic relations as far as the safety of the Catholic sanctuaries and the rights of the Catholic community in Israel are concerned. However, there are other problems concerning Israel which will surely affect Jewish-Catholic relations in the future. The question of the administration of the holy places is one of those problems. However, there are indications that this issue may be resolved in the not too distant future.

Support for Atlantic Pact

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. JAVITS. Mr. Speaker, the New York Young Republican Club, well known for its forthright and enlightened stand

on public affairs, endorses the Atlantic Pact in a resolution hereto appended:

RESOLUTION OF THE FOREIGN AFFAIRS COMMITTEE ADOPTED UNANIMOUSLY BY THE BOARD OF GOVERNORS OF THE NEW YORK YOUNG REPUBLICAN CLUB, MARCH 10, 1949

Whereas the independence and territorial integrity of the free countries of western Europe are vital to the United States; and

Whereas these can be made secure only by firm, coordinated and well-implemented plans to resist any possible aggression; and

Whereas participation by the United States in these plans and preparations is necessary if they are to be effective: Be it

Resolved, That the board of governors of the New York Young Republican Club urges the President and Senate of the United States to conclude with all free states of western Europe which may need and desire such assurance a treaty including:

1. A statement by all signatories that each would regard an attack upon any signatory as an attack upon all.

2. Guarantees for the exchange of sufficient supplies and equipment between signatories to enable any and all to defend themselves from attack during the period before troops can be brought into action in full strength.

3. Joint staff plans and provision for the appointment if necessary of a joint chief of staff.

HENRY V. POOR, *President.*
JAMES VAN B. DRESSER,
Chairman, Foreign Affairs Committee.
SIDNEY G. KINGSLEY,
Chairman, Board of Governors.

Employers Proud of Two Unions' Funds

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 31, 1949:

EMPLOYERS PROUD OF TWO UNIONS' FUNDS—CLOTHING MANUFACTURERS PRAISE HANDLING OF WELFARE PLANS FOR WHICH THEY PAY—MANY BENEFITS OPERATING—AMALGAMATED HAS $30,749,975 FOR RETIREMENTS, WHILE ILGWU HAS $18,000,000 RESERVE

(By A. H. Raskin)

Employers in the men's and women's clothing industry are almost as proud of the welfare funds set up under their union agreements as are union officials.

Unlike coal operators, who have fought John L. Lewis unremittingly in his efforts to establish the United Mine Workers' health and retirement funds, clothing manufacturers accepted the welfare principle without strikes in a period when such funds were virtually unknown in American industry.

What is more, the manufacturers make no secret of their satisfaction with the way the funds are being applied by the International Ladies Garment Workers Union, AFL, and the Amalgamated Clothing Workers, CIO.

The cordiality of the employer attitude is, in part, a reflection of the harmonious relations that prevail between the two unions and their respective employers. However, it is also founded on a belief, shared by many neutral social insurance experts, that the financial base of the clothing funds is much sounder than that of the United Mine Workers.

The Amalgamated has a retirement reserve of $30,749,975 to protect the pension rights of 136,500 workers in the men's and boys' clothing industry. The union expects to collect $5,771,500 in employer contributions to the pension fund this year and to pay out $1,260,000 in benefits to 3,500 retired workers past the age of 65.

RETIREMENT COVERS 173,000

The benefits match Federal social-security payments on a dollar-for-dollar basis and currently average $30 a month. Hyman Blumberg, executive vice president of the Amalgamated and head of its insurance operations, estimated that about 9,000 persons were eligible to retire under the program, but that nearly two-thirds of these were still at work.

The ILGWU has employer-financed retirement programs covering 173,000 workers in various branches of the women's garment industry. but the only fund that has been operating long enough to begin actual pension payments is the one covering 60,000 cloakmakers in the metropolitan area.

This fund has a reserve of $18,000,000 built up through employer payments amounting to 3 percent of pay roll since 1943. The Amalgamated fund also operates on a 3-percent pay-roll collection. Benefits under the ILGWU program are $50 a month, beginning at 65, and 1,700 retired workers are currently receiving payments.

Whenever a worker goes on the pension rolls the union blocks off an amount equal to his anticipated pension payments for 12 years. This $7,200 account provides an actuarial basis for guaranteeing that the fund will not have to default on its future obligations.

David Dubinsky, president of the ILGWU, is convinced that the fund is in a position to increase monthly pension payments to $75 and to lower the retirement age for women to 60. Employer representatives in the tripartite administrative board, which is headed by Arthur J. Altmeyer, Federal Commissioner for Social Security, have refused to agree to these changes.

Additional ILGWU retirement funds have been established in this city, Philadelphia, Boston, Cleveland, and the Pacific coast. They have accumulated $8,000,000 in reserves and some will begin paying pensions this summer. Among these is the New York Dress Joint Board, largest union in the metropolitan district.

Virtually all of the union's 400,000 members (and some 35,000 nonmembers) are covered by the ILGWU health and vacation funds. These operate on a decentralized basis through 62 separate local funds, each of which functions under the general supervision of the union's international executive board.

PAID OUT $19,000,000

Last year the funds took in about $25,000,000 in employer contributions, representing an average of about 4 percent of pay roll, and paid out $19,000,000 in benefits. The combined reserve in the health and vacation funds was about $35,000,000 at the beginning of 1949, Mr. Dubinsky reported.

He said the union's aim was to pile up reserves large enough to pay all foreseeable benefits for 3 years. In general the funds provide 1 week's paid vacation, sickness benefits of $12 to $15 a week for a maximum of 13 weeks, hospitalization payments of $4 to $7 a day, $50 in maternity benefits, surgical benefits ranging up to $100, $25 in medical incidentals, cash allowances of $300 for tubercular cases, health center services, sight conservation allowances, and a $500 death benefit.

The Amalgamated Clothing Workers does not operate on the pooled vacation fund basis. Its members receive 2 weeks' vacation, but in most cases they receive their checks direct from their employer.

The Amalgamated got into the welfare field through the pioneer unemployment funds it established in New York, Chicago, and Philadelphia in 1923. When the Federal Social Security Act was passed 12 years later and State unemployment insurance systems were set up the Chicago fund was converted into a social benefit fund. By 1940 several such funds were functioning in the Amalgamated to provide health protection and life insurance benefits. In 1945 retirement benefits were added.

The retirement program is confind to workers engaged in the manufacture of clothing, but the other benefits cover a total of 264,684 workers in such other fields as laundries, cotton garments, neckwear, retail clothing stores, and cleaning and dyeing establishments. At the end of last month the reserve in the various welfare funds, other than retirement, stood at $15,220,513.

In addition to all this, the Amalgamated has its own insurance company, chartered by the State of New York, and operating under all State rules, which has a contingency reserve of $6,500,000. The company has a board of directors made up of 12 union officials and an advisory committee made up of 12 employers.

The union board of directors has full operating authority, but there must be joint employer-union agreement on any change in the benefit schedule. The employers also exercise veto power on the investment of funds and on authorizations of expenditure. Costs run about 5 percent, or half the cost of insursuring through a commercial insurance company.

The health and hospital benefits paid by the Amalgamated fund are substantially the same as those under the ILGWU fund, although some, such as the surgical benefit of $150, are somewhat higher. An employer contribution of 2 percent finances these welfare services, exclusive of vacations. The Amalgamated has no health centers, but is planning to open such agencies soon in New York, Chicago, and Philadelphia.

EMPLOYER PRAISES UNION

The employer reaction to the fund's operations was summed up by Victor S. Riesenfeld, long a chairman of the labor committee of the United States Clothing Manufacturers Association and a member of the fund's executive committee.

He said the welfare program was working out "exceedingly well," and he complimented the union for the "skill and scrupulous care" with which it administered the funds. Mr. Riesenfeld expressed confidence in the financial soundness of the insurance company but added that he saw no prospect of liberalizing benefits in view of the uncertain business outlook.

Both Mr. Riesenfeld, for the employers, and Mr. Blumberg, for the union, noted that the collective-bargaining agreements in the industry provided for a review of benefits and employer contributions if the Federal social-security program were expanded. Mr. Riesenfeld said he felt an adjustment would have to be made if new Federal services were provided and pay-roll taxes increased.

In the women's clothing industry, I. A. Agree, executive director of the National Dress Manufacturers Association, said the employers were "rather pleased that our industry has taken a pioneering role in this field of social protection."

"While we have contributed substantially to the construction of the union health center and the building up of the welfare fund, we are so confident that the ILGWU is administering it efficiently and honestly that

we are not too conversant with its detailed operation," Mr. Agree observed.

Joseph L. Dubow, executive director of the Merchants Ladies Garment Association, voiced the view that retirement programs were of benefit to employers for practical, as well as humanitarian, reasons. By providing incentives for workers to retire after 65, pension funds helped increase the level of efficiency in shops making women's coats and suits, Mr. Dubow said.

"I think other branches of industry are taking a short-sighted view of the pension problem," he added.

On the other hand, Mr. Dubow said he felt that the health and hospitalization services should be provided under the governmental social-insurance programs.

Robinson-Patman Act Aids Small Business

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. EVINS. Mr. Speaker, a week or so ago the United States Court of Appeals for the Seventh Circuit upheld a cease and desist order of the Federal Trade Commission against the Standard Oil Co. of Indiana prohibiting this company from engaging in certain unfair methods of competition and monopolistic practices. This decision represents a great victory for the small independent oil dealers, but has occasioned some criticism by a number of our newspapers.

As a friend of small business, it is, therefore, refreshing for me to read a comment on the other side of this issue on the editorial page of the Detroit News, March 18, 1949. In the Commentator column of W. K. Kelsey appears an article entitled "Small Business Fights for Existence." This article analyzes the Standard Oil decision from the point of view of small business and, althought I do not necessarily agree with all of its observations, respectfully commend it to the Members of the House and to the citizens of the country.

I ask unanimous consent that this article may be printed in the RECORD.

The article is as follows:

SMALL BUSINESS FIGHTS FOR EXISTENCE

(By W. K. Kelsey)

A fierce but almost unreported struggle is going on between big business on the one hand and small independent business on the other. Small business is fighting to maintain its very existence, and such independence as has been left to it. Big business wants absolute control of its industries all the way to the consumer. That is as simple a way as the commentator can find for stating a highly complex issue.

Last week the small independent oil dealers with a notable victory when the United States court of appeals for the seventh circuit, sitting in Chicago, upheld a cease and desist order of the Federal Trade Commission against the Standard Oil Co. of Indiana. But the little fellows can't begin to crow yet, since the decision will surely be appealed to the Supreme Court.

Meanwhile they may lose their cause if a bill introduced in the Senate passes Congress in its present form. This bill, presented in consequence of the Supreme Court's recent decision in the cement cases, would modify the Clayton Antitrust Act as amended by the Robinson-Patman Act of 1936 and would apparently legalize the practices against which the FTC issued its order against Standard Oil. The Robinson-Patman Act was passed to protect small dealers against discrimination by manufacturers in favor of chain stores, by allowing them lower prices and other favors on large-volume orders.

The effect of the decision is Nation-wide, and applies not only to the oil industry, but to all industries which indulge in forbidden practices.

What the case was about—in effect, the court said: "For a business to indulge in practices which discriminate between its customers, in local territory, to the benefit of the few and to the injury of the rest, is unlawful."

The issue arose in this way—in the late 1930's Standard began selling to a few large dealers gasoline in tank-car lots at tank-car prices, 1½ cents below the tank-wagon price paid by operators of Standard's leased stations and by Standard's independent dealers who owned their stations. The dealers thus favored in price were enabled to sell to customers, through their own outlets, at lower retail prices than other dealers who bought from tank-wagons.

Standard's gas station lessees, and Standard's independents, all of whom were under contract to take only Standard products, had to continue buying at tank-wagon prices. They were not even permitted to buy from the favored jobbers who were handling Standard gas. Because of their contracts, they could not switch to any other brand that might be offered them more cheaply. In effect, Standard was thus subsidizing competition against the majority of its own dealer customers. Naturally those men protested to the retail oil dealers association, which filed a complaint against Standard with the Federal Trade Commission. The war intervened to delay proceedings, but at last the FTC issued its cease and desist order, which Standard decided to test in the courts. Last Saturday that order was upheld in the circuit court of appeals, with one slight modification. The principal point in the court's decision was its denial of Standard's contention that its lower prices to a few dealers were granted in good faith to meet competition. It was held, in effect, that the lower prices to the few constituted discrimination against those dealers who were compelled to pay tank-wagon prices, and that such discrimination is unlawful. The court took into consideration testimony that some small dealers, alone or in combination, had or could obtain storage capacity which would enable them to handle tank-car lots, but nevertheless standard had refused to grant them the privilege and the lower tank-car price.

The reason the small independent dealer requires protection is to be found in recent history. The little man operates on a small margin, which forbids him to meet price-cutting competition and make a sufficient profit to live on. If he is pinched long enough, he goes broke and quits. If in a long price-cutting war, in which favored stations are subsidized, he maintains his prices, he loses customers to the lower-cost, lower-price stations and may eventually be pinched out. During the great depression the big oil companies took over a multitude of stations from owners unable to make ends meet, getting them at bargain prices.

Price discrimination can be used by "big oil" to force independents out of business and acquire their property. Congress saw that fact, among others, when it passed the Clayton Act, the Robinson-Patman Act and other antitrust legislation.

We Can't Take Chances on Tomorrow's Meals

EXTENSION OF REMARKS
OF
HON. JAMES F. LIND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. LIND. Mr. Speaker, under leave to extend my remarks in the RECORD, I invite the attention of the Members of the House to a most interesting article written by Mr. H. E. Babcock, and which appeared in the April 1949 issue of the Country Gentleman. Storing food "on the hoof," the author says, builds soil, human health, and stable markets for producers, providing a foundation for a farm program fair to all.

The article follows:

WE CAN'T TAKE CHANCES ON TOMORROW'S MEALS

(By H. E. Babcock)

Soon after the Eighty-first Congress settled down to work, I spent a week in Washington looking it over. There are too many men in Congress to get acquainted with each one, so at the end of my stay I resorted to a stockman's device. Mentally I ran them through a cutting chute and sorted them according to their qualifications to vote on farm and food legislation.

My first cut was less than a score of Senators and Representatives who seem to me to have a grasp of the over-all farm and food problems confronting the Nation. My second cut showed up 40 or 50 "captive" Congressmen—fellows whose thinking is entirely dominated by the problems of the districts or States they represent.

The balance—I'll call them "confused" Congressmen—includes a great majority of the Members of both Houses. Mostly these are men of fine ability and the best of intentions. But they are completely mystified by the numberless and contradictory demands of farmers and consumers.

Nor is this vast unhappy majority being helped out much by the national farm organizations. They, too, are split, both among and within themselves. Only by Herculean efforts are the heads of these organizations able to hold a working majority of their members in anything resembling a line.

With conditions as chaotic as this, there is an obvious need for spelling out a few fundamentals for a national farm and food program which will be in the interests of everyone. Country Gentleman has recognized this need by publishing a statement by Secretary of Agriculture Charles Brannan in its January issue, and in the March editorial, Price Supports Don't Make a Farm Program. Now I have my opportunity.

I shall begin by laying down the commonsense premise that a population soon to number 150,000,000 human stomachs can't take chances on tomorrow's meals. I suggest that we accept this principle as a basic test of all future farm and food legislation.

I'll even go a step further. Does the proposed program hold out hope of more Americans eating better? If it doesn't it's not in the national interest and should not be written into law. I repeat that 150,000,000 people can't take chances on tomorrow's meals.

Surely no one can quarrel with this start. But there is a lot of farm and food legislation due to come before the Eighty-first Congress which will not square with this ideal. Some of it will be proposed by the "captive" Congressmen backed by powerful commodity and regional farm lobbies. Some of it will be put forward by individuals at the moment

more interested in socializing agriculture than in our future food supply. These individuals would like nothing better than to cross 6,000,000 farmers off the list as private business managers. If they cannot do this any other way, they are prepared to buy them off with public funds.

It is going to take statesmanship, clear thinking, and stout courage on the part of the administration and Congress to stand up against these drives by the representatives of special interests and the subtle foes of private enterprise.

If we can agree on "better meals for more Americans" as a national long-time goal, it is only common sense to describe such meals in terms everybody can understand in order to secure maximum public acceptance of the goal. In previous articles in Country Gentleman I have done this.

The foods for such meals (when they are available at reasonable prices) are found in any well-stocked home refrigerator on any Saturday night anywhere in the United States. They are the milk, meat, eggs, butter, and cheese, and fresh fruits and vegetables with which most American housewives like to prepare the meals they serve. Any American family which eats free choice from a well-stocked home refrigerator certainly should be well nourished, happy, and content.

A second premise is that a nation with a growing population and the task of selling its philosophy of free enterprise to the rest of the world cannot afford to eat at the expense of its soil. Mere soil conservation is not enough for America. We must actually increase the productivity of our land. If we don't do this, there is no chance over the long pull of maintaining even our present dietary standards, much less of improving them. Fortunately, thousands upon thousands of farmers know how to do this job, and are doing it.

Summarizing, I offer two guiding principles for everybody's farm and food program:

1. It must provide an ever-increasing American population with an ample supply of the foods we like best and which are best for us—the refrigerator foods.

2. These foods must be produced by the kind of farming which will build up soil productivity as well as conserve it.

As a security measure (I will discuss this later) we also must so farm and eat that we maintain at all times a substantial food reserve against war or natural disaster.

Only by the wise management of our food-producing livestock can we develop such a program. Under our system of farming, even soil fertility depends to a great degree on our animal population.

The ratio between our domestic livestock and our humans is one of the most important figures in our so-called way of life. How much food-producing livestock should there be behind the family refrigerator?

In an endeavor to get at some answer to this question I appealed to the Chief of the United States Department of Agriculture's Bureau of Agricultural Economics. As I expected, his staff already had a figure in which all food-producing livestock (including milk cows and laying hens but excluding horses and mules) was annually reduced to a hog-equivalent. I asked the Bureau to compare this figure on an annual basis with our population figures. My object was to see if it would be possible to keep track of the balance between our food-producing livestock and our human population. While this may come to be known popularly as a hog-man ratio, it must never be forgotten that the hog-equivalent figure includes the all-important dairy cow and laying hen as well as meat animals.

The Bureau came up with some most interesting comparisons. In 1919–20 we had 1.67 head of productive livestock to 1 human being. In 1934–35 this hit a low of 1.27. At the present time the ratio is estimated to be 1.41 hog equivalents to 1 man.

For myself, I need no more accurate measure of the progress being made in working out a satisfactory farm-and-food program for everybody than this ratio. As it inches upward, we shall have well-stocked family refrigerators, improving soil fertility, and the kind of food stock pile we need for national safety. If it goes the other way, we shall be headed for a poverty standard of eating.

I am convinced that there is only one way for us to stock pile any substantial amount of food—on the hoof. No better storage bin has ever been devised than the flexible hide of a steer or a dairy heifer. It is storage which also can be eaten if necessary. As we expand the numbers and weight of our livestock, we achieve everything the ever-normal granary ever tried to accomplish, including support of grain prices.

Actually, no country's livestock population should be a stationary thing. Traditionally, it operates as a cushion between our human population and the land. When good crops are produced, the bulk of them (normally over four-fifths of our cereal production) is naturally taken up by an expanding livestock population. Then, in the event of war or other disaster, we have a reservoir of high-quality, nutritious food just when we need it most. Killing the livestock releases the cereals and other foods that animals were eating for direct human consumption as we need them.

Stock-piling grain in dead storage is quite another thing. To go into storage at all, more has to be paid for the grain than the owners of livestock are willing to buy it for. The natural adjustment that would be made by feeding it to livestock thus is stopped in its tracks and the surplus is frozen. This is a bad thing for everyone.

Once in storage, the grain overhangs the market and becomes a football for politicians and the pressure boys. It costs money to hold it in storage and keep it in condition. Even then, the grain tends to deteriorate in nutritive quality. Finally, the whole economy is denied the turn-over of this wealth in improving its standard of living.

In the long-time farm-and-food program which I am suggesting, grain in dead storage is a stand-by factor. Experience has indicated the normal carry-overs of grain that we should expect to maintain. The prudent livestock man will naturally attempt to protect himself. Our stored grain, in addition, should be sufficient to protect and to encourage the livestock producer who operates in regions where weather brings wide fluctuations in crop yields and the threat of liquidation of his herds because of lack of feed.

What really counts in dealing with big crops and building useful stock piles of food is our productive livestock population. Let farmers on their own move the present ratio of 1.41 hog-equivalents to 1 man up to, say, 1.75 to 1, and we shall have improving soil fertility and a better supply of foods for the home refrigerator. The alternative is simple: An ever-increasing amount of grain in dead storage, acreage controls, progressive regimentation of 6,000,000 farmers, and finally no market for—refrigerators.

Now for some positive ideas for producing better meals for more Americans. The first step in implementing such a program is to manage our food-producing livestock to the maximum advantage of the human population. This is a job we have never tackled squarely.

We have been dealing with it in sections. We have veterinary schools for the health protection of animals. We have divisions in our experiment stations studying animal genetics. We have others dealing with the growing of forage for livestock, and still others with barn and feed-lot nutrition. But nowhere in the United States do we have an institution which brings together and correlates all these programs for the preservation and improvement of our domestic food-producing animals.

A few such pace-setting institutions are badly needed. I seriously propose for the consideration of some of the leading land-grant universities the establishment of schools or institutes of animal agriculture, the purpose of these institutions being to deal with our food-producing livestock population as a whole and to bring together for the teaching of graduate students who are destined to become skilled in the management of livestock all we know about the preservation and management of this basically important part of our way of life.

I am reliably informed that at least one leading land-grant university is considering setting up just such a school.

As a second positive step I feel that the great mass of publicly supported agricultural research should be inventoried and reviewed. This review should be by a committee representing all the people. Perhaps the National Research Advisory Committee might do this job.

Primarily, such review should seek to determine whether or not the public dollar appropriated for research in agriculture and food is being spent in the right proportions. Is enough aimed at the problems of our animal agriculture; or is too much of it devoted to fringe production, to specialty crops and the like?

Such a review should extend clear down to the State experiment stations. If it turns out as I expect it may, that we need to spend more research money to learn how to control animal diseases, breed them better, feed them cheaper, and make better utilization of the food they produce, then this money should be made available. Or better still, it should be saved from projects which are not as fundamentally important.

As a third step, in putting a long-time farm-and-food program into effect we must cancel out, gradually but thoroughly, all those activities of government which work against an expanding livestock industry with all the benefits it can bring to our standard of living.

It is at this point that our present conception of price supports must be brought into focus. It is at this point, too, that our ways of supporting soil conservation and soil building must come under critical study.

The above are complicated activities. Some of them are sired by socialism. Others are the children of pressure groups. All these devices must be kept under continuing review and constantly challenged to see if they are in accord with a long-time program of soil building, an expanding livestock population, and better meals for more Americans.

For these are the three objectives toward which our economy must move. Actually, I think the question of whether our agriculture shall remain in the hands of free farmers or be State-managed, important as it is, is secondary to the question of how well we want to eat in the future. Which system will fill the most home refrigerators? This is what we all want to know, because we all have stomachs.

Realistically, this is the question now before the Eighty-first Congress. But, in my opinion, neither the administration nor Congress but the market place eventually will answer this question.

If 150,000,000 Americans become sufficiently sold on the importance of the kind of meals they like best and is best for them, they won't kick in the long run on paying 6,000,000 farmers well to grow these meals. But this supposes two developments: (1) that through mass education and mass selling the American people will buy the ideal of good nutrition, and (2) that 6,000,000 farmers will be left free enough to apply their courage, their ingenuity, and their

proved ability to produce cheaply adequate quantities of the foods for such nutrition—the "refrigerator foods."

If we can gradually straighten ourselves out to a point where everybody appreciates the health, energy, and social satisfaction of good eating; and farmers—principally through keeping more livestock—can get set to provide what the market really wants, we shall be on our way.

Consumers can be sold on the idea of paying fair prices for the foods they like best and which are best for them. Dairymen, poultrymen, and livestock feeders under such circumstances will be willing to pay fair prices for grain. Remember that right now they provide four-fifths of the grain market. And, finally, the whole Natior will be safer because it is preserving its soil fertility and maintaining as it goes along a food reserve, the best which possibly can be devised, against war or natural disaster.

While actually the kind of farm and food program I have sketched should be self-sustaining because of the great flexibility which is inherent in our food-producing livestock population, let us suppose that we run into such a depression that too many of our 150,000,000 can't buy an adequate diet.

If this happens, then it seems to me that through school lunches and other diet subsidies which may be devised we can deal much more effectively with the emergency than we can if we try to meet it by shutting off production of food by acreage controls with resultant restriction of livestock numbers and, finally, State management of farming.

It must never be forgotten that over the long pull it is the suction of the market place on the food supply which determines the pay farmers get for raising food.

Why Are Taxes Going Up?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of March 29, 1949:

WHY ARE TAXES GOING UP?

Taxes are going up in this country.

But they are going down in many other parts of the world—especially in England.

How come?

England has made two large scale tax cuts since the war. The general rates were lowered in 1945 and again last year; and exemptions were increased to a point which dropped hundreds of thousands of families from the tax rolls.

Canada also is on the highway to lower taxes. At this moment there is before the Canadian Parliament at Ottawa an official Government recommendation that the income tax be cut one-third. Meanwhile personal and dependency exemptions also are to be raised a third, so that an estimated 600,000 Canadians will be relieved from paying any income tax. Canada also is slashing her excise and nuisance taxes. It is planned to eliminate entirely the tax on candy, soft drinks, and transportation.

The contrast between rising taxes in the United States of America and falling taxes in this British Empire is a strange aftermath of the war. It is especially startling in view of the fact that Great Britain has been represented as broke, impoverished, and desperately in need of financial aid.

Where is it that the British Government is finding revenue in such abundance that it can afford to cut its people's taxes—even to relieve great numbers of them from making any contributions at all to the support of their Government?

Why is it that a nation like England, supposedly up against an economic crisis just as critical as the war itself, does not find it necessary to keep its internal income at least up to the war?

And why is it that our people, supposedly prosperous since the war, and supposedly rich enough to afford to help others, still have to keep paying more and more to keep their Government going; while these other demoralized lands, although so badly off one would think they need every cent of revenue, can slash their domestic-' x rates?

The answer to these questions is no mystery. The British Government has found a way to get money without working for it, and without taxing their own people for it. In the old Broadway slang phrase, they've found an "angel" to pay their bills.

You are the angel.

The reason the people of England can enjoy two tax cuts in succession since the war with a third almost a certainty before the pending election, is that you are paying their bills for them.

And the reason Canada is "prosperous" enough to cut its own taxes is that the American people have been making the contributions to British support which the Canadians, as part of the British Empire, otherwise would have had to make.

We got into the postwar foreign relief business, including the Marshall plan, on the theory we were going to help the destitute and aid the suffering.

It wasn't presented to the American people as a scheme for helping Socialist politicians abroad reduce the taxes on their voters, and thereby prolong their tenure of office.

Yet that is the way it is working out.

The second dose of the Marshall plan is now before Congress. Its big political purpose is to give the Socialists in England a war chest with which to win reelection for another 5-year period.

Inescapably, part of it will go to allow the further reduction of taxes in England, and thus "sweeten" the British voters.

If you oppose the use of your money for this sort of political run-around by your Government, write and say so to your United States Senators and your Congressmen.

Congressional Colleagues Urged To Visit Lighted-Up Jefferson Memorial and Cherry Tree Area at Night; and Correspondence Between Congressman and Department of Interior

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. DOYLE. Mr. Speaker, this is the famous cherry tree festival season, and the world-famous Jefferson Memorial is situated spectacularly in the midst of this area and just across the beautiful Tidal Basin waters from the most numerous of the cherry trees, now in blossom. Go see them—at night, if possible. Go in the daytime, too; but do not miss the night illumination of the Thomas Jefferson Memorial as well as the cherry trees.

While a Member of the Seventy-ninth Congress, Mrs. Doyle and I noted that the Jefferson Memorial, itself, was not lighted on the exterior nor was the park area surrounding this famous Thomas Jefferson Memorial lighted. Consequently and manifestly folks generally did not visit the memorial building at night except in very, very rare cases. We felt it was a shame to keep Thomas Jefferson in the dark and that he should be brought into the light. Other nationally famous memorials, such as the Lincoln Memorial, were very beautifully and adequately lighted outside as well as inside. The inside of the Thomas Jefferson Memorial was, in our judgment, not adequately lighted to be efficient as well as beautiful to behold in the nighttime. But I did nothing more than to make inquiry as to why this was so and expressed regrets that it was so.

Returning to this Eighty-first Congress, Mrs. Doyle and I again immediately noted the conditions of inadequate light continued to exist, and inaugural week was just ahead of us. So I called upon our good friend, Oscar L. Chapman, Under Secretary of the Department of the Interior, and I asked him why Oscar Chapman kept Thomas Jefferson in the dark and why not light up the Jefferson Memorial appropriately and adequately at nighttime. He replied that the suggestion had never before been made. But Mr. Chapman, as usual, moved promptly, as will be revealed from the following correspondence between myself and him:

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 15, 1949.

Hon. OSCAR L. CHAPMAN,
Under Secretary of the Interior,
Department of the Interior,
Washington, D. C.

MY DEAR FRIEND: While a Member of the House of Representatives during the Seventy-ninth Congress, Mrs. Doyle and I frequently visited the national monuments and memorials in Washington and vicinity many times during the evening hours.

It, then, impressed us very, very much that the Jefferson Memorial was (in our judgment) neither lighted adequately in the interior thereof, and it was entirely nonilluminated on the outside of the monument. This, it then seemed to us, resulted in a loss to the visitors of Washington of a great deal of the value of the monument—both of the statue of Jefferson and of the beautiful architecture of the memorial itself and also of the park and planting surrounding the same.

Again, as we return to Washington, we have renewed our friendships with these national memorials and monuments, and it again occurs to us that the exterior of the Jefferson Memorial should be lighted during reasonable hours of the nighttime so that passersby could be inspired by a view thereof and so that it would naturally attract many, many visitors directly to it in the evening. We now note that the interior of the memorial is lighted so that, upon going close to the memorial, a person could reasonably observe the lighted statue of Jefferson. But from the highway or a distance, it still is not too noticeable. Probably the lighting of the exterior of the memorial would greatly enhance its value as a memorial.

Having been president of the playground and recreation commission of my own home

city for some 15 years, I feel it is possible that either the District or the National Park Service would have available adequate flood lights to install. Could the exterior of this memorial be flooded with lights, at least inaugural week? Could you experiment quickly enough to have this result accomplished? I am sure that the thousands upon thousands of visitors to Washington next week would enjoy having it so.

Probably you have already experimented with this possible feature with the Jefferson Memorial—but I could not help but know that, after personally observing it on many, many occasions, Mrs. Doyle and I have felt we should not hesitate to make this anxious inquiry, trusting that you would not find it entirely out of order.

I have the honor to be, and with appreciation of all your busy department is already doing,

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., February 2, 1949.

Hon. CLYDE DOYLE,
House of Representatives.

MY DEAR MR. DOYLE: I was greatly pleased at the suggestion contained in your letter of January 14 that the Thomas Jefferson Memorial be illuminated during inaugural week, and I directed the Office of National Capital Parks to undertake the project during inaugural week. This was done and the lights were operated on the evening of Wednesday, January 19, and continued through Sunday, January 23.

The extent of the temporary lighting of the memorial was of necessity limited by the amount of available equipment, but we feel that a creditable showing was made. The light was well distributed over the north facade and the east and west sides of the memorial, but the spotlights used on the south facade did not give a pleasing effect. Unfortunately, no floodlights were available to correct this situation.

We will ask the Commission of Fine Arts to give us an expression of opinion concerning the advisability of permanently illuminating the structure. In the event that it is held to be desirable, we shall make a study of the cost of the installation and request funds for the purpose in connection with the submission of our next budget estimates.

I am greatly pleased at the keen interest which you continue to exhibit in the national memorials and the valuable suggestions which you have made for improving their attractiveness to the people. I am also grateful for your thoughtful expression of appreciation for the work which the Department of the Interior is doing.

Sincerely yours,

OSCAR L. CHAPMAN,
Under Secretary.

FEBRUARY 4, 1949.

OSCAR L. CHAPMAN,
Under Secretary, United States Department of the Interior, Washington, D. C.

MY DEAR FRIEND: Immediately acknowledging receipt of your favor of February 2, 1949, in regard to the lighting of the Thomas Jefferson Memorial, at night, I note that you say, "We will ask the Commission of Fine Arts to give us an expression of opinion concerning the advisability of permanently illuminating the structure. In the event that it is held to be desirable, we shall make a study of the cost of the installation and request funds for the purpose in connection with the submission of our next budget estimates." In this connection, I will say that I am very certain that there will be ample evidence to convince the Commission of Fine Arts, and your own Department, of the fact that the lighting of before, and since, made the Jefferson Memorial truly an attractive, inspiring memorial, at nighttime as well as during the daylight hours. I cannot personally conceive of any reason why the memorial of Thomas Jefferson should be kept in the dark and other memorials kept in the light, during the visiting hours after sunset.

In connection with the consideration of this matter, by the Commission of Fine Arts, I would thank you to inform me, in the premises, as to what manner they function in such problems, in connection with the Department of the Interior.

Several Members of Congress have expressed definite interest in keeping the lighting conditions on this Jefferson Memorial and, we are, therefore, desirous of committing to the responsible parties, the fact that the great difference was noted as a gladsome condition which caused real inspiration and pride to those who observed it. I know of several people who deliberately drove around the Basin after dark in order to observe the inspiring sight across the waters of the Basin, looking from the driveway toward the Memorial.

Granting that what you say is true, that the spotlights used on the south facade did not give a pleasing effect, yet the balance of the lighting was so very well distributed and the results so inspiring that it would appear that the relatively small cost of acquiring necessary floodlights to illuminate the south facade might well be determined as a relatively insignificant amount.

I am trusting and hoping, therefore, that the responsible parties will make an expression of opinion, to the effect that it is advisable to promptly illuminate the structure at night, and that the cost of installation will be found well within and commensurate with the inspiring and profitable results achieved from the night illumination.

I will say that a great number of folks here in the Capitol, have come to me and commented on how pleased they were that you were able to so promptly fulfill the suggestion made by me that the memorial be illuminated during inaugural week, and that they thought it would be wonderful if it were possible to have it permanently illuminated at night.

If you have any suggestion of ways and means in which the many of us here who are interested in having the memorial permanently illuminated, can make our findings known, and likewise can contact those in the premises regarding the requirement of funds in connection with the submission of our next budget estimates, I will appreciate your advising us of such.

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., February 25, 1949.

Hon. CLYDE DOYLE,
House of Representatives.

MY DEAR MR. DOYLE: I have received your letter of February 4, complimenting us for the temporary night illumination of the Thomas Jefferson Memorial which we were able to effect during inaugural week. I am delighted to know that you were pleased with the result, even though the inadequacy of the equipment available left much to be desired.

The problem of lighting the edifice is one that would require expert treatment to insure proper artistic results and preservation of effect which the architect sought to achieve in his design. Before proceeding further, therefore, we plan to bring the matter to the attention of the Thomas Jefferson Memorial Commission.

The act establishing the Commission of Fine Arts (36 Stat. 371) as amended (46 Stat. 366) authorizes the Commission to advise generally on questions of art. Proceeding upon the premise that it was the intention of Congress that the recommendations of the Commission should be obtained by the executive departments before reaching decisions in such questions, it has been the policy of the Department of the Interior to seek the advice of the Commission of Fine Arts on all matters within the scope of the act.

I greatly appreciate your offer of assistance in this instance and will inform you of our progress in the matter.

Sincerely yours,

OSCAR L. CHAPMAN,
Under Secretary.

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 19, 1949.

Hon. OSCAR L. CHAPMAN,
Under Secretary, Department of the Interior, Washington, D. C.

MY DEAR FRIEND: You and your associates were very prompt and helpful to the end that the Jefferson Memorial was temporarily lighted during the recent inaugural celebration, and, no doubt, you have heard some of the many, many commendations you folks in authority have received for doing that sensible thing.

Now I am urging you to immediately see if it is not possible to again—at least temporarily—light the Jefferson Memorial for the period of the cherry-blossom festival. It would certainly be an added inspiration and point of delightful view to have that memorial lighted so that the many thousands who will visit during the cherry-blossom festival could also visit the Jefferson Memorial while it is lighted at night.

That Jefferson Memorial, adequately lighted, would be one of the memorial locations in all of the District and surrounding States to which people would go and view the same from nearly as well as from across the waters of the Tidal Basin. We have experimented with it and have driven along the roads when the memorial was lighted and have viewed it from different locations and distances, and it is magnificent, and it would be a glorious tribute and improvement of the appearance and use of this significant memorial.

There are many of us who earnestly hope that this memorial may be again lighted during the cherry-blossom festival; and then permanently lighted by the authority of the Commission having authority to act on such matters.

With personal regards and appreciation, I remain,

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

P. S.—The lighting of it during the inaugural celebration caused some newspapers and periodicals to headline that circumstance with such language as "Jefferson no longer in the dark," "Why keep Jefferson in the dark," "Jefferson all lighted up," "Jefferson brought out from darkness," etc.

MARCH 31, 1949.

OSCAR L. CHAPMAN,
Under Secretary, United States Department of the Interior, Washington, D. C.

MY DEAR FRIEND: Thank you very much for following my suggestion contained in my letter to you of March 19, to wit: That the Jefferson Memorial again be lighted for the cherry-tree festival. You and your associates have certainly done a splendid thing in having those spotlights placed around the Basin. By doing this you have accomplished even more than I had expected would be possible, to wit:

1. You have lighted the Jefferson Memorial and its immediate surroundings in a magnificent manner so that when last night we visited it there were literally hundreds of men and women, young and old alike, walking through and around this inspiring memorial. I am told that never before have so many people visited the Jefferson Memorial during the season that the cherry trees are in bloom.

2. You have succeeded in bringing out at nighttime the beauty and grandeur of the cherry trees themselves. I have been told again that never before have so many people been at the Tidal Basin during the cherry-blossom season.

3. You succeeded in lighting the Tidal Basin waterways so that actually the reflection of the Jefferson Memorial in the waters looks as though there were two memorials.

4. Your lighting of the total Jefferson Memorial area by means of those Army spotlights resulted in a very magnificent reflection of the Washington Monument in the waters of the Tidal Basin.

Yesterday morning at 8 o'clock Mrs. Doyle and I visited the Jefferson Memorial area, as well as the night before, and again last night (when it was lighted for the first time).

I hope that you personally went there to receive the inspiration and joy of seeing literally hundreds of people enjoying that grandeur of the total picture—which primarily resulted from the lighting of the Jefferson Memorial.

Last night when Mrs. Doyle and I drove across the bridge near the Jefferson Memorial, she said: "This proves, CLYDE, that the people will travel almost any distance to see real beauty, and this lighting of the Jefferson Memorial and cherry-tree area will make the cherry-blossom festival more famous than ever. It will also make the Jefferson Memorial more famous than ever." I agreed with her.

I do hope that the Fine Arts Commission will make the lighting of the Jefferson Memorial at night a permanent feature. I hope, too, that the enriching experience and result of the lighting of this memorial to this famous American citizen during the inaugural-week period and again now during the cherry-tree festival will result in the Jefferson Memorial and total cherry-tree area being lighted annually during the cherry-tree festival and probably during other similar occasions of more than just local interest.

Thanks again for your following my anxious inquiry and suggestion.

Please let me know of any further way in which I can be helpful.

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

Mr. Speaker, I know you will join with me in the expression of earnest hope that the Fine Arts Commission, who has final judgment in such matters and has to make the final decision in such cases, will arrange so that this famous Thomas Jefferson Memorial will be adequately lighted on the exterior, and that the area itself will be likewise adequately lighted to attract folks at nighttime to go and visit the Thomas Jefferson Memorial the same as they are attracted to go to the Lincoln Memorial and the Washington Monument because they are adequately lighted about the exteriors.

Let us bring the greatness of Thomas Jefferson out into the light and knowledge of more Americans. It will strengthen the sinews of our American democracy to do so. A visit at nighttime to the Thomas Jefferson Memorial and the reading of the inscriptions upon the interior will inform and inspire every reader and visitor.

Who Pays the Fiddler?

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. CANNON. Mr. Speaker, under leave to extend remarks, I am supplementing my extension of yesterday by including further excerpts from letters received by the Committee on Appropriations on Federal expenditures:

BENTON HARBOR, MICH.

It seems to us to be particularly important at this time to cut all nonessential items completely out and reduce drastically the funds allocated to many of the so-called essential Government functions. It is our feeling that the country is mortgaged to the hilt right now, that a reduction in tax income will be apparent when taxes are all in this year, and a very serious slump will be revealed next year under our present tax laws due to reduced personal and corporation incomes and taxes being drained out of the Federal coffers by the carry-back privileges of the present tax laws.

Only by hard-boiled appropriation cutting can we get through the next fiscal year without a damaging deficit.

PRODUCERS SERVICE CORP.

ST. LOUIS, MO.

Our own thoughts have a close parallel with the Hoover Commission recommendations for the interest of taxpayers and the soundness of our national economy. We only hope that way of thinking will find widespread support and effect some degree of saneness in Government-spending programs.

THE WEDLER-SHUFORD CO.

ST. LOUIS, MO.

It is time that something is done to get Government expenses back to a reasonable figure so that our large national debt can be systematically reduced.

Most of us from our earliest days were taught to work and to save, to provide security for that time in our lives when we would be unable to work any longer. We have consequently invested our money in Government bonds, insurance, etc., which will be entirely wiped out if we continue to spend as we have, permit our debt to grow larger, and not get the financial condition of our Government on a good, sound basis.

MISSOURI STEEL & WIRE CO.

CHARLESTON, W. VA.

There is definitely too much money spent today on foolish projects, which the taxpayer has to assume.

GENERAL WINDOW CLEANING CO.

EAST PROVIDENCE, R. I.

It is unbelievable and discouraging that the budget is so overwhelming. It is my opinion that the President and Congress should give grave consideration to the carrying out of the recommendations of the Hoover Commission. It is more important than loading the "gravy train."

HENRY MAXSON BRIGHTMAN,
ROBERT HENRY BRIGHTMAN,
Heating Engineers.

OLEAN, N. Y.

It is time that the representatives of the people stop the political maneuvering with our money and cut our budget down to a figure that will not bankrupt all of us.

DAILEY MILLS, INC.

BROWNING, MONT.

I am taking the liberty of enclosing some clippings from the Great Falls Tribune quoting an Indian in his remarks before the Kiwanis Club in Great Falls. He states that about 80 percent of the Indian appropriations are squandered in administration and that the district office is a joke, being mostly handlers and producers of red tape.

When the Indian himself in the very department that is supposed to assist him sees the squandering and makes the statement in public that it can well be dispensed with, it is high time to cut it out and save as he suggests, 80 percent of the expense of the Indian Service.

THE SHERBURNE MERCANTILE CO.

WARRENTON, VA.

Individuals and businesses, from whom the Government expects to collect, are thoroughly tired of rule by bureaus with their attendant enormous cost. These sources, which are the only sources of revenue, have reached the point of discouragement and only immediate and drastic reduction can hope to avert bankruptcy.

BLACKWELL ENGINEERING CO.

CHICAGO, ILL.

Surely all thinking businessmen and a large majority of our people know if a business was run the same way the Government was managed, there would be a creditor's meeting in the very near future. To keep on expanding and spending the money must be available, but from where?

Cut out unnecessary spending and reduce the Government pay rolls. If industry does not need five men for a one-man job, neither does the Government.

HINSDALE MANUFACTURING CO.

SANTA FE, N. MEX.

It so happens that in checking my returns at the end of the year I find that I am working for Uncle Sam at least 40 percent of the time. With an increased budget such as requested by the President and his staff, it would no doubt mean that we business people in the medium brackets will be working for Uncle Sam not only 40 percent of the time but perhaps 60 percent of our time in order to carry out what I call socialistic practices in our Government.

It is quite easy for anyone in business—and in all business today you have to come in contact with Government agencies one way or another—to see the waste that goes on at the expense of those who risk their capital and devote their time trying to build up a sound economy program in our country.

BROOME FURNITURE CO.

ETNA, N. Y.,

There must be a halt in the progressively increased spending for uncertain socialized and experimental projects, until our very large and burdensome debt is reduced and the proposed Federal Government budget should lead the way.

We are having some very definite reductions made in the New York State budget because of the program set up by the Governor which covers the same type of projects. There is a very definite undercurrent against these increased spendings, which necessarily calls for more and more taxes.

FINGER LAKES CHEMICAL CO., INC.

NEW YORK, N. Y.

Any of us who have had the slightest amount of business experience realize that

neither a company or a government can stay in existence when the point is reached where the liabilities continually exceed the receipts.

THE FAIRFACTS CO.

SIOUX CITY, IOWA.

Everybody has been in the habit of throwing money around for the past several years and it became quite a gesture to see how much one could spend in private as well as in business. The Government has not encouraged people to be thrifty. What I am thinking about is if another depression would set in what would happen to this country?

NEW HOTEL MAYFAIR.

SANTA FE, N. MEX.

As a businessman I cannot understand why our Government should continue to spend such large sums of money.

The American citizen cannot go on contributing such a large share of his income for Government. As I see the picture, our economy is at a very critical stage and continued extravagance in Government spending could easily cause serious damage.

WOOD-DAVIS HARDWARE CO.

ENGLEWOOD, N. J.

It is a well-known fact that few nations have remained solvent long when the tax load reaches one-third or more of the people's income, and we are dangerously near that point, if not already at it. It also does not appear sound over the long pull for such a small percentage of the people to pay as high percentage of the individual taxes, as now exists. The base is not broad enough.

STILLMAN & HOAG, INC.

OMAHA, NEBR.

I have worked for the Federal Government myself and am aware of some of the wasteful and fruitless expenditures that are typical of many bureaus and branches. I appreciate the resistance to be encountered from almost every quarter by anyone proposing to make a specific reduction in personnel or expenditures in any bureau but if more Representatives and Senators would take a stand similar to yours it would be quite possible for the Government to make tremendous reductions in personnel and expenditures and operate on the more economical lines of any private or corporate business.

I am sure that there can be reductions and believe that at least 75 percent of the voters feel that Federal expenditures should and could be reduced by elimination of useless personnel, consolidation of bureaus in similar and related fields and withdrawal from excessive business controls and socialistic activities.

JAMES E. LOFTUS, A. I. A.

PITTSBURGH, PA.

So few people appear to realize that the old law of economics cannot be ignored. I have frequently wondered how the Nation could survive on a spending budget of more than $40,000,000,000 if the national income again reaches the total of $58,000,000,000 or $60,000,000,000.

It is very difficult to understand why the thinking people of the Nation do not rise up in open rebellion at the manner in which we are now being taxed.

For with the tax situation on income and the confiscatory tax on estates, one wonders whether we shall ever again become a self-sufficient people.

THRIFT INVESTMENT CORP.

HIGHLAND, N. Y.

Unnecessary expenditures will mean unnecessary taxes. I welcome honest business competition and you can take my word for it being competitive. However, excessive taxations to meet this stupendous budget can also ruin many a small-business man like myself.

RATHGEB KNITTING MILLS, INC.

NEWPORT, TENN.

If our Government does keep on spending money at the rate they are now doing, our children's children, children's children's grand-children will still be trying to pay this tremendous debt. I am behind our Government for any worth-while spending for the good of our Nation, but all the gravy-train jobs should be thrown out of our Government.

WOOD PRODUCTS COMPANY, INC.

VIRGINIA, MINN.

We who are operating small businesses throughout the rural United States are beset by increasing costs, rules, and regulations labeled by our Congress as necessary to our economic welfare. It has become a requisite in business to retain a battery of accountants and lawyers in order to comply with all these laws. This is not as it should be. This is not America as our founding fathers hoped it to be.

The Hoover Commission has reported its findings. I believe our Congressmen should give this report serious consideration. The perspective of a group of men such as those that sat on this board has not been tainted by the ever present lobbyist. They had no nest to feather.

THE TROY LAUNDRY & DRY CLEANING CO.

UTICA, N. Y.

You no doubt are well aware of the present recession in all lines of industry, due to the fact that we have created and are continuing to create considerable surpluses not only in farm products but in many manufactured articles. At the present time it is definitely turned from a seller's market to a buyer's market. We in business and industry have endeavored to the best of our ability to effect such economies in the operation of our businesses in order to go along with our Government, not only during the war years but in the reconstruction period.

At the present time there is no national emergency and we, like yourself, feel that it is now time for the Government at Washington to give legitimate business a break if we are to survive during this period of economic adjustment in the United States.

FULLER SUPPLY CO., INC.

EAST LANSING, MICH.

Statesmen make their decisions on whether a thing is right, or will work, or can we afford it, or is it good for the country as whole rather than listen to the organized pressure groups who are constantly looking for something for nothing and never satisfied no matter how much they get.

It is my opinion that if this money that is going down the drain is checked and poured back in building our industries and creating more jobs no one in this country will suffer too much for lack of anything.

If we are to keep America the country it always has been with opportunities for all regardless of race, color, or creed, this wasteful dole for the strong minority groups must stop and the Government put on a sound and economical basis. We cannot spend ourselves into utopia.

If we are going to get into a third world war we should be preparing for it financially as well as in a military way. Where would the money come from to finance it, with condition we are in today.

J. J. MCLEAN.

NEW ROCHELLE, N. Y.

I think most of us believe that taxes should be maintained to a point that will preclude deficit spending. I know, too, that most intelligent taxpayers feel that this can be accomplished without increasing the tax burden by eliminating unnecessary expenditures.

It is realized that the various Bureaus and Departments will squeal like stuck pigs on any reductions that affect them. It takes courage to take a stand such as yours, and hence you deserve much commendation. I am sending a copy of this letter to my Representative and my Senators, and I believe you can count on their cooperation to further your efforts.

While on the matter of expenditures, I would like to put in a plug for the 70-group air-force plan, by reducing if necessary, appropriations for the Army and Navy. I am in a business that derives all the benefits that accrue to it from Government spending through the Navy, so I stand to lose by this procedure. However, I want to keep the United States free, and I believe that if Russia starts something, we want to go in and finish the job fast. The Army and Navy cannot do that, but a heavy Air Force might.

PACKLESS METAL PRODUCTS CORP.

MERRILL, WIS.

Our Government, since the cessation of hostilities, has gone on spending money almost at the same rate as when we were in the height of a war.

We cannot continue to spend more than $40,000,000,000 a year. I could ply you with many statistics—all of which would be a repetition of what you already have in your files and have had called to your attention.

I realize that money must be spent, but the days of the gravy train are over in business and, rightly so, should be over in politics and in governmental affairs.

MERRILL CANDY CO.

LANGDALE, ALA.

We must find a stopping point in our taxation and spending.

The businessman can't get around without running into a Federal or State tax collector. This should not be. The different reports we have to make takes time and effort and is expensive. This is an added expense and if continued will make for more employees and of course further expense to the Government.

JOHNSON & CO.

OELWEIN, IOWA.

It is time citizens wake up and begin to realize that after all the biggest corporation in the world can go on the rocks too if it continues very long to spend more than it can take in. Frankly, we've been spending too much for too long. Why can't something be done to cut off at least part of the waste and unnecessary expenditure? Why don't we attempt to streamline the Government activities along the line of Herbert Hoover's recommendations?

CITY LAUNDERING CO.

COLUMBUS, NEBR.

If this country is to continue to prosper, Government spending must be kept within the bounds of the country's ability to create wealth. Government spending, while it does temporarily put more money into circulation, does not create wealth. Any money spent by the Government must eventually be paid by the toil of some person or by the depletion of some natural resource.

The future of our country lies in the hands of men who are willing to put expedient petty politics aside and take the long view with regard to the whole country's welfare.

ROGERS MOTOR CO.

BIRMINGHAM, ALA.

These enormous appropriations place a heavy tax burden on individuals, business, and industry. It is a positive fact that more and more small businesses (which are the backbone of this Nation) are compelled to fold up through excessive taxes and restrictions, caused by wasteful spending.

You know if you don't give them as much as they want but curtail appropriations these bureaus and special groups will find ways to carry on if their particular operation has any merit. How can we hope to maintain our position as a democracy if we persist in burdening the people with excessive waste and high taxes.

BIRMINGHAM ORNAMENTAL IRON CO., INC.

ATLANTIC CITY, N. J.

In my visits to various offices in this area I have seen a great many unnecessary employees. This was especially so in the shipyard occupied by the WAA, and when I made a remark to the girl who was serving me that there seemed to be a lot of incompetents she said, "I am sorry that I have to agree with you."

A colonel told me that the same conditions prevail in the Army. It is quite probable that a budget of $37,000,000,000 or less could supply efficient service.

M. B. MARKLAND CONTRACTING CO.

HARLAN, KY.

If we don't put a governor on a spending machine that has been put in motion to slow it down, not a bit, but an awful lot, we will find ourselves in the poorhouse or worse.

Please see to it that the spendthrifts of our Federal Government are stopped before it is too late.

We are living in a time when clear thinking is needed as never before since '65.

SILAS CAMPBELL.

SHARON, PA.

If the country keeps on pouring out money, who is going to furnish the money, even though this is the richest country in the world? But, some of our good friends in Washington seem to be anxious to see what the bottom of the bag looks like.

THE WELLER-KROUSE CO.

SANBORN, N. Y.

Anyone who knows or understands conditions at all must realize that we cannot keep up the present trend and survive as a free Nation. Trim all the unnecessary bureaus as much as possible.

If this is not done the source of revenue will dry up.

C. F. TREICHLER.

HOUGHTON, MICH.

Cut all unnecessary appropriations to the very minimum so that we can again get our country back on a sound financial basis.

HAMAR-QUANDT CO.

BRIDGEPORT, CONN.

The fact that Federal expenditures per capita have increased from $7.56 in 1915 to $268.23 in 1948 is alarming enough in itself.

TAYLOR KNIT WEB CORP.

UNION CITY, N. J.

Inflationary pressures are still so great that it is the duty of all of us to use prudence in our daily economic affairs, and the Government, as the biggest purchaser of all, should surely use most care and caution. It would be tragic indeed if our Government, in its zeal to do good for the people, were the prime force in turning loose the flood that spells inflation.

FINGER & LEVINE, INC.

SALINA, KANS.

It is pleasant to dream of our Government doing everything for everybody the world over, but common sense tells us our Government will collapse in the undertaking. Furthermore in attempting to do all things for everyone, we are developing a nation of weak people unprepared to take care of themselves.

OTHO SCHMIDT INSURANCE SERVICE.

TAMPA, FLA.

There is only one way to successfully operate a business, and that is on a sound financial business basis. The United States Government is the biggest business in the world. But for many years the United States Government has not been operating on a sound financial business basis.

VITAMINERALS.

HAGERSTOWN, MD.

It appears to be more apparent each day that even comparatively uninformed individuals are becoming increasingly aware of the selfishness and waste which accompanies an extensive and loosely supervised group of Government agencies, and in view of this fact it would appear to be sound politics as well as sound economy to effect economies in Government where these can be made at no loss of efficiency and at the sacrifice of only superfluous personnel.

As a veteran of the last war and an active member of the Officers' Reserve Corps of the Army of the United States, I wish to call to your attention specifically the great economies which could be accomplished through a true unification of the armed services.

R. D. MCKEE HARDWARE.

MINNEAPOLIS, MINN.

I assure you, Mr. CANNON, that the tax burden is getting just too much. Somebody in a position of power must say "No" to pressure groups, or else the Nation will soon be where, whether anyone says "Yes" or "No" it will make little difference.

CHALMERS OIL BURNER CO.

ROCK CITY FALLS, N. Y.

One of the main objections to socialistic programs, which in themselves may be proper, is that apparently they can only operate on an increasing basis and will, unless properly curtailed, snowball to such an extent that they become inoperative.

COTTRELL PAPER CO., INC.

SWAMPSCOTT, MASS.

Most of us want to go back to the economic pattern which permitted us to earn an honest living and keep all of it except the modest percentage required to maintain good government. We do not want to be subservient to the Government; we want the Government to serve us.

THE LYNN SAND & STONE CO.

The Case of Samuel L. Wahrhaftig

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 1 (legislative day of Friday, March 18), 1949

Mr. HUMPHREY. Mr. President, I have prepared a statement regarding the treatment accorded Samuel L. Wahrhaftig, an American military government official in Germany, who on March 9 was removed from his position in the office of the military government in Germany. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUBERT H. HUMPHREY ON THE WAHRHAFTIG CASE

On the 17th of January of this year I addressed a letter in protest to Secretary of the Army Royall concerning the treatment accorded Samuel L. Wahrhaftig, an American military government official in Germany. Mr. Wahrhaftig was summarily suspended in early January and ordered back to the United States pending further investigation. He was not given a hearing nor a statement of charges. He was simply told that he was under suspicion. On March 9 he was removed from his position in the office of the military government.

In my letter of January 17 to Secretary Royall I stated that "I should hesitate to feel that such serious accusations were brought against an American citizen loosely, through personal malevolence, or by a confusion by Army investigatives of anti-Communist liberals with Communist Party members or fellow travelers."

On February 15 I again wrote to Secretary Royall and said I was "appalled that the investigative procedure followed in cases of this nature precludes the possibility of the subject knowing the specific charges against him until after he is found guilty."

This is exactly what has happened to Wahrhaftig. I first received a letter from John W. Martyn, Administrative Assistant to Secretary Royall, defending and explaining this procedure. Subsequently, in response to my letter of February 15, Secretary Royall replied over his signature and voiced a similar defense. Both acknowledged that under the Army's loyalty investigation procedure an accused man is not given a hearing until after he has been removed from service.

I know of no precedent in the American system of justice for a doctrine that a man's trial should be delayed until the verdict is handed down. It seems patently clear to me that a person removed from his position, transferred back to America, and suspended without pay, even though it might be possible at some future date he will be restored to duty, is automatically stigmatized. He has no opportunity to defend himself, to deny charges, or to present evidence that might well establish his innocence. The terrible inequity in this system is dramatically revealed in the case of Wahrhaftig.

When I wrote to Secretary Royall in January I described Mr. Wahrhaftig as a strong anti-Communist liberal. I charge that he was being railroaded by men who apparently could not tell the difference between a liberal and a Communist.

At this point I should like to present a statement to support my contention. It is the statement of Ernst Reuter, mayor of Berlin, and a heroic figure in Berlin's resistance of Soviet aggression. Mayor Reuter is in the front lines of the battle against communism. He has emphatically stated that he knew Wahrhaftig well in Germany and regarded him as a devoted friend of democracy. The attached news story published in the New York Post, March 24, 1949, describes Mayor Reuter's statement delivered at a National Press Club luncheon on that day:

"ANTI-RED BERLIN CHIEF DEFENDS WAHRHAFTIG

"(By James A. Wechsler)

"WASHINGTON, March 24.—Ernst Reuter, fiery anti-Communist mayor of Berlin, today warmly defended Samuel Wahrhaftig, AMG official whom the Army fired without a hearing on the ground that he is subversive.

"In a dramatic declaration made in the presence of high state and Army dignitaries attending a National Press Club luncheon, Reuter said bluntly:

"'I know Mr. Wahrhaftig. He was a very good friend of ours. I have always had the greatest respect and admiration for him.

" 'I must say to you that I considered him one of the most able and capable men whom I knew in the American military government.'

"Tribute follows speech

"Reuter's tribute to the ousted AMG official came during the question period which followed his speech before 500 correspondents and government officials.

"Among those seated at the head table as Reuter lauded Wahrhaftig, were Tracy Voorhees, Assistant Secretary of the Army, and Robert Murphy, top political adviser to Gen. Lucius D. Clay.

"His personal endorsement of Wahrhaftig created murmured comment in the audience, which earlier had given the mayor a standing ovation as he described Berlin's resistance to Soviet aggression.

"Wahrhaftig was summarily flown back to the United States from Berlin early in January, suspended from the AMG pay roll pending further investigation, and finally dismissed this month without receiving a chance to defend himself. Thurman Arnold, former Assistant Attorney General, is appealing the decision to the Army Review Board—first and last court of appeal in Army loyalty cases.

"Reuter has volunteered to submit an affidavit in Wahrhaftig's behalf. His statement today made it plain that he had not altered his judgment of Wahrhaftig despite the Army crack-down.

"Reuter's entrance into the case may create major embarrassment for the Army intelligence officers who reportedly prepared the dossier against Wahrhaftig and attempted to picture him as a Communist sympathizer.

"In his address to the Press Club conclave preceding his endorsement of Wahrhaftig, Reuter said:

" 'Berlin was the last city to give in to Hitler, and we will not yield to the Soviet generals. It is cold in Berlin, but it is colder in Siberia.' "

In the light of Mayor Reuter's declaration I again challenge the Department of the Army to admit that it has committed a colossal blunder. I ask the Army to grant Mr. Wahrhaftig a speedy hearing before the Secretary of the Army's Security Review Board, or if, as I believe, no real charges can be formulated against him, to reinstate him at once.

I should like to contrast the procedure which has been followed by the Department of the Army in the case of Mr. Wahrhaftig to that of the trial of the 12 Communists before the Federal district court in the city of New York on the charges of sedition. These 12 openly avowed and confessed Communists are given the full protection of due process of law. Their defense has been given every opportunity within the technical limits of American law. They are having trial by jury, they have the right of counsel, they are notified of the charges, they face the witnesses. In other words, they are given what we call justice and fair treatment under the Constitution of the United States. But in this instance, a man who was accepted for duty in the military government, cleared by the Federal Bureau of Investigation, and supported by his colleagues in military government in Germany as an outstanding anti-Communist leader and defended by the democratic leader and mayor of the city of Berlin is denied any of the protections which are afforded the avowed enemies of our way of life.

The ouster of Mr. Wahrhaftig has already created confusion, dismay, and fear among strong anti-Communist Germans like Mayor Reuter, who knew him as one of our able military government officials. I am convinced that the Department of the Army owes an abject apology to Mr. Wahrhaftig and that his official vindication is long overdue. I hope that this case will not be closed without careful examination of the procedures and circumstances under which this injustice was perpetrated. I further believe that this case demonstrates the grave need for drastic revision of the Army's loyalty investigation procedure to give innocent men a genuine chance to defend themselves before their names are irrevocably smeared.

Minimum-Wage Bill

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. LUCAS. Mr. Speaker, never before in peacetime has a committee in Congress reported a bill which delegates such extraordinary and unlimited powers to an administrator as does H. R. 3190, the minimum-wage bill. Briefly, the bill grants power to the Secretary of Labor to, first, make rules and amend them or rescind them at will; second, make inspections of company records; third, bring civil action for enforcement; fourth, charge criminally for failure of a person to conform to the act or any of the Secretary's rules, regulations, or interpretations, and fifth, bring suit in the name of employees against employers, at no cost to employees, to recover allegedly unpaid minimum wages or overtime payments. It has been estimated that it will take more than 1,000 lawyers in the Labor Department to prosecute these private suits.

I have prepared, while working with other members of the House Education and Labor Committee, a questionnaire, which I insert with these remarks. I invite, I importune you to study this questionnaire so that you may know just how far-reaching, how vicious this legislation is. The questionnaire follows:

AN ANALYSIS, IN QUESTION AND ANSWER FORM, OF H. R. 3190 (AS REPORTED ON MARCH 16, 1949, BY THE HOUSE LABOR COMMITTEE), ON A BILL TO AMEND THE FEDERAL WAGE-AND-HOUR LAW

Question. How many workers not now under the law are covered by the bill?

Answer. Administrator McComb estimates the number to be over 5,000,000 workers. But he admits that there are no figures upon which an accurate estimate can be based.

Question. How are so many additional workers brought under the law?

Answer. In two ways. First, by a drastic reduction in the scope of existing exemptions. Second, by covering all employees of an employer who is engaged in interstate commerce. The House Labor Committee recognized this in its report (see second full paragraph on p. 18 of H. Rept. No. 267). As almost every employer gets some supplies, goods, or materials from outside the State, it may be categorically stated that almost every employer is engaged in interstate commerce, including the barber, the shoe-repair shop, the restaurant, the hotel, the motion-picture theater, and every other neighborhood business.

Question. Does any other Federal statute use "commerce" language which is as sweeping as that used in the bill?

Answer. No. Such language has never been used before and virtually will have the effect of bringing almost all employees under the minimum-wage and overtime provisions of the law unless specifically exempted.

Question. Does the bill retain the present year-round overtime exemptions for (a) the first processing of the farmer's milk and cream, (b) the ginning and compressing of the farmer's cotton, and (c) the processing of the farmer's sugar beets and sugarcane?

Answer. No. The bill deprives these industries of any overtime exemption as a matter of statutory right and merely authorizes the Secretary of Labor in his discretion to grant them a limited overtime exemption of not over 14 workweeks per year.

Question. Does the bill retain the present 28 workweeks per year overtime exemption for the packing and canning of the farmer's fruits and vegetables?

Answer. No. The bill deprives fruit and vegetable packing and canning of any overtime exemption as a matter of statutory right, and merely authorizes the Secretary of Labor in his discretion to grant this industry a limited overtime exemption of not over 20 workweeks per year.

Question. Does the bill retain the present 14 workweeks per year overtime exemption for the slaughtering and dressing of the farmer's poultry?

Answer. No. The bill deprives this industry of any overtime exemption as a matter of statutory right and leaves to the Secretary of Labor's discretion the granting of any overtime exemption to this industry.

Question. Does the bill retain the present year-round wage and overtime exemption for the processing and canning of fish products and byproducts?

Answer. No. The bill deprives this industry of all wage exemption and merely permits the Secretary of Labor in his discretion to grant the industry a limited overtime exemption of not over 14 workweeks per year.

Question. Does the bill retain the present year-round wage and overtime exemption for country grain elevators and other storage places for grains and seeds within the area of production?

Answer. No. The bill deprives this industry of all wage exemption and merely permits the Secretary of Labor in his discretion to grant the industry a limited overtime exemption of not over 14 workweeks per year.

Question. Does the bill retain the present year-round wage and overtime exemption for the buying, handling, and candling of eggs within the area of production?

Answer. No. The bill deprives this industry of all wage exemption and merely permits the Secretary of Labor in his discretion to grant the industry a limited overtime exemption of not over 14 workweeks per year.

Question. Would the bill make any change for white-collar employees?

Answer. Yes. Tens of thousands of white-collar employees are brought under the act for the first time by (a) extending the coverage to include every employee of an employer engaged in interstate commerce, (b) eliminating the local retailing exemption in its entirety, and (c) narrowly restricting other exemptions.

Question. Does the bill greatly reduce the existing exemption for retail and service establishments?

Answer. Definitely yes. The bill imposes two new limitations upon the present exemption. First, it provides that the exemption shall not apply if the employer has a total annual volume of sales or servicing in excess of $500,000. Second, it provides that no retail or service establishment shall be exempt unless 75 percent of its selling or servicing (1) is to private individuals for personal or family use, or (2) is to farmers, or (3) is of goods or services not differing materially in type or quantity from goods or services normally sold or rendered for personal or family consumption.

Question. Will the $500,000 limitation relieve the small retail and service establishment from the requirements of the law?

Answer. No. Employees engaged in the local retailing and service trades in any community form a common labor pool. If the larger establishment has to maintain the wage-and-hour standards of the law, then as a realistic matter the smaller establishment across the street will have to pay the same wages and overtime to maintain good labor relations or as a result of unionization and collective bargaining.

Question. Does the bill grant the Secretary of Labor any other unusual powers?

Answer. Yes. He is given the authority to sue any employer for back wages. No such authority is conferred upon the Administrator in the present law.

Question. Will the provision that nothing is retail selling except sales to private individuals for personal use, farmers, etc., deprive small retail and service establishments of the exemption?

Answer. Yes. Most retail stores and dealers sell both to private consumers and to local business consumers. Hardware stores sell both to private householders and building contractors; coal dealers sell both to private householders and to churches, schools, hospitals, etc.; furniture stores sell both to private householders and to business offices; etc.

Irrespective of how small the volume of the store may be, the effect of this limitation in the bill would be to take the exemption away from thousands of local stores engaged in selling hardware, stationery, furniture, coal, lumber, paint, dry goods, automobiles, etc. Even numerous country general stores which sell both to private householders and business customers would lose the exemption.

Question. Does the bill continue the present year-round exemption for local trolleys and local motorbus carriers?

Answer. No. The bill eliminates entirely the existing wage and overtime exemption for employees of local trolleys and local motorbus carriers.

Question. Does the bill continue the present year-round overtime exemption for employees of motor carriers?

Answer. No. The bill eliminates entirely the overtime exemption for loaders and mechanics. Even the driver or driver's helper will lose the exemption if he spends as much as 50 percent of his time in activities other than driving or helping the driver.

Question. Was evidence submitted to the House Labor Committee showing that wages can be raise to 75 cents per hour under the broadened coverage of the bill without substantially curtailing employment?

Answer. No. Such evidence as was presented was to the effect that the impact of a 75-cent minimum in the retailing industries, for example, would have the effect of substantially curtailing employment.

Question. Does the bill continue administration of the act under an independent administrator?

Answer. No. It transfers administrative authority to the Secretary of Labor, who is duty bound under the Organic Act of the Department of Labor to foster and promote only the interests of labor. Moreover, the Department of Labor is staffed with assistant secretaries recruited from organized labor and takes the position that it is spokesman for labor in the President's official family.

Question. Does the bill grant the Secretary of Labor rule-making power not now conferred upon the Administrator?

Answer. Yes. The bill grants the Secretary of Labor unlimited rule-making power which is without precedent in a peacetime statute. The House Labor Committee's report states that this power includes the power to define any term used in the law (see p. 34 of H. Rep. No. 267).

Question. Is the present 2-year statute of limitations on employee suits for back wages continued?

Answer. No. It is increased to 4 years. The bill also continues the provision in the existing law for assessment by the court of liquidated damages in an amount equal to the back pay sued for. This means that an employer may be sued under the bill for an amount equivalent to 8 years of back pay.

Two American Communists Abdicate American Citizenship Responsibilities

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. DOYLE. Mr. Speaker, under authority granted me, I place before you, my colleagues, and the other readers of the CONGRESSIONAL RECORD, an editorial dated March 26, 1949, from the Los Angeles Daily News, and desire to comment that I not only urge its most careful and repeated reading, but I urge consideration of its ultimate import and significance.

Our Nation needs nothing of communistic ideologies or practices, and even though we, as sound, patriotic Americans must steadfastly seek and work to the end that we must make our democracy work better tomorrow than it ever did before—that is no sign or reason that we need to yield, even a toe length, in our firm conviction and appreciation of the fact that our American way of life has and does continue to be paramount in comparison with that which is controlled and dominated by the political and economic philosophy which stems in totalitarianism and the deification of the state as contrasted to the supremacy of the rights of freedom of thought and the dignity of the individual. Godlessness never gained anything for a nation or an individual except distress, disgrace, depreciation, despondency, and, finally, destruction; and any nation which does not magnify the propriety and the power which comes from seeking divine guidance is destined to find himself without the blessings of God.

The editorial follows:

THE UNDECIDED QUESTION

The statement by two American Communist leaders that they would support Russia in the event of war is quite different from recent statements by Communist leaders in France and Italy. The words sound the same, since Moscow announced the text. But the circumstances were not similar.

Thorez and Togliatti spoke in countries where Communists are more numerous than here. They spoke in countries which would be in real danger of speedy Russian occupation if war broke out now. And they spoke to people still suffering from the horror, exhaustion, and destruction of the last war.

Their appeal was based on the assumption that many Frenchmen and Italians would prefer Soviet serfdom to battle. It was not, we believe, a safe or reasonable assumption. But at the time it was the best answer that Moscow had for the challenge of the North Atlantic Alliance.

The statement of Foster and Dennis was only a faint echo of the others. These men were not silly enough to ask Americans to welcome the Soviet armies as liberators. They simply said that they would support Russia in any "unjust, aggressive, imperialistic war" brought on by "Wall Street."

Well, everybody knows that's what they would do. They've said so before and they will probably say so again. But one would think that something new had been added.

A Presidential press conference made quite a big thing out of President Truman's permitting a direct quote when he called these Communists traitors. Senator EASTLAND indignantly proclaimed that he would ask legal provisions "to curb these traitorious agents of a foreign power, and to prevent sedition, espionage, and treason."

The president of the National Association of Manufacturers called on labor to cooperate with management in driving the Reds out of industry. William Green said the A. F. of L. would take no part in strikes to sabotage American defense. Even Henry Wallace got into the act by saying he was not in accord with the Communist statements.

Apropos all the flurry, General Eisenhower said something sensible—as is his custom—in a talk to the New York Bar Association.

"The 146,000,000 people in this great land," he said, "are the mightiest temporal power that ever existed. Let us look on our problems like a man who knows he is strong no matter how humble he is."

That is sound advice. The greatest temporal power that ever existed can certainly cope with the danger of domestic communism, which is a real menace even with virtually no popular support. It can cope with communism as it has coped with other dangers and menaces—by action, not by fear and hysteria.—J. T.

Cotton in Our Economy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two addresses on the subject Cotton in Our Economy, one by me and one by William D. Felder, Jr., president of the Texas Cotton Association, delivered at the meeting of the Texas Cotton Association on Friday, March 25, 1949.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. ESTES KEFAUVER, OF TENNESSEE, DELIVERED BEFORE THE TEXAS COTTON ASSOCIATION, FRIDAY, MARCH 25, 1949

It is a pleasure to have this opportunity of speaking to the members of the Texas Cotton Association. I am glad to be able to come to the great State of Texas for this meeting.

I had a visit with your capable and able Senators CONNALLY and JOHNSON before I left the Nation's Capital. Senator CONNALLY is now carrying on the fight for the continued authorization of adequate funds for the ECA. He and Senator JOHNSON told me to extend to you their best wishes and to express their regrets at not being able to be present. I know that you in Texas are tremendously proud of the great part that Senator CONNALLY is serving in the direction of our foreign affairs. Senator CONNALLY has vision and leadership at a time when these qualities are so urgently needed. He is, as all of

you know, one of the Nation's and the world's outstanding statesmen.

I had the pleasure of serving in the House of Representatives with Senator LYNDON JOHNSON for almost 10 years. He is a very close friend of mine. I have great confidence in his judgment, his integrity, and his ability as a legislator. He is a tireless worker, and he will make a great Senator for the State of Texas. I know that you will take continued pride in his accomplishments.

CLARK THOMPSON, the Congressman from Galveston, and the whole Texas delegation are notable in their accomplishments.

From a purely selfish standpoint, there is probably no other group more interested than yours in the promotion and expansion of production, distribution, and consumption of goods throughout the world, and I find you to be liberal in your views in that connection. Apart from any selfish interest, however, there is your personal interest—a deep and abiding one, shared by all sincere American citizens and by many citizens of the rest of the world—in the building of a just and enduring peace.

I have arbitrarily chosen as my subject on this occasion The Time Is Now. I feel that time is of the essence in building for world peace. Every minute we delay in our efforts may cost a proportionate number of lives. I do not mean to imply that I favor rushing headlong into a plan that may not prove effective. The peace that we make this time, after two wars within our generation, must be effective. That is of prime importance. At the same time we should not permit our feet to halt, nor our hands to grow weary in our efforts to find the solution to our critical world problems as expeditiously as possible. The time is now for us to give the very best of which we are capable in the continuing and intensive effort to determine the best course for the peoples of the world to pursue. We need then to apply our every energy to the consummation of a workable peace organization.

There has been in the past a great deal of criticism on the part of those who follow the foreign relations of the United States to the effect that the United States does not have an established foreign policy. If I am any judge—and I have given considerable study to the matter—it is my contention that we do have a policy at the present time. That policy emanates from the expressed desires of our people.

The purpose of our policy, necessarily, is to save our freedom. We must somehow find a way to settle differences among the nations of the world by the utilization of some method other than war. Surely there is a more humane device. Our civilization cannot withstand a third World War.

At the present time there is being considered an alliance of the nations of the North Atlantic region, whereby one would come to the defense, with appropriate action, of any or all of the others in the event of aggressive action on the part of a nation not a signatory to the pact. There is bipartisan agreement in Washington on the ratification of this pact. Senator ARTHUR VANDENBERG, the Republican leader in the United States Senate on international relations, has stated that this alliance is entirely proper in furtherance of the United Nations Charter. Some time ago he made a very pointed statement in which he said, "In my view, the thing we are undertaking to do in the North Atlantic Pact is nothing more than to acknowledge in writing the facts of life as they are." It is clear that, under articles 51 and 52 of the United Nations Charter, the creation of regional arrangements and such alliances by the participants in the United Nations Organization is not only permitted, but sanctioned. The treaty that is being considered in the North Atlantic Pact is intended chiefly as a warning to any government with aggressive intentions that aggression will be met with a united and overwhelming force.

It is significant that the aggressor nations in history have always begun their conquests with the uniform practice of destroying, one at a time, the smaller nations surrounding them. It is my belief that any further aggressive action on the part of any nation in the world will follow this same pattern. Perhaps I should qualify the statement I have just made. It is within the realm of possibility that atomic warfare, and the inventions and discoveries coming out of World War II, may make it possible for an aggressor nation to strike and weaken the major powers of the world with the first blow. However, judging from the recent actions of the Soviet Union, we must assume that, if Russia does have aggressive intentions, she intends to gobble up all of the smaller nations surrounding her before coming to grips with one of the major powers of the world.

I wonder if you share my idea that, had Kaiser Wilhelm anticipated that the free peoples of the world would join together in time to strike him down, he would never have begun his career of conquest which led to World War I; and that Hitler and Mussolini would never have plunged us into a Second World War if they had known, or had had good reason to believe that the free peoples of the world would again join in time to halt them and save the world for freedom.

Therefore, time is of the essence. The farther we draw away from the realities of bloodshed and the other horrors of war, the more likely the people of the world will be to forget. We need to act with dispatch lest some new aggressor take advantage of our complacency.

In my judgment, the North Atlantic alliance is a step in the right direction. It does not provide, however, the complete and final solution. Equally important as a step in the direction of world peace is the program of President Truman, made known at the time of his recent inauguration, to lend our production know-how to the development of wastelands of the North Atlantic region. When we strengthen the weaker nations, which are susceptible to easy defeat at the hands of an aggressor, we strengthen our chances for world peace. To my mind, it is better to expend some of our resources and technical knowledge in this manner now than to expend them later on at greater cost, in time of disaster, in another horrible conflagration. I think that the admitted success of aid to Greece and Turkey and of the Marshall plan is definite proof that such funds are well spent.

The North Atlantic alliance has great value not only as a stop, look, and listen signal to the men of the Kremlin, but it is the first time that the democratic nations of the North Atlantic have gotten together for their mutual protection during a time of peace. I think that, out of this cooperative effort, a permanent and substantial agreement for security and economic cooperation may grow. I hope that in the future these nations may work into a limited federation for their own protection and development.

The most encouraging prospects for an eventual North Atlantic security arrangement that will really work for the maintenance of peace and world stability are found in the announcement earlier this month of the formation of the Atlantic union committee for a Federal convention of democracies. In my opinion, the formation of this committee represents great vision and force in the furtherance of a permanent plan which will strengthen the possibility of preventing a third world war and enable the people of the world to have peace for generations to come.

This committee is composed, not of those in government, but of private citizens. They have the vision to discern our great need, and the will to do what is indicated to fill that need. They are taking a bold step, and only courageous men and women are capable of bold actions. These great private citizens are laboring night and day to see that we chart our course in the direction in which we should go.

According to former Supreme Court Justice Owen J. Roberts, the federation proposed by the committee would strengthen the United Nations and would raise the standard of living and lower the cost of military security for all. Justice Roberts is president of the Committee.

Another committee officer, former Secretary of War Robert P. Patterson, who is certainly an authority, stated, "A union of the democracies will convince the Kremlin that the democracies mean business."

A vice president of the committee is a man whom all of us hold in especial veneration, the Honorable Will L. Clayton, of Houston. As a former Under Secretary of State, Mr. Clayton is in a good position to understand the gravity of our present situation. With your permission, I should like to quote his entire statement, which is not long, issued at the time the Atlantic Federation Committee was announced.

Mr. Clayton said, "The preservation of peace and freedom is the only thing that counts in the world today. Russia is on the march, determined to communize the world. Russian communism opposes the civil freedom and the religious freedom which democracy holds dear. There is only one way to stop Russia, short of war. Democracy must be made to work in all those lands which are still free. In economic terms, democracy works when people have more to eat, more to wear, and better homes in which to live. This rising standard of living can only be realized in the modern world by releasing the world's productive capacities, through striking off the shackles of economic nationalities, and by reducing armaments. I favor union of the free, believing it to be the only road to world freedom, world prosperity, and world peace. I believe such a union is the next step forward in the spiritual, economic, and social development of the human race."

This question is burning in my mind at this point: Shall we have to have world war III to prove the correctness of the statements of these learned men?

I submit to you, history has proved already that their position is sound—and not only sound, but essential to our civilized existence.

SPEECH OF WILLIAM D. FELDER, JR., PRESIDENT, TEXAS COTTON ASSOCIATION, FRIDAY, MARCH 25, 1949

The past year has witnessed the greatest, most unselfish effort by one group of people, on behalf of their fellow men that the world has ever known—the operational beginning of the Marshall plan and China-aid program. I know that we all feel great pride in being citizens of a Nation whose resources, generosity, and plain know-how, enable it to undertake such a vast program on behalf of our friends overseas whose properties were devastated, and whose resources were sadly depleted in the late war against totalitarianism. Only because we are a free people operating under a system of free enterprise were the miracles of production performed during the war, and being continued today, possible. The active shooting war did not give our part of the cotton industry the opportunity to participate directly as it did the manufacturers and heavy industries. The

shooting war is over, but the winning of the peace is still in the balance. Under present plans for the assistance of our foreign friends, our industry is provided with a unique opportunity in helping to win the peace. We are to play a stellar role in bringing goods, but even more important, the example of what free enterprise, operated under a democratic government can do to our former allies and enemies, who in many cases are brought into daily contact with the opposite philosophy. Ours is by far the most important commodity going to our overseas friends through regular, established trade channels, and the responsibility of demonstrating the superiority of our great country's philosophy of free enterprise and democracy falls heavily on our shoulders. We are not taking these responsibilities lightly. To protect the good name of our industry against any possible element which might be tempted to undertake business practices not in keeping with the high ethics of our trade, your association, in conjunction with all our affiliate organizations, adopted six special rules almost a year ago. We recognize that these rules are not perfect, by any means, and that rules cannot be written that cannot be violated. However, these six special rules are certainly a step in the right direction, and evidence the seriousness with which we are accepting our responsibilities. There have been some bothersome details in connection with the beginning of the operation of this great plan, and there are still some minor problems to be solved, but a truly remarkable job has been done to date, which would not have been possible without such able administration, and wholehearted cooperation as has been given by the ECA cotton administrator, and his extremely capable staff. It was a fortunate thing for the taxpayers and the cotton people that there was an E. D. White available when there was a man chosen to administer the cotton end of this great program.

Our product, now in surplus, affords a perfect medium of assisting our neighbors, and it would now appear that our volume of exports will increase materially during the coming 12 months. For our part, we accept this responsibility and can get the job done.

A great deal is being said these days about the loan rates on commodities for 1950 forward. Since all of us have lived close enough to the situation in the past to have seen the disastrous results, when the sunshine fiber has been overpriced, I am not going to take up your time in discussing this topic. I would like to remark, however, that if we do not exhaust every means of acquainting our legislators with the facts concerning the loss of our markets to foreign growths and artificial fibers when the price on our cotton has been noncompetitive, we will be guilty of not keeping faith with our producer and manufacturing friends. This past year, with cotton only slightly overpriced by comparison, saw much ground lost to artificial fibers, and with price competition becoming keener daily, some realistic program must be adapted to assure our farmer friends and the sunshine fiber against the loss of a market. While I know you are all familiar with the situation, I would like to draw your attention to the following simple two facts which point up the seriousness of the problem. Since 1940 rayon production, at the expense of the sunshine fiber has increased 238 percent, synthetic fiber has recently been reduced in price 12½ percent. Some means other than a high loan rate must be found to assure our southern producers a fair share of the national income.

Although generally slow, some progress has been made during the past 12 months in the return to private channels of cotton trade in some of our larger export markets; and where this has been the case a marked improvement in the efficiency of handling has been seen. Trading in France is approximately 75 percent in private hands; some private purchases are being permitted in Germany; and in Japan, while the military government is faced with special problems, I believe we can confidently expect some constructive steps soon. While business with Japan is still under the direction of the military, its administration has been a model of efficiency, for which we all owe a vote of thanks to our former member, W. S. Carter. There seems little hope that our largest export customer, England, will soon return to private trading. Since bulk buying seems to be the rule, it is indeed gratifying to know that the buying of U. S. A. cotton will be done by an experienced and highly regarded contemporary of ours, Mr. Richard Thorpe. Business with the RCC has gone forward in the past with few minor difficulties, and the officials of the RCC have shown a fine spirit of cooperation.

The cotton trade is following with great interest developments in Germany. Mr. Bode and other officials in JEIA have rendered yeomanlike service to all interested in this important phase of the German economy, and we, through the ACSC, and ACSA are pleased to have been privileged to make a contribution in these efforts through making available the high talent and technical knowledge of Carl Bartz.

We members are more than fortunate to have a trade association as well organized and ably directed as the TCA. Having lived with our problems closely the past 12 months, I cannot compliment Mr. Murray and his staff too highly on the efficient manner in which they discharge our day-to-day business. In my opinion, your organization is qualified and capable of rendering a much greater service when called upon to do so. The moving of cotton, from the field to the loom, is a complicated process, and requires many resources and much technical skill. Our present system, which we are constantly striving to improve, has come as the result of much blood, sweat, and tears—to say nothing of indigestion and heart attacks. For my part, I am more than a little bit proud to be a member of an industry that has found means of rendering the unique services that we perform, for so little cost. A cotton man is a fabricator, an insurance company, a bank, a shipping agent, etc.—we have proved that we can do the job of merchandising far better than a publicly-owned organization, whose mistakes were paid for with the taxpayers' funds, and in the interest of perpetuating our system, which is tried and proven, I think that money, time, and effort spent in acquainting the public and our legislators of the facts will pay dividends in the long run. Our fine sister organization, the National Cotton Council, is demonstrating what public relations can do for cotton generally. I would like to see us take a leaf from their book and do something for our part of the industry through supplying funds, and personnel, and ideas, to our affiliate, the ACSA, to better our public relations and locally, to tell our neighbors what we are doing. When our neighbors and legislators are acquainted with the facts, the opinions we, as highly qualified specialists, and public-spirited citizens express, concerning our commodity will receive the deserved attention. Your present staff is capable of rendering such services when, and if, called upon, and I hope that they will be.

Your TCA presently has larger resources—and more members than at any time in the past. The largest single item in our budget was for the cotton improvement and contact committee. This committee is performing a wonderful job for us and the funds furnished them are, in my opinion, more than a sound investment in our future. During the 12 months ended March 10, 1949, we collected from you, for account of ACSA over $31,000, and the money has been well spent. The ACSA, owing to its increased activities and loss of revenue from domestic sources, presently is operating at a deficit. It seems to me to be a sound policy that this affiliate must increase its revenues to a point where a reasonable surplus can be created each year against a rainy day, which may be in the offing—at which time it will undoubtedly be necessary for the ACSA and our association to expand its activities materially.

I would like to take this occasion to thank the directors and committee chairmen for their splendid cooperation, guidance, and assistance. They gave unselfishly of their time and talents during the year, in the interest of us all, and I know we are all deeply grateful. It has been a great privilege and pleasure to serve you as your president, and an honor that I will always cherish.

Democracy Can Take It

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Democracy Can Take It," from the Putnam (W. Va.) Democrat of March 25, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEMOCRACY CAN TAKE IT

The easy strength of a giant speaks for itself. We believe the United States has just shown that strength, through its State Department, in issuing visas to 29 delegates from behind the iron curtain to attend the Cultural and Scientific Conference for World Peace in New York.

The State Department makes no bones about the fact that the conference will undoubtedly be used to attempt to spread Communist propaganda. But it makes some far more effective democratic propaganda of its own—all the more effective because of its basic truth—when it declares:

"The Government of the United States has approved the issuance of these visas because of its unswerving devotion to freedom of information and free speech on any issue, however controversial it may be. As such, this Government does not feel that the visa authority should be used to prevent any arrangements however dubious certain of them may appear, for open public debate of outstanding issues. We owe it to ourselves not to prevent such arrangements regardless of the actions and policies of other governments."

The greatest temptation to be met in fighting an ideological enemy is to make yourself over into the image of your foe in the process. Hence the force of the New Testament warning against man's gaining the whole world while losing his own soul. But to overcome your enemy by the force of a superior example is another matter. We believe the State Department has the right idea.

Christian Ethics

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. ROBERTSON. Mr. President, the Senate of the United States has never had a more brilliant or more beloved Chaplain than the late Dr. Peter Marshall. Though his death was untimely there is no one in this distinguished body who can adequately appraise his influence for good. It will live after him "woven into the stuff of other men's lives."

No less a master of the English language than Mr. Winston Churchill could have expressed as eloquently as did Dr. Marshall the fundamental truth that God governs in the affairs of men. In his Boston speech last Thursday evening Mr. Churchill said:

> The flame of Christian ethics is still our highest guide. To guard and cherish it is our first interest, both spiritually and materially. The fulfillment of spiritual duty in our daily life is vital to our survival. Only by bringing it into perfect application can we hope to solve for ourselves the problems of this world and of this world alone.

Today I received a letter from the mother of Dr. Marshall's widow, Mrs. John A. Wood, the devoted wife and helpmate of a consecrated Presbyterian minister now serving in one of the garden spots of the Old Dominion—Northampton County, Va.

Many references at this session of the Congress have been made to our international problems and to our domestic racial problems. The faithful Christian women of the United Council of Church Women of Northampton County are pointing the way and the only sure way to "drive out discontent" as Woodrow Wilson once said "and lift the shadows from the road ahead."

I ask unanimous consent to have the letter printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR SENATOR ROBERTSON: As president of the United Council of Church Women, of Northampton County, I am writing to ask your interest and cooperation in a project which we are trying to carry out in our county. One which we believe will have far-reaching influence on the lives of the future voters of this county.

In connection with the Gideons of the Norfolk camp, we have undertaken to place a Bible in each hospital room, and a New Testament (with the Psalms and Proverbs) in the hands of each nurse in the hospital, and a New Testament in the hands of each student in the county, above the fifth grade, and a Bible on the desk of each teacher. The first part of the project has been carried out. At a special service held in the hospital 2 months ago the Bibles and Testaments were presented. The Bibles for the school rooms and Testaments for the students, should be presented before the end of this school year. Due, however, to the lack of funds, we have been unable to do this work.

We have 1,700 students above the fifth grade in Northampton County. Of these, more than 900 are colored. No greater work could be done for the young people of the county, both white and colored, than to inspire them to read the Bible. We are most fortunate in having the wholehearted cooperation of our county superintendent and the principals of our schools, and the door is wide open for this Bible work. The Testaments which we want to give cost about 35 cents each, wholesale, the Bibles $1 each. The Gideons will do all they can to help with the project, but we will have to raise several hundred dollars to help pay for the books.

From friends of yours on the eastern shore, and my son-in-law, the late Dr. Peter Marshall, I have been happy to learn of your deep interest in spiritual things. So, if it seems a bit presumptuous on my part to ask for your help in this Bible for the youth of Northampton County project, it is only that I am fully convinced that we need only to give those who are interested the opportunity to help us. It is the Lord's work, not that of our group of church women, but we do not want to fail Him by any lack of making our needs known and giving others the opportunity of helping.

The little leaflet which I am enclosing will give you a better idea of the project. And if you are guided to make a contribution toward it, make the check to the Gideons, International, and I will forward it to Norfolk camp.

With sincere good wishes for you personally, and the thanks of the United Council of Church Women of Northampton County, for any help which you may be led to give us, I am,

Yours most sincerely,
LEONORA W. WOOD
(Mrs. John A.)

Bretton Woods, the British Loan, and the Marshall Plan

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. BREWSTER. Mr. President, I have a rather interesting compilation of statements regarding the Bretton Woods agreement in 1945, the British loan in 1946, and the Marshall plan in 1948, covering the various objectives of currency stabilization, the ending of trade barriers, strengthening security, and establishment of a fruitful and peaceful world; and I ask that they be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

	Bretton Woods, 1945	British loan, 1946	Marshall plan, 1948 (first year)
Currency stabilization	"The Bretton Woods proposals present us with a chance to avoid this disaster (economic warfare and shrinking international trade) by acting in common with the other nations in the world to put aside the implements of economic warfare and make possible an expansion of production and consumption and trade" (Dean Acheson, Assistant Secretary of State, before House Committee on Banking and Currency, 79th Cong., 1st sess.).	"The credit to England is in no way a precedent for other loans. Its particular purpose from the American point of view is to free a major segment of the world's trade from the currency and trade restrictions by which it is now shackled" (Secretary of the Treasury Vinson before Senate Banking and Currency Committee, Mar. 6, 1946).	"It (this European program) is aimed at achieving a true, solid, firm, economic recovery, and reconstruction of this devastated part of the world. * * *" (Ambassador Lewis Douglas, hearings before Senate Foreign Relations Committee on ERP, 80th Cong., 2d sess., pt. 1, p. 81, Jan. 9, 1948).
	"The cornerstone for international economic cooperation is the Bretton Woods proposal for an International Monetary Fund and an International Bank for Reconstruction and Development" (Franklin D. Roosevelt message, Feb. 12, 1945).	"It (the British loan) will aid British recovery and reconstruction and at the same time be of enormous advantage to this country" (Secretary of Commerce Henry Wallace before Senate Banking and Currency Committee, Mar. 12, 1946). "Currencies, under United States-British leadership, will gradually be stabilized on a modified gold-exchange basis and the United States and Britain will stand together against the race to revalue currencies" (Senator H. ALEXANDER SMITH, in the Senate, CONGRESSIONAL RECORD, Apr. 26, 1946, p. 4153). "The British financial agreement is the supplement or the complement of Bretton Woods. It is merely the speeding up of the transition period in Bretton Woods, and time is of the essence" (Secretary of the Treasury Vinson, hearings before Senate Banking and Currency Committee, May 14, 1946, p. 39).	

	Bretton Woods, 1945	British loan, 1946	Marshall plan, 1948 (first year)
End trade barriers		"One major virtue of this loan agreement is that it cuts through the financial log jam which has made it so difficult to get on with the job of removing other obstacles to trade between nations" (Dean Acheson, speech to the United Nations Association of Maryland, Feb. 1, 1946). "New trade opportunities for the United States will be opened up because the dollars earned by British Empire countries must be spent in the United States and under the arrangement will be free from any British control" (Senator H. ALEXANDER SMITH, in the Senate, CONGRESSIONAL RECORD, Apr. 26, 1946, p. 4153).	"If the (Marshall) plan succeeds, the entire international sky will brighten like magic. With the 16 nations of western Europe restored to health, production, and cooperative trade the world will achieve a new stability which only a madman would attempt to upset" (Will Clayton, CONGRESSIONAL RECORD, vol. 93, pt. 13, pp. A4664 ff).
Strengthen security	"Bretton Woods is the complement of Dumbarton Oaks. To construct a peace, there must be one peace—an economic peace as well as a political and military peace" (Dean Acheson, Assistant Secretary of State, before House Committee on Banking and Currency, 79th Cong., 1st sess.). "Without international collaboration in the economic and financial fields, organization for security in other fields will not insure us a lasting peace" (Dean Acheson, Assistant Secretary of State, before House Banking and Currency Committee, 79th Cong., 1st sess.).	"The British loan will aid the revival of world trade and prosperity, which is necessary to heal the economic wounds of war and insure the preservation of the peace" (Secretary of Commerce Henry Wallace, before Senate Banking and Currency Committee, CONGRESSIONAL RECORD, Mar. 12, 1946, p. 270).	"I firmly believe * * * that a recovery program for Europe of the size and nature proposed by the President will serve the cause of peace" (W. Averell Harriman, hearings before Senate Foreign Relations Committee on ERP, 80th Cong., 2d sess., pt. 1, p. 245, Jan. 12, 1948). "* * * its (the Marshall plan) success will yield priceless dividends in world peace and security—which also means American peace and security—in comparison with which the cost of the plan will be insignificant. "In simplest terms, it is a proposal that America help western Europe to save herself from economic and political collapse; * * *" (Will Clayton, CONGRESSIONAL RECORD; vol. 93, pt. 13, pp. A4664 ff).
Fruitful, peaceful world	"They (the Bretton Woods agreements) are all parts of a consistent whole. That whole is our hope for a secure and fruitful world, a world in which plain people in all countries can work at tasks which they do well, exchange in peace the products of their labor, and work out their several destinies in security and peace" (Franklin D. Roosevelt message, Feb. 12, 1945).	"We are making this loan to Great Britain because it will enable nations to trade all over the world, instead of in restricted areas; because it will give an outlet to our products of farm and factory, and employment to American working people; because it will contribute to the prosperity and happiness and contentment of other people as well as of our own, and thereby contribute to the foundations for peace and security and accord among the nations of the world." (Senator BARKLEY, in the Senate, CONGRESSIONAL RECORD, Apr. 17, 1946, p. 3840). "This loan would be good business for us. Moreover, I regard this loan as necessary to peace. It tends toward a solution of the economic problems in the world which are at the root of international disputes." (Senator Austin, radio speech in Boston, Apr. 29, 1946). "This agreement is a part of the world economic policy of the Government of the United States. It is a part of the peace program." (Senator BARKLEY, in the Senate, CONGRESSIONAL RECORD, Apr. 17, 1946, p. 3840).	"To promote world peace and the general welfare, national interest, and foreign policy of the United States through economic, financial, and other measures necessary to the maintenance of conditions abroad in which free institutions may survive and consistent with the maintenance of the strength and stability of the United States" (title of Public Law 472, 80th Cong., 2d sess.). "I believe that this program is one of the most far-reaching undertakings for peace and for human progress ever undertaken by this or any other country. It is noble in concept but it is based on considerations of our own self-interest and in fact, in my opinion, of our self-preservation." (W. Averell Harriman, Secretary of Commerce, hearings before Senate Foreign Relations Committee on ERP, 80th Cong., 2d sess., p. 246, Jan. 12, 1948.) "This legislation * * * seeks peace and stability for freemen in a free world. * * * It fights the economic chaos which would precipitate far-flung disintegration. It sustains western civilization. * * * It recognizes the grim truth—whether we like it or not—that American self-interest, national economy, and national security are inseverably linked with these objectives." (Senator VANDENBERG, CONGRESSIONAL RECORD, No. 5, Mar. 1, 1948, p. 1915).

Address by Archbishop Bergan at St. Patrick's Day Banquet, Omaha, Nebr.

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Archbishop Bergan at the annual St. Patrick's Day banquet, sponsored by Omaha's Ancient Order of Hibernians, at Omaha, Nebr., on March 17, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Looking at the world through rose-colored glasses will not change the drab, sober coloring of the leaden, darkened tinge of the present day. Black predominates with a not too rosy future and clouds hide the sunshine which daily should bless us. Here and there in an ever-widening circle the haunting black is splotched with a vivid red; the red of blood and defiance streaming in floodlike torrents from a supposedly friendly nation of wartime days. She was our ally; side by side, her sons and ours fought and died, and she with us shared the fruits of victory.

But the friendship of deceit and treachery faded fast in the dim light of the afterglow; and by stealth and propaganda, by lash and prison and death, the lands of 10 countries are crimsoned with the rising tide of absolute slavery; loss of God and loss of self, with a positive threat to all liberty-loving men the world over. The most dangerous menace in history faces us; we must conquer it or perish.

But with all the might of the minions of Moscow, with their armies, their secret police, their spies, and their machinations, they are having a hard time in turning this world Red. But come the 17th of March, without a whisper of a gun, or the clank of a chain, or a suggestion of force or fear, the whole world turns green. Indeed, there is heard around the globe the tramp of thousands and thousands of marching feet. But they will neither be the feet of armies on the march nor of slaves dragging themselves to doom. The Irish, who for centuries have been too familiar with both these sounds, march on this day proudly and freely, gaily boasting of their heritage of faith and freedom—and all the world will applaud and join in the wearing of the green.

Green is the symbol of everlasting hope. It is the sign of another springtime; the harbinger of better things to come. It is the answer to the threat of a perpetual winter of discontent, the constant reminder that God is still in His heaven and all could be right with this world. Seven hundred years of winter never blotted out from Irish hearts the undying convictions that spring would return, no matter how black the night or long the weary vigil.

Long and severe was their winter. Starvation their daily diet, when plenty abounded; but starvation was preferable to apostasy and famished mothers with babes at their empty breasts turned their faces to the gutter and died, lest they lose their souls by a bowl of soup. Hunted like the beasts of the forests, they worshipped their God in the early morn, when faithful priests broke unto them the bread of life on craggy altar with wind and wave singing no requiem but the Mass of Resurrection, which one day would come. Prison and exile, sons and daughters of them I met in Australia, Tasmania, and New Zealand and all over the world. Deprived of an education; poverty stricken, they learned the lessons of life and were rich in the blessings of their Heavenly Father. Never conquered by an overwhelming foe but ever victorious, for they were true to their convictions of freemen. God's children could never be slaves and one day they would rise to their stature and regain their birthright.

Smiles mingled with their tears, playing hide-and-seek the live-long day—friendless, never—for daily they held sweet converse when they told their beads to her, who was a sorrowful mother too; and brave men walked up the rough, hard, stony road, first traveled by their Saviour.

Today we celebrate the feast of the patron saint of these heroic people. It makes little difference where he was born; suffice to know that he did go to an island of pagans and, without bloodshed or force of any kind, but by the persuasiveness of the Gospel, converted the entire land to the sweetness and peace of the Christian way of life. He had no army, nor wealth, but was only a commoner in the eyes of those who held sway in those days. But he did his work and did it well, and after 1,500 years it still perseveres. I wonder if 15 centuries from now a parade similar to that which marched up Fifth Avenue in New York this afternoon will march through the streets of Moscow in honor of Josef Stalin? He is supposed to be a conquerer, too. There are no parades in Berlin or Rome for those who only a few years past were national heroes. They held power and nations trembled, and their subjects obeyed in abject fear and waved banners and some closed fists when they passed by. They were to bring great blessings to their people; yet one lies in an unnamed grave, and the other took his own life as a cringing slave.

There is a lesson in St. Patrick's Day for all freemen, and there is a promise of hope for all who suffer under the cruel heel of the tyrant. St. Patrick, saint and apostle, gave the Irish a faith that not all the fury of the tyrant nor any form of human adversity could tear out of their hearts. During all the long years they stood for God and St. Patrick and their native land. And they won. They kept their faith, and they earned their freedom. All freemen can learn from the Irish that loyalty to God, and to Him alone, can keep them free.

There is grave reason to doubt that the present-day world has learned this lesson. After the most disastrous war in history we still do not have peace. Men sit at tables and barter and haggle, and 12 men keep this world in turmoil. Will they ever learn that without faith in God, the one source of truth, there can be no faith in your fellow man? Without trust in Him, the One who will keep His promises, there can be no security in the whims of our neighbor? Without inspiration from Him, there can be no safe planning for the future? Without a prayer to Him for help, He who is still the ruler of the world and our provident Father, this world will perish?

There is a lesson too for all those who even today languish in prison cells, martyrs for liberty and love of their fellowmen. There have been Cardinal Mindszentys and Archbishop Stepinacs in the long list of Irish saints. May St. Patrick sustain them and cause them to remember that all those who suffer persecution for justice sake can look to the Irish and know that theirs is the kingdom of heaven and theirs too must be the freedom of the children of God.

Thus it is that this evening in the city of Omaha, in glorious America, the Sons of St. Patrick rejoice in him and his children. With their brothers, whose ancestors came from every nation under heaven and who fought for freedom in days gone by, and some are suffering today, they glory in the triumphs of days that are past. It is right and proper that it should be so. Pride of ancestry will be the incentive for imitation. Our forebearers came here seeking liberty and were welcomed. They had their days of sadness; they were objects of ridicule, scoffed at, calumnated on the stage, denied the opportunity of employment. But in the spirit of their patron and their fathers, they too remained faithful to God and to their burning desires for a free way of life in lovely America. Some fought and died to preserve it here, and we are the fortunate beneficiaries of their sacrifices.

Are we their worthy sons? America has been good to us. What have we done in return? Do we spend our time in complaint or everlasting criticism?

Have we ever performed one positive act for the advancement of our beloved land? Have we one tiny spark of the zeal of our pioneers, who fought against overwhelming odds that the American way of life might be born? Are we awake to the dangers which beset her now? If I could leave one thought with you on this day, it would be this: Are we acting now to prevent in America the sufferings of those who have gone before us? There may not be too much time left. I ask you in the spirit of St. Patrick to put your faith in God and America to a practical purpose. Live it, act it, love it. Much has been given us; much will be expected in return. May we ever be faithful Sons of St. Patrick and faithful sons of America.

It's a great day for the Irish, this feast of St. Patrick. It's a great day for the whole, wide world—the day that the world turns green.

Atlantic Union

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atlantic Union," from the New York Herald Tribune of March 9, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC UNION

A whole series of developments are coinciding to attest, in a dramatic way, to the reality and vitality of the great idea of Atlantic union. Starting from many different springs of motive, from many special sources of hope or anxiety, the origins are coalescing into a mighty historic stream, carrying with it a greater present power and future potential than many, perhaps, are aware of.

A single day's news brings a grist of dispatches which 20 years ago would have been almost inconceivable, and even 10 years ago would have seemed almost improbable. The Danes are following the Norwegians in throwing their fate in with the Western alliance, not because that alliance can as yet offer them any absolute security, but because in a cold and perilous world one must stand with one's own side, in defiance of the risks. The Brussels pact powers are about to expand their rudimentary organization of the western European community—an organization which already includes a joint defense system and a common structure of economic cooperation—to embrace a common political organ. They are projecting a bicameral consultative political council, to which the three Scandinavian powers, Italy, and Eire will be invited, together with Britain, France, the Low Countries, and Luxemburg, who are the signers of the Brussels Treaty. In Washington the Foreign Relations Committee of the Senate has unanimously reported the bill authorizing further aid under the Economic Cooperation Administration, the basic expression and generator of western European and Atlantic union. And the Atlantic Pact text itself is reported to have been completed and referred to the participating powers for early action.

These are all striking developments, each pointing in its own way to the emergence of a new form of political union and organization, a new factor in the tangled history of Western culture. Something like a United States of Western Europe, operating in intimate alliance with the strengths of the North American Continent, is already on horizons where a few years ago one could scarcely imagine that such a thing could ever appear. Behind its appearance are, plainly, two great factors: One is the successful organization of the vast totalitarian empire of Soviet communism, operating on principles diametrically opposite to those of the libertarian West and inevitably a threat to every system which refuses to accept them. The other is the realization by the American people that the best use to which they can put their own resources, their own blood and their own convictions is in the rebuilding of a common western system capable of standing by its own strength and power against any alternate method for organizing human life and human needs.

Without the threat of Soviet Russia, there would be no pressure for Atlantic union; without the resolve of the United States to support it, an Atlantic union would be impossible. Both factors are, however, present; and from them a new synthesis of international policy, a new and creative development of governmental organization, is actually appearing in world history. It is not growing out of theory, but out of facts; with clarity of understanding and vision among the peoples, it will continue to grow, and its possibilities are almost limitless.

Truman Economics and the Realities

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Truman Economics and the Realities," published in the Philadelphia Inquirer of April 1, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUMAN ECONOMICS AND THE REALITIES

President Truman's dogged insistence on higher taxes and stand-by wage and price controls, in the face of overwhelming evidence that inflationary forces are dwindling, merits no support either in Congress or from the public.

There was doubt about the need for these controls last January, when the President asked for legislation authorizing them. Events in the past 2 months have removed the doubt; they have made it certain that there is at this time no justification for moves to give the executive branch power to clamp down ceilings on either wages or prices.

Mr. Truman passed lightly over the facts of recent economic history in asserting that his anti-inflation proposals are still desirable. He ignored the evidence of falling prices in many lines, of increasing supplies of goods

the consumers want. In effect, he disagreed with the top financial advisers in his official family, who have been issuing statements reassuring the public that the current price drop does not mean the Nation is headed toward a serious depression.

That is sound advice. There is no reason to fear that the reduction in prices is anything but the result of the operation of two perfectly normal factors in a free economy—supply approaching and sometimes exceeding demand and overpricing of some articles.

Those clearly do not add up to a dire situation for the Nation's economy. They mean that the full-scale production since the end of the war is beginning to show its effect, and that the overpricing stemming from scarcities is responding to resistance of buyers.

But if an orderly price drop is no cause for alarm, neither is it an occasion for instituting controls aimed at keeping wages and prices from soaring out of sight. If the situation should change, there will be time to act.

In renewing his demand for stand-by controls, Mr. Truman appears to be unaware of the economic forces at work. Asking those powers now, when there is no need, smacks of a move to make Government controls a permanent part of the economy, to interfere at some future date with all economic activity.

The President's demand for higher taxes also seems strange in view of the testimony of the Nation's markets that inflationary forces are disappearing. For it will be remembered that last year, when Mr. Truman vetoed a tax reduction, he did so on the grounds that higher taxes were necessary to take the steam out of inflationary purchasing power.

Now prices are falling, and still Mr. Truman asks for higher taxes. But he fails to answer the question whether, if higher taxes last year were essential as a deflationary measure, they would not be just as deflationary this year when the Nation doesn't need any more deflation, and the administration itself is invoking its powers to modify the downward pressure on prices.

Most Americans will subscribe wholeheartedly to Mr. Truman's desire to avoid a deficit this year. But the alternatives facing him are not simply to have a deficit or have higher taxes.

The sensible—and long-overdue—step to avert a deficit is to start work right now on cutting down the swollen Federal budget. The President's budget recommendations increase, instead of reducing, the number and size of the sprawling Government bureaus, in themselves a tremendous drain on the economy. The Nation would get better government service—and perhaps eliminate the deficit—if the administration undertook a sincere pruning job this year.

The Nation's economy is strong, but it could be seriously harmed by the ill-advised moves urged by the President. An approach based on economic facts, not political campaign slogans, is essential. If Mr. Truman persists in his drive for controls and taxes that would be unnecessary and dangerous, he will fully deserve another defeat in Congress.

Why South Fights for Filibuster

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting editorial which appeared recently in the United States News and World Report.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY SOUTH FIGHTS FOR FILIBUSTER—DIXIE SENATORS FEAR A NATIVE NEW DEAL

(South's political, business life is at stake in Senate fight against filibuster. Any change now upsets an old system. Right to talk a bill to death is a weapon to protect States' rights, to beat antilynch laws, equal-rights plans for Negro. What southern conservatives fear is a Senate gag rule that will cut their power, swing South over to New Deal ways.)

The battle of the filibuster, now being waged in the Senate, involves far more than whether a majority, or two-thirds, of the Senate shall be able to shut off debate. It is a stand of southern Senators to keep the old way of life for the South and to keep their own places of power. And it is a battle in which northern conservatives have a big stake.

The fight is the first engagement in the campaign to halt President Truman's civil-rights program. It marks a show-down between conservative and New Deal forces, of both parties. Business outside the South is interested in the fight. Many southern plants run on northern capital. Southern Democrats often have combined with northern Republicans to fight off New Deal labor and tax legislation. The old coalition now is threatened.

Through the filibuster, with its unlimited debate, southern Senators have been able to talk to death many measures that might have doomed the political system that holds them in power. Under the present regime, the South stays conservative and business has a strong voice in running affairs. The system thrives on low votes and a divided labor force. The filibuster has helped southerners beat measures to give the Negro broader voting privileges and better jobs.

Now the South sees its old weapon endangered. A plan to stiffen Senate rules against the filibuster is taking shape in a Senate committee. It would prevent a small minority of the Senate from talking endlessly until they have killed a bill or forced its withdrawal. This has been the chief weapon southerners have used to hold off action on antilynching and anti-poll-tax legislation.

Death to coalition: Southerners say the end of the filibuster would slowly strangle the coalition of southern Democrats and northern Republicans by permitting legislation to pass that would overturn the present political regime in the South. Through this coalition Republicans and southern Democrats have been able to hold in check Democratic Presidents and New Deal legislation.

The southerners argue that removal of the poll tax would widen the base of the electorate in the South and might imperil some southern conservatives. An act to compel industries to give Negroes and whites an equal chance at jobs would bring the Federal hand deeper into business.

And in the backs of their minds some of the southerners see the old division between the Negro and the white worker wiped out in the South. An undivided southern working force would be easier to unionize, and an organized working force in the South could spell the same disaster for southern conservatives that organized labor has worked out for conservatives in the North.

The South's political system is staked upon the battles of the present Congress, and of these the fight against a ban on filibusters is the key engagement. If the rules are changed to ban filibusters, southerners have little hope of winning their fight. Restrictions that hold down the vote are important to the South's one-party system, and southerners fear the Negro vote and unionization.

A low vote bolsters the present system. Kansas, with about the same population, cast three times as many votes in the 1948 Presidential election as did Arkansas and five times as many as South Carolina; Iowa cast five times as many votes as Alabama; Minnesota three times as many as Georgia or Virginia. In southern primaries the average range of voting is from 1 or 2 percent of the potential total in Virginia to 23 percent in Texas.

The poll tax, whose removal by Federal legislation southerners now are fighting, is only one of the restrictions that help to hold down the vote. Three southern States have property qualifications for voting. The requirement usually is for ownership of 40 acres of land or $300 of personal property. Seven States have educational qualifications for voting; seven States require the payment of a poll tax before voting.

As it stands, the poll tax is only a fighting symbol. In such States as Florida, Georgia, Louisiana, and North Carolina, which have abolished it, the percentage of potential voters who ballot is not much higher than it is in poll-tax States. The real job of holding down the vote is done in most southern States by the boards of registrars in the counties. These pass on voter qualifications. They can make it hard for voters to register.

A united labor force in the South is feared both by the politicians and by business interests. It is this fear, in part, that underlies some of the opposition to the bill to require industries to give Negroes an equal chance with whites at all kinds of jobs. For Negroes and whites have been played against each other by some southern industries to keep down unionization. A Labor Department study of unions in the South says, "Race prejudice has been used to break strikes in the South (and elsewhere) and to keep workers divided among racial lines."

This is cited as one of three important factors that have kept down unionization in the South. Another is the fact that much of the southern labor force comes from farms and is not accustomed to group action. And the third is that there is a great scramble of desperately poor people from farms for jobs. The result is that unions have grown slowly in the South. But now they are taking hold.

Negroes and whites alike are moving away from farms and into cities of the South, hunting better jobs. Between 1941 and 1945, upward of 3,000,000 changed their places of residence. Some now are moving back to farms, for there are not enough jobs to go around in the South. Southern incomes almost trebled between 1938 and 1946, but in the latter year they still averaged $500 a year less than those of the rest of the country.

A politician's nightmare is shaping up in this picture of the South. If the white man and the Negro throw down racial prejudice and work together, unionization will grow. With stronger unions, the workers can do the same job on southern conservatives they have done on northern conservatives.

Indications of what can happen already have shown up. ESTES KEFAUVER was elected to the Senate from Tennessee by the strong backing of labor. Mrs. Helen Mankin got a majority of the popular vote in the Georgia congressional district that includes Atlanta, 2 years ago, by mustering the combined support of labor and Negroes. She failed of election when the local Democratic committee decided to use the county unit system; Mrs. Mankin had gotten more votes, but her opponent had carried more counties.

Southern politicians, therefore, are fighting hard to hold in check any effort by the Federal Government to bring the white worker and the Negro worker together. But

Negroes are driving steadily toward more privileges. In every southern State, they are developing careful, thoughtful leadership. Young Negroes are taking advantage of schools. The South now is spending more for Negro schools alone than it did a few years ago for both white and Negro schools.

Negroes are insisting on more pay, a larger part in all kinds of work, and shorter hours. Negro women are demanding more pay and less work, or, in view of the better pay of their husbands, they are not working. This is deeply resented by the white South, long conditioned to Negro help for little pay.

Southern whites are angry and fighting stubbornly to hold back the drive of the Negro for a better share of everything. Much bitterness is developing. The Ku Klux Klan is marching again, and the preachers of race hatred are busy. But broad factors are at work in southern schools and colleges to change the old pattern of thought.

In this situation, old-line southern politicians are fighting with their backs to the wall. If white and Negro workers in the South manage to work together and get to the polls, they can send a new kind of southerner to Washington. He would speak for the poorest people in the Nation and might make the New York and Chicago New Dealers look like pikers. The southerners want to use the filibuster to halt this trend.

The Chicago Housing Shortage

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Chicago and S. 1070" from the Chicago Sun-Times of March 23, 1949. This editorial points out the need for housing by a large segment of our population, and I believe it should be called to the attention of all Members of Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHICAGO AND S. 1070

Chicago's housing shortage is so chronic and so acute that every possible method of attacking it should be used.

That is why Chicago has a stake in S. 1070, the bipartisan Senate housing bill. That is why the people of Chicago and their city government should get behind the drive for S. 1070 in Congress, and should prepare to make the maximum use of its provisions when it is enacted.

S. 1070 is primarily a bill to provide Federal aid for cities in slum clearance and the construction of public, low-rent housing. What it might mean to Chicago has been described for Sun-Times readers by David Anderson. As the bill now stands, Chicago could qualify for 30,000 homes to be built by the Chicago Housing Authority over the next 6 years.

We now have in operation fewer than 8,000 permanent public dwellings, with about 2,000 more in sight. Thus S. 1070, if Chicago officials are on their toes, could mean tripling the city's stock of public housing.

We need that public housing for many reasons. One of the strongest reasons is the terrific over-all shortage of housing of all types. The metropolitan housing and planning council estimates that more than 242,000 families need new or rebuilt homes and flats.

Measured against the need, 30,000 public housing units are a drop in the bucket. But if we don't go after the 30,000, we shall be even worse off. Private enterprise just isn't filling the need.

Though 1948 was a big year for residential building, only 6,000 permits were taken out in Chicago proper. That, too, is a drop in the bucket compared with the need. Most of the postwar building has taken place in the suburbs, and virtually all of it has consisted of construction for sale.

We need home building inside the city. We need home building for rental. We need home building of a kind that will permit slums to be rebuilt. All three of those targets demand that a substantial public-housing program be included in Chicago's plans.

Well, isn't everybody for housing? You'd think so, but public housing doesn't always get a friendly reception in the city council. One alderman has blocked a public-housing project in his ward for more than a year.

In rejecting the Carey ordinance, the city council decided not to apply the principle of no-racial-segregation to privately financed slum-clearance projects. It cannot afford to narrow the area in which the nonsegregation policy does operate. It should go after a substantial public-housing program as an integral part of the city's long-range slum-clearance plans.

Central America

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Saturday, April 2 (legislative day of Friday, March 18), 1949

Mr. BREWSTER. Mr. President, all too infrequently in these days we hear about constructive efforts to broaden understanding and to improve effective cooperation among the peoples in our community of neighbors. However, there recently came to my attention what I believe to be a constructive effort along those lines. It was extended by one of our well-known New England enterprises, but involved leading educators and agriculturists from many of our States, and was directed at results outside our own country.

The United Fruit Co. invited some 24 educational leaders—college presidents and those chiefly interested in the improvement of farming—to visit the firm's operations in the Republics of Honduras and Guatemala. These visitors not only studied the accomplishments of the fruit company, but also had opportunity to examine the peculiar problems and singular opportunities existing in that part of the world.

As might be expected, these men made observations and reached conclusions of varied nature. A friend has given me a copy of their reports; and I have found them somewhat interesting, particularly in view of our current interest in ways and means of accelerating the progress of our friends and neighbors outside the United States. I shall not take time to read these reports to the Senate though they are, for the most part, brief; but I ask unanimous permission to include salient points from their reports in the RECORD, so they will be available, as time permits, for wider service.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

I was much impressed with the evidence everywhere of the fundamental need of adequate capital operating under broad, forward-looking policies. Where such use of capital has taken place, living standards of the people are much higher and health and educational opportunities much better. Sociologists and other would-be solvers of the world's economic and social problems should study this section before criticizing capitalistic developments. (Dr. Ernest L. Anthony, dean of agriculture, School of Agriculture, Michigan State College.)

The United Fruit Co. has done a fine job of instilling a philosophy of loyalty to the organization in the personnel, and of cooperation with the governments and the public of the countries in which you operate. To them, the United Fruit Co. is more than a company to produce and merchandise various products; it is also a public service organization, with social and economic responsibilities. * * *

In other words, you are making a contribution to the welfare of people. To me, this philosophy of business is fundamentally sound. In business as in other activities you will always get back far more than you give, even though what you give costs considerable money. * * * What makes a company great is what you are doing for human welfare: raising the standard of living of the people; providing better health safeguards and medical care; developing the resources of these countries; engaging in reforestation and soil conservation; providing employment; educating the youth; improving nutritional habits of the people. * * *

"What you give in these ways will in the long run reward you in revenues to a far greater degree than a policy of take as much as you can for profits and give as little in return to the people in the countries in which you operate. (Dr. C. E. Brehm, president, the University of Tennessee.)

The constant attention to plant and soil science is a sure indication that the company is overlooking no factor in improving production and efficiently utilizing its lands. * * * When banana cultivation fails because of plant disease or soil conditions, that area is utilized for other crops. * * * What United Fruit is doing should serve as a great lesson to citizen farmers * * * particularly in the field of soil conservation in which the old custom of burning to clear lands is replaced by cutting down the jungle and permitting the quickly rotting vegetation to return to the soil. In this development in the tropical lowlands there rests great possibilities, for these areas will supply highly desirable products for which the great nations of the world offer a steady market. (John F. Cunningham, dean emeritus, College of Agriculture, Ohio State University.)

Because of the hazards of disease, the extremely perishable nature of the product, and the close coordination of production and marketing that is necessary, I am afraid that these banana plantations might again become jungles but for the skill of the present management. (Prof. A. W. Gibson, director of resident instruction, New York State College of Agriculture, Cornell University.)

The establishment and operation of the Escuela Agricola Panamericana in the Zamorano Valley near Tegucigalpa, Honduras, by the United Fruit Co. have resulted in a unique and valuable enterprise. Not only will the young men who receive training at the school at no expense to themselves profit from the experience personally, but the communities to which they return will be greatly benefited. The director, Dr. Wilson Popenoe, is managing the school in excellent fashion. The plan whereby applicants for the school are visited in their homes prior to acceptance is especially noteworthy. The neat, orderly appearance of buildings and grounds made a most favorable impression on our group and will undoubtedly have a lasting influence on the young men enrolled in the school. (Dr. R. S. Hawkins, vice dean and vice director, College of Agriculture and Agricultural Experiment Station, University of Arizona.)

The group was most universally impressed by the widespread application of agricultural science and engineering skills to agricultural production. This included the scientific methods of draining land and irrigating crops, the timing and methods of applying commercial fertilizers, the system of plant selection and breeding, disease control, mechanization, and health and nutrition programs. (Homer J. Henney, dean of agriculture and director, Agricultural Experiment Station, Colorado A. and M. College.)

All of our group was particularly impressed with the application of scientific facts in the production and transportation of bananas. Certainly this is an example of what can be done by applying science to agriculture. Particularly is this true in the program worked out to control and possibly in time to eliminate the Panama disease in bananas. (Dr. J. H. Hilton, dean and director, North Carolina State College of Agriculture and Engineering, University of North Carolina.)

Your provisions for the development of other crops to insure permanency of operation of the company and employment and assistance to nationals in various ways, your measures for the improvement of health—the child nutrition work was particularly impressive—the school of agriculture at Zamorano, all are evidence of an enlightened management and the recognition in a very practical way of the values of inter-American good will. (Dr. C. B. Hutchison, vice president of the university and dean of the College of Agriculture, the University of California.)

Abacá, citronella, African palm, the many new plantings of valuable woods and the great variety of tropical fruits impressed me greatly as to what may be excellent possibilities for the future. I believe there would be an excellent demand for papayas, mangoes, sugar-loaf pineapple like those growing around Cortes, Honduras, and many other fruits if they were available in our North American markets and our people were educated to their use. There is no question but the foresight of planting such trees as mahogany, teak, rosewood, rubber, and cedars will be of great importance in the future. (Dr. F. D. Keim, chairman, department of agronomy, College of Agriculture, the University of Nebraska.)

One of the achievements that was particularly impressive to me was the level of agricultural accomplishment in the highlands without commercial fertilizers, lime, or farm implements on land where apparently agriculture has been practiced for centuries. When we see what has been accomplished in our own country with the increased use of such aids to production we can envisage what lies in store in these other countries in future agricultural development. (Dr. W. B. Kemp, director, Agricultural Experiment Station, University of Maryland.)

I was impressed, as anyone must be, by the efficiency, alertness, and general competence of your organization. I was impressed even more by the sense of human values that seems to characterize it and by the long-range thinking and planning which is being done in terms of what is best for the people and the countries themselves. I recognize that this may be good business but it is also statesmanship of a high order. I would like to feel that American business enterprises in every part of the world constitute unofficial ambassadorships of such high quality. (Dr. H. B. Knapp, director, Long Island Agricultural and Technical Institute.)

The whole venture is a great example of what free enterprise, imagination, energy, intelligent management, and capital can do to transform a jungle into a great wealth-producing organization which benefits all concerned. In Guatemala I was asked what I thought would help the agriculture of that country and I replied, "More United Fruit Co." (Dr. H. J. Reed, dean and director, School of Agriculture, Purdue University.)

The results in capturing the jungle, harnessing the rivers, controlling disease, and marketing quickly the banana crop are amazing. They represent a new height of business enterprise. At the same time a people are elevated to a level of living heretofore unknown to them, and a country gains likewise in economic resources. (Dr. L. L. Rummell, dean and director, College of Agriculture, Ohio State University.)

The visit to your school at Zamorano was another high light of the trip. This constructive and well-organized educational enterprise should have a far-reaching influence for better relations between this country and all of Latin America. It was my first opportunity to meet Dr. Wilson Popenoe, who was once an employee of this Bureau and about whom I had heard so many enthusiastic comments. His encyclopedic knowledge of tropical agriculture and of Latin peoples, his enthusiasm for his job and the energy which he puts into it all mark him as a most unusual individual. The young men who graduate from the school doubtless will exercise a profound influence for the betterment of agriculture in all of tropical America. (Dr. Robert M. Salter, Chief, Bureau of Plant Industry, Soils, and Agricultural Engineering, U. S. Department of Agriculture, Washington, D. C.)

The research program conducted by Dr. Dunlap and his associates impressed me as well planned and effectively conducted. Here again I seemed to sense an attitude of "how can we benefit the countries and the people living in these countries?" The work on the African oil palm and the properties and uses of the oil, the work on the establishment and growth of plantations of tropical woods, and the development of a breed of cattle better adapted to tropical and subtropical conditions would do credit to any of the agricultural experiment stations in this country. (Dr. Henry Schmitz, dean, College of Agriculture, Forestry and Home Economics, University of Minnesota.)

It seems to me that your public health and educational programs are outstanding, and I want to congratulate you on the forward-looking policy which your company has in effect at this time. (Dr. C. N. Shepardson, dean of agriculture, Agricultural and Mechanical Colleges of Texas.)

I was impressed with the great diversity of interests of the United Fruit Co., and particularly in its efforts to reforest areas that are not suitable for fruit production looking toward the production of valuable hardwoods which are becoming more and more scarce. (Dr. R. H. Walker, director and dean, Agricultural Experiment Station, Utah State Agricultural College.)

The technique being used for the control of the fusarium of the banana through flooding is a gigantic experiment which only a well-financed organization could perform. This observer was constantly impressed with the forward-looking program and scientific direction of the United Fruit Co. (Dr. H. L. Walster, dean and director, Agricultural Experiment Station, North Dakota Agricultural College.)

Basing-Point System Called "Bunk" and Hypocrisy by Cement Official—Causes Iron-Bound Monopoly and Fixed Prices in Cement and Steel Industries

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 31, 1949

Mr. PATMAN. Mr. Speaker, an official of the Cement Institute admitted in a letter to one of his associates, which was intercepted by a Government agent, that the basing-point system, as used by the Cement Trust, was "bunk" and hypocrisy. This admission was in a letter from John Treanor to B. H. Rader, regional manager of the Cement Institute, which I have already placed in the CONGRESSIONAL RECORD. I also inserted a sample of bids made by cement companies which showed that they were identical.

I am now inserting bids by steel companies to furnish steel conduit pipe. They are as follows:

Through the use of the basing-point delivered-price formula, supplemented by the use of common delivery-charge factors and common freight-rate books to aid in reducing and eliminating price differences which might arise through the individual calculation of freight rates and the conversion of such rates from terms of cents per hundred pounds to cents per hundred feet of conduit of any given size, respondent conduit sellers have been able to achieve a substantial degree of delivered-price identity in quoting and selling conduit. The effectiveness of respondents' formula is illustrated in the record in several ways. The following examples, taken from public bids, show varying degrees of uniformity.

Bids to the Panama Canal for supplying 111,000 feet of conduit f. o. b. Cristobal or Balboa, C. Z., were opened June 17, 1935, and were as follows:

American Electric Supply Co. (5 percent, 10 days)	$1,188.90
M. B. Austin Co. (5 percent, 10th proximo)	8,188.90

Baitenger Electrical Co., Inc. (5 percent, 15th proximo)	$8,188.90
Philip Cass Co. (5 percent, 10th proximo)	8,188.90
Central Tube Co. (5 percent, 10th proximo)	8,188.90
Clayton Mark & Co. (5 percent, 10th proximo)	8,188.90
Enamel Metals Co. (5 percent, 10th proximo)	8,188.90
Gaffney Kroese Electric Supply Co. (5 percent, 10th proximo)	8,188.90
Garland Manufacturing Co. (5 percent, 10th proximo)	8,188.90
Gertler Electric Supply Corp. (5 percent, 10th proximo)	8,188.90
Graybar Electric Co. (5 percent, 10th proximo)	8,188.90
Greene Wolf Co., Inc. (5 percent, 15th proximo)	8,188.90
Home Lighting Co., Inc. (5 percent, 10th proximo)	8,188.90
Hudson Electric Supply Co. (5 percent, 10th proximo)	8,188.90
Laclede Tube Co. (5 percent, 10 days)	8,147.70
Lavenson & Savasta (5 percent, 10th proximo)	8,188.90
Lee Electric Co. (5 percent, 10th proximo)	8,188.90
Loman Electric Supply Co. (5 percent, 10 days)	8,188.90
National Electric Products Corp. (5 percent, 10th proximo)	8,188.90
Noland Co., Inc. (5 percent, 15th proximo)	8,188.90
Shell Electric Supply Corp. (5 percent, 10 days)	8,188.90
Thomas Summerville Co. (5 percent, 10th proximo)	8,188.90
Steel & Tubes, Inc. (5 percent, 10 days)	8,188.90
Steelduct Co. (5 percent, 10th proximo after shipment)	8,188.90
Triangle Conduit & Cable Co., Inc. (5 percent, 10th proximo)	8,188.90
U. S. Electric Export Corp. (5 percent, 10th proximo)	8,188.90
Walker Bros. (5 percent, 10th proximo)	8,188.90
Weinstein Supply Co. (5 percent, 10 days)	8,188.90
West Philadelphia Electric Supply Co. (5 percent, 10th proximo)	8,188.90
Westinghouse Electric Supply Co. (5 percent, 10th proximo)	8,188.90
Youngstown Sheet & Tube Co. (5 percent, 10th proximo)	8,188.90
Baltimore Electric Supply Co. (5 percent, 10th proximo)	8,188.90
National Electric Supply Co. (5 percent, 15th proximo)	8,188.90

(Committee exhibit 318.)

In the above instance, 12 respondent conduit sellers submitted bids. Austin, Central Tube, Clayton Mark, Enameled Metals, Garland, National Electric, Steel & Tubes, Inc., Steelduct, Triangle, Walker Bros., and Youngstown each bid $8,188.90, and Laclede Tube bid $8,147.70, but, under a policy of disregarding bids which did not comply with the invitation, the award in this instance was made by lot.

Bids on 100,000 feet of conduit for the Panama Canal, opened January 6, 1938, were as follows:

American Electric Supply Co. (5 percent, 10th proximo)	$6,200.00
M. B. Austin Co. (5 percent, 10th proximo)	6,200.00
Baitenger Electric Co., Inc. (5 percent, 10th proximo)	6,200.00
Enameled Metals Co. (5 percent, 10th proximo)	6,200.00
Gaffney Kroese Electric Co. (5 percent, 15th proximo)	6,200.00
Garland Manufacturing Co. (5 percent, 30 days)	6,200.00
Germantown Electric Supply Co. (5 percent, 15th proximo)	6,200.00
Gertler Electric Supply Corp. (5 percent, 20 days)	$6,200.00
Gold Seal Electric Supply Co. (5 percent)	6,200.00
Graybar Electric Co., Inc. (5 percent, 10th proximo)	6,200.00
Greene-Wolf Co., Inc. (2 percent, 10 days)	6,000.00
Laclede Steel Co. (5 percent, 10th proximo)	6,200.00
E. B. Latham & Co. (5 percent, 10th proximo)	6,200.00
Loman Electric Supply Co. (2 percent, 10th proximo)	6,200.00
Louis Electric Corp (2 percent, 10 days)	7,000.00
Clayton Mark Co. (5 percent, 10th proximo)	6,200.00
National Electric Products Corp. (5 percent, 10th proximo)	6,200.00
Noland Co., Inc. (5 percent, 10th proximo)	6,200.00
Shell Electrical Supply Co. (5 percent, 10 days)	6,200.00
Steelduct Co. (5 percent, 10th proximo)	6,200.00
Steel & Tubes, Inc. (5 percent, 30 days)	6,360.00
U. S. Electrical Export Corp. (5 percent, 10th proximo)	6,200.00
Walker Bros. (5 percent, 10th proximo)	6,200.00
S. Weinstein Supply Co. (2 percent, 10 days)	5,823.95
West Philadelphia Electric Supply Co. (5 percent, 10 days)	6,200.00
Westinghouse Electric Supply Co. (5 percent, 10th proximo)	6,200.00
Youngstown Sheet & Tube Co. (5 percent, 10th proximo)	6,200.00
General Electric Supply Corp. (5 percent, 10th proximo)	6,200.00
Nathan Goodman Co., Inc. (5 percent, 10th proximo)	6,200.00

(Committee exhibit 324.)

In the instance above, 10 of respondent conduit sellers submitted bids. Austin, Enameled Metals, Garland, Laclede Steel, Clayton Mark, National Electric, Steelduct, Walker Bros., and Youngstown each bid $6,200, and Steel & Tubes, Inc., bid $6,360.

Bids on 2,000 feet of conduit for the Panama Canal, opened December 21, 1938, were as follows:

Graybar Electric Co., Inc. (5 percent, 10th proximo)	$687.00
Greene-Wolf Co., Inc. (5 percent, 10 days)	687.00
Clayton Mark & Co. (5 percent, 10th proximo)	687.00
Monumental Electrical Supply Co. (5 percent, 20 days)	638.00
Steel & Tubes, Inc. (5 percent, 10th proximo)	685.80
Walker Bros. (5 percent, 10 proximo)	687.00
Williamsburg Electric Supply Corp. (5 percent, 10 days)	666.40
General Electric Supply Corp. (5 percent, 10th proximo)	686.60
National Electric Products Corp. (5 percent, 10th proximo)	687.00
E. B. Latham & Co. (5 percent, 30 days)	686.60
Garland Manufacturing Co. (5 percent, 30 days)	687.00
Gertler Electric Supply Corp. (5 percent, 10 days)	666.80
Associated Hardware & Supplies Corp. (5 percent, 20 days)	656.00
Youngstown Sheet & Tube Co. (5 percent, 10th proximo)	687.00
Electrical Industrial Equipment & Supply Corp. (5 percent, 10 days)	640.00
American Electric Supply Co. (5 percent, 10 days)	687.00

(Respondents' exhibit 12.)

It will be noted that six of respondent conduit sellers bid in the above instance. Clayton Mark, Walker Bros., National Electric, Garland, and Youngstown each bid $687, and Steel & Tubes, Inc., bid $685.80.

(b) The effect of this pricing system in securing and maintaining identity of delivered-price quotations and prices in private sales was substantial. RSCA tabulated the percentage of all sales of conduit which were "on card"; that is, which accurately reflected the controlling base prices. In a memorandum circulated by Mr. Booth under date of February 10, 1938, it is stated:

"The percentage of tonnage shipped in the month of December on card 76 by the industry was 81.46 percent.

"This includes all the 13 members in the industry and compares with 80.86 percent in the month of November 1937 (committee exhibit 496)."

The report of the conduit committee of NEWA of its meeting of May 23, 1938, states, in part:

"You will probably be interested in knowing the manufacturers' report, that in the month of March 1938, 87½ percent of the rigid iron conduit sold at card 76 (committee exhibit 39–D)."

Reds in Peiping Hold Open-Air Trials of Rich

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. HALE. Mr. Speaker, the insensibility of our State Department to the tragic conquest of China by communism becomes from day to day more shocking. I should like to call attention to the following news article in the New York World-Telegram, of March 28, 1949, by Clyde Farnsworth, descriptive of actual Communist behavior in Peiping:

REDS IN PEIPING HOLD OPEN-AIR TRIALS OF RICH

(By Clyde Farnsworth)

SHANGHAI, March 28.—The new Communist bosses of Peiping are keeping the public amused with mass open-air trials of well-to-do persons accused of crimes against the people.

Chinese who have arrived here said the trials are held out of doors to permit crowds of spectators. So there will always be large numbers present, the Communist council for each of the city's 10 districts supplies at least one spectator from each family under its jurisdiction.

Generally accused of being undercover men from the Kuomintang, the defendants are declared guilty by acclamation of the audience, then led indoors to have their sentences confirmed by a people's court.

MORE SOUND THAN FURY

The trials are more sound than fury so far, with no known cases of lynch action.

Meanwhile, say the visitors from Peiping, rich people who haven't yet been arrested fear to make any display of their money. Good Communists drive automobiles, wear fine clothes, or frequent expensive restaurants. Others don't dare.

Civilians are sometimes seen marching in custody of police or soldiers. Disappearances are common, though it is impossible to say whether the vanished people were detained or have fled.

MANY SHOPS CLOSED

Sixty to seventy percent of Peiping's shops are closed. Private manufacturing has stopped. After dropping, in the first 10 days of Communist occupation, commodity prices soared. There is a heavy black market in American dollars, with Communists themselves eagerly exchanging their local currency for United States greenbacks.

Church services are allowed to continue, but Communist-led student unions are rapidly taking over mission universities and high schools. Russian movies, books, and photographers have appeared in schools.

Four armed Red soldiers guard the United State consulate by day, and more by night. Visitors entering must identify themselves or be identified by the consulate gateman. Sometimes they are searched, and once an armed squad made an inspection of the consulate itself.

Mr. Speaker, I also call attention to a letter of Louis C. Wyman appearing in the Washington Post for March 31 protesting the really outrageous smugness of that newspaper, about what is going on in China, in consequence of what has gone on in our State Department. I emphatically agree with the writer that—

It is never too late to put our shoulders to the cause of freedom and the protection of our own security.

The letters follows:

CHINA'S FRIENDS

I am profoundly shocked by your March 24 editorial, China's Friends. When the Washington Post sinks to the level of a plain smear in attempting to support its traditionally liberal approach, and calls hopeless the fight of those who genuinely wish to prevent a Communist Eastern Hemisphere, I am almost sick at heart.

It is unnecessary to spell out the consequence of complete Communist control in the Far East. Not only China, but Indochina, Burma, Malaya, and the East Indies are already troubled with the first signs of Communist infection. Lies, deceit, treachery, spoliation, noncooperation, murder, pillage are in the same familiar pattern. How long can a free nation such as ours continue to have basic security without prohibitive military expenditures, in a world one-half of which is proposed to be supinely donated to this same communism?

If Senator McCARRAN'S attempts to protect our interests in the Far East and to put the lie to the theory that coalition with Communists can work for peace, is a senseless intervention—if, as the Post states, the cause of the truest friend the United States has had in China is a hopeless fight—if, as the Post implies, the poor, unfortunate people in China would be left alone (which means left to Communist control), then the wholly negative conclusion is that the United States should get out of China, get out of the Far East, and let the whole eastern, oriental world go by default to the hammer and sickle.

It is not too late to help hold the Yangtze line. It is never too late to put our shoulders to the cause of freedom and the protection of our own security.

We have had some experience with Manchuria—the Ruhr of China—before. From 1931 until Japan marched, this same Manchuria we permitted to work for Japan. Today it and its vast industrial capacity works for Russia. Perhaps this time, if we continue to sleep, it may be less than 7 years.

It is not a question of being a friend to China. What is involved here is a commonsense protection of this country. We will not be safe if all of the oriental millions become vassals of the Kremlin.

LOUIS C. WYMAN.

WASHINGTON.

Two Hundred and Fiftieth Anniversary of First European Settlement of Biloxi Area

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Monday, April 4 (legislative day of Friday, March 18), 1949

Mr. STENNIS. Mr. President, the peoples who inhabit the lovely area surrounding the Bay of Biloxi on the Gulf of Mexico are celebrating the two hundred and fiftieth anniversary of the first European settlement in the region. The chief city of this region, Biloxi, was the first capital of the French Province of Louisiana. I ask unanimous consent to have printed in the Appendix of the RECORD an article outlining the history of the region, written by Mr. Anthony V. Ragusin, of Biloxi.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILOXI BAY AREA REACHES 250-YEAR MARK WITH CONFIDENCE IN FUTURE—HISTORIC GULF COAST REGION PREPARES FOR COLORFUL BIRTHDAY PROGRAM

(By Anthony V. Ragusin)

BILOXI, MISS.—The peoples of the Bay of Biloxi area, including Ocean Springs, North Biloxi (d'Iberville) and Biloxi, are making ready to light up the candles on a huge birthday cake—250 candles to be exact. Much has happened since the first capital of the French Province of Louisiana was established on the shores of the Bay of Biloxi. Many flags have flown from numerous countries which have furnished citizens in the intervening time.

Against this background of subtropical climate, romance, history, and color plans are being completed to observe the founding of one of America's oldest and most cosmopolitan cities.

Pageants, musical programs, and visits to shrines, old homes, and landmarks will feature the observance. The festivities will begin April 3. Actual birthday time will come Friday, April 8. It was on April 7, 1699, that Pierre Charles le Moyne d'Iberville, famous Canadian in the service of King Louis XIV of France, actually marked out the site. The following day workmen swung axes to effect a clearing on the eastern shore of the bay, on the site of present-day Ocean Springs.

FORT IS BUILT

D'Iberville previously had put his fleet into the lee of Ship Island, some 12 miles directly south of Biloxi, on February 10, 1699. The intrepid colonizer and his brother, Jean Baptiste le Moyne Bienville, conducted subinvestigations with the use of small boats. The mouth of the Mississippi River and Lake Pontchartrain were visited. It was finally decided to build a fort and settlement on the high eastern shore of a large bay which offered a sheltered and safe haven behind Deer Island. When d'Iberville stepped ashore he was greeted by the Biloxi Indians, a small but cordial tribe of the Sioux Nation. The name Biloxi was chosen for the new settlement in honor of the friendly Indians. A fort was constructed at the same time guarding the entrance to the bay, and called Fort Maurepas.

This was the first actual colonization of that vast part of America, consisting of more than 1,250,000 square miles of land which later became known as the Louisiana Purchase Territory. There were several capitals called Biloxi, the first and second being on the Ocean Springs shore near the present-day Bay of Biloxi highway bridge. Later the seat of government was maintained at Dauphin Island, and at Mobile.

The greatest colonial capital called Biloxi was the one established on what is now West Beach Boulevard, between the historic Biloxi lighthouse and the old cemetery.

When the John Law land scheme reached its height, colonists came from Europe in large numbers for concessions elsewhere, especially along the Mississippi River. Slaves were dumped on Biloxi's west beach like ballast.

BUBBLE BURSTS

The Mississippi bubble finally burst. In 1722 Governor Bienville was successful over the objection of his senior engineer and practically all the members of the superior council in removing the headquarters to a town which had been established in 1718 on the lower Mississippi and which had been named for the Duke of Orleans. Thus, Biloxi became the mother of the fabulous city of New Orleans.

It would require many books to tell the long story of the Biloxi area. Eight flags that have waved over this exotic coast land, will fly in the Gulf breeze during the approaching celebration. They are French, English, Spanish, West Florida Republic, United States, Mississippi Magnolia State, Confederate States, and Mississippi State.

In addition to soldiers and sailors of the principal old world nations, these shores have felt footsteps of mercenaries such as Hessian and Swiss hired-out troops. Pirates, too, contributed their presence. Today, Biloxi houses large colonies of Yugoslavians and French Arcadians. The headstones in the private and public cemeteries of the Bay of Biloxi area attest that these fecund waters, teeming with shrimp, oysters, and fish along with the salubrious climate, brought people here from Nordic countries and nearly every corner of central and southern Europe during the 250 years. The first settler to live on what is present day Biloxi was believed to be a French-Canadian named Deslots.

POPULATION DOUBLED

With Biloxi having doubled its population since the last Federal census and with the development of the fishing industry, resort, and convention facilities and the gigantic Keesler Air Force base, the peninsular city has expanded all the way from Point Cadet to Beauvoir and beyond and from the Gulf to the Back Bay. Many shopkeepers and businessmen as well as a good part of Keesler's permanent military and civilian party now reside at Ocean Springs and North Biloxi.

Few regions have experienced the long and colorful history as the Biloxi sector. Despite the vicissitude of the sea-food industry, an occasional storm and the prevailing custom of taking time from work and business in order to play, Biloxi and its immediate neighbors look forward with confidence to the next 2½ centuries.

Government Paternalism Menace to Progress and Security

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include a portion of the New England Letter, published by the First National Bank of Boston, Mass., which discusses the relationship of Government paternalism to

the progress and security of the people. The letter, dated February 28, 1949, follows:

VERDICT OF HISTORY: PATERNALISM GREATEST INTERNAL MENACE TO PROGRESS AND SECURITY

The administration has proposed a Fair Deal program that if adopted would impose intolerable burdens and speed the Nation down the road of socialism. It is estimated that this program would raise the total budget to $60,000,000,000 annually within a 5-year period.

On the surface, it would appear that providing security from the cradle to the grave for all people is in keeping with an advancing civilization. But irrefutable historical evidence down the ages clearly shows that the protective spirit of government is the greatest internal menace to general welfare as it undermines the very foundation of security that it designs to establish.

It is held by the proponents of such a program that a nation cannot prosper unless the government watches over its people, protects them against want, and directs social and economic activities through an ever-expanding bureaucracy. But when a government loses confidence in the capacity of its people to rule and to provide for themselves, and proceeds to coddle and pamper them and to shield them against the storms of life, the wealth-creating power of the people is undermined, personal intiative is smothered, and incentives seriously impaired or destroyed. The end result is that the nation becomes impoverished while free enterprise and self-government are engulfed in some form of regimentation. This is the verdict of history.

Let us call the roll of a few countries that have tried the experiment of doing everything for the people, and soberly note the baneful consequences. There was Greece, the mother of art and culture, that reached the climax of her glory in the golden age of Pericles. Under this benevolent dictator the Government embarked upon a huge spending program to provide for the wants and entertainment of its people, a large proportion of whom were on the Government pay roll. But as the burdens accumulated, and with bankruptcy imminent, Pericles led his people into a disastrous war, and that was the end of Greek leadership.

As Greece fell, the torch was handed to the Romans, who extended civilization over Europe and formed the basis of modern society. But the Roman Empire was destroyed because its citizens became flabby and too weak to defend themselves against the barbarians. In stating the causes of the decline and fall of the Roman Empire one authority has said: "The pressure of public burdens was an increasing disability that ate the very heart out of the capitalist and the laborer alike: There was no hope to inspire energy or encourage enterprise and the gradual decay culminated in an utter collapse."

When Rome fell, the world was plunged into darkness for 500 years. The torch of learning was burning very low and would have been extinguished if it had not been for the knights and their friends, the monks. As governments became weak, daring and resourceful men rose to the occasion and broadened the horizons, lifted the spirits, and stimulated the energies of the people. Then came the Crusades, accompanied by the flourishing of international commerce with its riches and leisure. This paved the way for the Renaissance—the rebuilding of civilization and the rapid development of learning and culture. Then followed the great discoveries of the New World, and during the reign of Queen Elizabeth, Great Britain emerged as the leader of civilization, which leadership she retained until fairly recent times.

In the meantime Spain, too, had her day of glory and at one time was mistress of the world. But as she rose in power her government extended its protective wings so that everything being done for the people, nothing was done by the people. The nation tottered into stagnation from which it has not been able to emerge.

So in Spain, as in Rome and in Greece, "it was when things were the most prosperous on the surface that they were the most rotten at the foundation," according to the noted historian, Henry Thomas Buckle.

Then let us skip a few decades to more modern times and see whether the extension of paternalism and government planning has had the same consequences as in earlier times.

Before the war, the Fascist countries abroad held out to their people a Utopian plan of full employment, security, and better homes. This was to be achieved by a planned economy financed by government borrowing and spending, while a totalitarian government was to regulate all activities. But after surrendering their freedom for illusory security and military pageantry, the Italian and German people were led into a war of aggression that ended in humiliation and misery. The tragic experience of the Fascist countries should be a stark warning to us of the dangerous course plotted by those who are so anxious to rebuild our society. In the face of indisputable evidence that we are following the same economic and financial pattern, and are drifting along under the same forces, we cannot afford to harbor the illusion that it "cannot happen here."

Before turning our backs upon a system that has served us so well over the decades, we should ponder now, before time has run out, on the price that must be paid should we heed the siren voices of those who would lead us down the road to serfdom. We should be warned that government planning through the ages invariably shows that one step leads to another until finally the entire economy and all institutions are brought under the iron rule of bureaucracy.

At this crucial stage we should also be mindful that it is a recognized part of the Communist strategy to have this country spend itself into bankruptcy in order that we may be softened for easy conquest.

The tragic irony of it all is that after spending $400,000,000,000, sacrificing the lives of 300,000 of our best youth to defeat the Fascist powers, and now spending around $20,000,000,000 to combat communism, we should be pursuing a domestic policy that will inevitably lead to some form of totalitarianism.

So with red lights flashing and foghorns blaring, the American people should be heedful of the danger signals that the many chapters in world history grimly and soberly remind us are warnings of the treacherous reefs upon which have been wrecked so many so-called liberal governments down through the ages.

It should be apparent to all that income and wealth are not created by government but by the productive efforts of the people. The government merely siphons the money by means of taxes and borrowings, and then distributes the money through the spending channels.

The government providing for the people is not a novel experiment but can be traced back to dim antiquity. It is atavistic and has a blighting influence on the recipients. What might appear like manna from heaven would in reality be a drug that in the course of time would make the people submissive and subservient to those in power. As has been said:

"Thus runs the law, and the law shall run till the earth in its course is still
That whoso eateth another's bread shall do that other's will."

Public Safety Work of the National Safety Council

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, April 4 (legislative day of Friday, March 18), 1949

Mr. MARTIN. Mr. President, we are all greatly interested in the public safety work which the National Safety Council has been carrying on. Mr. W. A. Irvin, chairman of the board of trustees of the National Safety Council, has taken an important part in this work, and has written me a letter under date of March 24, 1949, giving a summary of what has been accomplished. I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES STEEL CORP.,
New York, N. Y., March 24, 1949.

Senator EDWARD MARTIN,
United States Senate,
Washington, D. C.

DEAR ED: I have been looking over some recent reports on the public-service work (now known as the Green Cross program) that the National Safety Council has been carrying on under the sponsorship of its trustees since 1942, and as a matter of information, I think you may be interested in a brief summary of what I have found. The gist of it is:

That every year for the seven consecutive years since this work was started the number of accident fatalities has been lower than the year before the work began.

That last year the accident death rate was the lowest on record.

That, despite a tremendous increase in highway travel, traffic fatalities in 1948 were below those of any other year.

That the decrease in accidental deaths since the public-service program was started has meant a saving of 39,000 lives and about three times that number of permanent physical impairments.

That organized safety work, which was confined almost entirely to industrial operations and enforcement aspects of traffic regulation before 1942, is now reaching also into homes, schools, offices, farms, and all the daily activities of people to influence them to protect themselves and others against the common day-to-day hazards to which everyone is more or less regularly exposed.

That as a nonprofit organization devoted wholly to promoting safety, the National Safety Council, through its public-service program, has been able to enlist the cooperation of the press and radio to such an extent that more than half a million newspaper and magazine articles and more than two and a half million radio broadcasts have been used since 1942 to channel safety information and advice to the Nation.

That hundreds of organizations—such as trade and professional associations, women's clubs, parent-teacher groups, fraternal orders, boys and girls clubs, agricultural organizations, et cetera—that had never before been identified with safety work, have been drawn into various phases of accident prevention on an unprecedented scale.

I will not attempt to go into detail about all the various activities embraced by this program beyond pointing out that a great

deal of constant research and field service, and the production of enormous quantities of printed and other materials, are obviously entailed. The main point is that the situation does look like we are getting somewhere with this work, and I thought that, just as a matter of information, you would be interested.

Sincerely yours,

W. A. IRVIN,
Chairman, Board of Trustees,
National Safety Council.

Veterans of Foreign Wars

REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. CHESNEY. Mr. Speaker, the year 1949 marks 50 years of patriotic service by the best veterans' organization of our time, the Veterans of Foreign Wars. It is a proud organization, and, justly, it should be. The men who cherish the wearing of the Cross of Malta, the emblem of the Veterans of Foreign Wars, are veterans who have shed a part of their lives in the battles and campaigns of the Stars and Stripes on foreign shores. Whether it was on the frozen plains of the Arctic or the steaming jungles of the Philippines, Guadalcanal, Burma, or in the defense of American lives in China, or in the battles of Château-Thierry and St. Lo, the members of the Veterans of Foreign Wars walk with their heads high. Their contribution to American history in time of need rightfully places them in the front line of the parade of American patriotism.

The Veterans of Foreign Wars, with its rich heritage, is always in the forefront to provide aid and help to its members and families. The record of legislation possesses countless actions to assist the honorably discharged veteran.

How can we forget the Veterans of Foreign Wars' ceaseless drive to provide hospitalization for disabled veterans, pensions for Spanish-American War veterans and benefits to veterans of World Wars I and II? The achievements of the Veterans of Foreign Wars are immeasurable. From its humble beginning in 1899, the Veterans of Foreign Wars, first under the leadership of Gen. Irving Hale, the hero of the Philippines, to the present commander, Lyall Beggs, has tread a glorious path. It is significant that in this day when the world is yearning for peace, the wearers of the Cross of Malta are pledged to defend the principles of human rights in times of peace and war.

The Veterans of Foreign Wars' symbol of service to its fellow men is an outstanding declaration to all Americans that justice and freedom shall not perish as long as there are veterans organizations such as the Veterans of Foreign Wars to uphold the principles of the American way of life.

My own State of Illinois is extremely proud of the VFW. Its present membership totals approximately 75,000 overseas veterans. The great majority of these men are veterans of World War II. From the northern tip of the State of Illinois to the down-State city of Cairo, Ill., the VFW and its auxiliaries are constantly devoting their time to the needs of veterans' families in distress, and the needs of disabled veterans. The hospitalized veterans of Hines, Downey, Danville, Dwight and Marion, Veterans' Administration Hospitals, will vouch vehemently of the grand work of the VFW in planning the numerous programs of morale and welfare activities.

Whenever there is a service to be rendered, the overseas veterans of the VFW are always ready—whether it be aid to his fellow man or in defense of his country.

The citizens of the State of Illinois salute the VFW.

Congratulations to Commander Henry L. Warner and his staff and the VFW posts in the Eleventh Congressional District: General Leonard Wood Post, No. 143; Naval Convoy Ship Post, No. 300; Mont Clare Post, No. 1284; Irving Park Post, No. 1487; Louis D. David Post, No. 1493; Henry A. Honack Post, No. 1583; West End Post, No. 2004; Northwest Post, No. 2042; Norwood's Own Post, No. 2131; Conrad Martens Post, No. 2202; Barb-Wire Post, No. 2245; Logan-Avondale Post, No. 2978; Leyden's Own Post, No. 3509; Indian Portage Post, No. 3592; Europac Post, No. 5151; Armana Post, No. 6460; Diversey Post, No. 6868; Pfc. Frank Witek Post, No. 8844; Kosowitz-Evankoe Post, No. 9420; Greater Higgens Post, No. 9792; and Lieut. Otto Staeheli Post, No. 849.

Proposed Legislation Affecting Oleomargarine

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 4 (legislative day of Friday, March 18), 1949

Mr. THYE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement I have prepared regarding the proposed removal of restrictions relating to the coloring of oleomargarine.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Because I am convinced that removal of restrictions relating to oleomargarine colored yellow in imitation of butter would have a serious adverse effect on the dairy industry, and eventually the entire agricultural economy, I have joined with a group of Senators in sponsoring a bill that repeals the Federal taxes on oleomargarine but makes unlawful the manufacture, transportation, or sale of yellow oleomargarine in interstate commerce.

Yellow oleomargarine manufactured or colored within the borders of a State or Territory in which it is consumed is not subject to the provisions of the act but to the laws and regulations of the State or Territory. Application of Federal pure food laws are not limited by the act, and the enforcement provisions of those laws are specifically cited in connection with the new provisions to be administered by the administrator of the Federal Security Agency.

This measure is along the lines I believe necessary as a fair safeguard to consumers and producers of both dairy products and substitutes. In fact, in considering this problem I am concerned that oleomargarine should not be sold on the market or served in public eating places in such a manner that the consumer is not aware when he is getting a substitute. Coloring oleomargarine to look like butter does not make the product either more nutritious or more palatable. When such coloring is permitted commercially without restriction it places the substitute product in a competitive position with butter where only a laboratory test could determine whether the commodity being sold was a genuine dairy product or not.

Therefore, I am in favor of repeal of the taxes on oleomargarine which increase the cost to the consumer, but I will strongly advocate continued protection of the public as regards the color and appearance in marketing of butter substitutes.

Tennessee-Tombigbee Inland Waterway—Necessary Link in Our Inland Waterway System for Both Transportation Purposes and National Defense

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. RANKIN. Mr. Speaker, while Congress is appropriating billions upon billions of dollars for the peoples of other countries, it seems to me that we can afford a small amount to start on the most important undeveloped link of our inland waterways—important for both navigation and national defense. I refer to what is known as the Tennessee-Tombigbee Inland Waterway, which will provide a slack, or still water route from the Gulf of Mexico to the Tennessee River at the mouth of Yellow Creek on the Mississippi-Tennessee line, a down-stream route on the Tennessee from that point to the Ohio River at Paducah 215 miles, and a down-stream route from Paducah 47 miles down the Ohio to Cairo, Ill.

This project has been approved by the Army engineers and authorized by Congress. All we are asking for is a small appropriation to begin its construction.

As I have pointed out before, the main cut will be through a sand ridge in which, General Kingman, Chief of the Army Engineers, stated that—

The absence of rock in the ridge makes it the most favorable location for the proposed waterway.

The Army engineers have investigated this project time and time again, and have unqualifiedly approved it. The chief of Army engineers, General Reybold, and his successor, General Wheeler, came before the committee and gave it their enthusiastic support.

They said that there is not another place on the face of the earth where the

traffic can be transferred from one major watershed to another with so much ease, so little expense, and such tremendous savings in transportation costs and distances.

General Robbins, of the Board of Engineers, in discussing this project before the Senate committee, said that if he were to tell them, that with the amount of money called for to develop this project, they could extend an arm of the Gulf of Mexico to provide a slack-water route all the way up to Cairo, Ill., and back, they would throw up their hats and shout.

Yet, he said, this project is infinitely better. Because it saves the swift current of the Mississippi River for downstream traffic, and still gives us a slack-water route up to the Tennessee River for returning traffic, and then a downstream route on the Tennessee River 215 miles to Paducah, and then down the Ohio 47 miles to Cairo.

It is 869 miles from Cairo to New Orleans down the Mississippi River, 156 miles from New Orleans across to Mobile along the protected intercoastal waterway, 481 miles from Mobile to the Tennessee River in slack water behind the locks and dams which this project will provide, and 262 miles downstream from that point to Cairo, Ill.

In other words, the round trip from either Paducah on the Ohio River, or Cairo on the Mississippi River to New Orleans and Mobile and back will be 1,768 miles, of which 1,161 will be downstream, and the rest of it in slack or still water.

As the Army engineers have said, there is not another place on earth where a project with these advantages can be provided.

The savings which this project will provide are so great as to challenge the imagination of its most enthusiastic advocates. They seem almost astronomical.

But these figures of the Army engineers cannot be questioned.

In order that Members may understand what this project would mean in savings to people along the Ohio River and its tributaries, including the Allegheny and Monongahela, along the Illinois River and the Great Lakes, along the upper Mississippi, all the way to St. Paul and Minneapolis, along the Missouri River all the way up to Keokuk, Iowa, and along the Tennessee, the Cumberland, the Arkansas, and the Tombigbee, as well as along the Gulf coast, I am inserting some tables supplying that information.

These tables were worked out by the Army engineers, and they are as nearly correct as they could possibly be made.

If there is any difference at all, it is that the savings would be greater today than when these tables were worked out 3 years ago, owing to the increased cost of fuel.

Here is a table showing the cost per ton for both routes, and the savings per ton this project will provide on the fuel bill alone:

TABLE No. 1.—*Comparison of costs per ton of upstream traffic*

From—	To—	Cost via Mississippi, per ton	Cost via Tennessee-Tombigbee, per ton	Average savings, per ton
New Orleans, La.	Cairo	$2.02	$1.32	$0.70
	Paducah	2.10	1.26	.84
	Tennessee-Tombigbee junction.	2.42	.99	1.43
Mobile, Ala.	Cairo	2.39	.95	1.44
	Paducah	2.47	.89	1.58
	Tennessee-Tombigbee junction.	2.79	.62	2.17
Port Birmingham, Ala.	Cairo	2.96	.95	2.01
	Paducah	3.04	.89	2.15
	Tennessee-Tombigbee junction.	3.36	.62	2.74
Demopolis, Ala.	Cairo	2.68	.67	2.01
	Paducah	2.76	.61	2.15
	Tennessee-Tombigbee junction.	3.08	.34	2.74
Columbus, Miss.	Cairo	2.83	.51	2.32
	Paducah	2.91	.45	2.46
	Tennessee-Tombigbee junction.	3.23	.17	3.06
Aberdeen, Miss.	Cairo	2.88	.46	2.42
	Paducah	2.96	.40	2.56
	Tennessee-Tombigbee junction.	3.28	.13	3.15
Fulton, Miss.	Cairo	2.93	.41	2.52
	Paducah	3.01	.35	2.66
	Tennessee-Tombigbee junction.	3.33	.08	3.25

You will note that the cost of this traffic from New Orleans or Mobile to points on the Ohio or the upper Mississippi are almost unbelievable, and they increase as we ascend the Tombigbee.

We already have a 9-foot channel up to Demopolis. You will see from the above table that this development will cut the cost of transportation from Demopolis to Cairo, Ill., exactly three-fourths, or from $2.68 a ton to 67 cents a ton. And of course the savings to Paducah and all points on the Ohio River and the Tennessee are still proportionately greater.

But wait till you see the savings in dollars and cents in the following tables.

Here is a table showing what these savings would amount to on a 3,500-ton load returning by way of this slack-water route.

This is the size tow composed, of course, of a number of barges, that has been most frequently used on this inland waterway for the last few years.

The following table will show the cost per tow by way of the Mississippi River, then by way of the Tennessee-Tombigbee and the savings per tow of 3,500 tons which this short, slack-water route will provide up to the Tennessee River and then down to Paducah and Cairo:

TABLE No. 2.—*Table showing cost per tow of barges carrying 3,500 tons, and showing savings via Tennessee-Tombigbee*

From—	To—	Cost via Mississippi per tow of 3,500 tons	Cost via Tennessee-Tombigbee per tow of 3,500 tons	Average savings per tow of 3,500 tons
New Orleans, La.	Cairo	$7,070	$4,620	$2,450
	Paducah	7,350	4,410	2,940
	Tennessee-Tombigbee junction.	8,470	3,465	5,005
Mobile, Ala.	Cairo	8,365	3,325	5,040
	Paducah	8,645	3,115	5,530
	Tennessee-Tombigbee junction.	9,765	2,170	7,595
Port Birmingham, Ala.	Cairo	10,360	3,325	7,035
	Paducah	10,640	3,115	7,525
	Tennessee-Tombigbee junction.	11,760	2,170	9,590
Demopolis, Ala.	Cairo	9,380	2,345	7,035
	Paducah	9,660	2,135	7,525
	Tennessee-Tombigbee junction.	10,780	1,190	9,590
Columbus, Miss.	Cairo	9,905	1,785	8,120
	Paducah	10,185	1,575	8,610
	Tennessee-Tombigbee junction.	11,305	595	10,710
Aberdeen, Miss.	Cairo	10,080	1,610	8,470
	Paducah	10,360	1,400	8,960
	Tennessee-Tombigbee junction.	11,480	455	11,025
Fulton, Miss.	Cairo	10,255	1,435	8,820
	Paducah	10,535	1,225	9,310
	Tennessee-Tombigbee junction.	11,655	280	11,375

The reduction in cost of every load going to the Tennessee-Tombigbee junction would mean that amount of savings on every such load going to our atomic bomb plant at Oak Ridge.

This project should be constructed at once for national defense, if for no other reason. Let us not sit here and wait for another Pearl Harbor.

Here is a table showing the cost and the savings which this project would provide on a tow of barges carrying 10,000 tons:

TABLE No. 3.—*Table showing cost per tow of barges carrying 10,000 tons and showing savings via Tennessee-Tombigbee*

From—	To—	Cost via Mississippi per tow of 10,000 tons	Cost via Tennessee-Tombigbee per tow of 10,000 tons	Average savings per tow of 10,000 tons
New Orleans, La.	Cairo	$20,200	$13,200	$7,000
	Paducah	21,000	12,600	8,400
	Tennessee-Tombigbee junction.	24,200	9,900	14,300
Mobile, Ala.	Cairo	23,900	9,500	14,400
	Paducah	24,700	8,900	15,800
	Tennessee-Tombigbee junction.	27,900	6,200	21,700
Port Birmingham, Ala.	Cairo	29,600	9,500	20,100
	Paducah	30,400	8,900	21,500
	Tennessee-Tombigbee junction.	33,600	6,200	27,400
Demopolis, Ala.	Cairo	26,800	6,700	20,100
	Paducah	27,600	6,100	21,500
	Tennessee-Tombigbee junction.	30,800	3,400	27,400
Columbus, Miss.	Cairo	28,300	5,100	23,200
	Paducah	29,100	4,500	24,600
	Tennessee-Tombigbee junction.	32,300	1,700	30,600
Aberdeen, Miss.	Cairo	28,800	4,600	24,200
	Paducah	29,600	4,000	25,600
	Tennessee-Tombigbee junction.	32,800	1,300	31,500
Fulton, Miss.	Cairo	29,300	4,100	25,200
	Paducah	30,100	3,500	26,600
	Tennessee-Tombigbee junction.	33,300	800	32,500

Some of the larger concerns are now using tows of barges carrying 14,000 tons. That is true of the traffic going down the Ohio River, the Illinois River, the Mississippi River, and the Missouri River.

The Army engineers have supplied us with figures of these large tows of 14,000 tons going down from Pittsburgh, Detroit, Chicago, Minneapolis, St. Paul, and points on the Missouri River.

Here is another table which the Army engineers have provided showing the cost per tow of barges carrying 14,000 tons and also the savings which these barges would provide:

TABLE No. 4.—*Table showing cost per tow of barges carrying 14,000 tons and showing the savings via the Tennessee-Tombigbee*

From—	To—	Cost via Mississippi per tow of 14,000 tons	Cost via Tennessee-Tombigbee per tow of 14,000 tons	Average savings per tow of 14,000 tons
New Orleans, La.	Cairo	$28,280	$18,480	$9,800
	Paducah	29,400	17,640	11,760
	Tennessee-Tombigbee junction.	33,880	13,860	20,020
Mobile, Ala.	Cairo	33,460	13,300	20,160
	Paducah	34,580	12,460	22,120
	Tennessee-Tombigbee junction.	39,060	8,680	30,380
Port Birmingham, Ala.	Cairo	41,440	13,300	28,140
	Paducah	42,560	12,460	30,100
	Tennessee-Tombigbee junction.	47,040	8,680	38,360
Demopolis, Ala.	Cairo	37,520	9,380	28,140
	Paducah	38,640	8,540	30,100
	Tennessee-Tombigbee junction.	43,120	4,760	38,360
Columbus, Miss.	Cairo	39,620	7,140	32,480
	Paducah	40,740	6,300	34,440
	Tennessee-Tombigbee junction.	45,220	2,380	42,840
Aberdeen, Miss.	Cairo	40,320	6,440	33,880
	Paducah	41,440	5,600	35,840
	Tennessee-Tombigbee junction.	45,920	1,820	44,100
Fulton, Miss.	Cairo	41,020	5,740	35,280
	Paducah	42,140	4,900	37,240
	Tennessee-Tombigbee junction.	46,620	1,120	45,500

You will see from the above table that going from New Orleans to Cairo the cost of a 14,000-ton barge tow is cut from $28,280 to $18,480, or a saving of $9,800 on its fuel bill alone.

If it goes up the Ohio River, it would cut the cost from New Orleans to Paducah from $29,400 to $17,640, or a saving of $11,760 on its fuel bill alone.

Going from New Orleans to the Tennessee River, traffic to any point on the Tennessee, including Oak Ridge, where our atomic-bomb plant is located, the cost would be cut from $33,880 to $13,860, or a saving of $20,020 on its fuel bill alone.

Now, let us look at the traffic going from Mobile to Cairo, Ill. The cost will be cut about 70 percent, or from $2.39 a ton to $0.95 a ton. On a 14,000-ton load going from Mobile to Cairo, the cost would be cut from $33,460 to $13,300, or a saving of $20,160 on the fuel bill alone.

Remember, that means every barge load going into the Middle West, along the Missouri River, up the Mississippi, to Minneapolis and St. Paul, up the Illinois River into the Great Lakes, and around to Detroit and Cleveland.

But suppose that traffic is going up the Ohio to Cincinnati, Wheeling, or Pittsburgh, or into the Monongahela or Allegheny. The cost will be cut on a 14,000-ton barge from $34,580 to $12,460, or approximately two-thirds, and the saving on the fuel bill alone will amount to $22,120.

Of course, if it is going into the Tennessee River, the cost will be cut from $39,060 to $8,680, or a saving of $30,380 on its fuel bill alone.

Nothing that could possibly be done would be worth more to our great atomic-bomb plant at Oak Ridge.

In addition to these tremendous savings, it would cut the water distance between Oak Ridge and the Gulf of Mexico more than 650 miles.

Now let us take the traffic from the Birmingham area which comes down the Warrior River and joins the Tombigbee at Demopolis. We already have this water route developed up to Demopolis, Ala.

You will note by referring to table No. 1 that traffic going from Demopolis to Cairo will have its cost cut to exactly one-fourth, or from $2.68 a ton to 67 cents per ton.

On a 14,000-ton load the fuel bill from Demopolis to Cairo would be reduced from $37,520 to $9,380—a saving of $28,140 on the fuel bill alone.

Mr. Speaker, these figures are so miraculous that one could hardly believe them were they not carefully worked out by the Army engineers, the finest experts on this subject to be found anywhere in the world.

Suppose these barges are going from Demopolis to Paducah. The cost per ton would be cut from $2.76 a ton to 61 cents a ton, and on a 14,000-ton load the cost would be reduced from $38,640 to $8,540, or a saving of $30,100 on its fuel bill alone.

And if you will take the figures on the traffic going from Demopolis to the Tennessee River, you will find that it is reduced to about one-tenth of the cost, or from $43,120 to $4,760—a saving of $38,360—on every 14,000-ton barge load going from Demopolis, or Birmingham, to Oak Ridge, or to any other point on the upper Tennessee River.

I will not take up the time of the House to discuss the saving this waterway would provide from other points along this waterway. They speak for themselves. They are simply astounding.

This project has already been authorized by Congress. It is a vitally necessary link in our inland-waterway transportation system, and it is most vitally necessary from a standpoint of our national defense.

It is just as sure to be constructed as the night follows the day; and the sooner it is done, the better it will be for all America.

Basing Point Hasty Action Warned Against by Food Brokers—Defeat of Moratorium Bill Vital to Preservation of Small Business

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. PATMAN. Mr. Speaker, the National Food Brokers Association, meeting in Chicago for the forty-fourth annual convention of the association were warned of the inherent dangers to small business if the basing-point moratorium is enacted into law. As reported in the Wall Street Journal for March 22, 1949, Mr. Paul F. Myers, general counsel for the food brokers' national organization told a capacity attendance at the initial session, among other things that—

If the prohibition against the use of devices which have the purpose or effect of destroying competition is taken out of the law, it is perfectly clear that the big concern can adopt a basing-point system which could utterly destroy smaller and less wealthy competitors in the market place, even though the plan may be free of any deception, coercion, and fraud.

Small-business men in all walks of life may benefit by this timely warning and rally to defeat legislation, which as Mr. Myers said, "could utterly destroy smaller and less wealthy competitors." The article, in part, follows:

FOOD BROKERS AIR MONOPOLY FEARS IN BASING-POINT BILL

(By A. E. Mockler)

CHICAGO, March 21.—Hasty legislation to legalize the basing-point system holds the danger of emasculating the anti-trust laws to the point where large corporations can adopt basing-point systems which could utterly destroy smaller and less wealthy competitors, the forty-fourth annual convention of the National Food Broker's Association was warned here today.

"Any overhauling of the antitrust statutes to clarify the statutes of basing-point selling," Paul F. Myers, general counsel for the food brokers' national organization, said, "should insure the retention of the vital parts of the present law, namely, the outlawing of any device which has for its purpose or effect the destruction of competition.

BACKS ANTITRUST LAWS

Addressing a capacity attendance at the initial session of the brokers' convention, Mr. Myers declared that "the heart of the antitrust laws is the prohibition of devices which substantially lessen or destroy competition. Without this prohibition, the antitrust laws are meaningless."

Referring to recent court decisions on the basing-point system, the speaker pointed out that as a result of these rulings there is agitation for action by Congress by moratorium or other law, to legalize basing-point systems, provided they do not involve collusion or conspiracy.

"The proposed legislation," he said, "would provide as a test for legality that such systems do not involve fraud, deceit, or coercion."

"The proposed test of fraud, coercion, and deception," Mr. Myers charged, "is not enough for preservation of the antitrust laws."

FEARS IMPACT ON SMALL FIRMS

"If the prohibition against the use of devices which have the purpose or effect of destroying competition is taken out of the law," he said, "it is perfectly clear that the big concern can adopt a basing-point system which could utterly destroy smaller and less wealthy competitors in the market place, even though the plan may be free of any deception, coercion, and fraud.

"I say with great earnestness," he continued, "that if we are to have legislation let's be vigilant, lest by some device such as the ones proposed, that the very heart is cut out of our antitrust laws. Conversely, let's make sure that the vital parts of the present law be kept, namely, that any device is illegal which has for its purpose or effect the destruction of competition. If that is removed from the law, nothing of importance remains.

"It would seem to me to be important that we be a little patient. Other cases are in or on their way to the Supreme Court involving this question, and I feel quite confident that the Supreme Court will give us an answer which will wipe out the present confusion."

OVERFLOW ATTENDANCE

The convention during the afternoon session featured a forum of manufacturer-broker relationships, and as was the case at the morning meeting again attracted an overflow attendance.

The formal phase of this year's NFBA meeting wound up tonight with the association's annual banquet, held in the grand ballroom at the Palmer House.

Association committees will continue sessions here during the remainder of the week, however, and numerous sales conferences have been scheduled, running through the rest of the week by manufacturers and processors. At these conferences, plans for the development of advertising and merchandising programs to cover the marketing of the coming season's packs of processed foods will be developed.

Inflation Controls

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Indianapolis News of April 1, 1949:

STUBBORN ABOUT IT

Stubborness makes a man look a little ridiculous, even the President of the United States.

Despite evidence that prices are easing, that the economy is receding, Mr. Truman persists in demanding controls for inflation. Even his right bowers on economic questions, Senator JOSEPH O'MAHONEY and Dr. Edwin G. Nourse, have cooled off on the advisability of selective price and wage controls. They now recognize, as most perceptive business leaders and bankers have for some time, that business needs a stimulant, not a sedative. That was why the Federal Reserve Board eased up installment credit and reduced the margin requirement on stocks.

In the face of all these actions, what else except mulishness could prompt the President to renew his demands for price controls and higher taxes? His insistence on increased taxes is hardest of all to understand. With the Nation's economy in the balance, heavier taxes are the last thing that should be considered. Both industry and individuals need every cent of income these days. Business must have sufficient funds for continued productivity and expansion capital that would be drained off by higher taxes. The President would be wise to heed the warning of an influential Senator in his own party, WALTER F. GEORGE, who bluntly stated that heavier taxes now could produce a depression.

Tree Shelter Belts in the Midwest

EXTENSION OF REMARKS
OF
HON. WILLIAM T. BYRNE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of April 3, 1949:

TREE BELTS HAILED AS MIDWEST BOON—STEFAN, HOUSE REPUBLICAN, SAYS NEW DEAL PLANTINGS SAVE SOIL, PROVE WINTER AID

WASHINGTON, April 2.—A veteran Republican Member of Congress pays high tribute to the tree shelter belts planted in the Midwest by the New Deal in the 1930's.

Representative KARL STEFAN, of Nebraska, a member of the House Appropriations Committee, declares that the forest stands have proved a great conservation boon to their areas and were particularly helpful to farmers in this winter's severe weather.

He predicts that, as a result of this showing, Congress will approve a new forestry experimental station in Ames, Iowa, with a branch in Nebraska.

"The way in which these woodlots and shelter belts withstood three successive heavy layers of snow and ice this winter confirmed the highest expectations for them," he states.

"There has been some destruction. It was inevitable in view of the severity of the storms. But all the shelter belts have survived, and I have many photographs to prove it.

"I have sent these pictures to the Senate Appropriations and Senate Agricultural Committees so that they can see for themselves just what the situation is."

According to Mr. STEFAN, the shelter belts saved thousands of cattle and unknown numbers of wild animals this winter.

"During the blizzards," STEFAN asserts, "the belts enabled farmers to get to their livestock. In many cases the trees kept the snow off the road. Also, the timber stands provided refuges for deer, pheasants, and other game which have flourished in the Prairie States as a result of this forestation program.

"And now that the snow that was held back by the trees is melting the soil is getting much-needed moisture. The snows kept the ground from freezing, and the melting snow is being absorbed by the soil. That's going to help a great deal on the flood problem."

Recalling the strong opposition to the original shelter-belt program, Stefan declares it now has wide support throughout the Midwest.

"I remember very clearly," he adds, "how angry many people were when the program first got under way. Nurserymen charged that the Government was going into their business. They called the plan cockeyed and

almost succeeded in holding up the appropriation.

"Now the trees that were planted then are 40 to 50 feet high in many instances. They started out with cottonwoods and then went on to elms, locusts, and cedars.

"The program has been of great benefit to many areas and many farmers. Antelope County, Nebr., is an example. Before the forestation program farms that had been very productive had become covered with sand. As a result of the shelter belts that's all changed now. I visited some of these farms recently and they are altogether different now.

"They have fine stems of grass, and the growers told me they were able to get to their livestock during the storms and feed them. The county agents were unanimous that soil conservation would be years behind if it had not been for these tree belts. These are just a few examples of the tremendous value and the great success of this program."

The Militia Belongs to the States

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Collier's for March 26, 1949:

COLLIER'S BELIEVES THE MILITIA BELONGS TO THE STATES

The Gray committee for the Defense Department suggests that the National Guard be federalized. Collier's is against it. Here is why. The National Guard is organized State militia. In every State men and women are proud of their militia—divisions, battalions, regiments, and companies. The Seventh, the Sixty-ninth, the Blues, the Greys, have heroes' records in many wars.

The men and the boys who serve in these State forces are the best we have. They are the fellows who enlist to do what is required to save our skins and our civilization in war and in peace.

The roots of admiration and affection and pride for the companies and regiments that compose the National Guard go down deeply into our historical traditions.

That is why so much anger was aroused when the Gray committee recommended the National Guard be federalized. In all our wars the National Guard has borne the brunt of our defense.

Collier's is against federalizing the National Guard for many fundamental reasons. First of all, ours is a Federal and not a National Government. The difference is far more than a matter of words. It is the difference between a Nazi or a Communist state and a free state.

The American idea is to give the Federal Government only as much authority as the States cannot successfully administer. We have always thought that local governments and States should do what they could to govern the country. Where the State turned out to be too small the Federal Government has stepped in.

The Federal idea has worked well up to now. The United States, and not any other Government, was invited in to settle the First World War. The industrial might of the United States was the factor that finally determined the issue in the Second World War. Industrial might was something that came out of our Federal system. Without the freedom, personal initiative, and individual enterprise that make possible the prodigious production of the United States, we might not have the industrial might that makes American production possible.

We are against federalizing the National Guard for the same reason that we are opposed to federalizing other general activities. We don't think that public education ought to be federally controlled. We don't think education should be federalized, for the very simple reason that any national government would be tempted to use public schools as a medium of propaganda for whatever doctrines it wanted to preach.

That is precisely what Bismarck did in the old Germany. Thus he sowed the seeds for World War I. That is what the Kaiser Wilhelm did and made World War I certain. That is what Adolf Hitler did. That is what the Russian Communists do. That is what any strong central government having ideas it wants to make popular is tempted to do. That is precisely why federally controlled education in the United States could be dangerous. And that finally is why Collier's is opposed to the federalization of education.

The federalization of the National Guard is open to similar objections. The Constitution laid the foundation of the National Guard. From the very beginning both the States and the Federal Government have shared the control and expenses of maintaining the National Guard. Since 1787 the Congress has had the duty of prescribing the training and the discipline of the National Guard. In times of war the National Guard becomes a part of the United States Army. But the States have enduring control. The States choose the officers. The roots of the National Guard regiments go back to the States. So nobody at Washington can indulge in military speculations with the idea of using the National Guard. In peace the Guard belongs to the States and not to the Federal Government.

Thus no American has to be afraid of his own soldiers. If we lived in Russia we would know that the Red Army would do what the Communist government wanted, right or wrong. We don't have to worry about our National Guard.

Collier's believes it is better to safeguard what we have. The Defense Department has a problem in being prepared against a surprise attack by Russia or by any other enemy. A peace-loving people such as we Americans are always at a disadvantage in dealing with an aggressive imperialist government. But when attacked and aroused freemen have been good fighters. We think the young men of today have lost none of the vigor, courage, and enterprise of their elders.

Our view is that the Defense Department will have to do the best it can with existing law. The Congress will appropriate many billions for defense in case we are attacked. We shall surely come through victorious in the end if we should be forced into a war we did not want.

The big thing is to retain the free way of life that makes America the envy of all other peoples. There are short cuts to efficiency but if we run even a small risk of sacrificing our freedoms by taking them, the risk is too great. Let's not federalize the National Guard or any other governmental enterprise that can be successfully operated by State or local governments.

W. L. C.

Commander Frackman, of Regular Veterans' Association, Speaks Up for Americanism

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. HAGEN. Mr. Speaker, I have asked permission to place in the CONGRESSIONAL RECORD a radio talk by National Commander of the Regular Veterans' Association David H. Frackman, because I felt that it is of special interest to the Members and also to the readers of the CONGRESSIONAL RECORD. I had the pleasure of introducing Commander Frackman when he spoke over the radio station, WWDC of Washington, D. C., on the evening of March 27. I understand that he has received dozens of compliments on his excellent talk. My introduction of the commander and his own address follow:

Congressman HAGEN. I am pleased to have this opportunity to introduce the National Commander of the Regular Veterans' Association, of which I am an honorary life member. This organization and National Commander Frackman are rendering an exceptionally fine service to the personnel of the regular establishments of the armed forces and the veterans of the two world wars.

Commander Frackman is a life-long resident of the City of New York, where he has been actively engaged in the practice of the law for upwards of 30 years. There and in Washington, his ability both as a lawyer and as a leader in veteran and civic organizations is well established and fully recognized. He has done much to place the Regular Veterans' Association high in the esteem of veterants organizations throughout the Nation. A veteran of World War I, he enlisted at the outbreak of the war in the United States Naval Reserve Force and for some time was stationed in the Bureau of Navigation at Washington, D. C. Subsequently he was instrumental in forming and heading the legal department of the Third Naval District, coupled with a public defender bureau for officers and enlisted personnel and their dependents, in naval, civil, and criminal courts.

He is a member of the law committee of the American Legion in New York City; a past county judge advocate of the Jewish War Veterans; one of the founders and first president of the Manhattan Civic Club, Inc., which is prominent in civic affairs in the City of New York; a director of Interfaith Movement, Inc., a member of the American Society for International Law, the Society of American Military Engineers, the Masonic Order, the B'Nai B'rith and other civic, fraternal, and law societies.

He has served faithfully and well in all the capacities to which he has been called. Prior to his election as national commander of the Regular Veterans' Association, Commander Frackman served it in many capacities, including that of national judge advocate. Since its inception he has been the national representative of the Regular Veterans' Association to the organization of the United Nations accredited by the State Department for nongovernmental organizations.

A man of the people, possessing a keen understanding of their problems and a deep-

rooted desire to serve his fellow men, Commander Frackman will continue his efforts to aid the personnel of the Regular armed forces, the veterans of our World Wars and their dependents. I present to you the national commander of the Regular Veterans' Association, the Honorable H. David Frackman.

Commander FRACKMAN. Thank you, Congressman HAGEN, for your kind introduction. I deeply appreciate your presence on this program. I have had the pleasure of working with you for sometime past in relation to the problems of the servicemen and the veterans of our wars. I know your deep interest and desire to further their welfare. It is to you and the officials who keenly feel the problems which face both groups that they owe much for your efforts to bring to them just and proper benefits and privileges. It is to sincere public officials that the American people owe much for the preservation of their freedom and way of life. The Regular Veterans' Association is grateful for the fine public service you are rendering your country. We are proud to have you with us as one of our most valued honorary life members. May you continue your service for many years to come.

The Regular Veterans' Association and I extend our grateful appreciation to the officials of station WWDC for granting this most valuable time to us for this broadcast. We all deeply appreciate your interest in the welfare of the servicemen and veterans and add their thanks to ours for your fine public service.

The shooting war is over but peace is not yet assured. The veterans of our wars and the servicemen in the Regular Military Establishment must of necessity be concerned with the efforts now being made to bring about a lasting peace. They must likewise concern themselves with the attempt of certain subversive and un-American groups to weaken and destroy our concepts of democratic government. Our organization is composed of veterans and servicemen of the Regular Military Establishment. Our membership today represents every branch of the armed forces. We are, therefore, in a position to reflect the thoughts of both groups and to speak on their behalf.

This organization was among the very first veteran groups to publicly oppose communism and every other ideology which seeks to make inroads in America to either weaken or destroy our democratic institutions. We are committed to the task of bringing to the attention of the American people the dangers of permitting these ideologies to penetrate any further. We intend that our activities in this important movement reach out to every American, including the young ones now being prepared for the duties of citizenship. These children will one day have the responsibility of directing and preserving our freedom. We must make known to them in their youth the advantages and privileges which flow from a free form of government and the terror and oppression which come to people of lands where freedom such as we enjoy is unknown. We must not permit the false philosophies and untruths spread by those who seek to destroy us to remain unanswered. We must vigorously bring to their attention the unalterable truth that our way of life is the best known to the human race. The Regular Veterans' Association is committed to the task of spreading this knowledge everywhere. To aid in this most important program we have recently formed and are sponsoring an organization to which all people who believe in our form of government are eligible for membership, namely, Freedom Incorporated, the primary objective of which is to combat communism and every other ideology dangerous to our institutions. We believe a campaign is essential which will disseminate information through the press, magazines, periodicals, the radio, public forums, and speakers' bureaus to destroy the myth that there is a better way of life than the one known to us. We invite all Americans who love liberty to join with us in this effort.

We believe that we must be militarily strong until such time as peace is assured. We must have a strong Army, Navy, and Air Corps; one second to none. We cannot otherwise make secure to our people the concept of life so dear to all of us. We favor universal military training as necessary and just under our form of government to aid in maintaining our national security.

In an effort to bring about permanent peace in the world we support the organization of the United Nations as the means most likely to achieve this end.

We urge for the servicemen of the Regular armed forces and the veterans of our wars and their dependents full consideration for their needs. The disabled are entitled to just compensation, proper hospitalization, and full rehabilitation wherever possible. We must help them to be restored to a life of usefulness. On behalf of disabled veterans we urge that Veterans' Administration hospitals now maintained be kept under the direct control and independent direction of the Veterans' Administration. We do not approve of the effort now being made to consolidate them with the armed forces general hospitals. This in our opinion would operate to the detriment of the veteran and deprive him of adequate hospital facilities. We must not permit this.

We recommend that steps be taken to provide additional housing for the United States Soldiers' Home. The permanently disabled and retired soldiers of the Regular services need some permanent home for their comfort and welfare, where they personally are unable to provide one. The funds for additional housing are presently available, the same having accumulated from their service pay while on active duty. It is difficult to understand why these men are kept waiting and denied admission for lack of facilities when the money necessary to erect additional housing is presently available. We urge that a suitable building program for the United States Soldiers' Home be enacted immediately.

This organization is supporting equal disability compensation for peacetime servicemen and war veterans alike. We feel that all of them are entitled to just compensation for their disabilities, but on equal standards. Lack of parity in the payment of compensation to both groups should be immediately remedied. We have recommended legislation to provide the same standard of compensation for both groups and we urge its adoption by the Congress.

As a final word the Regular Veterans' Association urges upon servicemen, war veterans, and all the American people a united effort to keep alive the torch of liberty. Let all of us work together for the common good. Let no group for selfish purposes ask for any special privilege which would tend to weaken or destroy our economy or our American way of life.

Address to Women's Army Corps

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include my address at the Women's Army Corps Training Center officer candidate graduation ceremonies, Camp Lee, Va., on Friday, April 1, 1949:

INTRODUCTION BY LT. COL. ELIZABETH SMITH, COMMANDANT OF WAC TRAINING CENTER

The exigencies of total war presented demands upon the resources of our country far beyond any which we had ever known. The utilization of the skills and the patriotism of American women presented itself as a national potentiality to many of our country's leaders. From one of these came a positive, strong, courageous advocacy of this utilization in its most practical form as a part of the Army of the United States.

EDITH NOURSE ROGERS, who was that advocate, is our distinguished guest this afternoon. Her record as dean of our Congresswomen speaks for itself in constructive legislation. Her faith and confidence in the abilities of American women is also a matter of historical record.

Her championship of the WAC as a permanent part of our plan of national security made an inestimable contribution to our present legal status as a part of the Regular Army.

It is my privilege to present to this audience the woman who introduced, sponsored, and championed the original legislation which brought into existence the WAC—the Honorable EDITH NOURSE ROGERS.

REMARKS OF HON. EDITH NOURSE ROGERS, REPRESENTATIVE FROM MASSACHUSETTS

First, I want to tell you what a pleasure it is to me to come to Camp Lee and speak before you who are graduating as officers in Women's Army Corps, so ably led by Col. Mary Halloran of my own city of Lowell, Mass.

This day has special significance to you—it represents a great many weeks of intensive training to prepare for the responsibilities of being an officer in the Army. It represents more, too, in that all of you gave quite a bit of service before you came here to work for a commission. But more than this, your graduation day represents a day on which our Nation has proved its recognition of the fact that national defense is the business of every American. Women since the Revolutionary War have shown their interest in security as much as have men. Men have died for democracy—so have women. Women have gone wherever duty has called them and it has been their duty to serve to the best of their ability—just as this is a man's duty.

Today proves that the Nation, finally, has seen the truth of this—today is just as important as that day in May 1942 when you came into being—because today represents the final step in the historical process which marked the important milestone of that year.

Let's look back for a moment. There have been 7 years of trial—a period far longer than is given to other so-called new trial ideas. Moreover, this trial is in name only, because women, in or out of uniform, have always felt this way in this Nation.

Remember that this trial will never end. Those who are doing a job are always subject to criticism from the sidelines. You have heard, and will always hear, many statements about your Corps. You will hear it said of you that you are helping to glamorize war and militarism, but you will remember that there was no glamor where you were on Normandy Beach shortly after D-day.

You will hear it said that you are of fragile morale and require special treatment. But you will remember that many of you were far from your homes and the security of your native shores for as long as 3 years at a time during wartime. You lived in tents and mud, dugouts, Quonset huts; you

washed in helmets and were packed into troop transports for days while crossing an enemy-infested ocean.

It will be said that the public has not accepted you. This in part is true—there will never be total acceptance of the great American public of anything—that's what makes democracy! But the way to gain public acceptance is not to argue about it, but do your job with quiet efficiency. Proof is in the pudding. It is the work produced which wins acceptance, not the words which are spoken about it.

Bear these things in mind: Never forget that you are here because the Nation's Congress wanted it—and that you achieved it through democratic forms.

Never forget that the Army wanted you and proved it by making you part of the Regular Military Establishment.

And never forget that all of this came about because of the good job done by you personally, and thousands of women in the service.

Now—you must meet the standard of that work—it is a heritage—a proud one. But you know all of these things. If you did not, you would not be here in the first place—and because you know these things I am confident of the high quality of work you are going to do.

I know that you will accept the responsibilities of your new office with an acute awareness of its importance to the Army and to the people.

I know you will bear in mind at all times that the greatest portion of your mission in uniform is service! I know that you will enlarge on the qualities of stamina, endurance, and adaptability—that you will ask for no special privileges or consideration—and that in your relations with your sister services, you will recognize their unquestionably equal contribution to the Nation.

Last of all—be proud!

Be proud, not with the vocal, garrulous type of pride which springs from a secret inferiority complex, but with the quiet real pride of a woman who knows the real truth about herself—that she has been selected and trained for a job she can do and that she is in the company not only of the Wacs who have worn their uniform with honor and efficiency, but of all those men and women, past and present, in all services, who have led or are leading a life dedicated to the service of their Nation.

Depression Fears Flouted by Facts

EXTENSION OF REMARKS

OF

HON. CHESTER A. CHESNEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the following article which appeared in the New York Times of April 13, 1949, entitled "Depression Fears Flouted by Facts":

DEPRESSION FEARS FLOUTED BY FACTS—DR. REED, OF THOMPSON AGENCY, ASSERTS JITTERS IN BUSINESS IS PSYCHOLOGICAL ILLNESS

(By Brendan M. Jones)

Business' current case of jitters can be pampered into a nervous break-down, or make a hypochondriac out of an organically sound economy, but it will be wholly psychological, not a mortal illness.

Opening an interview last week with this medical metaphor, Dr. Vergil D. Reed, associate director of research for the J. Walter Thompson advertising agency, vigorously attacked depression fears with a deskful of facts. Commenting that he recently had met with some serious cases of jitters among business executives, of the let-me-cry-on-your-shoulder variety, he described the victims as so busy looking for hidden weaknesses that they entirely overlook hidden strengths.

In every instance, he continued, it was admitted that advertising budgets had been cut. "Naturally, sales are going to fall off if you stop advertising. Under present favorable circumstances, American business will have to try very hard indeed to become a hypochondriac, let alone make itself really sick. Faith must be bigger than fear."

EMPLOYMENT STILL AHEAD

Concern over the current unemployment total of some 3,000,000 appears foolish, Dr. Reed said, when it is placed beside the facts that the number of persons employed in December of last year and January and February of this year was higher than in the same months a year before.

"The small increase in unemployment for those months can be accounted for by new additions to the labor force. The usual seasonal increase in employment started in March can easily digest the additions. Even in good times, an unemployment of 2,500,000 to 3,000,000 is necessary before selectivity can be exercised in hiring employees. In fact, it takes an unemployment of at least 2,500,000 to take care of those who are changing jobs or shifting from place to place."

Dr. Reed recalled that unemployment during postwar reconversion, gloomily forecast as approaching 10,000,000 to 12,000,000, actually turned out to be no more than 2,700,000. "Strangely enough," he remarked, "many business and Government leaders alike have grossly underestimated the vitality and stamina of the American economy, its industries, as well as the market."

Changes in markets, while always occurring, are extremely rapid in a period like the present, Dr. Reed said. "Right now," he added, "when competitors get scared, is the cheapest time to buy leadership in a market."

Turning to doubts about purchasing power, Dr. Reed declared that it is now 50 percent over 1940 in terms of goods and services rather than mere dollars. Discretionary buying power, that remaining after essentials have been provided, is four times that of 1940, he said. Savings of individuals, he continued, are approximately three times greater than in 1940, and the rate of saving is still high.

"Consumer debt is very low in relation to both income and savings," Dr. Reed noted, "in spite of the alarm recently expressed by some. Consumer long and short term debts combined are about 32 percent of aggregate individual savings, compared to 99 percent in 1940.

"The rate of family formations remains high, and in spite of a gradual decline in the birth rate, to be expected, live births for 1948 are estimated to have been 3,715,000. The abnormally high birth rates of the war and immediate postwar years have added an unexpected bonus to the American market."

Farmers' income in 1948 was three times that of 1940, Dr. Reed said, and farmers' cash assets in 1948 were $22,000,000,000, against $5,000,000,000 in 1940. Wages are expected to remain at least as high as last year, he added, and there will be the additional "props" of $5,000,000,000 in economic recovery program funds and $15,000,000,000 in military expenditures.

Producing additional facts, Dr. Reed recalled that in the last quarter of 1948 the value of the gross national product was at the rate of $265,000,000,000, and payment to individuals at the rate of $221,000,000,000. He estimated that the gross national product this year will approximate $245,000,000,000.

It is fundamental economics that with reduction of prices the dollar will become more valuable, he pointed out, and added that concern with dollar totals was a delusion. "Business men," he said, "always want to compare their latest sales year to their worst, instead of their best. It's all psychological."

Ownership of Submerged Lands

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Senate Joint Memorial 3 adopted by the Senate and House of Representatives of the State of Oregon:

Senate Joint Memorial 3

To the honorable Senate and the House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the Forty-fifth Legislative Assembly of the State of Oregon, in regular session assembled, respectfully represent as follows:

Whereas since the founding of our Nation, the States have exercised sovereignty over the tidelands, the submerged lands, including the soil under navigable inland waters, and soils under all navigable waters within their territorial jurisdiction, whether inland or not; and

Whereas under the common law and civil law the States' sovereignty and authority over and title to said lands has been long acknowledged, affirmed, and respected by the Federal Government whose only powers were expressly delegated to it by the States at the time of the formation of our Government; and

Whereas the States did not delegate unto the Federal Government authority or power over or title to said lands but retained same to and for the States; and

Whereas the recent decision of the United States Supreme Court in the case of *U. S. v. California*, while not deciding the question of ownership of the tidewater lands of California, casts a cloud on the State's title to said lands and the minerals and other natural resources beneath; and

Whereas this decision of the Supreme Court recognizes that the matter of ownership of said tidewater lands is still a question for the Congress to decide; and

Whereas the title to the tidelands and submerged lands of the States is clouded by this decision and the language therein is so broad as to be extendible to the soil under navigable inland waters and soils under the navigable waters within the territorial jurisdiction of the States, and even to the minerals and other natural resources or important elements on or beneath the soil of the States; and

Whereas this cloud of uncertainty affects minerals, fisheries, and all other natural resources and should be removed by the Congress, thereby acknowledging and reaffirming ownership to the States; and

Whereas the House of Representatives of the Eightieth Congress passed a bill, reaffirming and acknowledging ownership in the submerged lands and resources of the respective States and quitclaiming all right and title thereto to the respective States, reserving only a paramount right to the Government in case of national defense, by a vote of 198 for to 26 against, but the measure

died in the Senate by the adjournment of the Eightieth Congress: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the house of representatives jointly concurring therein), That the Eighty-first Congress of the United States be and the same hereby is memorialized to further consider and enact suitable legislation for the purpose of acknowledging and affirming ownership of submerged lands and resources thereof to the respective States in accordance with the heretofore long-recognized constitutional rights of the States; be it further

Resolved, That a copy of this memorial be forwarded to each House of the Congress and to each Member of the House of Representatives from the State of Oregon and to each of the United States Senators from this State, and urge that they individually and collectively give wholehearted support to bring about the enactment of such legislation.

Adopted by senate March 7, 1949.

WM. E. WALSH,
President of Senate.

Concurred in by house March 28, 1949.

FRANK J. VAN DYKE,
Speaker of House.

Hawaii Youth Calls for War on Communism in Prize-Winning Essay of DAR Contest—People of Territory Combat Subversive Influences

EXTENSION OF REMARKS
OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. FARRINGTON. Mr. Speaker, a speaking contest conducted by the Daughters of the American Revolution in Hawaii late last fall brought forth many fine expressions of American patriotism from the youth of our territory, the most eloquent of which came from Archie Makaiwi, grade 11, of the Wallace Rider Farrington High School.

I am presenting this young man's first-prize-winning speech for publication in the RECORD in hopes that it will receive the careful attention of Members of Congress. It is a splendid manifestation of the high standards of American citizenship that generally rule the attitudes of the youth in the schools of Hawaii. It is one of many speeches made in this contest that should be proof enough that the youth of the islands are not yielding to Communist influences despite the fact that one contestant, and only one, in a preliminary contest in one of the high schools delivered a pro-Communist speech.

This incident was recently brought to the attention of Congress when the speech in question was incorporated in the RECORD without pointing out the circumstances under which it was made and the fact that its appearance was the object of an immediate investigation by the Department of Public Instruction in Hawaii.

The widespread public attention given the department's investigation and the prompt steps taken by the Commissioners of Public Instruction warning the entire teaching staff of the Territory to beware of Communist influences is but one of many incidents that prove the people of Hawaii are completely alert to this problem and entirely capable of dealing with it.

And the utterances of the youth in the schools is evidence that they are, with rare exceptions, equally awake to this menace. The speech of Archie Makaiwi should be proof enough of this.

It follows:

MY PLEA FOR DEMOCRACY

(By Archie Makaiwi, grade 11, W. R. Farrington High School, Honolulu, T. H., DAR contest speech)

Suppose you were a young American of George Washington's day and some grave gentleman in a wig, brocaded coat, and knee breeches asked why the history of your country was worth understanding, you would have said: "Because it is the story of how a people came from Europe to be free to govern themselves, worship as they saw fit, and make a living as they pleased, and how they finally fought a long and bloody war to establish complete liberty".

Suppose you were a young American of Andrew Jackson's day, and some backwoodsmen in buckskin leggings and hunting shirt asked the same question, you would have replied: "Because ours is the story of how a free people spread themselves over the wild West, hewed their homes out of the wilderness, and made the common man the equal of the richest aristocrat, thus showing that democracy could not only hold its own, but grow."

Or suppose you were a young American of Lincoln's day responding to the same inquiry. To your questioner you would have said: "Ours is the story of how a free people after expanding from ocean to ocean, proved to the jealous Old World that it could endure a great civil war, and could rid itself of slavery."

And finally, suppose you were a young American of Woodrow Wilson's day. You might have said: "The history of our country is worth understanding because it is the story of a Nation conceived in liberty and dedicated to the welfare of the common man, a Nation which went to the aid of freedom when it was threatened in other lands, fought for justice throughout the world, and tried to lead other nations into peace."

This is the background of our continuous struggle for democracy; and with these thoughts in our mind, will and can we sacrifice our own democratic heritage by ignoring the fact that communism is within our own country?

With this as our background, will we let communism grow to the extent where our own people will be devoured by this hungry monster?

We, the youths of today and the leaders of tomorrow, must educate ourselves to rise and defend our Government. We must rally to a cause and rid ourselves of this undemocratic society.

This is my plea to all of you.

For the Russians, any inroad into our democracy is occasion for a joyous celebration, a victorious harvest, for they know that a lifetime dream has come true. The seed they planted has at last grown to an extent where the plant is beginning to bear fruit. They know that we are human beings after all. That we will be tempted to taste this fruit, a fruit so bitter, so tasteless, so rotten, yet appetizing enough so some people lower their integrity by working for a foreign ideology.

What can we do? What will we say?

We can wage another war, a war against communism. Our weapons will be our books, books to let the world read the words or phrases compiled by men of wisdom who believed in a free and equal government, government by the people, for the people, and of the people. Our weapons will be our pencils—pencils to write out these thoughts of our free government. Our weapons will be our papers—papers to decree these thoughts and prove to the world what we aim to accomplish. And our weapons will be our voices, voices to explain to the world our form of government, to educate the meek and uncertain, and to rally the strong to be aware of the diseased nucleus of communism.

I am sure that with the rightful use of these weapons our battle, though perhaps a hard-fought one, will be a victorious one.

My voice is a single one and a very small one out of many millions. But I know that the American people will echo this feeling and together we will blend our voices and shout our praises, and let the world know we will and can win this battle.

Only then can we march home, home to a country, home to a people, home to a government we are proud of, home to the land of democracy.

STATEMENT OF POLICY

Mr. Speaker, following the disclosure that a pro-Communist speech was presented in a preliminary phase of this contest in one high school, the commissioners of public instruction of Hawaii adopted a statement of policy as follows:

Teachers should be alert to the possibility of Communist propaganda from sources outside the school system being introduced into the thinking of students in connection with essay and speech contests. One instance of this has recently been reported and thoroughly investigated. Constant vigilance is essential for two reasons.

Not only must we guard against subversive groups, thus gaining back-door access to the public schools and indirectly using the classrooms as a forum for their propaganda, but equally important is our responsibility for the education of the individual student who may be misled by antidemocratic totalitarian doctrine. Loyal teachers will know how to develop appreciation of democracy and faith in American institutions.

The appropriate educational method is simple but effective. One teacher, for example, in dealing with a student who had made a bid for attention by repeating Communist Party-line propaganda found that merely holding the student responsible for reading and presenting the arguments against communism was sufficient to counteract any subversive influence and begin to build in the student the intelligent and informed loyalty essential to good citizeneship.

Superintendent of Schools, Dr. W. Harold Loper, said:

The department is on the alert to deal promptly and decisively with any subversive activity in the entire school system.

STATEMENT TO THE PRESS

The board of commissioners, after adopting their statement of policy, issued the following statement to the press in Honolulu:

The commissioners of public instruction at their meeting yesterday adopted a policy warning teachers to be on the alert for the possibility of Communist propaganda coming into the schools from sources outside the system. The occasion for this action was a pro-Communist essay written with outside help by a Kaimuka High School student and delivered in a DAR speech contest held at the school last November.

The young lady who wrote the paper frankly admits having received help in the form of pamphlets and ideas from a member of the Communist Party but says she took the initiative in contacting him rather than the other way around. A portion of her

speech was based upon comments of Dr. Cyril Garbett, Archbishop of York, as quoted in a London paper, and in the Honolulu Advertiser of November 11.

The matter was investigated shortly after the contest and dealt with rather effectively as an educational problem. The outside-help angle came to light and was investigated only recently. The student says she is not a Communist and that she took the pro-Communist line just to be different and attract attention, and that she is interested in entering a forthcoming contest with a paper on the function of education in a democracy.

Everyone interviewed in this connection now agrees that the speech should have been excluded from the school finals and followed up merely as an individual educational problem. Allowing it to go on the program was a mistake in judgment at the time. It is worth noting that the last of four speakers in the school finals, a young veteran of World War II who has had some personal experience with communism in the Orient, won a most enthusiastic applause with his speech against communism.

The statement of policy adopted by the commissioners is being issued to all schools to put teachers on the alert for totalitarian propaganda stemming from sources beyond their control.

DAR APPROVES ACTION

The DAR rules for the speech contest allowed free choice of subject and indicated that the speeches were to be judged on organization, knowledge, English construction, and delivery.

Following the press release, the Honolulu Advertiser printed the following item:

DAR PRAISES BOARD STAND ON PRO-RED TALK

Members of the National Society of the Daughters of the American Revolution at their annual Hawaii State Conference here Saturday adopted a resolution commending the school department and school commissioners for their action in the case of the pro-Communist essay written by a Kaimuki high-school girl. The essay was written in connection with preliminaries to the annual DAR essay contest held here last year. It was not selected for presentation in the final contest.

The DAR members voted a rising vote of thanks to the department of public instruction for its hearty cooperation in the holding of the annual speech contest of Aloha chapter, DAR, and to commend the commissioners upon the sensible and effective way in which the present situation with regard to one of the speeches on communism had been handled.

Mrs. Reginald W. Carter, State regent, presided at the conference. An officer of the DAR said that the student who delivered the pro-Red speech was never in the finals but took part only in the school's preliminary contest.

Poage Oleo Bill

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 1, 1949

Mr. ELLIOTT. Mr. Speaker, I am supporting the Poage bill because I believe the taxes and licenses now imposed upon the manufacture, distribution, and retail sale of oleo and other types of margarine are unjust, and should be removed.

I also believe that oleo and other types of healthful margarine should be allowed to move in interstate commerce without any restriction, other than the restrictions normally imposed by law on all interstate commerce.

I am sympathetic to the interests of the dairy farmers of this country, but they themselves, acting through their various organizations have, as I understand it, agreed that the taxes and licenses now imposed on oleomargarine should be removed. At least they are making no fight against the removal of the taxes and licenses. Their logical objections then are to the sale of colored oleomargarine as butter. The Poage bill in my judgment provides the necessary safeguards.

Under the Poage bill, the manufacturers of oleo must clearly label it as such. This binding restriction of course applies to the distributor and the retail seller. The restaurant that serves it must clearly indicate in one of the several ways provided in the bill that it is serving oleomargarine.

So, when this bill is passed, all parties will be given a reasonable protection. The housewife can buy oelo, colored or uncolored, as she desires and as the family budget will permit. The patron of a restaurant will know whether he is getting butter or oleo. The discriminatory taxes and licenses, first imposed by this Government in 1886, will be removed. Housewives will be saved the laborious hours presently spent in coloring their oleomargarine. Oleo sells on the market at a price of approximately 60 percent of the cost of butter. It is nutritious, wholesome, and healthful. Those of us who desire to use it, should be allowed to do so without restraint.

Some of the gentlemen who have spoken here have tried to make an economic or sectional issue of the debate on this bill. As I have tried to state, I believe the bigger issue is the welfare of all our population. When I forget the side issues, it is crystal clear to me that we should allow those who desire to buy and use oleomargarine to do so without penalty.

We hear a lot about free enterprise in this country and in this House. I believe in free enterprise. The principle of free enterprise would suggest that we allow the oleomargarine industry to be free to develop itself without being unduly penalized or discriminated against.

The district that I represent might be called a "cotton" district. Cotton is the biggest money crop. However, the district has great dairy and cattle possibilities.

A large percentage of our cottonseed oil goes into the manufacture of oleomargarine.

I believe that the dairy industry in the Seventh Congressional District of Alabama will continue to grow. Our fine climate that allows 10 months grazing is a factor that is being recognized more and more. I look forward to the day when there will be a greater balance in my district between a diversified agriculture—cotton, corn, dairying, truck crops, poultry, livestock, fruit and vegetables—on the one hand and a diversified industry on the other. I do not believe we can have this development by unduly penalizing one section of the economy at the expense of another. This bill does not give oleomargarine any advantage. It only places it on a par of equality with our other industries. I think this bill should pass.

Arizona's Pitch Game

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. KING. Mr. Speaker, under unanimous consent to extend my remarks, I include therein an editorial written in the Los Angeles Daily News of March 31, 1949, by Manchester Boddy, distinguished editor and publisher of that daily paper:

ARIZONA'S PITCH GAME

(By Manchester Boddy, editor and publisher)

Californians have good reason to be concerned over Arizona's latest move to circumvent the Colorado River water compacts, particularly since there is growing evidence that the Truman administration has been wooed into supporting Arizona at California's expense.

By the indirect route of advocating the $738,000,000 central Arizona project, which can only mean giving Arizona 1,200,000 acre-feet of water to which she is not entitled under the agreements, the Arizona water lobby is knifing at vital local interests.

The strategy of the Arizona water grabbers seems to be something like this: (1) California isn't using all of its 5,362,000 acre-feet allocation and won't need it all for another 40 years (a fallacy); and (2) by that time new sources of water supply can be developed; therefore, (3) why not let Arizona have the 1,200,000 acre-feet for her project now?

Such new water resources (suggested by Under Secretary of the Interior Oscar L. Chapman) are set forth as: (1) Distilled sea water; (2) hauling water from the Columbia River in Oregon; or (3) tapping remote mountain streams.

Well, as the late President Roosevelt was wont to say, "That's a pretty 'iffy' proposition." Certainly California isn't going to trade its blue-chip water supply, already developed and assured, for a wildcat possibility that may turn out to be a dry hole.

Distilling sea water on an experimental basis by the Reclamation Bureau has been proposed in a bill introduced into Congress by Senator O'MAHONEY, of Wyoming. The bill would appropriate $30,000,000 for research and pilot plants. California should indeed support this bill, for it cannot afford to be placed in the position of blocking the advance of science. But such support should not be turned into a weapon against itself. Present information advanced by experts is that sea-water purification on a quantity basis sufficient to supply southern California would cost 25 times that of our present supply. It is apparent that our agriculture and industry would collapse and die under such a system that imposed higher costs.

For that matter, why should California, with its $500,000,000 investment in Colorado

water installations, be the goat? Why not, instead, let Arizona wait out the results of this research and then, if it proves feasible, install its own sea-water pumping and distilling system from the Gulf of California, by way of a treaty with Mexico? It certainly would cost no more than its present larcenous central Arizona project idea.

As for the alternate sources of supply so glibly advanced by Arizona propagandists—Columbia River water and remote mountain streams—they hardly bear mentioning. An exhaustive Daily News series on water sources last May examined all these methods and found them not feasible or economic for decades to come—and then only under conditions of near disaster where cost would be no object.

In a recent blistering historical review of the 30-year California-Arizona water controversy, Representative CECIL R. KING, Democrat, San Pedro, summed up the matter very well when he said: "How can Arizona get additional water? Only by taking it from California.

"Arizona is not concerned that California has contracts with the Federal Government for 5,362,000 acre-feet of Colorado River water. Break these contracts, says Arizona; the Government had no right to sign them. California is not entitled to this water."

Arizona has been playing this same broken record for over 30 years—including two appearances before the United States Supreme Court, both lost by her. California is willing to adjudicate the matter before the same tribunal again. But Arizona isn't. It appears that she wants water by whatever method; not merely such an abstract thing as justice.

We repeat: The situation is very serious in Washington. Congressmen from other States, not familiar with the whole involved legal and economic implications, are intrigued by Arizona's latest pitch game, which on its face appears reasonable. Only those desperately familiar with the problem, through years and years of experience, can know the fallacy of Arizona's proposals. For that reason California must again mount its guard and by every honorable means mobilize its forces to acquaint the Nation with the true situation.

Where Are They?

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. DONDERO. Mr. Speaker, I offer for the RECORD an item entitled "And How Are You?" dealing with an important meeting held in Chicago, Ill., during 1923, and which deals with 10 of the world's most successful financiers and their present whereabouts. The item brings out very forcefully the fact that all of these men learned well the art of making money, but not one of them learned how to live. The item follows:

AND HOW ARE YOU?

In 1923 a very important meeting was held at the Edgewater Beach Hotel in Chicago. Attending this meeting were 10 of the world's most successful financiers. Those present were the president of the largest independent steel company, the president of the National City Bank, the president of the largest utility company, the president of the largest gas company, the greatest wheat speculator, the president of the New York Stock Exchange, a member of the President's Cabinet, the greatest "bear" in Wall Street, head of the world's greatest monopoly, president of the Bank of International Settlements.

Certainly we must admit that here were gathered a group of the world's most successful men. At least men who had found the secret of making money. Twenty-five years later, let's see where those men are.

The president of the largest independent steel company—Charles Schwab, died a bankrupt and lived on borrowed money for 5 years before his death.

The president of the greatest utility company—Samuel Insull, died a fugitive from justice and penniless in a foreign land.

The president of the largest gas company—Howard Hopson, is now insane.

The greatest wheat speculator—Arthur Cutton, died abroad insolvent.

The president of the New York Stock Exchange—Richard Whitney, was recently released from Sing Sing Penitentiary.

The member of the President's Cabinet—Albert Fall, was pardoned from prison so he could die at home.

The greatest "bear" in Wall Street—Jesse Livermore, died a suicide.

The head of the greatest monopoly—Ivor Krueger, died a suicide.

The president of the Bank of International Settlements—Leon Fraser, died a suicide.

All of these men learned well the art of making money, but not one of them learned how to live.

British Dentists Discuss Outlook Under Nationalization Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. MULTER. Mr. Speaker, on April 1 I placed in the RECORD the eighth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 27, is the ninth of the series:

BRITISH DENTISTS DISCUSS OUTLOOK UNDER NATIONALIZATION PROGRAM

(By E. J. Delaney)

(Ninth in a series)

LONDON, March 26.—British dentists are becoming reconciled to their role in the new national health service and will be happy if it is allowed to roll along as is, but with more weight given to the considered opinions of the ethical spheres of the profession concerning techniques and policies.

They think they always will be in danger of regimentation and this may be just the beginning of a long-range plot to cast them into the position of being full-time paid public servants with little individual freedom.

Let us present the viewpoints of several of the more conservative kinds of dentists, topflight men who have had good private practices.

DOUBTFUL OF FUTURE

"Yes, I was against the scheme," says one at a luncheon at his country club, 50 miles outside of London. "I thought there was too much regimentation in it but I came in in January. I grant the Government is not domineering now. I hate to think that may not be so later."

"He" gets into the conversations often. "He" is Aneurin Bevan, Minister of Health, the big bad wolf in the minds of the middle and upper classes and the professional men. So "he" always will mean Aneurin Bevan.

One speaker resumes: "What I think he will do is reduce the fees all around to such an extent a large number will not want to work the scheme. The public is becoming accustomed to it and ever to start a private practice again will be impossible."

FLAT-SALARY CLINIC WORK

"Then we may be forced to work in a clinic at an annual wage. That is wholly my own fear. It will not come in my time, but we have the coming generations to think about. The standard will descend to a low point. It will not be good dentistry."

This dental leader, who has been a member of committees setting forth high principles, deplores the Ministry's attitude on dentures. He explains:

"My contention is this: The biggest blot today is the denture. My average patient wants a denture that will be a credit to him and an esthetic job cannot be turned out for the $42, which is the Government's allowance for one. I would not want my wife or daughter to wear one of them."

SERVICEABLE JOB

"It is a good serviceable job, it will fit all right, but it has no finesse. My average fee for dentures for private patients is $126. The difference between the two dentures is the workmanship. The health-plan denture may be set up in 30 or 40 minutes. Mine takes over 2 hours. I like to have a photograph of the patient when he had all his teeth. It helps me to maintain his good appearance."

The dentist thinks the fees for the remainder of the dental program are reasonable and he has no complaint against them. The denture part of it gives him the horrors and he bemoans the fact that he is doing work that he considers to be undesirable, even though useful.

Another dental surgeon in the better-than-average class gives us some of his ideas.

BETTER THAN EXPECTED

"It's much better than I expected it could be," he starts off. "There isn't nearly as much red tape as I anticipated. The forms are many in number, that's true, but they are explicit and not complicated and a good nurse can keep them in order and get scores of them required into the mail every night.

"We regret that in our field, as in everything else, we have rogues who are working this plan to get themselves $40,000 a year. Whoever told 'him' that $19,200 a year gross income is adequate for a dentist was very near the mark. If a dentist does legitimate work he cannot do more than that under the Government scale of fees.

"I still do much private practice. My turnover under the health plan in February was $1,468, and it was about the same in January. I work from 8:45 in the morning to 6:30 at night, with an hour and a half off for lunch and 20 minutes off for tea. I work 4½ days."

QUITE ABSURD

"If I were working fulltime making dentures under the scheme I would make $1,600 before a month would be up. Under the new rule I would get only 50 percent of the fee after that. After I paid my costs I would have a profit of only $2.20 per denture. That is quite absurd, and I wouldn't do it."

We move along and steal some of the valuable time of a third dentist. He goes into the problem of meeting the heavy demand from the public.

"I just can't do otherwise than let patients wait for treatments," he declares. "My bookings are 4 weeks ahead, but if someone comes in here in pain I manage to give him some immediate care, though it may be only temporary in nature.

"It would be easy to book much more than 4 weeks ahead, but it is not wise to do so. When a patient comes in for the first time he may need six or seven treatments, and I want to get those all in inside of a month. You see, we do not get paid until we finish up with a patient and have him sign a statement that we have concluded with him. I keep openings through my 4 weeks of appointments to insert these newcomers."

England and Some of the Worth-While Things She Has Accomplished, as Told by Col. Robert R. McCormick, of Chicago, and Reprinted in the Chicago Tribune of March 20, 1949

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, under permission granted, there is printed herewith an address of Col. Robert R. McCormick, editor and publisher of the Chicago Tribune, delivered over WGN on Saturday evening, March 19, 1949, and reprinted in the Chicago Tribune of March 20, 1949:

ENGLISH HISTORY

(Following is an address by Col. Robert R. McCormick, editor and publisher of the Chicago Tribune, delivered last night on the Chicago Theater of the Air over WGN, and the Mutual Broadcasting system.)

(By Col. Robert R. McCormick)

Visiting the conscientious and able governors of Jamaica and Trinidad, it occurred to me that propagandists are so busy trying to make England out to be what she is not, that they have overlooked the really tremendous claims she has to our admiration and gratitude.

It is a fair generalization to say that modern England began at the time of Queen Elizabeth. The revolution of Henry VIII was over, and there swept in a whole series of events. First, let us consider the English language. The ancient English of Chaucer had passed through the period of Spenser and burst into refulgence with Shakespeare. I have never heard the supremacy of Shakespeare challenged in behalf of any post-Dark Ages author. The claims of Homer and the Greek tragedians, who were what Shakespeare was not, great moralists, need not be considered here.

Shakespeare was followed by a half dozen Fletchers, then by Milton and the King James version of the Bible, and the language was established to stay.

I have heard Luther's Bible compared favorably to that of King James, but as I do not read German, I cannot make the comparison. Certainly the French plays and poems fall far behind the great Englishman.

The sonorousness of the English language makes it supreme in poetry, prose, and in oratory and fortunately does not lend itself to the vituperation achieved by Hitler in the German tongue.

Compared with our Virginia philosophers, Franklin, Lincoln, even Borah, English political literature does not shine, but it is far superior to the anarchist mouthings of the Rousseau school and the brutal teachings of Nietzsche and Treitschke.

England extended her language to Scotland and to Ireland. The greatest Scotch writers, Sir Walter Scott, who wrote for an English audience, and the patriot, Robert Burns, who borrowed the immortal phrase "chains and slavery" from Patrick Henry, both wrote in English as did the famous Irish authors.

It is satirical that George Bernard Shaw used the English language to destroy the nation which forced it upon his ancestors. Before that Irish nationalists under the lead of the Welshman Lloyd George destroyed the veto of the House of Lords, reducing the Government of England to the tyranny of one House. We did well to keep English as our national language. It is sure to become the world language.

England did not originate the system of conquering and imposing tyrannies upon weaker people. The Portuguese came first in that field, the Spanish second; and then the Dutch and French.

In the early days, its brutalities were excused as crusades. By the time the English entered the field, it had become plain, commercial larceny, accepted by all that called itself the civilized world. British conduct, according to our ethics, was evil, but, compared to its contemporaries, almost humane.

In her world conquests, England showed great statesmanship. All over the world, she permitted small Portuguese, Spanish, Dutch, and French colonies, thus not driving her defeated rivals to desperation. She also permitted local princelings to rule—in her interest—and unquestionably reduced their excesses.

The India Company was nothing but chartered piracy; the rule of the viceroy a would-be beneficent autocracy that finally fell before a changing world.

In her great wars, our sympathy goes to England. Certainly the world would have been worse for the success of the Armada, of Louis XIV, or Napoleon.

In the reign of Elizabeth, again we find the English common law at its height, when the judges told the Queen that her gifts of monopolies to her lovers were illegal. At one time the courts even held that Parliament could not change the common law. It was a sad day for England when this doctrine passed away.

In the mistaken effort to make out that the English gave us at least the base of our Constitution, it is entirely overlooked that she did give us her common law, which works hand in hand with the Constitution in opposing the efforts of subversives to destroy our liberties.

The Church of England came back with Henry VIII, was abolished under Mary, and returned with Elizabeth. As the state church, it has partaken of all of the vicissitudes of English revolutions and even English politics. Of it, the late Bishop George Craig Stewart, of the Episcopalian diocese of Chicago, remarked that the Church of England is really England. The Reverend John Evans, an Episcopalian rector, believes that most American Episcopalian bishops would assent to some form of that statement. He continues:

"All bishops of the American Episcopal Church acknowledge the Archbishop of Canterbury, Primate of all England, as their spiritual supreme as well as the chief bishop of the world-encircling Anglican communion. That communion is composed of a score of completely autonomous churches, including the Episcopal Church in the United States as well as many younger mission churches, which are autonomous to the extent that they support themselves. The ties that bind the communion together are maternal rather than ecclesiastical. Such, however, can be more potent than organic bonds.

"Significance of Bishop Stewart's remark is deepened by the fact that the Archbishop of Canterbury traditionally has crowned English sovereigns. Such coronations literally are ecclesiastical consecrations of kings who become not only head of state, but also temporal head of the church.

"While it is true that the designation of King George VI, as the temporal head of the American Episcopal Church would be both ridiculed and denied, yet the flavor of that long tradition in England lingers with an undeniable influence on the attitudes of American Episcopalians toward England. Evidence of this was observed when Edward Windsor visited Chicago in 1924 as Prince of Wales and heir apparent to the throne of George V.

"The round of Chicago's hospitality began with a celebration of holy communion in old St. James Episcopal Church. The Prince read the Epistle from without the sanctuary just as a Prince of Wales always may do if he wishes in any church of the Anglican communion throughout the world."

Lord Macaulay, the British historian, found the most distinguished feature of the Church of England to be "its relation to the monarchy and the sway the sovereign had over it." So strong was this feeling of loyalty that a number of bishops stood by the Catholic James II and against the Protestant Parliament of William and Mary, forfeiting their livings thereby. The higher clergy were once appointed by the King, now actually by the Prime Minister. One of these, Disraeli, although baptised in childhood, was always a Jew at heart; another, Lloyd George, was a Welsh noncomformist; Bonar Law, a Presbyterian. Their appointments of Anglican bishops appear to have occasioned no protests. The lower clergy have been the patronage of the larger land owners. The doctrines of the church, originally set by the King, are now a matter of parliamentary regulation. A proposed change in dogma was defeated in Parliament some years ago.

Whatever the vicissitudes of the Crown, it has always been the head of society; so that except for a few, very old Catholic families, anyone of social ambition must belong to the Church of England, a status which is growing in Northern Ireland as well as in the United States.

In the Revolutionary War, the Church of England was unanimously Tory. As such, it was ejected from the country. In order to reestablish itself after religious toleration had been created, Episcopal clergymen had to go to a nonjuring bishop of Scotland for ordination, because the Archbishop of Canterbury would not ordain anyone who did not take the oath of loyalty to the King.

This formality has since been done away with but the substance remains. The Church of England in the United States is English. It unanimously supported England in getting us into the recent two wars, and it is worth while to note the President Franklin Roosevelt and the last four Secretaries of State have been Episcopalians.

While endeavoring to enforce conformity on the English-speaking people, the Church of England has not been a missionary church. It is taking little interest in the colored subjects of the Empire. It was largely from ignored American missionaries and hospitals that the Chinese and Indians learned the principles of freedom that overthrew the Empire. One of the inconsistencies that puzzles non-Episcopalians is the violent antipathy of the English church and the royal family to divorce, when one considers that both came into existence through Henry VIII, who divorced three queens.

England owes her banking system to the Dutch, introduced by King William III, and by the Scotch with the Union.

From then on to World War I, England was the world's banker. Now without the financial resources to back it, her prestige is still dominant.

In achievements of abstract science, England ranks among the highest. Her application of steam brought in the industrial revolution and modern standards of living. It also heralded labor strife. Serfs who for centuries had seen no chance of betterment, resolved to share in the new prosperity, while the emerging middle class fought to maintain and increase the slender capital which began to come into existence.

Ireland forms a black page in England's history. For that part that came after the Battle of the Boyne, I can find no mitigation, but it is supplied by the Irish author, Shane Leslie, of an old Irish Protestant family, recently turned Catholic, in his book, The Irish Tangle.

From the time of Elizabeth, English politics have been constantly anachronistic. The failures of the Long Parliament and of Cromwell were as tragic as the French Revolution. After this collapse, the aristocracy had recourse to a series of expedients. A Dutch commoner, in the person of William of Holland, with Mary, a royal English wife, were invited with a French Huguenot general to drive the Stuarts from the throne. They were successful, but issue continuously failing, the Whigs had recourse to a whole series of German princelings to give an atmosphere of royal legality to the aristocratic usurpation. Dr. Johnson horrified Boswell by saying that if popular opinion could prevail, the then rulers of England would all be hanged.

In the present English unrest, the royal family is turning to Scotland again, naming the German blooded husband of Princess Elizabeth, Duke of Edinburgh, and the heir to the throne Charles, in recognition of the Stuarts. The present Queen of England is of commoner birth in that country, but in Scotland is a resident of the Glamis Castle of Macbeth and royal as a descendant of Robert Bruce.

It was one of the German princelings, William IV, who began the destruction of the aristocratic system by threatening to create enough new peers to pass legislation desired by the House of Commons.

Since then the aristocracy has slowly lost all political power and has been robbed of its wealth, while the Government has moved further and further to the left to its present quasi dictatorship of the proletariat and economic collapse.

The doctrine that gentlemen must not soil their hands in trade has furnished that enormous bureaucracy which has administered the Empire for hundreds of years.

The British military has been largely officered by younger sons of the nobility and by what the French would call the petite noblesse, largely from Ulster.

The great Generals Marlborough and Wellington received their titles for service in the field. The Earl of Cornwallis, successful in Ireland and India, is generally known for his surrender at Yorktown.

The English Navy ruled the world for centuries. In preferment, Trevelyan says it was third to the army and the church. Its greatest hero, Nelson, rose from the lower class.

In its decline, the aristocracy have served their country well. The noble British ambassadors have dominated most diplomatic posts for a century, and in particular have run the State Department of the United States for over 50 years. Lord Lothian, perhaps the last of them, devoted his whole life to understanding, influencing, and dominating American foreign policy with complete success.

Reds' Speakers Expose Them as Enemies of Religious Faith

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. MULTER. Mr. Speaker, from time to time I have directed attention to the fact that communism is attempting to spread its tentacles by undermining all religions. The following editorial which appeared in the Brooklyn Eagle, of Sunday, April 3, further accentuates these dastardly tactics:

REDS' SPEAKERS EXPOSE THEM AS ENEMIES OF RELIGIOUS FAITH

In the week-end edition of the Daily Worker there is an article entitled "The Truth About Religion in the Soviet Union." The author is listed as G. Karpov, chairman of the Council for the Affairs of the Russian Orthodox Church. The first paragraph of the piece says: "Along with the other civil liberties guaranteed by the Constitution of the U. S. S. R., the full freedom of religious worship is enjoyed by the people of the U. S. S. R."

In another paragraph Mr. Karpov says: "Freedom of conscience, and hence freedom of religion, as guaranteed by the Constitution of the U. S. S. R. has done away not only with national but also with religious strife among the numerous peoples of the Soviet Union." Then he adds that the constitution also recognizes the freedom of anti-religious propaganda. The last sentence is a gem of understatement and at the same time the key to the real truth about religion in Russia.

The professional Communists play it safe in their drive against God. They begin with the children in their formative years to make sure they will not be misled by the religious-freedom front in their beloved constitution.

CAN'T BE NEUTRAL ON RELIGION

On March 30, Soviet youth met in the Great Hall of the Kremlin for the first All-Union Komosol Congress in 13 years. This is the Communist youth organization which claims a membership of 9,283,289. The session was addressed by N. A. Mikhailov, the general secretary, who said that "in certain places there is observed some revival of church activity which seeks to increase its influence on youth."

"Some organizations," he declared, "ignore such phenomena. Komosol organizations cannot be neutral concerning religion. Komosols are called upon to propagandize the advancement of science, and any religion is in direct conflict with science."

The speaker said the organization has an army of 200,000 propagandists working among the youth of the country and operates 237,125 political circles and schools attended by 4,000,000 youths,

There you have the picture of religion in Russia today. Stalin's wistful weasels work night and day sinking their agnostic fangs into the throats of children in an all-out effort to destroy any spiritual leanings that might betray them into joining the world family of decent God-fearing men and women.

CAN'T COMPROMISE WITH REDS

It is strange indeed that we have so many Americans, including men of the cloth, who berate the tough policy of the United States toward Russia and look upon the Soviet Union as the future hope of the world. Strange, too, that there are liberals who oppose such measures as the one Governor Dewey signed Friday barring subversive teachers from our school children.

A decent man cannot compromise with an ideology that seeks to warp the minds of the young as a means of perpetuating the system, particularly when he knows that no child or person in any country is wholly immune to these false teachings. I consider that any Communist here or anywhere else is my enemy and the enemy of my son, and I know of no better justification for my belief than the words of Mikhailov in Moscow on March 30.

Mikhailov and his cohorts set the pattern for all Communists—in his country, mine and everyone's. We need to know the full nature and intent of our adversaries. The cold war is a war against freedom but it is also a war against God. Mikhailov makes them all too clear.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, April 4 (legislative day of Friday, March 18), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "In our Lodge," published in the Fort Wayne (Ind.) News Sentinel of March 31, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN OUR LODGE

Senator WILLIAM E. JENNER's candid view of American foreign policy was not popularly received, but then critics of Government spending and world policing are never popular.

The Hoosier Senator, who apparently was not playing to the gallery, recently made a major foreign policy speech in which he accused the American foreign spenders of going on a Broadway playboy's splurge.

This newspaper has not always seen eye to eye with Senator JENNER. We opposed his gubernatorial ambitions. We said he could be doing a better job in the United States Senate.

The stand he has taken against exorbitant outlays abroad and his denouncement of phony bipartisanship put him in our lodge on foreign policy and, incidentally, serve to justify our belief he could best serve his State in the United States Senate.

In the Senate, the Indiana lawmaker was first to come out solidly against the misnamed bipartisan policy. He realizes it is a shrewd method of funneling credit for any good to the Democratic side of the ledger and of charging the GOP with any liabilities of the arrangement. Except for forthright speeches such as Senator JENNER has made, one in Washington would hear only of the glories of this unholy alliance.

The product of 3 days' continued research, the Hoosier's 18-page speech touched a sore spot. Nobody has denied, he said, the recent speech of Christopher Mayhew. This British political leader, it will be recalled, embarrassed the Labor Government by asserting that Britain has accomplished recovery and is now engaged in social experimentation.

Senator JENNER says the American taxpayer is complacently financing these experiments, "financing the purchase of false teeth and toupees and every other socialistic experiment the mind of man can conceive."

And if the Senator's charge—that ECA shipments have found their way to Russia—can be confirmed, the Hoosier will have made his point that we're "squandering material and financial resources in a foreign scheme labeled for recovery."

Reply by Tom Henderson to Attack by Henry McLemore on Daughters of Confederacy

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, April 4 (legislative day of Friday, March 18), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a very splendid article by Mr. Tom Henderson, of Yanceyville, N. C., in which he defends the United Daughters of the Confederacy against a recent attack by Mr. Henry McLemore. The Daughters of the Confederacy is one of the outstanding organizations in the whole country and has rendered marvelous service in preserving the finest traditions of the South and in keeping green the memory of her illustrious dead, even as it has worked to contribute to and perpetuate the greatness of the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DAUGHTERS OF CONFEDERACY DEFENDED AGAINST HENRY MCLEMORE'S ATTACK

(By Tom Henderson)

"We give to you our faithful vow,
No vandal touch shall bruise thy brow."

Maybe the United Daughters of the Confederacy have never put these lines on any one of the many monuments they have laboriously builded and prayerfully dedicated to the memory of the men who wore the gray, but this silent vow is in the hearts of every one of them as they vigilantly stand guard over these markers. But, while they would cheerfully give their lives in defense, they are too ladylike to engage in a war of words with those who deride their motives and scurrilously attack in print the labors of their hands and spirit of their hearts.

Henry McLemore would dynamite all these monuments, dig up their hallowed graveyards, and hang these faithful Marys and Marthas on cypress trees.

Silly tommyrot. And, southern papers print the slurrings and the calumnies. This at a time when the South again has her back to the wall, fighting a horde of foes intent on taking away all of what is left of her States' rights and mongrelizing her citizenship.

HISTORY CANNOT BE DISMISSED

You cannot dismiss history, however distorted and hypocritically it is written; you cannot erase altogether the scars of war, however unreasonable and unrighteous the causes may have been; you cannot forget the bravery and the sacrifices of those who did the fighting. The boys of World War I who sleep in Flanders field never knew for what they gave their lives. "Their's was not to reason why; their's was but to do and die."

The Alamance County lad of World War II did not make the world either safer or better, but he had something appertaining unto ironic realism when he wrote to his daddy back home: "Dear Pappy: I come mighty nigh getting killed last week. A piece of iron whizzed right by my head. I hunted it up and found it was one of them old worn-out Dixie plow points you sold that junk dealer last year." There were those in Washington who knew the Japs were on their way to Pearl Harbor long before they got there.

Henry McLemore was straining himself to be funny, but his humor was mean and contemptuous wit. In keeping fresh and green the graves and memories of their Confederate fathers the Daughters are not opening up old wounds and stirring up old hatreds. They memorialize and glorify not the "casus belli," but the bravery of those who died at Bethel and Gettysburg and those who surrendered at Appomattox.

Henry evidently does not know much of the aims and objectives of the Daughters of the Confederacy. It is not only a memorial and historical organization, but, now that probably the last monument has been erected and almost the last grave has been marked, it is also a benevolent, educational, civic, and social association. It is caring for the aged, providing scholarships for chest drives and bond sales—and will probably help raise funds for the next foolish war which is seemingly in the making.

HATED WAR, BUT FOUGHT

This scribbler's Confederate daddy hated war, was for the preservation of the Union, did not believe in slavery and was never a secessionist at heart, but, like Robert E. Lee, he fought with his South when the despot's heel was at her door. While he never held any hatred against northerners, even the one who shot off his leg, he ever eulogized the gallant conduct of his comrades—and he loved them all, the dead and the living.

However much we may castigate the politics and despicable actions of Gov. William H. Holden (born at Leasburg, Caswell County) and write him down in the words of Editor Josiah Turner as "a white-livered miscreant," we must give him credit for trying to keep North Carolina from seceding and out of the fratricidal war.

The late Daisy King Barker (a Daughter of Leaksville) did a great deal of research work for her excellent book, Echoes of the Old South, (dedicated to the memory of my father, D. Franklin King, who volunteered in the Confederate Army at the age of 16 and became a boy captain, Company F, Forty-third Virginia Regiment, and to the memory of my mother, Eliza Dyer King, a child of the Confederacy) and preserved these historical notes:

"In June 1859, President Buchanan, who attended the University of North Carolina commencement, assured his audience that North Carolinians 'have always stood by the Constitution and the laws, and are destined in the history of this country to do much to preserve our glorious Union.'"

HOLDEN'S INFLUENCE FELT

"When the Democratic National Convention met in Charleston, April 23, 1860, its great problem was to harmonize the demands of the northern and southern wings of the party. In this debate North Carolina occupied a middle ground and her stand was an important factor in holding the delegates of Virginia and other border States to their position. While State after State was seceding, a member of the North Carolina delegation, coming from a consultation with the Virginians, urged Holden to make a speech to hold our delegates against going out, saying, 'From what I have heard, if our delegates go out, Virginia will go out also, and the constitution will be broken up.' Holden complied with a 10-minute speech, declaring that North Carolina had sent her delegates to the convention to maintain and preserve and not destroy the bonds of the Union; that by an immense majority the people of North Carolina would frown indignantly on the first dawning of any attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which link together the various parts. He exerted a strong influence.

"A great Union rally was held at Salisbury in October, prior to Lincoln's election. Among the great orators of the occasion, Vance carried off the honors. The correspondent of the Raleigh Register wrote that but one sentiment prevailed: 'We fight for the Constitution, the Union, and the laws—we will not be led off by seceders, in the South, or by black Republicans in the North, and we will never give up our institutions until stern necessity compels us to believe that they being no longer adequate to our protection, we must resort to the right of revolution, which is inherent in every people.' * * *

"After the fall of Fort Sumter, which news flashed over the country like an electric shock, the South, believing that the defense of southern rights had become necessary, sprang to the support of the Confederacy."

If I were Henry McLemore I would first abjectly apologize to all the papers of the South which carried his sordid column of the Confederacy, then go out to Lee's tomb, hunt a judas tree, climb it, drape a Confederate flag around my neck, and jump off.

Letter From Five Great Scientists

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. O'HARA of Illinois. Mr. Speaker, in the district which I have the honor to represent is the University of Chicago, one of the great educational institutions of the world. The distinguished junior Senator from Illinois, the Honorable PAUL DOUGLAS, is a professor of economics at that university. A number of the Members of this House who are held in highest esteem are graduates of Chicago.

Certainly no institution of learning in the great middle western area, none in the Nation during the period of its existence, has made larger contribution in the field of education. It has been a contribution to scientific progress, to the cultural and the spiritual tones of daily living, and to the free, unhampered processes of thinking with open and unbiased minds on the economic and political problems of a changing world.

The people of Chicago are proud of the university. This is especially true among the men and women of the Second Congressional District of Illinois.

On the faculty of the University of Chicago are many of the great atomic scientists of the world. James K. Allison, professor of physics and director of nuclear studies, and Harold C. Urey, discoverer of hydrogen atom of atomic weight 2 and winner of the Nobel prize for chemistry, are but two of the number whose renown for achievement is international.

These men, so distinguished as scientists, are of towering stature as patriots. Not one whisper came from those closed doors behind which they were toiling

when the atomic bomb was in the period of conception and development. With devotion to country and with the desire of all true scientists to advance the welfare of all mankind, they are striving in the experimentations with and the development of atomic energy to enlarge the horizons of human existence. They deserve the commendation of us all and the appreciation which is the reward of good service faithfully rendered.

They were active in the campaign of last fall, which resulted in my election to this distinguished body, because of the unfair and unjustified aspersions cast, not upon them individually but anonymously upon atomic scientists as a body, by the Un-American Activities Committee of the Eightieth Congress.

Under the permission granted me by the unanimous consent of the House, and that the position of these men may be more thoroughly understood by my colleagues, I am including in my remarks the following letter signed by five members of the faculty of the University of Chicago who are recognized as among the foremost atomic scientists of the world:

MARCH 29, 1949.

The Honorable BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR MR. O'HARA: Many of us in the neighborhood of the University of Chicago believe that the Committee on Un-American Activities, under the Eightieth Congress, flagrantly abused and exceeded its legitimate functions of inquiry and recommendation of legislation. The present Congress certainly has the right to investigate subversive activities and the measures taken to counter them. The committee for this purpose, however, should have a more reasonable name and conduct its affairs in a manner consistent with the responsibilities and decorum of the Congress. Our disgust with the past activities of the committee may be summarized in the following points:

1. The committee has operated in an atmosphere of witch hunting and headline seeking. It has used unfavorable publicity in an attempt to punish persons who have been cleared repeatedly by loyalty boards. The committee has attacked in a similar manner persons whose records have been examined carefully by the Department of Justice and reported clear of any derogatory evidence admissible in a court of law.

2. The FBI and the Federal Grand Jury are responsible for dealing with treason and espionage. If they are derelict in these duties, it would be a legitimate function of a congressional committee to report this fact. The Committee has in the past attempted to usurp the functions of these agencies.

3. The aspect of totalitarianism which we dread above all others is the limitation on freedom of thought and the exchange of ideas. In a few sensitive Government positions it may be necessary to be certain that the incumbent is not affiliated with any movement denying him freedom of thought and conscience. A person in such a position must have no loyalty conflicting with loyalty to the Constitution.

In all other cases only overt, illegal, treasonable, or subversive acts should be penalized. A man should be free to think as he pleases and to associate with whom he pleases without endangering his means of livelihood.

4. The previous activities of the committee have furnished a wealth of propaganda material to the enemies of the United States, and held our Government up to ridicule all over the world. The very term "un-American" denotes an aggressive attitude toward citizens of other countries.

5. The staffing of Government posts with persons of high intelligence and capability is an outstanding problem of our time. The unwarranted activities of the committee in question have made Government positions undesirable to the very persons who should be attracted to them.

Kindest regards,

SAMUEL K. ALLISON.
HAROLD C. UREY.
EDWARD TELLER.
JOSEPH E. MAYER.
WILLIAM H. ZACHARIASON.

The Need for a Single Supply Catalog System for the Armed Forces

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. ANDERSON of California. Mr. Speaker, I would like to make a few remarks about my proposed bill, H. R. 321, entitled "The National Defense Catalog Act."

Ralph W. Page, writing in the Philadelphia Bulletin a short time ago, stated and I quote:

It is now manifest that the National Security Act has not been effective—the National Planning Association has released a report stating "the United States is now getting a too meager yield in security for its expenditures." It finds that the rivalry and jealousy among the services, the easy-going attitude toward expenditures by all the services, a great surplus of high-ranking officers and the piecemeal grab-all policy by which each service submits an independent and exaggerated budget, are piling up needless costs.

And Henry J. Taylor, speaking over NBC, stated and I quote:

And this is all backing up our amazing expenditures. Why, the overlapping of authority and wasted expenditures hardly seem believable, my friends, and, with our other vast expenditures at home and abroad, our military budget would in time crack our economy wide open. The military costs now consume more than 34 cents out of each tax dollar you and I pay; and unless the Army, Navy, and Air Force become more cost-conscious, the bill may zoom to double that figure. Although our three armed services are supposedly unified, each still arrives at its own budgetary requests separately, with the left hand often not knowing what the right hand is doing. And yet they say taxes must go up. Meanwhile, public relations and publicity costs of the services inflate like a giant balloon. The request is in for $8,338,575 for public relations in 1950. And other items reveal a similar disregard for cost. It (military budget) represents a prodigal approach to the whole question of costs. It is difficult to escape the conclusion that padding has been a very general practice.

Industry would not permit for a moment the loose, uneconomical, and inefficient methods of carrying on supply operations that are prevalent in the armed forces; they could not and still stay in business against more alert competitors.

The views of industry were exemplified during the war by the activities of William H. Harrison, at that time operating vice president of one of America's largest concerns, the American Telephone & Telegraph Co., now president of International Telephone & Telegraph Co.

One of the Army's technical services had run into unusual difficulties and was finding it harder and harder to carry out their supply mission. The Congress was advised that their supply activities were the worst in the Army, and were probably the worst in the Armed Forces.

The correction of this sorry situation was assigned to Maj. Gen. Harold C. Ingles who was returned from overseas where he had been acting commanding general of the European Theater of Operations. As a part of the agreement between him and General Marshall, he asked for and obtained the services of Mr. Harrison.

As acting head of A. T. & T. operations, Mr. Harrison had jurisdiction over such activities as the production facilities of Western Electric Co., some 20 operating companies, including Southern Bell, Bell of Pennsylvania, Northwestern Bell, and so forth; the huge Bell laboratories; and the vast distribution system of the Bell system.

All of these varied activities, including every supply function of research, development, procurement, transportation, warehousing, requisitioning, issuance and maintenance, were knit together into a huge single efficient system by a single catalog system. This single catalog system contained all the items used by the Bell System and was used by all its subdivisions. In it an item was shown once and the same name for an item was used throughout the Bell System. Statistics could be gathered and stock records could be maintained easily because of this single catalog system.

Harrison was astounded at the conditions he found in taking over the procurement and distribution activities of the technical service and had ample cause to wonder how any supplies were ever moved to the fighting fronts.

In a single month 44 percent of all the requisitions routed in the Supply Control Agency could not be filled because the data on the requisition could not be understood. The following month this rose to 47 percent—almost half. And this in spite of the fact that hundreds of technically trained personnel reviewed the requisitions attempting to establish the identity of the item desired.

Millions of dollars' worth of items lay in warehouses that could not be identified because they were shipped without proper marking, even though thousands of technically trained personnel, located at the receiving warehouses, opened all the boxes, and attempted to establish the identity. Such items could not be issued on requisitions and took up critically scarce space.

There were little or no statistics or reports, because there were no common definitions, terminology, names, and identification system.

And to his utter amazement, he found over 13 different catalog systems used by the same supply system.

These conditions were not unlike those existing in all the technical services and bureaus at the time and are not unlike the conditions existing today.

Harrison's actions were prompt and specific. His first decree was that one single catalog system would be developed and used by all supply units. There was a great hue and cry against this as it meant that each supply unit ceased to be a separate empire, sufficient unto itself and to blazes with the others; but Harrison persisted and a single supply language, instead of 13, was adopted for all units in the supply procedure.

This enabled the supply operations to be streamlined so that his motto of "one requisition, one shipping ticket, one 24 hours" was changed from a phantasy to a reality. Within 18 months, the operations became the finest in the Army; skilled personnel by the thousands were released to other important work; the time of filling requisitions dropped from weeks to days, then to 1 day; unidentified items on requisitions were no longer possible; and industry applauded at the elimination of duplicate unnecessary red tape and paper work.

Warehouses were cleared of unidentified items; purchase orders and requisitions were correctly written; shipments were packaged and marked correctly; and in every way a complete transformation had taken place.

With the end of the war, capable officers are transferred to other duties, the Harrisons return to civilian life and the knowledge and techniques developed at such cost and effort go with them.

Many of the leaders of the armed forces are aware of the need for a correctly designed and properly functioning catalog system. Mr. Forrestal on many occasions has expressed the need for such a system and recently Mr. Kenney gave a speech in which he stated:

A wartime Navy Department cataloging project, with the accompanying simplified inventory control for the engine parts of one airplane company, saved in 1 year over $275,000,000. That is enough to pay the operating costs of the Aviation Supply Depot at Philadelphia for over 30 years.

The Bureau of Ships has estimated that through its cataloging program a net saving of $25,000,000 on an inventory of $282,000,000 will be achieved over the next 6 years.

Due to estimated inventory reductions through cataloging, approximately 500 fewer employees will be needed at two naval supply depots. Resulting annual pay-roll savings will be about $1,000,000.

To turn to savings on individual items—cataloging disclosed, for example, that the Navy was buying identical thread taps from three different suppliers at $9.12, $2.33, and 73 cents.

Identical turbine bearing liner assemblies supplied by two companies at $25 and $63, respectively, were found to be manufactured by a third company which could supply them at $9.06.

Screws purchased at 5 and 10 cents were found to be identical with one screw carried by the Navy General Stores at 7.2 mills.

One pinion shaft supplied by one company was known by 13 different identifying numbers; a single refrigeration compressor piston by 94.

Three hundred thousand antifriction bearings identification numbers have been consolidated into approximately 9,000 different items.

However, the difficulty now as in the past has been that the leaders in whom has been vested the authority to take action have not had the experience and training in supply and catalog techniques to take action; the personnel having the necessary training have not had the authority.

The provisions of H. R. 321 are based on the wartime experiences of the armed forces, of civilians from industry who served in the armed forces, and of many Members of the House and Senate. H. R. 321, entitled the National Defense Catalog Act, should be approved by all personnel of the armed forces as it will make it possible for them to carry out their mission of preparing to defend this country with greater dispatch and efficiency and with the expenditure of less money, personnel, and resources. Industry will be relieved of much of the unnecessary duplicate work about which so much complaint has been made and every taxpayer will be delighted at the savings in the national budget.

Statehood for Hawaii Wins Widespread Support From Nation's Press

EXTENSION OF REMARKS
OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. FARRINGTON. Mr. Speaker, a compilation prepared by the Hawaii Statehood Commission of editorial comment appearing in the newspapers of this country during the first 3 months of this year on the subject of statehood for Hawaii shows 76 newspapers favoring statehood and only 2 opposed to it.

The Hawaii Statehood Commission is an agency of the government of the Territory of Hawaii and is financed entirely by funds appropriated by the legislature from the tax revenues of the territory.

Newspapers appearing in 32 States commented on this question, among those favoring statehood for Hawaii being the Baton Rouge Advocate, Boise Statesman, Dallas Morning News, Denver Post, Detroit News, Milwaukee Journal, New York Times, Omaha World Herald, St. Louis Post Dispatch, and San Francisco Chronicle.

These newspapers encompass every shade of political and social opinion. Some of the points of view expressed are contained in the following excerpts:

Alabama, Anniston Star: "Hawaii is * * * inhabited by persons who share our thinking and our traditions, and we cannot hold ourselves out as champions of democracy if we retain all these persons in territorial status. They deserve proportionate representation in the Congress which governs them."

California, Long Beach Press Telegram: "On the basis of population, wealth, payment of Federal taxes, wartime service and military importance to the nation in any future conflict, Hawaii deserves statehood."

Delaware, Wilmington News: "To our mind, there are few, if any, reasons for keeping the islands dangling on a territorial status. The aims and interests of its half million inhabitants are so closely tied in with our own that the casual visitor never thinks of it as anything but an extension of this country."

Florida, Tampa Morning Tribune: "Hawaii's long record of orderly government and its peoples' outstanding record of orderly living have shown it to be as capable of ordering its own affairs as any State in the Union."

Georgia, Albany Herald: "There is no excuse for delaying a vote on Hawaii as the forty-ninth State. Inaction is incongruous, to say the least, when Congress is earnestly considering closer alliances, militarily and economically, with western nations."

Idaho, Boise Statesman: "They ought to be admitted to our Union, and the Congress now in session ought to vote them the opportunity to join us."

Illinois, Marseilles Press: "At a time when the Far East is assuming vast importance in American calculations, Hawaii's successful laboratory experiment in racial relations can serve as a useful bridge of understanding to the Orient."

Indiana, Elkhart Truth: "The political kinship of Hawaii with the United States has been long established. It has been tested under the fire of a great war in which Hawaii was a virtual 'front trench.' There seems little doubt that the 520,000 citizens of this lovely island group are ready to join us."

Maine, Bangor News: "Certainly Hawaii has earned its admission to the Union as the forty-ninth State. A modern transportation system has invalidated the former principal argument against it. The islands are no longer remote. The 2,400 miles that separate them from the mainland can now be translated into 7 hours, or Bangor to Boston by automobile."

Michigan, Holland Sentinel: "Their citizens have proved themselves good Americans and they have earned the right to play the role of full-fledged citizens."

Michigan, Pontiac Press: "The platforms of both major parties call for statehood. * * * The chief executives of all 48 States have gone on record in their national conference in support of admission. Hawaii qualifications for statehood have been studied by no fewer than five congressional committees."

Missouri, St. Louis Globe-Democrat: "Exhaustive hearings on the Hawaii bill were held last year in which the evidence conclusively showed that the territory is ready for the responsibilities of statehood."

New York, the New York Times: "All the old arguments against statehood for the lovely islands that lie 2,400 miles off our west coast and over which the United States flag has flown for over 50 years have long since been worn threadbare. The new one of communism is no more valid against Hawaii than it is against any present state. * * * By every known standard Hawaii and its 520,000 inhabitants are well qualified to become the forty-ninth State of our Union and to have in Congress spokesmen for their interests. Further delay would be an injustice to them that cannot be defended."

Ohio, Toledo Times: "Hawaii, by every standard, is entitled to statehood. That has been proved, again and again. There really is no argument in favor of delaying admission to the Union any longer. Both political parties, at their last conventions, recognized this fact. It is to be hoped, therefore, that the ill-advised Senate opposition will not prevail this year."

Oklahoma, Tusla World: "Hawaii has the ingredients of statehood; it is a progressive area."

South Carolina, Columbia Record: "The courage and the loyalty of the Hawaiians in the war against the Axis was a demonstration of their capacity for statehood."

Texas, Fort Worth Evening Star-Telegram: "Hawaii stands as the closest point of United States ownership to the vast area of the Orient in which the rise of communism is becoming more than a potential threat. As

a State, it would furnish a demonstration to the oriental peoples of what democracy has to offer its citizens."

Texas, Houston Post: "Hawaii has a considerably greater population and is far more advanced in the arts of civilization than were many of the Territories when the accolade of statehood was conferred upon them. * * * Simple justice requires that Congress grant them the rights they have so long sought."

West Virginia, Weston Democrat: "By every known standard Hawaii and its 520,000 inhabitants are well qualified to become the forty-ninth State of our Union to have in Congress spokesmen for their interests. Further delay would be an injustice to them that cannot be defended."

Wisconsin, Milwaukee Journal: "Congressional hearings of recent years have shown no serious objection to Hawaiian statehood. Both Democratic and Republican Parties have pledged Hawaiian statehood in their platforms. The whole peoples of the Pacific area are watching Hawaii's fight for statehood as a symbol of American justice. It is sincerely to be hoped that the Eighty-first Congress will make Hawaii the forty-ninth State in this year 1949."

The two papers opposed were the Times-Democrat of Orangeburg and the Index-Journal of Greenwood, both in South Carolina.

The Times-Democrat argued that—

the main advantage in statehood for the inhabitants of the regions affected will be an increased claim upon the Treasury of the United States.

The Hawaii Statehood Commission points out that the Territory of Hawaii, for many years, has paid more taxes into the Federal Treasury than has any one of 12 States.

The Index-Journal editorial said:

It may be the right thing to do but we are not the least bit enthusiastic over the move.

Address of Hon. James A. Farley Before Portsmouth, Va., Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. HARDY. Mr. Speaker, on March 11 the Portsmouth, Va., Chamber of Commerce, in my district, was fortunate in hearing former Postmaster General of the United States, James A. Farley, as its guest speaker. It was my pleasure to attend that meeting and I was much impressed by Mr. Farley's thought-provoking analysis of the peculiar position which the United States occupies in its leadership role in the world today.

On the day following Mr. Farley's address, the Portsmouth Star carried an editorial which I believe will be of interest to the members. It follows:

MR. FARLEY'S SPEECH

James A. Farley, former Postmaster General of the United States and onetime national chairman of the Democratic Party, set forth a commendably well-balanced program for America in his address at last night's annual membership meeting of the Portsmouth Chamber of Commerce.

He reminded his listeners that the United States must not forget its responsibility for world leadership if the democratic world is to survive. "We have raised the expectations of the world," he said, " and we cannot be false to our promises."

Mr. Farley said that his world travels had convinced him that the United States enjoys a great asset of good will among nations, but also said that foreign countries are beset by two fears concerning America: (1) that it will lose itself in its own interests and forget its responsibility for world leadership and (2) that it will blunder into another depression.

Then Mr. Farley cautioned his audience as follows:

"To fulfill our own hopes and to fight those fears we must be strong and stable at home. Our Government must be efficiently organized and less repressive on the spirit of enterprise. Our relations between business and government must be friendly and mutually helpful. Our business community must be prudent but progressive. Our people must not expect unending miracles of generosity from government. We must in industrial relations seek mutual respect and cooperation."

Much credit should go to the chamber of commerce for its skillful planning of the program that featured Mr. Farley. The gathering was representative, and the handling of public relations in connection with the event brought favorable national publicity to our community.

The Autocracy Within Our Democracy

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. POULSON. Mr. Speaker, many hundreds of miles out in the blue Pacific under the tropical sun lies a bit of America—the island possession of Guam. It is inhabited by some 24,000 permanent inhabitants and by about twice that many temporary residents, all of whom are loyal and patriotic Americans.

The Americans who live in Guam, like those of us who live elsewhere under the American flag, give allegiance to the United States of America. Like us, they raise their eyes to the Stars and Stripes as the symbol of democracy and government by law. Unlike us, however, they experience little of the democracy and government under law which is yours and mine in everyday life.

It has been said—and I fear it is beyond contradiction—that the government of Guam is an absolutism. Even though the inhabitants are Americans and the very island itself is territory under the sovereignty of the United States, the Constitution and the laws of the United States have only such local application as suits the benevolence of an appointive governor who wields almost absolute power. The government of Guam is an autocracy existing within a democracy. It is a contradiction of the basic concepts of personal freedom and representative democracy which characterize the American way of life.

The people of Guam, like Americans everywhere, are peaceful and law abiding. They love liberty and aspire to a maximum of personal freedom. They want a part in their own government and a hand in the making of the laws under which they must live. They demand a form of government which will guarantee to everyone an equal measure of the social, political, and economic justice which is basic to life in the modern world. Like you and me, they will not stand idly by when these are denied and perverted.

I have here, and ask permission to introduce into the RECORD, an article by columnist Peter Edson entitled "The Guam Style Center" which was published in the Washington Daily News of April 1, 1949. The story which Mr. Edson relates is a sad commentary on democracy as it finds its expression in the island possession of Guam. This article reiterates the crying need for the enactment of organic legislation for Guam. In that respect, I invite attention to H. R. 3799, Eighty-first Congress, first session, entitled "A bill to provide a civil government for the island of Guam, and for other purposes."

The article follows:

THE GUAM STYLE CENTER

(By Peter Edson)

Navy Clerk Abe Goldstein and a women's clothing shoppe on the Pacific island of Guam, known as the Guam Style Center, may go down in history. They now seem headed for fame right along with the British Stamp Tax and the Boston Tea Party as the start of another great battle for liberty. Interior Department, the Navy, Congress, and even the White House are involved.

Guam itself is reported to be in an uproar bordering on civil warfare between the Guam Congress and Rear Adm. A. C. Pownall, naval governor.

How the Navy can get off the hook without going into full reverse is not at all clear. Best solution at the moment would seem to be for Congress to pass an organic law giving Guam self-government and transferring responsibility for civil affairs on the island from Navy to Interior.

Until August 1947, the naval governor had absolute power. Then the Guam Congress was made a legislative body, instead of just an advisory body, on orders of the Secretary of the Navy. The Guam Congress consists of an upper council and a lower assembly, all elected by the people.

The assembly now says it has no powers and it has gone out on strike in protest against Governor Pownall's action in vetoing a bill which would have allowed the congress to arrest Abe Goldstein and cite him for contempt of congress.

The case grows out of a postwar naval government order that outside business interests would not be permitted to invest in Guam as competitors to native establishments. A system of licenses was set up to control who could start and run a business.

To get around this requirement some Navy personnel and some businessmen from Hawaii and the mainland tried to use natives as fronts to acquire licenses. Native merchants complained.

Guam's Congress investigated. It subpenaed, among others, Abe Goldstein, 37-year-old civil-service employee. He had gone to Guam as an Army clerk, then transferred to Navy as an administrative assistant.

The Guam assembly's commerce committee wanted to question Goldstein about his alleged backing of the Guam Style Center. He appeared, but defied the committee. He said the Guam Congress had not been established by law of the United States Congress, so it had no authority.

Committee Chairman Jesus C. Okiyama then went to the island's attorney general, one Commander McKinney, of the United States Navy. McKinney gave an oral opinion tht the committee had power to issue a subpena and make Goldstein talk. Assembly Speaker A. B. Won Pat signed a warrant for Goldstein's arrest for contempt of congress. Governor Pownall stayed its execution, refusing to allow Goldstein's arrest.

The congress then passed a law giving itself power to subpena witnesses. Governor Pownall vetoed it, and had his attorney general draft a substitute. The assembly didn't like it.

Governor Pownall the next week called a special session of congress to deliver a speech on the state of Guam. The council showed up, but only two members of the assembly were present. The Governor had his attorney general issue an opinion that 34 of the 36 assemblymen had vacated their posts. The Governor said he would appoint successors.

This threw the little 30-by-6-mile island into turmoil. There have been mass meetings and petitions all over the place. There isn't much else to do on Guam, so the natives take politics seriously. They say Governor Pownall has no right to appoint members of the assembly, without prior confirmation of the Guam Congress. That's the law.

If Guam is troubled, official Washington has been no less so. With characteristic Navy loyalty, Secretary John L. Sullivan has cabled Admiral Pownall, backing up what he has done and commending him for it. He has been told to fill the 34 assembly seats by a special election, unless the striking assemblymen return Saturday for the next scheduled session of the congress.

Reds Pledge China To War for Russia

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of April 4, 1949:

REDS PLEDGE CHINA TO WAR FOR RUSSIA—COMMUNISTS ISSUE STATEMENT ATTACKING NORTH ATLANTIC PACT AMID PEACE PARLEYS

NANKING, April 3.—The Chinese Communists said amid peace negotiations with the Nationalists tonight that they would unite the people of China to fight for Russia in any war between the Soviet Union and the North Atlantic treaty nations.

A Communist broadcast quoted a statement signed by No. 1 Communist Mao Tze-tung, and other leftist leaders, denouncing the western treaty and pledging aid to Russia in event of war.

Discussions for settling the 22-year-old civil war between the Reds and the Nationalist government continued behind closed doors in Peiping.

CEASE-FIRE PROPOSED

Details of the talks were kept secret, but the government party newspaper Central Daily News said the six-man Nationalist delegation led off with proposals for a cease-fire and the calling of a multiparty political consultation conference.

This report drew an indirect denial from official sources who said the early stages were devoted to mapping an agenda for discussion.

The Communist broadcast tonight said that in event of war between east and west, even if it should start on the other side of the world, the Communists and their associated "democratic parties" would unite the people to march forward hand in hand with the ally of China, the Soviet Union.

TREATY CALLED AGGRESSIVE

The joint Communist-leftist statement condemned the North Atlantic Treaty as endangering peace and the security of mankind by aiming at a new aggressive world war.

It was signed by Mao and leaders of the Democratic League, which recently moved its headquarters north from Hong Kong; the National Democratic Association, peasants-workers groups, and the National Salvation Society.

Meanwhile, travelers from north China reported that more than 3,000 university students suspected of anti-Communist thinking have been massed in a huge concentration camp near Peiping.

Thousands of persons—students, former Government officials and private individuals—were reported fleeing southward in increasing numbers daily, trying to get into areas still held by the Nationalists.

The refugees journeying to south China travel mostly by rail and bus to Tsinan in Shantung Province or to Tangku, the port for Tientsin, and then by ship to Government-held cities.

The official military news agency reported that Gen. Lin Piao's Manchurian Communists had arrived in central China and attacked Hsinyang, strategic rail town 100 miles north of Hankow. Lin Piao's troops earlier were reported moving in a southerly direction toward Nanking.

Gen. Liu Po-shen's Communists at the same time were reported attacking Huayuan, 50 miles to the south.

"Communist attacks on the Yangtze River port of Anking, 145 miles southwest of Nanking, continued with increasing fury," the agency said, "while a small Nationalist bridgehead at Tuchiao, 50 miles northeast of Anking, was believed to have fallen to the Reds."

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the March 24, 1949, issue of the Vidette-Messenger, published at Valparaiso, Ind.:

AND WITH IT, CONTROL

Now out of committee and headed for probable passage by both Houses of Congress is a $300,000,000 Federal aid-to-education measure.

In the last session of the Indiana Assembly the legislature passed a bill providing some $53,000,000 to help Indiana school systems maintain what has been termed a "minimum foundation program."

Quite naturally the State measure includes adequate provision for control by the commission on general education, the State board of education, and the State board of tax commissioners on how this $53,000,000 is going to be spent. It further provides that the State may adjust local school tax rates as necessary. The theory is, of course, that since the money is coming from the State, the State should have something to say about how and under what circumstances it is to be distributed.

The fact that the State government got the money in the first place from the local communities who will now be told what they must do to get it back doesn't have anything to do with the picture.

Does anyone think the Federal Government, any more than the State, is going to pass an aid-to-education bill without reserving, in its own right, the power to tell how and under what conditions this money is going to be spent?

Moreover, does anyone believe that the money which the Federal Government is appropriating for this cause did not come originally from the local communities which it now proposed to aid?

The situation between State aid and Federal aid is parallel.

Every time the State or Federal Governments boost appropriations to aid schools they dry up that much more a community's potential sources of self-help. If the trend continues we might as well face that fact that in the days to come virtually all school taxation receipts will be funneled either to the State capital or to Washington for redistribution to the local communities. And when that day comes all control over local schools will be vested in State and Federal agencies.

Jim Farley's True Remarks at Syracuse Dinner

EXTENSION OF REMARKS
OF
HON. DONALD L. O'TOOLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Syracuse Herald-Journal of March 23, 1949:

JIM FARLEY'S TRUE REMARKS AT SYRACUSE DINNER

No truer words were ever spoken than former Postmaster General James A. Farley's remarks at the Kiwanis dinner at the Onondaga last night fixing responsibility for post-war chaos in international relations.

As Farley emphasized, the threat to world peace is none of our making but "springs from the unholy ambition of one power—Soviet Russia—to dominate every way of life in every place in the world * * *."

After the war the American people went into the United Nations with high hopes that a better day was in sight for all mankind. Then Soviet Russia embarked on the course of rule or ruin that has split civilization, all but wrecked UN, and posed the threat of a third world war. Or, as Jim Farley puts it, "We escaped one form of totalitarianism, fascism, to be confronted with another, red fascism, perhaps more dangerous than the vanquished form."

That's it precisely—they call it communism but it is perhaps even more menacing than Hitlerism. At any rate, from the freeman's standpoint there's little to choose between them.

And so what? Where are we heading?

It is encouraging to note that Jim Farley, a shrewd observer with excellent sources of information, believes that we're coming through all right. Civilization certainly is on trial, he says. But he is convinced that not only will free civilization survive but that the brightest period in the history of the great Republic lies ahead. To put it in his own words, "our horizon is not a whit less limitless and not a shade less promising than

that which lay before our forefathers in the blackness which followed the Revolution."

In order to speed that bright future, Jim Farley would have us remember that America's greatness was created through the freedom, rights, and initiative of the individual.

"We shall retain the power that is essential to the maintenance of America's responsibilities in the world only so far as we retain the spirit of the pioneer in each individual American," he says. "The door of opportunity must be kept open. The American boy must be taught from experience that whatever he attains depends upon his own inner integrity. We have won the past by hard work and honesty and self-reliance. There is no better formula through which we can win the future. The greatness of the past, in its achievements, lights the way for progress that is assured if no man-made shadows blur the road."

All this is sound American doctrine. We must avoid the totalitarian theory common to both fascism and communism that the individual is a mere cog in a massive, ponderous, all-powerful state—a mere nothing who is to be told what to do, what to read, what to think, what to say and what to believe. We must take our stand on the principles of the freedom of the individual and freedom of individual enterprise, under which America has flourished and become the light and hope of the world.

Jim Farley is an alert, patriotic American, genuinely devoted to the progress of his country. His Syracuse remarks come as a refreshing breeze in a sultry period in the world's history.

Solving the Grain Storage Problem

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an article from the Spokane Spokesman Review of March 27, 1949.

My reason for inserting this article in the Appendix of the RECORD stems from the present crucial storage situation among the producers and handlers of cereals in the United States. The storage situation in many parts of the Nation is becoming increasingly critical and with another sizable crop in prospect, anything that would effectively meet the probable storage problems should be useful all the way around.

In this case, it is encouraging to hear that a new type of bin that can be built speedily has been designed and developed by Spokane men. I know the article will be interesting to all of my colleagues from wheat-producing and wheat-storing areas. It follows:

SOLVING THE GRAIN STORAGE PROBLEM—SPOKANE BUILDERS BELIEVE JACK BINS WILL HELP FARMERS IN MARKETING WHEAT

(By M. G. Bassett)

A wooden triangle called a jack is a new kind of sedative for wheatmen's headaches. It is a framework for a grain storage bin that can be built in a matter of hours.

Rancher's operations are now limited to the confines of storage sheds. Lack of space has forced some farmers to sell their wheat at a low price. Others were deprived of Government loans by inadequate storage facilities. A cheap, quick solution has been offered by three Spokane builders who operate the B. & B. Manufacturing Co., North 5616 Market.

L. O. Ballard, Robert H. Camp, and L. A. Ogle have staked their reputations on the jacks as a partial solution to the storage problem. Their faith rests on reason.

In 89 days during the last harvest, jack bins furnished space for a million bushels of grain in Washington, eastern Idaho, and northern Oregon. They saved a quarter of a million bushels in 11 days in Wasco, Oreg.

"But the Spokane industry is not an emergency outfit. We've got material on hand for 500,000 bushels of storage and enough lined up for 12,000,000 more. We should be able to make a real contribution to wheat marketing," Mr. Ballard explained.

The record looks good so far. Now jacks are about ready to meet their real test—the 1949 wheat harvest in Washington.

Stacks of frames lie ready on the Market Street lot adjacent to the manufacturing company. Each is made with three wooden beams supported by a cross bar. The square bin takes shape as jacks are placed in rows, each 2 feet from the other. Metal or wooden sheeting nailed on the parallel frames completes the siding. Builders then put up a slanting roof and install an apparatus for filling and emptying the bin.

Sheds can be used to store anything that will go through a door 12 feet square. It takes pressure of 49,000 pounds a square inch to crumble one of the timbers. No braces or rods are needed. So a jack bin within another storehouse can be removed if a farmer needs it only temporarily. Between 16 and 17 million bushels of grain are now behind jack walls in the Pacific Northwest.

Business has skyrocketed. Operators have recorded a 50 percent increase each year of operation. Farmers who have seen grain saved by the jacks can believe that report. The Sherman county cooperative in Wasco, Oreg., knows. Wheatmen there sent a desperate call to the company during the last harvest. Trucks had lined the street in front of the co-op. The men were waiting to unload in storage bins that were already brimming with grain. B. and B. crews transported jacks to Wasco. Two hours and 30 minutes after they had unloaded the frames at the railroad depot they had the side walls up. Anxious farmers ordered 35,000 bushels of grain poured into the sheds even before the roofing was laid.

What bothers wheat men now is that the 1948 crop may not be moved out of storage in time to move in the 1949 crop. Present Washington State storage facilities can take care of 60,000,000 bushels of wheat. An average Washington crop is just 60,000,000. Last year it ran up to 79,000,000. Farmers can find room only with careful planning and cooperation with all grain dealers. Storage is essential for wheat ranchers who take a Government loan or purchase.

Loans simply give producers a chance to store grain in hopes that the market price will rise. Amount of the loan is at least 90 percent of parity at the time when the agreement is made. Parity guarantees buying power equal to that from 1909 to 1914. So the actual effect of the loan is to establish a minimum price. It also helps the farmer with midseason financing to harvest crops like fruit, beets, and hops. He can get the wheat back to sell for market prices if they are higher than the amount of the loan. The loan expires April 30.

A producer doesn't have to agree to a loan to assure Government purchase. The Government will arrange to take wheat on April 30 and pay for it then. But the essential condition of both plans is a catch for northwest farmers strapped for storage space. Only stored grain can qualify for Government financing aid.

Project No. 1 for this spring is to get rid of from forty-five to fifty million bushels of wheat in country elevators and on the farm. By July carloads of new wheat will be headed for warehouses.

"One elevator operator got his farmers to sign releases on the wheat. The producers agreed to move their crop whenever prices reached a prescribed level," Pete Stalcopp of the Pacific Northwest grain dealers' association, said.

Another idea has been suggested to the association. This would allow the farmer to surrender his wheat to the Government in full satisfaction for his loan before April 30. If such a method were approved, the warehouseman could not expect to collect full storage and conditioning charges.

Clearing storage bins of old wheat is one way to prepare for the new crop. Building warehouses is another. But wheat men contemplate limited construction.

"The Government recently allocated 50,000 tons of steel for farm storage. But the bulk of producers want storage in grain elevators," Mr. Stalcopp explained.

He estimated building of storage bins for 5,000,000 bushels in Washington, Oregon, and Idaho, within the next year.

While Government construction plans and private needs attempt conciliation, Ballard, Camp, and Ogle are getting results. They envision jack walls on farms by elevators and at mills. The Spokane industry is aimed at saving millions of bushels of grain and miles of red tape.

Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1949

Mr. RODINO. Mr. Speaker, there is no doubt in my mind that the people of our country are aware of the great service performed by our veterans in the past world wars. Their sacrifices preserved for us our great democracy. None can forget their contribution.

Today the disabled American veteran—he who gave so much and asked so little—is requesting consideration for his needs. It is incumbent upon us to heed him. I am certain that we will not lend a deaf ear to the man to whom our Government owes its greatest debt—the disabled veteran.

Under leave to extend my remarks in the RECORD, I include herein the following resolution adopted by the Disabled American Veterans, Department of New Jersey:

Whereas this Nation's primary obligation is to its wartime-disabled veterans; and

Whereas Gen. Carl Gray, Jr., the Veteran's Administrator, said in an address to the last national convention of the Disabled American Veterans that the "greatest debt of government is to the wartime disabled"; and

Whereas the wartime-disabled veterans are the ones who suffered most for the preservation of this Nation; and

Whereas proper and ample hospitalization and medical treatment is the first step in the rehabilitation of the war-handicapped, as well as vital to their continued rehabilitation; and

Whereas the originally authorized building program of the Veterans' Administration is necessary and the delay in getting hospitals built is bringing pain and misery and death to hundreds, if not thousands, of American veterans; and

Whereas the recent executive order reducing the Veterans' Administration's hospital-building program by 16,000 beds is in direct conflict with the need for these hospitals; and

Whereas powerful organizations are working to retard if not destroy the accepted hospital program of the Veterans' Administration as authorized by Congress, and that the Hoover Committee in its report to Congress recommends the merger of the veterans' hospital program with other agencies which will mean the complete destruction of the VA hospital program; and

Whereas any merger of VA hospitals with other services as recommended by the Hoover Commission is a complete breach of faith between this Government and its wartime defenders.

Now, therefore, the Department of New Jersey, Disabled American Veterans, meeting in executive session in the city of Paterson, March 27, 1949, hereby expresses itself on record as being vigorously opposed to any reduction in hospital beds and asks the reinstatement of the original building program; we also militantly attack any proposed merger of VA hospitals with any other agencies and urge the speeding up of completion of hospitals now planned; it is further

Resolved, That copies of this resolution be sent to the President, the Veterans' Administrator, and our congressional representatives.

CHARLES A. MCSPIRITT,
Department Commander.

Coolie Wages Show Effect in Decreasing Numbers Choosing Teaching Profession

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. PRICE. Mr. Speaker, the coolie wages America offers her school teachers show their effect in the decreasing numbers choosing the teaching profession. Congress should heed the warning given in the telegram from the Honorable Robert G. Buzzard, president of Eastern Illinois State College, Charleston, Ill., which follows:

CHICAGO, ILL., *April 3, 1949.*

The Honorable MELVIN PRICE,
The House of Representatives,
Washington, D. C.:

Officers and members of the executive committee of the American Association of Colleges for Teacher Education, with whom I have been in session for 2 days in Chicago, have just wired President Truman and congressional leaders expressing deep concern over the great gap between the number of new teachers who will graduate and the number required to keep open the schools of United States.

A new national survey shows that the colleges and universities of the Nation will turn out this year only 13,500 college graduates prepared to teach in the elementary schools to meet a demand for more than 100,000 new teachers in these lower grades. Enrollments swollen by the unprecedented increase in birth rates since 1940 will increase the total elementary school enrollment almost 50 percent in the next decade. The total need for the next decade exceeds 1,000,000 new elementary teachers.

The colleges which prepare elementary teachers will continue to lose ground in a desperate effort to meet the demand for new teachers until they can assure young candidates who wish to prepare for teaching that positive steps have been taken to strengthen the financial structure of the American school system. I would greatly appreciate your exerting every effort to bring about favorable action at the earliest possible time on legislation to provide Federal aid to public elementary and secondary schools. The chief reason why teacher supply falls far short of demand is low salaries. The information that the Congress has adopted a sound policy of extending financial aid to the States on a systematic basis would be tremendously helpful to us in assuring candidates for elementary teaching that school systems have been greatly strengthened in their efforts to offer opportunities equivalent to those in other occupations.

ROBERT G. BUZZARD,
President, Eastern Illinois State College.
CHARLESTON, ILL.

Two Planes for One

EXTENSION OF REMARKS
OF
HON. ROBERT L. COFFEY, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 4, 1949

Mr. COFFEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald for April 4, 1949:

TWO PLANES FOR ONE

Ivan H. Driggs, director of design research for the Navy's aeronautics bureau, has just laid a barrage of eggs, all smelly, on the Air Force's B–36 bomber.

He accomplishes this unusual effect in a highly technical piece written for Aviation Week charging that the B–36 is "economically unsound" and has "questionable tactical promise."

NAVAL SNIPING

It ill becomes any spokesman for the naval forces to talk about any other branch of the fighting forces being uneconomical, considering the billions that have been wasted on battleships in the past 40 years and considering the billions more the Navy wants to waste on aircraft carriers. Battleships were the flop of World War II because they were sitting ducks for airpower and submarines. Flattops are the same in the present day.

To give you an idea why we are worked up we quote from a United Press account of the Driggs piece:

"Mr. Driggs summed up this way: A bomber with a 10,000-mile range 'can only be obtained with an airplane which is economically unsound and which has a low probability of success. Too long a time spent over enemy territory reduces the chance of reaching the target and returning home. Too low cruising speeds increase the liability of fighter interceptions.'

"By 'economically unsound,' Mr. Driggs apparently meant that the bomber's size and fuel consumption would be out of all proportion to its bomb load."

REMEMBER PEARL HARBOR

In the first place, if Mr. Driggs is going to talk about economy in military and naval operations he could do a lot better to impress some of his theories on the Navy. From the end of World War I to the beginning of World War II the Navy spent between $7,000,000,000 and $8,000,000,000 in building up our sea forces. For a reminder of what the Jap air power did to our Navy at Pearl Harbor, see the picture to the right.

The Navy now says little about battleships, but instead is pinning its hopes on an airplane carrier of 65,000 to 85,000 tons, to cost $125,000,000. That's the cost of the vessel alone. It doesn't take into account what will have to be spent on planes or the more than 1,500 men aboard. Or the other naval craft needed to protect the carrier's every move.

A B–36, on the other hand, costs between $2,500,000 and $3,000,000 to build, depending on the number ordered and standardization and carries a crew of only 14—plus bombs. And one bomb from one B–36, or one B–29, B–50, or B-anything, can scratch one flat top, as all too many were scratched in World War II.

As to Mr. Driggs' other specific complaints against the heavy bomber, we're just going to cite here three missions flown by the B–36, the results of which are on record all over the country.

On December 7, 1948, a B–36 took off from Fort Worth, Tex., and flew nonstop to Hawaii and return. It was in the air 35 hours. It did not need to be refueled.

GASOLINE TO SPARE

It flew 8,400 statute miles and returned with 12,000 gallons of gasoline left over in its tanks in addition to the 5 percent of its fuel load always carried for emergencies. On that mission it flew as high as 40,000 feet and carried a 10,000-pound bomb load which it dropped at the halfway mark of its trip. The cruising speed was more than 250 miles per hour.

On January 29, 1949, a B–36 left Fort Worth and flew to Muroc, Calif., and back carrying two 42,000-pound bombs. These bombs were dropped from altitudes of 35,000 and 40,000 feet. The flight distance was 3,000 miles. The cruising speed was above 250 miles per hour.

On March 11, a B–36 hit for the sky at Fort Worth and flew 9,600 nonstop miles over this country, going to Minneapolis, Key West, Spokane, and back to Fort Worth. It dropped a 10,000-pound bomb load at the 5,000-mile mark and cruised between 230 and 240 miles per hour.

Although these cruising speeds have been conservatively announced by the Air Force as over 250 miles an hour, it is a known fact the big ship will do 100 miles an hour more at top speed at 40,000 feet.

These records along with reports from Eglin Field that jet-fighter pilots find it almost impossible to work out any satisfactory interception of the giants certainly knocks the latest attack of the Navy into a cocked hat.

WE NEED THE BEST

We need the biggest planes and the best planes. And more planes than any Nation in the world today. We need the B–29 now and we need to keep on developing intercontinental bombers until we have a sky covered with B–99's, if progress will allow it.

During his speech in Boston last Thursday, Winston Churchill said:

"For good or ill air mastery is today the supreme expression of military power, and fleets and armies, however necessary, must accept a subordinate rank. This is a memorable milestone in the march of man."

Two planes for one.

Southern Freight Rates

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 5 (legislative day of Friday, March 18), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD a copy of an address delivered before the Kiwanis Club of Anderson, S. C., on March 31 by the Honorable J. Roy Jones, commissioner of agriculture for the State of South Carolina. I am informed that the cost of printing the address will be $225.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE 11 FIDDLERS

Nero made a name for himself because he fiddled while Rome burned. The Interstate Commerce Commission is composed of 11 members and in some respects they are trying to emulate Nero by their czaristic handling of the present transportation situation. The economy of our country is at stake and they are still fiddling around.

The subject is not frequently discussed in agricultural circles. Indeed, this subject is not given the measure of importance to which it is entitled. That subject is the effect of high transportation charges upon the farmers, and it cries aloud for a larger plan of action.

It is recognized generally that the measure of freight rates used for transporting goods is of great importance to the economic welfare of this country. High freight rates are barriers to national and international trade. Let's take transportation seriously for once, because you cannot escape its effects.

In years past, transportation charges were considered to be only a small part of getting the agricultural product to market. The situation, as you know, has changed and the constant upward freight-rate trend necessitates corresponding adjustments.

The producers of food and fiber are important in the lives of every man, woman, and child in this Nation. The farmer's economic contribution to his country, therefore, need not be emphasized.

It should be emphasized, however, that the farmers bear the freight charges in getting their products to the market place. The farmers, likewise, bear the charges on all items of commerce that are consumed on his farm. In other words, the farmer looks at freight rates from both directions. He should be considered the transportation agencies' best friend.

But now the burden of the freight charges that are being borne by farmers has reached an all-time high with prospects of still greater rate assessments against our farm products and supplies. It is appropriate for members of service organizations to join forces with all others interested in agriculture to do something about it.

Incidentally, the rural inhabitants of our country consume more different types of commodities than the urban dwellers. Their relative, and also their direct, interest in such charges are above the per capita average for the country.

In far too many instances the farmer concludes that, because he does not pay the actual freight bill on the commodity he produces, it is a matter of no direct concern to him. This is, indeed, false logic.

The farm product has only a potential value at its point of origin, the real value being acquired when it reaches the consumer. All expenses attached to marketing performances, including freight charges, are deductible items from the sales price. This is equally true on the articles consumed by the farmer, such as seed, sacks, fertilizer, etc.

When the farmer purchases a plow from the retailer he pays the amount asked and freight charges are not discussed. The dealer, however, paid the freight charges which were definitely added to his cost price. Quite obviously, the dealer could not bear freight charges from the factory to his place of business, because such charges would frequently be the equivalent, or greatly in excess, of the profit he must make in order to stay in business. Thus it can be seen that freight rates contribute to the farmers' financial status or, in other words, the size of farmers' net income depends largely upon the freight charges assessed.

This brings us face to face with some of our present transportation problems because trade distortions and marketing limitations due to high freight rates can curtail the sale of the farmers' products into certain markets.

Since June 30, 1946, the railroads of this country have, with the approval of the Interstate Commerce Commission, horizontally increased their freight rates seven successive times. The last increase became effective on January 11, 1949.

The railroads are now assessing, on most products of agriculture, increases amounting to 50 percent or more over and above rates in effect 18 months ago. The discouraging part of this entire situation is that other horizontal increases are in prospect. Indeed, there are rumors to the effect that the railroads may seek even greater increases by amending their pending petition identified for the record as Ex parte 168. Another uncomfortable point about this matter is that when the railroads obtain their increases, which they usually do, other forms of transport follow through with similar increases.

Constructive projects supported by combined interests have often resulted in great savings to the farmers, only to be lost almost immediately, by increases in freight rates on farm products. Freight rates are as important to the users as to those who make them.

We are creating machines, such as the cotton picker and tractor, to lift the back-breaking problems off the farmer only to have his back broken by higher freight rates. Higher and higher freight rates are exacting an increasing toll against the farmers' net returns. It follows that the higher the freight charges, the lower the profit to the farmer.

Railroads are constantly preparing themselves for succeeding and similar formal actions as Ex parte 168. In other words, they have in their employ a large corps of statisticians, economists, attorneys, traffic experts, and other specialists, totaling literally in the hundreds, whose time and talent are employed on an annual basis in developing the best ways and means of acquiring increased revenues.

Agriculture is presently faced with a new series of hearings in connection with Ex parte 168. In other words, while the railroads have obtained as high as 6 percent increases, dating from January 11, as a result of their latest effort to acquire horizontal increases, there is still pending a permanent or final decision in this matter which may cause increases totaling 13 percent, the amount originally requested last fall by the railroads.

The first of a series of hearings in this litigation was held in Washington, D. C., on March 1, 1949, with territorial hearings following in Chicago, Montgomery, San Francisco, Salt Lake City, and Oklahoma City.

It may be helpful to mention that a discussion of the effect of transportation charges upon the farmers' products is to develop Where are we in transportation? Our consideration of this subject is timely because the American Farm Bureau Federation, the National Grange, and the National Council of Farmer Cooperatives have all recently gone on record with respect to their opposition to higher freight rates and other matters pertaining to transportation that is working against the farmers' interest.

It is known definitely also that the National Association of Commissioners of Agriculture and the southern commissioners of agriculture have been giving considerable attention to this subject, especially during the past year. Perhaps many other farm organizations and units of national groups have also discussed increased transportation charges and their effect upon the farmer.

Many shippers of agricultural products have appeared before the Commission in recent years in cases similar to Ex Parte 168. National farm organizations and the United States Department of Agriculture have been most active in these cases. Efforts have been made to keep the increases on agricultural products on as low a basis as possible. Voluminous testimony, many rate exhibits and other items, placed in the record to refute the carriers' claims, have available practically nothing in recent cases because the Interstate Commerce Commission always authorizes a major part of the increases requested by the railroads.

It seems to be the policy of the railroads to ask for a higher percentage increase than they expected to acquire, perhaps to make it a bit easier for the Interstate Commerce Commission to meet the railroads' actual hopes.

The maintaining of our railroads in good order is recognized as an imperative need to our economy. We wish their continuance upon a prosperous basis, but we do not want to pay undue tribute in the processes. What we are seeking for the farmer is an equitable adjustment of his freight rates to which he is entitled.

Questions with respect to the railroads could be framed to include the following: What's wrong with the railroads' revenue-earning capacities? Why do the carriers aspire to higher earnings? Under prevailing conditions are carriers entitled to increased freight rates? Are they rendering an honest, economical, and efficient service? The law says they must. What is it that the Interstate Commerce Commission has, or has not, done to bring about efficiency of operations? Comments to follow will include references to some of these points. Perhaps, but it isn't likely, the Interstate Commerce Commission might care to offer answers. We certainly extend that type of invitation.

Earnings by railroads are of great importance because no one, let alone the agricultural interests of the country, wishes to see our large transportation agencies go into bankruptcy. It is recognized that transportation is an essential part of every farm. Because of this recognition, prospects of solution can be explored to the betterment of all concerned. It is this concern in behalf of the farmers' interest that I ask your help.

Railroads invariably cite employee wages as one of the main agreements for rate increases to bolster revenue returns. The Secretary of Agriculture in his December 6, 1948 motion to the ICC to deny railroads further increases, states: "No national emergency in transportation now exists requiring further immediate general increases in railroad freight rates. The record in the present case shows that, even if wages of all railroad employees are increased 10 cents per hour, following the pattern of recent increases granted to railway trainmen, and if present high levels of prices of commodities purchased by railroads are maintained, the railroads of the country will receive in

1949, without an increase in the present freight rate or in the present volume of tonnage moving by railroads, and without improvement in present efficiency and economy of railroad operation, an average return on the value of their properties of approximately 4 percent after the payment of all taxes, including income taxes."

The front page headline of the February 11 issue of the Wall Street Journal, published just one month following the last over-all increase of railroad freight rates, includes the following statement: "Truckers haul more produce as shippers shy from rail rates." Now that the railroads' favorite newspaper is taking cognizance of such things, it is appropriate for the railroads themselves and the Interstate Commerce Commission also to give some thought to these happenings and to other potentialities that will have an adverse effect upon railroad earnings. Two years ago I wrote the ICC that the railroads are following a policy of pricing themselves out of the market.

Agricultural Secretary Brannan said recently that the peak of farm prosperity appears to be past. He told Congress that, since farm prices have been coming down faster than nonfarm prices, the Nation is put on notice to protect itself against imbalance in its economy.

The core of this entire problem with respect to Ex parte 168, insofar as producers and their interests are concerned, revolves around our ability to get the Interstate Commerce Commission to make an investigation as to the efficiency of the railroads. No other Federal agency has the statutory authority or mechanics to undertake such steps. Section 15a (2) of the Interstate Commerce Act reads as follows:

"In the exercise of its power to prescribe just and reasonable rates the Commission shall give due consideration, among other factors, to the effect of rates on the movement of traffic by the carrier or carriers for which the rates are prescribed; to the need, in the public interest, of adequate and efficient railway transportation service at the lowest cost consistent with the furnishing of such service; and to the need of revenues sufficient to enable the carriers, under honest, economical, and efficient management to provide such service."

This section has been used by the Commission in behalf of all railroads. Section 15a of the quoted act implies that no carrier is entitled to increased rates or charges unless the railroad is honestly and efficiently operated. In addition, the shippers and producers also have certain rights under the same section, but the Interstate Commerce Commission's actions in this regard have been of no visible value to the American farmer.

Every farmer in South Carolina, and, indeed, every farmer in the United States should be informed of the comprehensive petition filed on December 6, 1948, in behalf of the United States Secretary of Agriculture for the farmers of the country in opposition to carriers' attempt to acquire further over-all freight-rate increases. This document has obtained recognition as one of the most outstanding petitions ever filed with the Interstate Commerce Commission. The Secretary of Agriculture directed the Commission's attention to many important past studies compiled by well-equipped agencies designed to bring about improvement in carriers' operations, with particular attention directed to the reduction of costs through coordination, consolidation, and other things. In effect, the Interstate Commerce Commission was reminded of recommendations made by the Coordinator of Transportation some years back. Collateral recommendations were made also by individual members, and groups, of ICC Commissioners.

The Board of Investigation and Research in recent years made elaborate reports indicating how numerous savings, totaling many millions of dollars, could be effectuated, but to no avail. All these documents point a finger to the definite direction the ICC should take to create its own investigations and a program of action. If this agency of the Government continues in its complacency, other steps must be taken.

It is preposterous that the only Federal agency obligated and equipped to perform, practically sits idly by and permits one of the supporting pillars of our economy to undergo gross impairments. The message that I am trying to make you understand, gentlemen, strikes at the very vitals of our economic existence. Another thought important in its implications, is our national defense, which is likewise involved in this matter. The Commissioners to permit all of these things to get out of hand must have a warped sense of values.

On page 7 of the Commission's most recent order in these ex parte proceedings it is stated with brutal emphasis that the Secretary of Agriculture's petition was dismissed for the reason that "such an investigation could not be made in the manner sought without large appropriations for the purpose that are not available." Again the Commission growled out its dirge by stating: "We have had on our docket, since 1931, a continuing investigation under Ex parte No. 104 into and concerning practices of carriers by railroads which affect operating revenues or expenses, under which we have investigated certain of such practices. While progress has been made, much remains to be done, particularly in achieving the economies which require cooperation and coordination among the railroads, but we must recall that the war disrupted all industries and its effects are still felt."

The Ex parte 104 investigation was divided into seven parts with hearings conducted in connection with four parts, none of which had to do with carriers' efficiency. In the main, their investigations have been conducted with reference to terminal and switching service charges—inter- and intraplant operations, refrigerator car rentals, storage conditions at the port of New York, and the free use of packing sheds in Texas and Louisiana.

It is noted that the three important subdivisions, relating to efficiency, that might have been investigated are under part 1, railroad fuel costs; part 3, construction and maintenance of private sidetracks; and part 4, traffic expenses. The latter from the standpoint of promoting efficiency was the most important. My information, to date, has not brought to light, however, any actual or contemplated hearings in this regard.

I am informed there is a strong intimation by the Commission, that the lack of personnel prevented further investigations and lack of appropriations was given as the reason for such shortage of personnel.

An investigation to date has unfolded some very interesting facts. These include the discovery of the Commission's total unobligated balance of appropriation—unused—and returned to the Treasury—from June 30, 1931, to June 30, 1948, inclusive, amounting to $5,507,575. Indeed, at the end of the fiscal year terminating June 30, 1943, the unobligated balance of the appropriation was $808,360. The so-called general administrative fund from which the investigations would likely be financed has had a surplus for the same period amounting to nearly $1,300,000. You are reminded, my friends, these are the amounts reported as unused to the Congress of the United States.

It, of course, should be understood that the South Carolina Department of Agriculture has not had the opportunity of conducting an extensive research of the wherefores and whyfors of the ICC's performances. It does appear, however, from where we are sitting, there is a substantial dereliction on the part of the Commission. It is my opinion, however, gathered from the Commission's own record, which shows the return of huge sums of money to the United States Treasury at the end of each fiscal year, that to rely upon a claim that they had insufficient personnel and funds, is a very flimsy excuse for not conducting surveys as to the carriers' efficiency, and cries aloud for an investigation.

If they had examined the operations of only one carrier, particularly the New York Central Lines or the Pennsylvania Railroad, which I understand are the leading agitators in the matter of increased freight rates, it would have been most helpful in establishing the actual facts in the situation.

The height of all-time excuses perpetrated upon the American farmer by a Federal agency is that indulged in by the Commission in this case. Imagine, if you will, an investigation of this magnitude and importance pending before the Interstate Commerce Commission since 1931. Do you realize that many girls and boys not yet born in 1931 have since graduated from high school.

I, for one, do not recall ever having seen any special report made by this Commission to the public, the Congress, the press, the President, or anyone else, stating that they have been handicapped in measuring up to its requirements because they lack funds to make the necessary investigations which go directly to the heart of our economic existence.

Talking about questions reminds me that I can ask one along about here: How long do these 11 Commissioners on the ICC think that the agricultural interests of the country should sit on the side lines and await their convenience to determine the efficiency of common carriers, which, by law, they are obligated to perform?

Another appropriate question would be if the Commission does not perform and continues to be negligent about measuring up to its obligations, should not the Congress of the United States take cognizance of this condition and make an investigation of the Commission's inactivities as to carriers' inefficiencies because this matter is of outstanding importance to every citizen of the United States?

The Interstate Commerce Commission in its recent annual report, submitted to the Congress a few days ago, had much to say about "carriers' operations." They mentioned "high rates may become self-defeating" and that "much more must be done to reduce operating costs," as well as similar expressions, but gave no indication that any action would follow the failure of the carriers to heed the admonition.

Shortly, subsequent to the preparation of this same annual report, the Commission further increased by 4, 5, and 6 percent, depending upon territorial origins, freight rates on most items, including all products on the agricultural list. Remember again, these recent increases can be described as interim or temporary, with favorable prospects of additions at the close of the pending proceeding.

A continuance of the system now in vogue, especially because carriers are prone to follow a well-defined pattern of profitable routine, convinces me of the hopelessness of the present situation if allowed to continue without drastic protests and a well-planned policy of opposition.

The adopted vicious cycle includes presentation by railroads of evidence of increased labor charges and/or material costs, and a lowering of net income based upon unaudited (by the Commission) financial accounts, resulting in the filing of another

over-all freight-increase petition with the Interstate Commerce Commission.

Railroad petitions usually receive almost immediate action from the Commission insofar as hearings, decisions, and orders, including higher levels of rates in succeeding continuity, are concerned. Incidentally, should John Doe, farmer, attempt to get similar action he would be doomed to disappointment, although his individual condition could be substantially more serious. Farmers should realize that when freight rates go up, their income goes down.

All manner of opposition has heretofore been designed and put in motion to refute the carriers' incessant attempts at horizontal increases. In effect, the Commission generally issues an explanation regarding its order allowing increases which, in substance, means, irrespective of the showing made by the opposition, the carriers have proven to the Commission's satisfaction that their earnings are insufficient. This, mind you, has taken place repeatedly, with the Commission giving little or no consideration to carriers' efficiency.

A point that I have considered is to the effect that the railroads in their operations, including practices and policies growing out of managerial discretions and perhaps many managerial indiscretions, have a way of showing up ultimately in the respective carriers' balance sheets. A recapitulation of these balance sheets, which the Commission does not go back of, includes profits and losses of the strong and weak railroads and is the document most relied upon to obtain increases.

Incidentally, there is no individual or agency, save the Commission, that is in position to make a check as to the accuracy of these financial statements, let alone to determine that such is the outcome, in all instances of efficient operations.

Emphasis should be placed upon the fact that without the Commission's investigation the carriers "can do no wrong," because if earnings are not sufficient, which may be due in part to inefficiencies, they simply approach the Commission again for further increases—a beautiful arrangement for the railroads, but not for the farmer.

A point to be emphasized is the fact that nowhere in the Interstate Commerce Act is mention made of a stipulated rate of return or any fixed amount carriers must earn. The act is silent on this point. A seeming inconsistency exists under the same section of the act, upon which railroads rely, in that the rights of carriers thereunder are respected by the Commission but the rights of shippers or those having primary interest in freight rates, such as farmers, are accorded slight consideration.

The carriers' earnings collectively, at the time the railroads filed their last petition, were between 4 and 5 percent and this average includes "all of the weak sisters." Such average earnings, however, present no conviction that an extreme emergency exists, warranting interim increases without a complete investigation.

In recent years railroads operating in the southern and western districts have been relatively much more efficient and remunerative than their eastern brethren. Expressed differently, the railroads handling the most of agricultural tonnage are seemingly the most prosperous and these railroads have not taken the initiative in creating the last three ex parte investigations.

The eastern railroads have been relatively worse off than their southern and western connections. In a late newspaper report, however, one of the prime movers, in the recent ex parte investigation, the Pennsylvania Railroad, has reported its 1948 income as being in excess of $34,000,000, nearly five times greater than the $7,000,000 net income of the previous year. Similar earning expansions have occurred with the other eastern carriers. Remember the 1949 rate levels are higher than 1948.

From good authority, the railroads operating in the grain and cotton belts were not enthusiastic in supporting present policies of ex parte investigations. Even the Association of American Railroads has not been connected directly with Ex partes 166 and 168. This organization did, however, at the request of the eastern railroads, so I am informed, lend its senior statistician to compile and present certain financial and collateral data in exhibit form.

Under date of January 22, in connection with Docket No. 29886, the southwestern carriers petitioned the Commission for an order requiring certain official (eastern) territory railroads to furnish specific and so-called essential information for use in connection with the development of relative costs and stressed the savings to be effectuated by the use of Diesel equipment. In other words, the Pennsylvania, the New York Central, B & O, the New Haven, the Nickel Plate, the Erie, and the Norfolk and Western because of their previous refusal to do so, if so ordered, would be required to display their known inefficiencies. Perhaps we are getting somewhere when one group of railroads accuses some of the most important railroads in the country of things we have long suspected.

If the southwestern carriers prevail the eastern roads must put into the record of docket No. 29886 certain information regarding the antiquity of their motive power, the presumption being that such outmoded equipment results in high costs of operation, which, in turn, brings about a demand from the eastern railroads for a higher split in the divisions of all joint through rates between that territory and the southwestern territory.

In the same petition the following is particularly noted: "The southwestern respondents allege, upon information and belief that this terminal expense is excessive, due to the inefficient equipment in use, etc."

Another circumstance of importance may be of interest to relate. Some of the railroads, as you know, are the principal lines serving the thickly populated eastern industrial sections. The New York Central has made many claims to the Commission of its financial distress. Indeed, its vice president and counsel was the chief attorney and the principal outstanding advocate for higher rates in several of the most recent of the ex parte cases.

Of all items handled by the New York Central lines, to cite an example, its volume consists of more than 50 percent of articles listed as products of mines, a very low-rated list of commodities. They originate only a relatively small portion of this character of freight—the preponderance of this type of tonnage coming to it from the financially strong so-called Pocahontas railroads. A similar increase applied on coal tonnage as assessed against the products of agriculture would help financially weaker eastern lines. Similar horizontal increases ordered with a better division of the through rates between the strong Pocahontas coal railroads and their weaker eastern connections would also be another way to solve most of the lower earning eastern railroads' problems.

For the year 1947 (1948 data unavailable) the raw products of agriculture accounted for approximately 11 percent of all rail tonnage but the railroads derived 16 percent of their entire revenue from this source. For animals, and products thereof, these figures are 1 percent and 4 percent, respectively; while for products of mines the percentage was 56 for tonnage and 28 percent for revenue. The rail equipment used for shipments of coal is always returned to the mines empty or, in other words, for the most part, coal cars are loaded only about 50 percent of the time in transit.

While we will not quote extensively from the Secretary of Agriculture's petition, there is, however, one point that should be an exception and bears repeating: "The total average movement of freight cars in the United States is less than 47 miles per day, of which the loaded movement is only about 32 miles per day, while the average speed of freight trains is 16 miles per hour. These statistics reveal that the average freight car is in movement transporting freight only a little more than 2 hours out of every day and makes only about two revenue trips per month."

As freight rates go up railroad tonnage goes down. The railroads hauled 16,600,000 carloads less in 1948 than they did in 1947. With less and less tonnage, higher and higher rates are inevitable. This is recognized even by some important railroad officials. Recently the president of the Union Pacific Railroad made a speech using this fact as his subject. On the other hand, however, the president of the New York Central Lines is quoted as having said it was his belief that the ICC should be allowed to increase freight charges without a hearing upon application by the railroads.

In all cases affecting the various products of agriculture, the Secretary of Agriculture has been very active in protecting the farmers' interest under the authority vested in him through section 201 of the Agricultural Adjustment Act of 1938.

There are those of us who believe that now is the time for something to be done to save the railroads from themselves because it is inevitable that, if the carriers continue their present routine, it can lead only to Government control and, ultimately, to Government ownership of railroads. I believe it time now that consideration be given to the advisability of the farm and city organizations, collectively, offering the Interstate Commerce Commission their support in acquiring special appropriations to make any necessary investigations that will remove many of the indicated and suspected inefficiencies of carriers' operations.

A sort of closed corporation practice indulged in by the Commission is the method employed in rendering its decisions. In late ex parte cases the verdict reached appears to be unanimous. It is suspected, however, without any way of proving it, that in advance of conferences and vote, agreement was reached to record its findings as unanimous. To say the least, it is rather unusual for 11 men to agree completely in so many of these cases with its involved commodity and territorial ramifications. Even the United States Supreme Court, with only nine members, seldom reaches a unanimous decision in outstanding issues. Each individual Commissioner should be personally held accountable for his vote and should give his reasons in support of his actions.

Another criticism of the Commission's practices pertains to its declarations of what is a manufactured product of agriculture. The Harwood trucking case presents an example of the decisions opposed. Even when the Commission faces such issues in court and loses the verdict it will eliminate such practices in that court's jurisdiction but not in other districts which is, indeed, an arbitrary policy to follow. The South Carolina Department of Agriculture testified in this case.

In recent ex parte cases maximum rate increases were prescribed in certain instances. The railroads have been in severe violation of the Commission's decision by applying increases on two factor (combination) rates resulting in advances in excess of the Commission's decision. The Commis-

sion appears reluctant, at least in some instances, to order the railroads to respect its decisions.

The time is appropriate for the farmers and those who depend on the farmer to demand improvements in our transportation methods—starting with the Congress if necessary. Included in such a program should be our endorsement of membership on the Interstate Commerce Commission of a person, or persons, having a background of agricultural transportation experience. Other segments of our economy are represented on the Commission; therefore, this idea cannot be classified as inconsistent.

It seems that the 11 fiddlers are out of tune and their actions are not in harmony with the farmers' interests. Indeed, with the laying off of thousands of railroad employees all over the country, because of less tonnage, the Commission's decisions appear to be helping no segment of our economy. The railroads, following World War I also made substantial increases in their freight rates which diminished the volume of business handled. Later they had to reduce their rates. The railroads have resurrected the same unworkable pattern, aided and abetted by the Commission, which appears to be headed for the same disastrous experience.

It is my suggestion that we write Congress to create a special committee to investigate the operations—or better still, the lack of some imperative operations on the part of the Interstate Commerce Commission, especially as such would relate to carriers' inefficiencies. But let's demand this investigation be conducted by a committee that is nonpartisan. Members of this Congress have instituted proceedings for an investigation—but let me read from the Produce News, of February 12, under the column Capitol Letter.

"WHOSE INVESTIGATION

"Considering the rapidly growing clamor of the Nation's shippers and receivers for an investigation of both ICC and the railroad and motor carriers, an unprecedented and unexpected action by Senator CLYDE M. REED took place this week on the Hill.

"The Senator, speaking for himself and Senator MYERS introduced Senate Resolution 62, calling for an investigation of the land and water transportation system of the United States, which resolution promptly was referred to the Senate Committee on Interstate and Foreign Commerce.

"The investigation is to discover (a) if the transportation system follows national policy as expressed in the Interstate Commerce Act, (b) if expenditures are in accordance with that policy, (c) if legislation is necessary to bring transportation practice in line with national policy.

"Experienced congressional observers, however, are giving the resolution knowing winks, pending further development. The resolution naturally calls for a subcommittee (usually of three members) to conduct the investigation and the naming of a chairman.

"Such subcommittees are often completely dominated by the chairman, who becomes in effect a one-man committee. Senator REED was chairman of both the Bulwinkle bill and the railroad car shortage investigation hearings and bludgeoned his way through the opposition to the railroads on both occasions.

"Senator REED has been generally and without qualification spoken of as a railroad front man for some years. Senator MYERS is Democratic Senator from Pennsylvania, home of the Pennsylvania Railroad. He also was on the car-shortage investigation committee last year.

"As this column goes to press, members of the subcommittee have not been named. Pending further development of the investigation, determination of witnesses permitted to testify and such matters pertinent to a genuine investigation, noncarrier transportation circles are keeping their fingers crossed.

"Last guess of all is that Senator REED, prodded by western carriers who in a late January petition to ICC charged railroads in the eastern district with inefficiency, may be calling the investigation for a settlement of this dispute. But then, Senator MYERS is from the eastern district.

"At any rate, there is ample evidence in the record, pending further development, of course, to warrant a look-out on the part of the trade to prevent such an investigation becoming window dressing designed to stop a real investigation."

Will higher freight rates help the railroads? By way of being a bit facetious, we may compare the present ills to the mother giving more candy to the child when candy had already made it sick.

Boiled down to a simple question, Are the railroads operating economically, honestly, and efficiently? The law says the answer should come from the Interstate Commerce Commission.

Automobiles for Blind Veterans

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, I want to take a few minutes of the time of the Members to urge upon them their support of legislation, now pending before the Committee on Veterans' Affairs, that would authorize automobiles for those veterans who are blind as a direct result of their war service. Also the bill includes the amputees.

There are no less than five measures now on file that would accomplish this result. One of the latest of such proposals is one by the gentleman from Connecticut [Mr. SADLAK], with whom I have just been talking. Many Members have spoken to me about the proposal and have agreed with me that its enactment would be one of the most humane and thoughtful acts that Congress has taken in caring for veterans who gave their sight that we might be protected.

As each of you probably has, I have received many, many letters from blinded veterans and their families, letters that are most touching and in many instances pathetic, written on a typewriter obviously by one who cannot see, telling me what a boon an automobile would be in their every day existence. Many of these veterans can obtain gainful occupation if transportation is provided. Anyone who watches the blind on crowded streetcars, in subways, in railroad trains, in crowded busses realizes the difficulties they encounter.

I want to quote a few excerpts from some of these letters:

A blind veteran of World War II, from Brockton, Mass., writes:

I am a blinded veteran of World War II, and I am vitally interested in this bill. Its passage would mean a great deal to myself and fellow veterans so disabled. While it is true we cannot drive cars ourselves, we can derive the benefits of being driven in our own cars by members of our own families. As you can well imagine, public means of transportation leaves much to be desired from the viewpoint of a blinded person. A great deal of security could be realized if we could depend on our own resources in accomplishing our own travel.

Another of these men, from Camden, Ark., writes:

Having heard of your deep and sincere interest in the welfare of the disabled veterans, I feel that I would like to extend my thanks to you for our past benefits through your efforts. Having lost both my eyes and both hands in Germany in April 1945 it is difficult for me to get around as much as I would like. * * * Should the bill pass, my wife, who is a good driver, would take good care of my car.

Then there is the blind veteran from Fairview, N. C., who lives out in the country:

I live about 12 miles from the nearest town, and bus facilities are very poor, necessitating much walking and waiting for schedules. I feel an automobile would aid me very much in my readjustment. My wife could act as driver for me.

There is a veteran down in San Antonio, Tex., whose eyesight is so impaired that he is groping about trying to make his own way for his wife and children.

As the bill now stands I meet the requirements to qualify for a car. My vision is 20/200 uncorrectable in both eyes. I cannot see to read or to do any close work. I need a car for transportation to my job and to take my child to the doctor. It is very inconvenient to ride the bus to work in bad weather because of delays in transfer. I cannot always take my baby to the doctor and other places by bus. In inclement weather I am forced to stay at home. My wife will be available to drive the car for me, should the bill pass.

The family of a blinded veteran of World War II, from Methuen, Mass., writes:

I wish to take the opportunity to write to you in behalf of my brother-in-law, a blinded veteran of World War II. You have his and our support for the blinded veterans' auto bill, a Godsend to those shut-ins, our blinded veterans of the past war. Sometime in the past we approved the granting of cars for amputees and have found from observation that this has been of great benefit to these helpless unfortunates. In his particular case, we feel a car belonging to him and at his disposal to take him wherever he has reason to call would round out and better his future to compensate for his present handicap. In closing we hope the rest of your honorable colleagues vote favorably on this bill for the sake of these veterans.

Down in Louisville, Ky., there is a veteran who is living in a world of darkness, who has been hoping and praying for this legislation for a long while. He writes:

I am writing again as I wrote you last year, but I feel sure the bill will be passed this session as we have a Congress that wants to help the veteran to his best advantage. I realize Congress can't pass every bill that comes its way, but this bill if passed would do much to raise the spirit of many blinded veterans who will never see the light again, only through the kindness of our fellowman. Being a blinded veteran, I am in favor of passage of this legislation, because it would be a Godsend for me and many other blinded veterans to have transportation to and from

our daily work. I am sure you know how helpful automobiles are to the amputees in their rehabilitation. To the veteran who lives off the bus or car line, who must trudge through rain and snow to reach an overcrowded bus, to be pushed and shoved around, to own a car so my wife or another member of my family could drive me to and from work in comfort would truly be a gift from God.

One of the Red Cross Gray Ladies wrote this for a young man out in Long Beach, Calif., but he signed it himself—and legibly, too:

The bill pending in regards to blinded veterans, I understand, is about to come before you once again. I would appreciate very much if you would do everything reasonable to consider casting your vote in behalf of the blinded veterans. If I am fortunate enough to secure one of the automobiles it will mean a considerable lot to me and my family. It will serve as a means of transportation with my wife as a driver. I also have a brother who will be able to assist me in the way of driving. At the present I am engaged in an on-the-job training in a small candy and tobacco business. It would help me in securing my supplies.

From Glastonbury, Conn., comes the following:

Being blinded myself, this bill is of the greatest importance to me. Having it passed would aid my rehabilitation considerably. It would bring much pleasure and also help to get back and forth to a job. My wife would act as chauffeur and life would be lots brighter. There is so little I can do for activities at times morale is pretty low. I would like to thank you for all the effort you have put into this bill. I feel most confident having you on our side. Thank you again. I will in the meantime pray for the passage of the bill.

Out in Denver, Colo., is a boy who will never see the beauties of that wonderful scenic State. He writes:

I served in the United States Army and lost my sight 5 years ago. The car would certainly mean a lot to me in my rehabilitation as I attend school—and also an automobile is a great source of enjoyment. My wife is a licensed operator.

This letter comes from the wife of a blinded veteran from Philadelphia:

As the wife of a blinded veteran and the mother of his son, I feel that I must write and ask you to do all within your power to seek the passing of the auto bill for the blinded. Your past records have been so outstanding and we can't forget how untiring you worked for the amputees that we feel you will do the same for our loved ones. You realize how hard it is to get around without a car, for when you have a baby and husband to look after and prices of taxis beyond our budget very often, you understand that our visiting is very limited—so as a woman I appeal to you, for we wives have given unstintingly of our love and encouragement that our men may feel they are living a normal life as much as possible, but with a car to take us it would be the opening of many new and different thoughts for them. So again I ask and pray that we won't be told again that it hasn't passed, for so much money going abroad can't a little be given to those who gave so much to all of us. Hoping you won't let us down and pray God gives you the good health to continue your wonderful work.

A young man up in Fall River, Mass., typed a beautiful letter, free from errors and well signed:

I know if passed it will be a wonderful thing for these fellows, because I am one of them. I find it a great inconvenience to get about, especially finding and waiting for transportation on many needed occasions. This is why a car would help in my rehabilitation. I would like to explain that my friends and members of my family are available to act as drivers.

Near to my home in Malden, Mass., a blinded veteran writes:

I am a member of the Blind Veterans' Association, and I am writing in regard to the bill providing automobiles for blind veterans. I am so in need of a car to take me here and there. My brother could do the driving. I just want you to try your best to have this bill passed.

From the town of Hopedale, Mass., another veteran writes:

Would you do everything in your power to support and help secure passage of this bill? A car would be of great assistance in my rehabilitation. It would help me in getting to Boston, as I am taking voice lessons there. (Boston is a distance of approximately 35 miles from my home.) My wife can drive, and she could act as driver of the car and take me to Boston, as it's pretty difficult getting in there any other way. Also, it would come in handy for getting me to the many functions I have to attend. Being blind, I feel it a necessity in having a car of my own, making it much easier for me to get to my destination and making life more pleasant and bearable in not being tied down for lack of easy communication. Please think it over, my dear Congresswoman, and with your help and support I'm sure this car bill will become law.

Another blind veteran writes from Roxbury, Mass.:

Passage of such a bill would help greatly in the readjustment for myself and other veterans in the same condition. It would enable us to get out more often, especially in the large cities where there is so much traffic, and we would be able to associate more with our friends. I myself have a couple of members in my family who would be available to drive me around, and they would be only too glad to help me out.

Here is a veteran who lives for from the beaten path, in Alcalde, Ky.:

I am a blinded veteran of World War II and believe that the auto bill for us blinded boys is a great thing. I can't put in words how much in need of a car I am. I live 6 miles from our nearest town and doctor, and there is no bus nor anything that runs on our road. Every time my wife, baby, or myself need a doctor I have to hire a car there and back. It is almost impossible for me to travel without a car, and I am not able to buy one myself. I can think of nothing that would be of more service to us blinded soldiers than a car. I have a neighbor's wife or her brother who would be glad to drive my car for me if I should be given one.

This one comes from Wheeling, W. Va.:

As I am a blinded veteran with a wife and five children this would greatly improve my rehabilitation. It would enable my getting to my work, as my wife could drive for me. It would mean an awful lot, for as it is we can go nowhere. Please give your support to this bill, and it will be greatly appreciated.

None of us can read these letters without visualizing the vast scope of new activity an automobile would open up to these unfortunate men. It would do more to encourage them and help their morale, as well as to make them forget their handicap, than any other thing I can think of.

The blinded veterans are one of the most courageous classes of disabled veterans. They are tremendously proud of their accomplishments, and rightfully so. There is little we can do to ease the monotony of their daily lives, but each of them is unanimous in the belief that the possession of an automobile would do more toward a normal existence than any other thing we could do.

The Fear of War Hangs Like a Dark Cloud Over the Peace and Contentment of the People of This Nation—They Want Us in Congress To Do What We Reasonably Can To Prevent War, Rather Than To Assure Them That We Can Win It—They Do Not Want It To Start

REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. ALLEN of Illinois. Mr. Speaker, the American people acclaimed President Truman when he declared in Newark, N. J.:

I would rather have peace in the world than be the President of the United States.

Mr. Speaker, the two most profound expressions with respect to world peace since that memorable statement of our President were made in the last 72 hours.

One I came upon in the CONGRESSIONAL RECORD. It was spoken by your good friend and my good friend, the Honorable A. WILLIS ROBERTSON, who long served with us in this House and is now the junior Senator from the great Commonwealth of Virginia.

In the debate now taking place in the Senate with respect to the ERP, that distinguished Senator on Friday last spoke these profound words:

The fear of war hangs like a dark cloud over the peace and contentment of the people of this Nation. They want us in Congress to do what we reasonably can to prevent war, rather than to assure them that we can win it. They do not want it—to start.

I do not know as yet what we shall spend this year for armed services. I am glad that I am on the subcommittee of the Committee on Appropriations which will have to make the first decision on that matter. I understand the chairman of the Armed Services Committee of the House has proposed that $1,500,000,000 be added to that sum. There seems to be quite a sentiment in Congress as well as among the people of the Nation, that we would do well to increase our Air Force units from the 47 or 48 we now have, by at least 10 more, and some would like to see them increased to a total of 70 air squadrons.

The second statement to which I refer was made by the Honorable Winston Churchill during his speech in Boston last Thursday when he said:

For good or ill—air mastery is today the supreme expression of military power—and fleets and armies, however necessary, must

accept a subordinate rank. This is a memorable milestone in the march of man.

Mr. Speaker, what words could more truly express the American sentiment than those spoken by Senator ROBERTSON when he said that the American people want us in this Congress to do all that we reasonably can to prevent war rather than to assure them that we can win it. They do not want it to start.

Then sentiment in Congress as well as among the people of the Nation is that we would do well to increase our Air Force—

So declared Senator ROBERTSON.

The people of this country know that American air power is American peace power.

It was in order to prevent war from starting that this House last week passed legislation creating the 70-group air force.

It is for that reason that the Honorable CARL VINSON, the distinguished chairman of the Armed Services Committee of this House publicly stated his desire to have this House vote the money necessary to implement the 70-group air force program.

The success of the United States Air Force in operating the Berlin lift day after day, night after night, month upon month—the wonderful performances of our B–29's, our B–50's, our B–36's and our other long range superbombers—the marvelous record of the globe-encircling flight—prove that our air defense is not alone by far the least expensive—but that it is the sole deterrent to foreign aggression that the American people possess.

Dentists in Industrial Areas Praise British Health Service—But Some Ideas That Have Come Up Annoy Them

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. MULTER. Mr. Speaker, on April 4, I placed in the RECORD the ninth of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 28, is the tenth of the series:

DENTISTS IN INDUSTRIAL AREAS PRAISE BRITISH HEALTH SERVICE—BUT SOME IDEAS THAT HAVE COME UP ANNOY THEM

(Tenth in a series)

(By E. J. Delaney)

LONDON, March 28.—Dentists who live and work in industrial districts of England's cities have only praise for the new British National Health Service. They think it is wonderful, but do have a few reservations concerning possibilities that would affect their professional standing. They are more trusting in their attitude toward the Labor Government and its leadership, but they say there are some ideas they will not stand for and will revolt against.

These dentists are caustic in their remarks concerning other dentists who serve the white-collar and higher economic groups. One of them puts it this way:

"The trouble with them is that they want to spend too much time arguing with a patient against the Health Service and trying to induce the person to become a private patient."

BEST PLAN EVER

This man, in the docks section of a big city, is a member of the Labor party. He helped form the ideas on dentistry included in the Beveridge Report that make up the modern base from which National Health Service has emerged. He handles 50 patients a day, instead of the 20 that get into the chair of dentists in better neighborhoods.

But let him speak for himself: "Huge taxes, direct and indirect, have driven all classes to take advantage of the dental benefits of the health scheme. Aneurin Bevan's plan is the best that ever has been thought of for the dentists and it is working wonderfully.

"I am able to handle 50 patients a day, working 6 hours, during a 5-day week. I close on Thursdays. Formerly I had to labor in the evening, but not now. I close my door at 6, although I sometimes unlock it again because somebody comes around with a swelling jaw and rings my bell vigorously. I have 3,000 patients and no private practice. I don't take in $4 a month in cash from patients."

SAYS PATIENTS ARE HAPPY

What is the disposition of his patients toward the health service? "They are happy about it," the dentist says, "they are more cooperative in their relations with me than they ever were before around this region. They feel that the work is being paid for by somebody else and they are extremely grateful."

"What about the dentists and their freedoms?" you ask. This man says: "We are freer under this system than we were under the insurance plan for workmen that existed before the health service was started. Principally we are allowed to do a much wider range of work than I ever could do hereabouts.

"In this district about all I ever have done have been extractions, simple fillings and dentures. I have not put in one inlay in years. I can do a lot more for my people, and, isn't it wonderful, I can get paid for it."

OPPOSES TECHNICIANS

This dentist is ruggedly against the movement to make technicians and dental mechanics into some kind of an assistant dentist. Only in this respect does he indicate he would break with the labor government.

He says: "The technicians have a union and, of course, under a Labor government they may be able to induce the authorities to look most kindly on their ambitions, but the profession will fight against it. We will not stand for girls cleaning teeth and performing prophylactic tasks."

The technicians are trying to work up an arrangement that will make them more important in the service. They ask to be organized into dental auxiliaries. They offer to stop all advertising, to have their employees and helpers subjected to proficiency tests, and they swear they will not attempt any dental surgery and will refer everything not strictly mechanical work to a dentist.

SEEK REGISTRATION

They aspire to be registered by the Government. The technicians, too, are against regimentation and say they will oppose aggressively any attempt to turn them into civil servants working under a bureau for a flat pay per week.

One dentist who holds a high elective position has made a public statement in defense of his profession, of the public and of the health service.

He denies that most dentists are reaping fabulous profits, says he could not make the $1,600-a-month limit without an excessive amount of labor and, besides, everybody forgets that the gross income of a dentist is not a profit. He thinks overhead runs to 66 percent rather than 52 percent, and he knows dentists who barely are getting along.

Farmers Only Want Fair Competition From Oleo

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 1, 1949

Mr. HAGEN. Mr. Speaker, I represent the Minnesota Ninth District which contains a part of the great Red River Valley, referred to for the past century as the "breadbasket of the world."

My district is almost wholly a farming district with scores of very fine creameries and many thousands of farmers who produce dairy products.

The State of Minnesota produces one-eighth of all the butter used in these United States and I am proud to say that the quality of Minnesota butter is known throughout the world. In addition to private-owned creameries and dairies, we have great farmer cooperatives which send hundreds of millions of pounds of butter and other dairy products to all parts of the world.

The farmers of my district do not fear fair competition from oleomargarine. The quality of our butter is such that we can compete with any producer in the world, provided the consumer knows he is getting butter and not oleomargarine.

This bill we are considering today was introduced by a Republican representative, Congressman AUGUST ANDRESEN, of Minnesota's First District, who has been for many years a member of the Agriculture Committee of the House and has given intensive study to this controversy between oleo and genuine butter. We are also considering a bill, identical to the Andresen bill, sponsored by a Utah Democrat, the Honorable WALTER GRANGER.

This bill removes the Federal tax on oleo but it prohibits interstate commerce in yellow oleomargarine unless it is clearly labeled and marked so that the consumer will know that he or she is buying oleo.

I am heartily in favor of the Andresen-Granger bill, since it gives protection to the dairy farmers of America. I repeat, that the makers of real butter do not fear fair competition, but when some thousands of restaurants and hotels over the Nation serve oleo which they buy and color at a low cost to customers, who think they are getting genuine butter, then I say a halt should be called to this nefarious practice.

Other speakers have ably covered many points concerning this bill, but I

want to stress that soil conservation also is very much involved in this debate today.

Congress for years has appropriated tens of millions of dollars for soil conservation. We all realize that soil is the basis of prosperity and economy and that erosion and depletion of the soil is one of the most serious problems confronting not only the United States but every nation in the world.

If the dairy farmers meet such unfair competition that they do not plant sufficient land to grass, hay, and feed crops, then the soil becomes depleted and the riches of the Nation go down to an alarming degree. Millions of dairy cows furnish thousands of tons of fertilizer.

Millions of dairy cows furnish the milk which all of you realize is the fundamental food not only for children but adults. I think some of you Members from the Southern States realize that planting crops year after year, such as cotton and soybeans, has seriously depleted the soil, and the fact that some of your States are switching over to dairying will bear out my contention that the production of dairy products is one of the greatest builders of the soil known to mankind.

The dairy industry in America produces 25 percent of our total farm income, and in Minnesota it accounts for more than 50 percent of the farm income. On our farm income depends many jobs in other walks of life, such as those of railroad men, bankers, laborers, doctors, merchants, clerks, lawyers—in fact, in farm districts almost every job depends upon the prosperity of the man who tills the soil; therefore, when you harm dairying you harm all the people of the farming community.

We have only one request of the few oleomargarine manufacturers of America. We ask them to sell their product in its own clothes and on its own merits.

There are only 28 oleo manufacturers in the Nation, and yet they have such a powerful rich lobby here that it seems almost a hopeless task to protect the 2,500,000 dairy farmers of America.

Let me emphasize that the welfare of the farmers in my district is the welfare of all the people of the Ninth District. If the farmers fail, the business and professional people have no market and no money, as was shown during the depression of the 1930's, when everybody went down because agriculture went down.

I especially urge you Congressmen in the South and from the cities to vote for this law which protects the dairy farmer by prohibiting the sale of yellow oleomargarine with unfair competition with real honest butter.

When you knock down an important part of America, agriculture, you start destroying the soil, ruining the business of millions of hard-working farmers, and practicing deceit on the consumer, who thinks he is getting butter but is served yellow oleomargarine.

Vote for this Andresen-Granger bill as it stands and you will best serve agriculture and the Nation.

Soil Conservation in Wisconsin

EXTENSION OF REMARKS

OF

HON. MERLIN HULL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. HULL. Mr. Speaker, early this year the boards of supervisors of Wisconsin soil conservation districts made their annual reports to the Secretary of Agriculture and to the State Soil Conservation (Districts) Committee. The United States Soil Conservation Service, at the request of the district supervisors, provides these districts with technical help which farmers cooperating with the local district can use in planning and applying complete farm conservation programs to their farms. After reading the district supervisors' reports, M. F. Schweers, State conservationist at Madison for the Soil Conservation Service, wrote a letter to the supervisors commenting on points of interest to the two groups.

He complimented the supervisors highly on their excellent job of planning and administering the affairs of the local districts, thereby making more effective the technical help which districts get from the Soil Conservation Service and the other kinds of help they get from governmental and private groups, either Federal, State, or local. He referred especially to the "speeding up of all activities in districts during 1948." The soil conservation districts are organized by farmers under State law and are administered by local governing boards.

Following are some of Mr. Schweer's comments:

1948 ACCOMPLISHMENTS

During mid-winter of 1947–48 you supervisors, in consultation with county agricultural agents, soil conservation service field personnel and agricultural leaders, set your district's goals for the 1948 calendar year.

Prior to determining goals, we reviewed the kind and amount of work which district personnel and others believed farmers would undertake during the year, not taking into account our limitations of SCS personnel or equipment.

With information on the total job, and using locally derived rates per unit, we then totaled the number of man-days it would take to provide all the assistance farmers would need from the district staff. This assistance includes making detailed plans, laying lines for soil conservation practices, writing farm conservation plans, and assisting cooperators with any of their soil conservation problems. With only a few exceptions, these totals ran two, three, and, in some instances, as many as five times the personnel that were available to the district.

We use these total work-load figures in determining assignments of soil conservation service personnel to districts. We try to place our manpower in those locations where it can be used to the greatest advantage. We believe this work-load information serves as a guide for making the best distribution of our personnel.

Let's return to this business of reducing the work load to fit the number of men available to a district. In determining priority of work within a district we believe that without exception, you supervisors agreed upon the following order:

1. Lay-out: Assisting farmers in applying planned practices (called for in their complete farm conservation plans) on the land during the very limited season that this can be done.

2. Follow-up: Working with district cooperators in changing their farm conservation plans; guiding them in the expenditures of money for lime, fertilizer, and seed; encouraging them to speed up the application of the planned practices to the land, etc.

3. Replanning: To assist farmers in making what might be termed a complete overhaul in their plans.

4. New farm conservation plans: After each district work load was determined we then made a summary for the State. At the end of 1948 we totaled accomplishments. We have prepared a table listing the goals for the year, total accomplishments, and the percent of the goal attained.

Activity	Unit	Goal	Accomplished	Percent
Follow-up	Number	8,543		
Planning and replanning.	do	1,884	1,712	91.0
Contour farming	Acre	6,430	10,859	170.5
Strip cropping	do	76,498	63,469	83.0
Pasture improvement.	do	10,281	9,439	91.8
Wildlife area improvement.	do		3,423	
Woodland management.	do	3,558	4,250	119.8
Tree planting	do	2,113	1,840	87.1
Terraces	Mile	459.9	381	82.9
Field diversions	Acre	102.3	114	111.5
Farm drainage	do		14,533	
Structures	Number	236	26	11.0
Waterways and outlets.	Linear foot.	726,370	841,760	116.0

Unfortunately, we do not have detailed records on follow-up but we estimate that this percentage would be near 100.

1949 GOALS

We carried through on the same procedure in analyzing 1948 accomplishments and setting 1949 goals as was followed last year. We want to present a summary of the possible 1949 work load, goals for the year, and the relationship of goals to last year's accomplishments.

Activity	Unit	Total	Goal	Percent	Ratio, 1949 goal to 1948 accomplishment, percent
Follow-up	Number	12,109	10,095	83.4	
Planning and replanning	do	4,555	2,269	49.8	132.4
Strip cropping	Acre	83,376	68,508	82.3	108.0
Pasture improvement	do	20,235	16,043	79.4	170.0
Wildlife area improvement	do	665	540	81.3	15.8
Woodland management	do	8,400	5,050	60.1	119.0
Tree planting	do	3,054	1,600	52.4	87.0
Terraces	Mile	820.3	465.4	56.8	122.1
Field diversions	Acre	175.2	126.0	71.9	110.5
Farm drainage	do	31,411	20,020	64.5	138.0

Under "Total" is listed the amount of each of the activities that both you supervisors and our own field personnel believed farmers in the State will undertake during 1949. It would take 265 man-years of full-time assistance to do the job. With 140 man-years available, the 1949 goal appearing under "Goal" was devised. As in the past year, the same priority of activities was followed. Plans for the lay-out season will call for all personnel to concentrate on assisting farmers in the installation of practices during these periods.

We believe you will agree with us that the above goals present quite an ambitious program, particularly with respect to the increases planned for 1949 in relation to what was accomplished in 1948.

PERSONNEL

Goals set for the 1949 calendar year were figured on the basis of having no more personnel than we had in 1948. The appropriation recommended for the Soil Conservation Service during the fiscal year beginning July 1, 1949, was slightly less than we are receiving for the current year. In informing you of the number of men you can expect to have in your district for the calendar year, it is logical to assume therefore that there will be no increase. In the event the final appropriation differs, either upward or downward from that recommended, we will make the necessary adjustments in our staffs which assist districts. We will look to the goals and total job ahead for the year in each district as a basis upon which to make changes. In discussing personnel with district governing bodies, a majority of them asked us for additional help from the Service. Under present circumstances this will be impossible.

We will be staffing several new districts which farmers have organized. To do this we will have to either withdraw personnel now in training positions in some districts or use some of the funds, expended during the past year for part-time help in districts, in employing additional permanent farm planners for these districts that have not as yet been staffed, or as replacements for the experienced men who are transferred.

EQUIPMENT

One of the factors limiting an increased lay-out is the scarcity of heavy equipment. During 1948 a number of county boards purchased equipment that will be operated by the highway departments, with soil-conservation work having first call on these units. We understand that quite a number of counties are considering similar action. Several construction companies have gone into this business and if their rates are reasonable, there should be a pick-up in earth-moving and clearing jobs.

There is no question but that we will have to devise new techniques in using farmer-owned equipment for installing a lot of these practices. The use of the moldboard plow in the construction of terraces has materially stepped up the mileage of this erosion-control measure. However, more heavy equipment and more contractors working in this field, hired, and paid by the farmer, will speed up the job.

STEPPING UP LAY-OUT

You supervisors all agreed among yourselves that lay-out of soil-conservation practices is the No. 1 job in your district. We agree with you that soil conservation is of little value until it is applied on the land. We would like to present the following suggestions for speeding up this work.

A. Better planning of time and following your district work plan to bring about increased efficiency. Working through neighborhood groups should help.

B. Farmers should indicate seasonal needs in advance.

C. Do not look to the SCS alone for assistance, but also investigate possibilities of extra contributions by other agencies, State, Federal, and local.

D. Greater and more efficient use of farm power and equipment:

Wider use of contractors and county-owned heavy equipment on soil-conservation jobs with skilled operators on the machinery units.

E. Show farmers how they do their own lay-out.

F. Pool equipment.

G. Coach adapted farmers (or others) to do lay-out on an exchange-of-work basis or for hire.

H. Have groups of farmers employ competent aides.

I. Use funds in local district treasury, if any, to hire aides.

These are only a few of many ways of increasing the planning and application of a sound soil-conservation program on the land.

YOUTH TRAINING

We want to mention progress made in this activity. In quite a number of districts marvelous jobs have been done and are being done in having soil conservation included in the rural school curricula. Since the State soil-conservation committee employed I. O. Hembre to head up the youth program in soil conservation many other districts have gone into this fine program. Furthermore, 4–H projects in soil conservation have been introduced and considerable work is being done with FFA members and vocational students.

Anti-Semitism in Soviet Purge

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following item which appeared in the April 4, 1949, issue of Newsweek. It is further proof that freedom of religion as we know it does not exist in Soviet Russia. Soviet communism countenaces religion only so long as it can be used by her to further her attempt to subjugate the world:

ANTI-SEMITISM IN SOVIET PURGE

The following article is printed in full by permission of Newsweek:

A widespread official anti-Semitic campaign clearly emerged for the first time last week as one of the chief reasons for the current Soviet cultural offensive against Western decadence and cosmopolitanism. The Moscow censorship has hitherto kept news of this development from reaching the outside world. Edward Weintal, Newsweek diplomatic correspondent, has obtained the following documented report on this new discrimination against Jewish writers and publications.

A campaign to eliminate Jewish intellectuals from cultural life is now underway in the Soviet Union. Officially the campaign is directed against homeless cosmopolitans. But of the 50 intellectuals publicly attacked during the last 2 months, 49 are Jewish. Where the Jewish origin of the accused is obscured by an adopted Russian name, the original Jewish name is quoted by the Soviet press in parentheses. This is unprecedented in a country where anti-Semitism is a criminal offense.

Thus an article in the February 12 Literary Gazette refers to a "malignant putrid story written by homeless cosmopolitan Melnikoff (Mehlman)." Another article in the same issue twice mentions the "cynical impudent activities of B. Yakovleff (Holtzman)." In a subsequent issue a literary critic with the good Russian name of Kholodoff is revealed as "homeless cosmopolitan" Meyrovitch. In the February 19 Pravda Ukrainy three noted literary critics, I. Stebun, Ya Burlachenko, and L. Sanoff, are identified as "homeless cosmopolitans" Katzenelenbogen, Berdichevsky, and Schmulson, respectively.

For reasons known only to the Soviet propaganda masterminds, Jewish sports writers are not homeless cosmopolitans "but passportless wanderers." Komsomolskaya Pravda (March 6) thunders against four of the wanderers—G. Yasny (Finkelstein), V. Victoroff (Zlochevsky), A. Svetoff (Sheidlin), and G. Gurevitch. Their collective sins are cataloged as: (1) claiming that a Soviet wrestler before an international match drew inspiration from a Jack London book rather than from his love for the Soviet motherland, (2) asserting that employees of the Indo-European Cable Co. in Odessa introduced football into Russia, and (3) depicting Soviet sportsmen as petty seekers of glory.

The Jewish publishing house Emes has been closed and the only Yiddish-language daily, Einigkeit, suspended. A number of Jewish intellectuals have been arrested. Among them is believed to be Johann Altman, a literary critic, described in a recent issue of Soviet Art as a "double dealer, a man with the dark soul of a traitor, a servant of the imperialist West, a diversionist in art." Another victim of the purge is M. M. Borodin (Gruzenberg), Anna Louise Strong's successor as editor of the Moscow News, who disappeared after the paper itself ceased publication.

The homeless cosmopolitans are accused of the usual offenses: Decadence, bourgeois materialism, and admiration of things foreign. But the bitterness, viciousness, and spite of the onslaught are unparalleled. According to playwright Safronoff, the homeless cosmopolitans have even "utilized the experience of the anti-Soviet underground." Even Dmitri Shostakovich, the Soviet composer, larded a speech he made in New York last week with attacks on cosmopolitanism.

Other examples:

The plenum of the Ukrainian Writers Union on Feb. 28 condemned the "serious manifestations of Jewish bourgeois nationalism especially evidenced in the periodical Der Stern, which we suspended."

Vechernaya Moskva of March 14 discusses the autobiography of Alexander Isbakh (Izak Bachrach), in which the author is accused of exalting Hebrew religion and propagating Zionism.

N. I. Gussaroff, secretary of the Byelorussian Communist Party, in a speech February 17 declared: "Only one theater in the Byelorussian Republic—a Jewish one—puts on unpatriotic plays in which life in America is praised."

The campaign has its lighter moments. On February 16 the Literary Gazette castigated one I. Weisfield for "monstrously distorting Lenin's idea of the nature of reality." It so happened that Weisfield quoted Lenin correctly. In a subsequent issue the Gazette sulkily admitted its error but failed to withdraw its attack on Weisfield.

Russia was notorious throughout the 19th century for the ferocity of its pogroms. The Czarist governments also enforced many anti-Jewish measures, while writers even then referred to the Jews as "cosmopolitans." The Bolsheviks made anti-Semitism a crime, but carefully—and on the whole successfully—stamped out Zionism among the

3,000,000 Soviet Jews. Dislike of the Jews nonetheless remained ingrained in the Russian character. Stalin himself appears to be sporadically anti-Semitic, while many of the Communist leaders who opposed the Generalissimo's rise to power were Jews.

Western observers in Moscow hesitate to assume that the present compaign is deliberately designed to arouse this latent anti-Semitism. But they feel it may be intended as a stern warning that only by strict adherence to the precepts of the Soviet state can the Jews hope to survive.

A number of developments may have made the Kremlin decide on such a warning: (1) The Soviet Union acquired in the territories annexed during the war some 2,000,000 strongly pro-Zionist Polish and Rumanian Jews, (2) establishment of the state of Israel revived the attractiveness of Zionism among Soviet Jews, and (3) Jewish intellectuals, originally attracted to communism because of its universality, now find it difficult to embrace the peculiar combination of Russian nationalism and Communist internationalism known as "Soviet patriotism."

Beware the Ides of March

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, April 5 (legislative day of Friday, March 18), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Beware the Ides of March" by W. Alton Jones, published in the April 1949 issue of the magazine Service.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEWARE THE IDES OF MARCH

Everybody is against higher taxes but few oppose the expenses of Government which call for the higher taxes. We chuckle at the Congressman running for reelection who declared he "voted for every appropriation and against every tax bill." While we are chuckling, it is an even bet that 99 44/100 percent of us voters and taxpayers, in reality, think and act likewise. We forget that the only way a government, no matter how strong, can spend a single thin dime is to get it from a citizen-taxpayer.

We hope and pray for an expanding economy, a condition where everyone grows because he is active and prosperous. This Nation, alone of all the nations of the world, has had such an economy from the beginning. It was blessed with low Government expenses, which left money in pockets to take risks on new industries, which alone provide such expansion. In the 30-year period from 1900 to 1930, as Senator BYRD pointed out in Service magazine, 100 billion of such savings developed industries which did not exist in 1900. Eighteen of these new industries, such as aviation, plastics, electric appliances, automobiles, radio, accounted for 40 percent of the total jobs in 1930.

This was possible because in 1900 only 5 percent of the incomes of all of us went to State, local, and Federal Governments as taxes. Today it is 35 percent, which after the Nation's bare living expenses are met, leaves little or nothing, to risk on new enterprises.

If we wish to continue the upward curve of our famed standard of living, we must reduce taxes and thus assure the availability of capital for expansion. There are two things the citizen can do just now toward that end. First, get behind any plan that looks to greater economy and efficiency of present governmental activities. Second, put every new legislative proposal to this test: Is it something Government should do? Is it in the twilight zone, where cost is excessive and bureaucratic operation inefficient? Is it a proper activity of Government but which might be postponed until the foreign recovery drain upon us is over?

If any of us is in doubt as to what Government should do, here is a definition by a great statesman, Abraham Lincoln. He said:

"The legitimate object of Government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves in their separate and individual capacities. In all that the people individually can do as well for themselves, the Government ought not to interfere."

The Ides of March saw the passing of Caesar and the greatness that was Rome; we should see to it that our Ides of March does not terminate our famed expanding economy and thus frustrate the American dream of getting on and up in the world.

W. ALTON JONES.

Poland's Western Boundaries

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. FURCOLO. Mr. Speaker, by request, I include the following address by Paul Super, under leave to extend my remarks:

My topic today is Poland's western boundaries, a matter which is sure to become a subject of much discussion as soon as a peace treaty with Germany is genuinely before the nations for final settlement.

Before this recent war, which we all now call World War II, Poland was a large and peaceful state of 35,000,000 inhabitants, lying squarely between Germany and Russia. Germany began the war by attacking Poland on the west on September 1, 1939. Russia attacked Poland on the east on September 17. On Poland's defeat, Germany and Russia divided Poland between them. Now Germany has in turn been defeated and Russia is in full possession of all this area; Poland exists only as a puppet state of Russia. Many of us think this arrangement is only temporary, and that Russia will be forced back where it belongs.

The question of the permanent Polish-German boundary will then be a very real and important one. Real and important not only to Poland and Germany but to the whole world, and especially to America. Because when war breaks out in Europe, the United States is now always drawn into it. This we cannot prevent except by preventing war in Europe. A wisely arranged Polish-German boundary thus becomes an important matter to all Americans.

When those discussions about the future Polish-German boundary begin, three points of view will have to be considered. First, what boundary between Poland and Germany would best represent justice to Poland. Second, if Germany is to be deprived of territory in the interest of Poland and of peace, just how much land should be taken from the prewar German state, and why. Then, third, what settlement of this problem will best insure peace in Europe. The answers to these three questions will be found in the brief statement I am now to present.

Those of us who have long and intimate knowledge of Polish and German affairs believe that from every angle of justice and wisdom the line separating Germany and Poland should be the line of the Oder and Neisse Rivers. This line begins just west of the once German city of Swinemunde on the Baltic Sea, runs south putting all of the city of Stettin on the Polish side, thence on south along the Oder River, leaving Frankfurt in Germany, on south to where the Neisse River, coming from the south, flows into the Oder River; the line then continues south along the Neisse River to the northwest border of Czechoslovakia. The total air-line distance north and south is 225 miles.

So much for the Oder-Neisse line itself. Now, before we discuss how much territory this takes from Germany and gives to Poland, and before we look at the present population of that area, let us get clearly in mind three facts.

First, this line is the actual line today. This area east of the Oder-Neisse line has already been taken from Germany, evacuated of Germans, repopulated by Poles, and put under the administration of Poland pending the final arrangements of the peace treaty.

Second, the temporary award of this territory to Poland was legally made at Potsdam July 28, 1945, by President Truman for the United States, Prime Minister Attlee for Great Britain, and Stalin for the Soviet Union.

Third, the assigning of this area to Poland, a country now completely under the domination of Russia, would obviously for the present play into the hands of the Soviet Union. But we must remember two things: First, that Russia is now, already, in actual control of these lands and there is nothing much that we can at present do about it. Second, in our long-term planning for Europe, our thoughts must overleap these present evil days of Russian expansion, and plan for the more decent time of freedom which is sure to come at no distant date. Russia contains the seeds of its own dissolution. The time will come when Russia will have to retreat to behind its own frontiers, and Poland will again be free. In that day, these former German areas would be part of a free, independent, and democratic Poland—a Poland whose augmented size and power will be needed in building a strong belt of states between Russia and Germany.

Now let us look at the size and character of those provinces that are added to Poland on the west. In the first place, they greatly improve the strategic front of Poland in relation to Germany, giving Poland a 280-mile frontier with Germany instead of the 1,263-mile line that made it so easy for Germany to attack Poland in 1939, approaching Warsaw in six converging directions.

These new western provinces of Poland are an area about 130 miles wide in the north at Stettin, 50 miles wide on the Frankfurt Poznan line, and 75 miles wide down in Silesia. They give the Poles a coast line 285 miles long from Stettin to Danzig. The area is 39,120 square miles, about the size of the States of Maine, Connecticut, and Rhode Island combined. Added to Poland's prewar 150,000 square miles we have a Poland of roughly 190,000 square miles before we add the East Prussia area. This 190,000 square miles is a little more than the area of pro-Hitler Germany.

As to population: Before the war 8,200,000 people lived in this area, most of them Germans, but about 1,500,000 were of Polish blood. By the spring of 1945, after the Russian advance into Germany, millions of these people had fled west. Then Poles from other parts of Poland were sent in to occupy this almost empty land. The present population is about 5,500,000 Poles and 40,000 Germans.

We are now ready to consider our central problem: Why should this territory be awarded to Poland?

First. This transfer of territory to Poland in part compensates Poland and the Poles for all the horrors, suffering, and loss inflicted upon the Poles by the Germans during the recent war and the German occupation of Poland. I say "in part," for to those who suffered these brutalities, no compensation can be adequate.

Second. From the point of view of building a complete and strong state, well balanced in industry and agriculture, and with a firm basis in commerce, these lands are a great benefit to Poland. A truly complete Poland is arising. And Stettin is the natural seaport for much of the land west of the Vistula River.

Third. The loss of this territory weakens Germany in its war-making power. As Germany has launched five foreign wars with its neighbors since 1866 this is an important point.

Fourth, this strengthening of Poland increases its value as the central unit in the future federation of eastern European states, the form which political organization will probably take after Russia has been forced out of Christian Europe.

Fifth, historically, that is—600 to 800 years ago—all this area was occupied by Poles or by Slavic tribes related to the Poles. This argument by itself would not have great force, but as a consideration supporting all the other arguments it has peculiar value.

Sixth, and finally, we must remind you again that with the evacuation of these lands by the Germans in front of and during the Russian advance of 1945, the empty cities and towns and abandoned farms were occupied by Poles, and it is Poles who are there now, rebuilding the war-destroyed cities and farms and ports. It would be neither just nor easy to push more than 5,000,000 Poles off these lands and back east in time of peace. We had much more wisely leave things there as the fortunes of war left them.

We see, therefore, that common sense, justice, historic facts, and the grounds of future peace all argue that the present Oder-Neisse line be made the permanent boundary between Germany and Poland.

German Ethnic Origin

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a press release issued by the Department of State on March 30, 1949, containing the definition of the term "German ethnic origin" used in section 12 of the Displaced Persons Act of 1948.

In view of the interest that has been shown in this matter by many Members of Congress, I think it advisable to have the entire press release inserted in the CONGRESSIONAL RECORD:

The Department of State has formulated the following definition of the term "German ethnic origin" for the guidance of American consular officers in Germany and Austria in implementation of section 12 of the Displaced Persons Act of 1948:

"In order to qualify for an immigration visa under the 'German ethnic origin' portions of the German and Austrian quotas the burden of proof shall be upon each applicant to establish that he is not subject to exclusion from the United States under any provision of the immigration laws and to establish the following qualifications as a person of 'German ethnic origin' as intended by Congress in enacting the provisions of section 12 of the Displaced Persons Act of June 25, 1948:

"1. That he was born in Poland, Czechoslovakia, Hungary, Rumania, or Yugoslavia. The statute specifically requires this as an element of classification.

"2. That he resided in any part of Germany or Austria on June 25, 1948, when the Displaced Persons Act became effective. This is also a specific statutory requirement.

"3. That he does not come under the jurisdiction of the International Refugee Organization. The statute classifies as displaced persons certain aliens who are under the jurisdiction of the International Refugee Organization, and provides a special procedure for dealing with them as 'eligible displaced persons.'

"4. (a) That he is a German expellee, or the accompanying wife or minor child of a German expellee, pursuant to the Potsdam Agreement of August 1, 1945, from Poland, Czechoslovakia, or Hungary, or (b) that he is a refugee, or the accompanying wife or minor child of a refugee from Poland, Czechoslovakia, Hungary, Rumania, or Yugoslavia.

"5. That he is characteristically Germanic, a status which is to be determined upon the basis of the following combination of factors, the presence or absence of any particular one of which will not, in itself, be considered as conclusive, but any combination of which may be considered as providing satisfactory evidence of German ethnic origin:

"(a) Antecedents emigrated from Germany.

"(b) Use of any of the German dialects as the common language of the home or for social communications.

"(c) Resided in the country of birth in an area populated predominantly by persons of Germanic origin or stock who have retained German social characteristics and group homogeneity as distinguished from the surrounding population.

"(d) Evidences common attributes or social characteristics of the Germanic group in which he resided in the country of his birth, such as educational institutions attended, church affiliation, social and political associations and affiliations, name, business or commercial practices and associations, and seondary languages or dialects.

"6. Any person who fails to qualify under 1 or 2 is statutorily ineligible to receive an immigration visa under the 'German ethnic origin' clause in section 12 of the Displaced Persons Act, but such person may apply in the usual manner for an appropriate immigration visa under the quota of the country of his birth, at such time as his turn is reached on the waiting list, and his priority on such waiting list shall be determined as of the date of his registration for an immigration visa under the 'German ethnic origin' program.

"7. In the case of any applicant who qualifies under 1 and 2, but who fails to qualify under 3, 4, or 5, action should be suspended and a full report should be submitted to the Department for an advisory opinion concerning the alien's proper classification."

Persons in Germany and Austria who were born in one of the five countries mentioned in the above definition may submit to the American consular office at which they are registered appropriate evidence to establish that they are classifiable as persons of German ethnic origin. Such evidence should not be sent to the Department.

The Truth About Price Supports

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. ABERNETHY. Mr. Speaker, one of the most serious problems which confronts this Congress is the level at which farm products will be hereafter supported. The Agricultural Act of 1948, unless amended, will effect a severe drop in support levels beginning in 1950. In my opinion this will bankrupt American agriculture. I firmly believe that supports must be maintained at a high, stable level.

I ask unanimous consent to have printed in the Appendix of the RECORD an address which I made on this subject before the Mississippi Farm Bureau Federation in convention assembled at Jackson, Miss., on October 28, 1948. The address follows:

THE TRUTH ABOUT PRICE SUPPORTS

The major problems of our State are farm problems. For many years your organization has been in the forefront of the fight for agriculture. The farm programs that are in existence today trace back to men like Ed O'Neal, Earl Smith, Chester Davis, to mention only a few. The three I have named, and many others, who had a hand in shaping national programs for agriculture were Farm Bureau leaders.

Many of us here today recall with painful clarity, the late 1920's and early 1930's. We remember when cotton sold for 5 cents a pound and wheat was the cheapest since the days of Queen Elizabeth. Other farm prices were similarly low. The ownership of land, even the best Delta land, was a liability. The more land a man had, the more money he owed. Food was cheap in those days—cheap if one had money—but to millions of city unemployed so high they couldn't buy a loaf of bread or a bottle of milk for their children. We had the amazing spectacle of bread lines within sight of elevators in which were stored surplus grain and cotton.

Recently, there have been complaints about high prices for food. One of the reasons for high prices, it has been stated, has been support prices for farm products. There is now in progress a well-organized campaign against supports and the farm programs generally. We know that support prices have not been responsible for the high prices of foods. Support prices for most agricultural commodities have been at 90 percent of parity since 1942. During most of the war period and until this year, the price of almost all farm products have been well above parity.

Today, livestock products, meat, dairy products and poultry, are primarily responsible for high food costs. These items all are well above parity today. They range from around 180 percent of parity in the case of beef to 115 percent in the case of chickens. Furthermore, they account for 45 percent of

the average consumer food expenditures. People want these foods and have the money to buy them. Therefore, prices are high, but this cannot be blamed on the support program. Instead of being responsible for high food prices, supports, as I hope to show, actually have kept food prices down and have prevented ruinous inflation.

It is significant that every presidential candidate who has spoken out on the subject has backed the support-price program. I am no prophet, but I think I can safely predict that the support-price program for farm products will be continued. There are reasons and sound ones for that continuance.

First of all, these programs constitute assurances to farmers and the country that there will be no repetition of 1920–21. This was a bad time for farmers. Their prices fell 50 percent and for some crops even more from the middle of 1920 to the middle of 1921. Many farmers were ruined in that 12 months. Production costs were high; many had overextended themselves and they never recovered from the price debacle.

One of the reasons for the passage of wartime legislation providing support prices at 90 percent of parity was that experience after World War I. Farmers produced abundantly then but the reward for their patriotism was a cruel one.

Not only do existing support prices provide assurances against a sudden price debacle, but they give agriculture stability which extends beyond a year-to-year period. The theory behind price supports is a simple one. They operate on the theory of a reservoir which stores up water during rainy spells for use when drought comes. The principle is sound and sensible. It has worked well thus far and should work well in the future.

Without production control, or a workable loan program, farmers were in a precarious situation before 1933. A big crop oftentimes was a calamity. The fall in prices which resulted hurt almost everyone but the speculators. They lived in a hog's paradise. An unusually large crop report might break cotton prices fifteen and twenty dollars a bale. About the only help Government gave farmers was advice on how to grow bigger crops, and bigger crops were likely to result in still lower prices.

There are factors in the over-all farm problem which must be kept constantly in mind. First of all, farmers tend to produce abundantly year in and year out. People who were horrified at the plowing up of cotton and killing little pigs did not realize that industry is the real offender when it comes to production control. Year in and year out, farmers go right on producing abundantly. They have done so even with the triple-A programs.

Let me quote a few figures to illustrate this very important fact. Using 1935–39 as 100, agricultural production declined from only 99 to 96 in the 1929–32 period, the years of the great depression. But during these same years, industrial output fell from 110 to 58. From 1933 to 1937 agricultural production rose from 96 to 106. Industry rose from 69 to 113 during those years.

The second factor to keep in mind in connection with this farm problem is the decline in exports. Over the years our export markets have almost withered away. There were many reasons for this situation; one of the chief ones being our failure to admit exports after the First World War. During that conflict we became a creditor nation but we still had a debtor mentality. We exported heavily during and immediately after World War II, but that war also has further curtailed our export market for farm products. This decline in exports, coupled with continued abundant production, was the core of our farm problem in the 1920's. Most of our worries concerned the export crops and products, such as cotton, lard, wheat, and tobacco.

The McNary-Haugen bill, vetoed twice by President Coolidge, aimed at getting rid of our surpluses abroad. It might have served its purpose in the early 1920's, but after the Farm Board experience in 1930–32 farm leaders decided they could no longer rely upon exports to stabilize prices. The Farm Board, as you will remember, also tried to stabilize the price of farm products by loans. However, only half a billion dollars was available for stabilization and the greatest depression the world has ever known was in the making. Farm Board officials advocated production control to help keep down surpluses. Others familiar with agricultural problems came to the same conclusion.

I do not need to detail the provisions of the first Agricultural Adjustment Act, to review its invalidation by the Supreme Court, or to discuss at length the successor to the first triple-A, the Agricultural Adjustment Act of 1937. And now we have the act of 1948, yet to be tested in operation.

When the first triple-A began in 1933, administrators of the act shied away from loans to stabilize prices. They had the Farm Board's disastrous experience in mind. Yet the authority for loans was contained in the first triple-A and before long loan programs began. There was comparatively little risk in those loans. Farm prices were near all-time lows and price had only one way to go, and that was up.

Furthermore, farm leaders had come to recognize that the stabilization of farm prices was a job to be undertaken over a period of years. It also had to be undertaken with ample funds. It was a big job to be gone at in a big way. The Commodity Credit Corporation now has capital approximating $5,000,000,000 and more may be provided as time goes on. Periodically, as farm products accumulate through Commodity Credit loans, there is a great outcry. We are asked the question: "How long can this foolishness continue? The Government can't stand it much longer, etc."

I would like to call a few undisputed facts to the attention of those who look upon the farm price-support program as a piece of foolishness and who feel that it has made farming as restful as a bed of roses. For the past 8 years farm population has been declining, the support program notwithstanding. More than 7,000,000 people have left the farms and they continue to leave. We are told that farm population will go on declining, probably 1 or 2 percent a year. This is most alarming and if the trend remains unchecked there will come a day when the consumer will really be given something to complain about.

Even in these flush times more than half our farm families have gross incomes of less than $2,500 per year. In fact there are still a fourth of our 6,000,000 farm families who gross less than $600 a year for their farm production. And these figures include the Government support loans.

It is true that loans at too high a rate and continued indefinitely, could be disastrous. But, be that as it may, the surpluses accumulated in the past have proved of tremendous value and may prove of even more value in the future.

Surpluses accumulated during the depression helped prevent a major catastrophe after the droughts of 1934 and 1936. Those droughts wiped out grain reserves and sent the price of meats soaring. In 1934 and again in 1936, the corn crop was exceedingly short. We have had, over the past several years, a whole series of record or near-record harvests. There is no guaranty that such harvests will continue indefinitely. We need ample reserves to protect us against crop failures which are bound to occur.

We need reserves for another reason. Along in 1939, critics were saying that the farm programs had proved a failure. The Government owned or had under loan 8.4 million bushels of wheat, 77.2 million bushels of corn, and 6.8 million bales of cotton not to mention 177 million pounds of tobacco and some other commodities besides. When the war broke out if this food and fiber accumulated through price supports, had not been available, we do not know what would have happened. Without these supplies, we certainly would have had disastrous inflation and possibly a longer war.

Nor would there have been the record production we had during the war without the price-support program. To win the war, we not only needed the surpluses available in 1939, we needed the tremendous production we have had since that time.

Nevertheless, the first year that we begin to store up reserves of food and fiber a chorus of protest breaks out.

Everyone had hoped for peace after the end of World War II, but the peace we have is a most uneasy one. There is great international tension and worry about the future. Under such circumstances, I cannot understand the concern referred to. As I see it, we should be thankful that we have these reserves. We should be thankful also that we have the farm programs through which we can put food and fiber aside for use when it is needed. If we did not have reserves, I would indeed be fearful. I regard the commodities which will be stored this year as national safety insurance.

Now let's look at the charge—that supports paid farmers are holding up food prices. I believe when you know all the facts that you'll agree that price supports are necessary, and that they are actually holding down food prices, not boosting them.

It is basic to recognize that the greatest increases in prices paid by consumers are coming on items which are not supported. The items which are within the average person's pocketbook range are usually supported foods. The real pressure on food prices comes from livestock products, not supported. All the meats, for example are far above parity and therefore far above the level at which price supports would be brought into use. As a matter of fact, beef and lamb are not covered by any price guarantees at all.

Supported commodities which are at or near the support level—wheat, corn, and cotton—have declined during the past few months but prices of nonsupported livestock have increased.

In a sense, you might compare price supports to some of the social legislation provided other groups. Unemployment compensation, for example, is something not used except in emergencies, but when needed, the worker is mighty glad it's available. It does not cost the Government or the taxpayer a cent unless it is used; very little when it is used.

The farmer does not have the advantages of unemployment compensation, but he does have emergencies similar to unemployment. Suppose he harvests an enormous cotton or wheat crop—and so do all his neighbors. Without price supports, if his harvest comes at a time when demand is falling off, the price might drop to where he would not even recover the price of his expensive seed and fertilizer.

At the start of the last war, Uncle Sam asked the farmer to grow all the food and fiber needed by a nation at war and much for our allies. And, remembering how farmers had accepted a similar command during World War I, then lost their farms because the prices dropped 50 percent in 1 year, Uncle Sam offered them a variety of unemployment compensation. He assured them, in effect, that in return for all-out food production, he would see that they did not lose their farms this time.

Price supports do not apply to all crops the farmers raise—only to certain ones that are basic in our economy and, temporarily, to products which the farmer is asked to raise in increased amounts. Supports on them were established to prevent a recurrence of the postwar disaster of 1920 which

saw cotton fall from 38.5 cents a pound to 9.5 cents a pound within a year; corn drop from $1.95 a bushel to 42 cents.

Of course if the consumer thinks no further than that, he can still say "Well, obviously then, if price supports are going to hold up prices a farmer receives for his product, they will also hold up the price I pay for it." Actually price supports have helped—not harmed—the consumer, just as they have helped the farmer.

Let me first illustrate with an example which has nothing at all to do with farming, how I think of price supports. Two towns on opposite sides of a big river have a bridge connecting them so that people can go across whenever they desire. But once in a while this bridge needs repairs. The local townspeople, desiring to keep traffic moving between the two places, bought a ferryboat and stationed it below the bridge. They did not plan to use it when the bridge was passable; it was just insurance. But it was mighty good insurance to have in case of an emergency. The man who lived on one side of the river and worked on the other could still get across to his job, so production would not stop. People could keep on shipping merchandise so the wheels of business would keep rolling.

Price supports for the farmer are like that ferryboat, not often used, not costing a cent unless used, but mighty handy to have when needed. To pull them down would be like taking minimum-wage and unemployment-compensation rights away from labor.

There are some other factors in this price-support picture which must be taken into account. Industry profits are near all-time highs; labor is demanding and receiving wage increases. To withdraw price supports from agriculture would leave farmers at a hopeless disadvantage by comparison to other groups in our society.

No one, so far as I know, is demanding that the legislation which has enabled labor to organize and protect its earning power, be repealed. Nor should they. Industry is keeping and will continue to keep protection against low-cost foreign production.

The persons who criticize price supports have not taken into account what farm purchasing power means to this country. The farmer not only produces our food and fiber; he is the best customer for the products of city factories. Over the years, farm income and factory pay rolls have risen and fallen together. They will continue to rise and fall together. The removal of farm price supports and the end of national programs for agriculture would be the beginning of our most disastrous deflation.

So long as the Government gives protection to labor and to industry, it must give it to agriculture. It must give wisely and constructively. I do not claim that the present system of price supports, or the parity formulas used as a base for them, is perfect. The levels at which loans should be fixed are matters for discussion. Farm programs should be revised in the light of circumstances and developments; but they should not and will not be abandoned, which in reality is the effect of the Agricultural Adjustment Act of 1948. They have proved their worth, not only to the farmer but to the Nation.

I do not mean to imply that farm programs are perfect. They will need revision and remodeling as time goes on. Many problems remain. We are faced, for example, with a tremendous surplus in cotton if we continue to produce at the 1948 rate. Our export markets for cotton, if it were not for the Marshall plan and aid to Japan, would be a trickle. No one can foresee when Europe, Japan, and other countries will again buy, year in and year out, large quantities of American cotton.

The problem in wheat is similar to that for cotton. There will be a surplus problem in tobacco and in other commodities. We must deal with these as best we may. We must have supports at levels which will stabilize prices and yet will not encourage ruinous production. In other words, we must improve existing programs, not destroy them.

My committee, the House Committee on Agriculture, is attempting to work out legislation which will assure us a continuing three-part agricultural policy of abundance—organized, sustained, and realistic abundance. We need such abundance in order to cross over into an era of truly good living.

But abundance is not something that nature simply places upon our doorstep. If we wish to have sustained abundance, we must take care of our natural resources. If abundance is to be realistic, there must be a policy of price protection and a floor under consumption of food in times of slack demand. If abundance is to be realistic, it must be tied to purchasing power, to full employment and full production in industry, and to a reasonable amount of foreign trade.

We are attempting to develop a program which will let us consume our surpluses up to the point of a desirable reserve and avoid any future need for a plow-up.

The farm programs which are in existence today are the product of many minds. Farm leaders all over the country have worked on them. The Farm Bureau Federation has been a leader in their development. And not the least of the reasons why we have them is the united front presented by American farmers. Cotton farmers, dairy farmers, wheat farmers, livestock producers, and producers of almost every commodity have taken the other fellow's point of view. They have realized that these programs must be national in scope and have acted accordingly. They have refused to let themselves be divided by occasional differences. So long as farmers stand united, I have no fear about the future of price supports or national farm programs.

Strictly a Guess

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 5 (legislative day of Friday, March 18), 1949

Mr. REED. Mr. President, a few days ago I offered for the RECORD, an editorial written by F. W. Brinkerhoff, editor of the Pittsburg (Kans.) Headlight, entitled "Where, Oh Where?" Mr. Brinkerhoff is the dean of Kansas editorial writers, and one of the able men of the State. Now comes Rolla Clymer, editor of the El Dorado (Kans.) Times, who comments upon the Brinkerhoff editorial. Mr. Clymer is also one of the outstanding editors of Kansas.

I ask unanimous consent to have this editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRICTLY A GUESS

"Where is the money coming from?" asks the esteemed Pittsburg Headlight referring to all enormous expenditures by agencies of Government that are now being made or are in prospect.

The answer is: Don't look now, but that little guy standing over there in the threadbare suit, vintage of 1946, will pay most of it. The money will come out of his pockets, out of his living and out of his future prospects. He isn't bleating much these days. Maybe he is punch drunk. Some folk talk about the taxpayers' revolt that one day may come along. After taking another look at the little guy's face, with its hopeless, beaten, what's-the-use expression, we judge said revolt will be somewhat delayed.

The Kansas Legislature, just about to shut down with its 1949 session, has spent a lot of money. Some of it will have to come from taxes, now and hereafter, but a large portion will be derived from funds that already carried heavy surpluses. These accumulations will be spent. After they are gone, other officials will have to devise ways and means for the future. That, of course, is another story.

Sitting down here at El Dorado and getting most of our information about legislative procedure from fragmentary newspaper reports, we are not so sure what happened during this past session. But this might be a fair guess. The Republicans, in legislative majority, simply cleaned out the coffers. One time, we remember, the Republicans operated in a strictly economical vein and piled up considerable cash in savings. Then, one of those political upsets occurred, the Democrats came on into power and gleefully spent the money Republicans had carefully saved.

That won't happen again, not this time, at least. It could be that the Democrats might stage an overturn in State politics come November of 1950. But if they do and if they assume governmental power the following January, they will find the cupboard bare—even as did Old Mother Hubbard.

This, we repeat, is only in the realm of speculation. But it might have its points in totting up a balance sheet as to just what has happened at Topeka.

United States Schools Found in Need of Ten Billions for Buildings

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. RAINS. Mr. Speaker, one of the greatest problems confronting the people of the Nation is adequate school buildings. Recently, I introduced H. R. 3514, now pending before the Committee on Public Works, providing for Federal assistance for local government units in the construction of school facilities. Yesterday, the New York Times carried a front-page article, which I submit herewith for the consideration of the Members of Congress:

UNITED STATES SCHOOLS FOUND IN NEED OF 10 BILLIONS FOR BUILDINGS—SURVEY SHOWS DEPLORABLE OBSOLESCENCE, WITH STATES REQUIRING FEDERAL AID TO FINANCE 10-YEAR PROGRAM

(By Benjamin Fine)

Public school buildings in the United States, on both the elementary and high school levels, are in deplorable condition today, with a vast number in need of immediate repair or replacement. Millions of children now attend classes in buildings that are obsolete, potential firetraps or totally inadequate to meet the needs of a modern educational program.

A vast school building program, estimated to cost $10,000,000,000 during the next 10 years, is necessary to meet the requirements of a rapidly growing school population.

Every State in the land regards the need for additional buildings as one of its most urgent school problems. All realize that they face a serious educational crisis because of inadequate school buildings.

These conclusions are reached in a Nationwide survey on school building needs conducted by the New York Times. The survey showed that 82 percent of the Nation's school buildings are either fair or poor. The rest were listed as in good condition. No State reported that its buildings were excellent.

The Times study, based on information obtained from the 48 States, indicates that the present serious situation is expected to become considerably worse in the next few years. Many States report that they do not have the funds with which to build new schools, even though these are desperately needed. In some instances the local communities already have reached their maximum legal debt limit and cannot go beyond that without special legislation.

Various reasons are advanced for the critical shortage of adequate classroom facilities. Based on the viewpoints expressed by the educational leaders reached in the survey, these reasons would appear to be the most commonly accepted:

1. Increased birth rate: Every State reports that its school population has increased in the last year, and will continue to increase rapidly. In some communities the school enrollment in the elementary grades has jumped as much as 50 to 75 percent. On the average, the estimated increase for the next half dozen years is placed at 20 to 30 percent.

This will mean, the educators emphasize, a vastly expanded school system. In some States the schools are not able to meet present needs. Unless additional buildings are constructed, the increased school population will swamp all existing facilities.

2. High construction and labor costs: Because of the doubled—in many instances trebled—costs, many communities are unable or unwilling to undertake school construction now. The school administrators and boards of education are reluctant to spend huge sums for buildings that may deteriorate in value within a short time. The cost per classroom has increased enormously, jumping as high as 300 percent. Buildings that cost $250,000 before the war now cost as high as $500,000 or $750,000.

Because of high costs, many communities find they are unable to raise the necessary bond issues to construct schools. A number of cities reported that they had reached the debt limits imposed by their legislatures, and said they could do nothing but wait until these restrictions were removed.

3. Schools not built during war: The educators said that at present a serious backlog of needed buildings exists because of the building lag during the war and during the prewar depression. While the increased birth rate added to the school rolls, the communities have been able to provide only a fraction of the buildings needed.

$1,250,000,000 PROGRAM PLANNED

Reports from the various States show that a building program totaling $1,250,000,000 is planned. This sum is divided almost equally between the elementary and high schools, and ranges from less than $1,000,000 to more than $100,000,000.

However, the States report that they require $5,500,000,000 to meet present needs. They say this sum is a minimum and can not be pared to any considerable extent without harming the school system of the Nation. Many educators frankly admit that they will be unable to get the full amount they need. The Times study indicates that the plans for the school construction program will total only about 20 percent of the full amount needed.

In a number of States a wide gap exists between the amount of money that will be spent for school building construction during 1949–50 and the amount necessary to meet existing needs. Arkansas, for example, estimates that it will spend $5,500,000 for buildings in the coming year, but says it needs $50,000,000 to do an adequate job. A similar disparity is shown in figures supplied by Florida. During the 1949–50 school year, Florida intends to spend $5,000,000 for elementary schools and $7,000,000 for high schools. During this period, the State estimates it would need $70,000,000 for elementary and $80,000,000 for high schools.

Similarly, Dr. Pendleton Mitchell, director of Schoolhouse Planning in the Georgia State Education Department, reports that $2,000,000 will be spent for school construction this year, while the need will reach $100,000,000. In some States that gap is not quite as wide, although the educators observe that it is serious enough. For example, Illinois communities plan to spend $10,000,000 on school buildings, with the need set at $70,000,000.

TEN BILLIONS NEEDED BY 1959

During the next 10 years, the study found, the States will need a total of $10,000,000,000 for new buildings to meet the needs of a growing school population and to replace obsolete buildings. Many educators suggested that this long-range program could be developed on the basis of $1,000,000,000 a year during the coming decade. As reported by the States, the $10,000,000,000 would be divided equally between the elementary schools and the high schools. Although the great increase in population will come on the elementary level, the officials point out that high school buildings are more expensive.

New York and California lead in the amount of money necessary for school buildings. New York State puts the figure at above $1,000,000,000, while California says it will need $1,500,000,000 over the 10-year period. Pointing out that its enrollment has increased tremendously in recent years, the California school officials declare that the building shortage is acute today.

"The problem in California is not the condition of the existing buildings but the number of children that do not have any buildings at all," Dr. Charles Bursch of the California Department of Education, said.

Virtually all the States say they will not be able to meet the costs of the necessary long-range building program. They indicated that not more than 50 percent of the funds necessary will be available. In some States less than 10 percent of the money can be raised, the educators report. Nebraska, for example, estimates that it will need $40,000,000, and will be able to spend $8,000,000 for buildings. Of the $400,000,000 needed by Michigan, less than half will be available.

Most Southern States report that they will need huge sums to develop their building programs. Alabama put its needs at $200,000,000, Kentucky, at $100,000,000, Oklahoma at $75,000,000, South Carolina at $250,000,000, and West Virginia at $110,000,000. In almost every instance, the State officials say that they will be unable to get the funds unless outside assistance is provided.

Only three States—Connecticut, Delaware and Wyoming—indicated that the necessary funds were available.

NEED FOR FEDERAL AID CITED

All the States declared they needed assistance from the Federal Government. Some, such as Alabama, reported that they would need from $150,000,000 to $200,000,000, while others, such as Oklahoma, placed their needs at the comparatively low figure of $5,000,000. In the aggregate, the States urged that the Federal Government make available, during the next 10 years, a total of $5,000,000,000 for school building purposes.

Officials in Connecticut note that the condition of the school buildings is critical, with many of the buildings obsolete. Connecticut points out that in addition to the need for replacement of existing buildings, there is a great need for new construction.

A number of the States report that they are planning to consolidate their school districts, and build central schools. This would mean that the building costs would increase during this process. However, the educators emphasize that the reorganization and consolidation of the rural schools into larger units would ultimately benefit education generally. In the meantime, though, the pressure put on the school districts to raise money for new school buildings will increase.

In addition to new buildings, the States report that a substantial sum will be needed for necessary repairs and equipment. It is estimated that the Nation would need, over the next 10 years, a minimum of $2,000,000,000 for the improvement and the modernization of the school plants.

Idaho says it needs $1,823,600 to make the necessary repairs and replacements. Another $73,000,000 will be needed to provide additional buildings to house the present school enrollments and the expected increase. Illinois stresses that because of the reorganization of districts the building prob'em is serious in some parts of the State. It says it does not have the funds to finance an adequate school building program without Federal assistance.

DEBT RESTRICTIONS HAMPER MANY

Many States are in the position of Iowa, where the constitutional limit on bond issues prevents the school systems from constructing the buildings they need. It is not likely that the constitution will be changed to permit schools to be built, the officials indicate, adding that the influx of war babies will make the situation even worse. Some States, such as Kansas, make no contribution toward construction of school buildings. All building there is done on local plans and finances.

Similarly Kentucky notes that while it will spend from $3,000,000 to $5,000,000 for school construction next year, it needs a minimum of $20,000,000. Without Federal assistance the schools that are needed in the State will not be built, Kentucky officials report.

Dr. John J. Seidel, assistant State superintendent for vocational education in Maryland, reports that $80,000,000 will be needed from the State or Federal Government to meet present building requirements. Eight out of the 23 counties in the State have reached their limit governing the marketability of bonds. Dr. Seidel observes that the need for additional school buildings is without a doubt the most urgent problem at this time.

The school buildings in Maine are generally poor, Dr. William O. Bailey, deputy commissioner in charge of planning and research, reports. Antiquated buildings, he notes, together with increased enrollments and a demand for larger units have combined to make the school building problem serious for the State.

New Hampshire says it will spend $3,000,000 for school buildings, but needs $35,000,000. Fifty percent of the buildings in the State were built before the end of the Civil War. Two-thirds need replacement, enlargement, or other fundamental alterations.

Noting that its buildings are in poor condition, school officials in Michigan report that while $50,000,000 will be spent on school construction next year, $300,000,000 will be needed. School construction has not kept up with the needs since 1932 when a restrictive constitutional tax limitation was passed. This limitation was modified in the last November election, and the school officials expect a considerable volume of new construction.

Mississippi estimates that it will need 6,000 new classrooms, 5,000 to replace unsatisfactory rooms and 1,000 in additional facilities

for increased enrollment. It will take $40,000,000 to provide the classrooms; lunchrooms, gymnasiums and other facilities are not included in this sum.

NEBRASKA NEEDS $25,000,000

Nebraska reports that while it needs $25,000,000 to meet present school building needs, it expects to spend $2,250,000, or less than one-tenth the actual need. The officials recommend that the Federal Government provide $25,000,000 for school needs.

North Dakota says its buildings are inadequate for the enrollments. South Carolina reports that its school housing is not adequate for the large number of births of the last few years, Dr. H. L. Duncan, director of schoolhouse planning in West Virginia, observes that a State-wide survey showed it would take $20,000,000 to eliminate the present emergency needs. These include hazards to the health and safety of the children.

Present critical conditions are not all the fault of the educators, Dr. A. L. Buechner, of the Wisconsin Department of Education, asserts. The increased birth rate, he says, has made it necessary to use substandard, old, hazardous buildings and various other spaces, thereby penalizing a generation of youngsters.

Reports from many sections of the country indicate that the more enlightened communities are beginning to meet the problem of increased school enrollment and obsolete buildings by appropriating funds for the necessary facilities. Responsible school officials expressed the hope that the local community, cooperating with the State and Federal Government, would be able to provide the classrooms so urgently needed today.

FLORIDA BUSY ON PROGRAM

Florida has recognized the problem and is attempting to meet it on a State-wide basis. Many school buildings have been constructed or repaired; in the last 2 years Florida has spent $20,000,000 for new school buildings and the renovation of existing plants. New facilities constructed in the last 2 years include 305 classrooms, 52 school lunchrooms, 36 industrial arts rooms, 17 science laboratories, and a number of other special rooms.

Almost every county, reports Dr. Thomas D. Bailey, superintendent of public instruction, is making plans for the future construction of school buildings to serve the needs of the community. Forty-eight building sites have been purchased. Dr. Bailey says a special staff has completed surveys of school building needs and has made recommendations for better-planned buildings.

Taken as a whole, the school building situation in the United States is critical. The United States Office of Education estimates that within 10 years the elementary and high-school enrollment will increase by 9,000,000 students. The present school buildings will be forced to accommodate from 30 to 40 percent more children than they do today.

The Times survey indicates that the school building problem cannot be solved by the local communities alone. Without State and Federal help, the communities say, they will find it difficult if not impossible to meet the needs of the coming decade. School officials emphasize that several million children are not receiving an adequate education because of the poor school buildings. In some communities the children attend classes in garages, church cellars, private homes, and abandoned shops.

Although this condition is denounced by school leaders, they frankly admit that they do not know how to remedy it at present. They are almost unanimous in urging the development of a sound, comprehensive school building program, to provide adequate facilities for all the children.

Mr. Truman's Great Role

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith an editorial from the Washington Evening Star of Monday, April 4, 1949.

This editorial is of special interest to me because it confirms a prediction I made during the campaign last fall. It was my privilege and sincere conviction during the campaign to say and believe that Truman would be the choice of the American people for President. I also stated that Truman, as President in his own right, would so conduct the affairs of that office during the world's most critical period, that he would become one of our greatest Presidents.

I recommend this editorial to you and believe the events of the immediate future will fully justify this quotation from the article:

We of this generation will at least know that once again, in a time of great need, the American system has produced a President who had the wisdom and the courage to make the right decision and the strength of character to act upon it.

MR. TRUMAN'S GREAT ROLE

It would be unbecoming on this historic day of signature of the North Atlantic security pact not to take particular notice of the great role which has been played by President Truman in recasting the foreign policy of the United States.

We have come a long way since George Washington admonished a struggling young nation against permanent alliances, since Thomas Jefferson spoke out against entangling alliances, since James Monroe enunciated the policy which bears his name and which served thereafter for more than a century as the guiding star of our foreign policy. We have seen great powers come and go. Through the processes of age and decay in other parts of the globe rather than through any design of our own, we have seen the United States rise to the pinnacle of world power. Finally came the time when we had to decide what use would be made of our power, whether in the face of a new world aggression we would shackle ourselves with the remnants of the old isolationist tradition or whether we would move forth boldly in an endeavor to employ our power to prevent another war rather than fight it after it had begun.

The man who had to make that decision was Harry S. Truman, newly come to the White House through the accident of the death of his predecessor. For a man fixed with the ultimate responsibility, it was no easy decision to make. Certainly there were grave risks involved, but Mr. Truman saw very clearly that it was not a question of accepting or avoiding risks, but of choosing between risks. And it is to his everlasting credit that he chose the risk which went along with the assumption of responsibility. He decided that the immense power of the United States should be used affirmatively in the interests of a decent world, and it may very well be that the whole hope of western civilization rides on that decision.

Of course, other men contributed to the grand design. General Marshall and Senator VANDENBERG were conspicuous among them. But in the last analysis it was the President who had the responsibility, who made the decision, and who is entitled to the credit. The Rio Pact, which changed the Monroe Doctrine from a unilateral to a reciprocal undertaking, was followed by the Truman doctrine of extending financial and military aid to Greece and Turkey so that they could resist the threat of communism. Then came the European recovery program, without which western Europe could not have survived as a non-Communist community. Today it is the North Atlantic Pact, which, with the attendant arms agreement, spells the end of American isolation. Ahead, still unformed but rich with promise, lies point 4 of the inaugural address—a program for applying American skill and American resources to the resuscitation of the backward areas of the world.

What history will say of the man who has fathered this unprecedented undertaking, where he will be ranked among the American Presidents, can best be left to the historians. But if the desired results are achieved, if aggressive communism is turned back, if the peace is saved, if the consummate disaster of another war is averted, we of this generation will at least know that once again, in a time of great need, the American system has produced a President who had the wisdom and the courage to make the right decision and the strength of character to act upon it.

Count Carlo Sforza

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star:

A SFORZA OF THE SFORZAS

Count Carlo Sforza, here to sign the North Atlantic pact, is no stranger in Washington. He has visited this city on many occasions, resided here for lengthy periods, kept in touch with friends here constantly during the course of three decades. His work as a career diplomat has made his contact with the Capital of the United States natural. It was to Washington that he came when the vicissitudes of his long struggle against fascism rendered him an exile. Yet not everybody knows the background of his life or understands exactly why Washington must seem more like home to him than any other place outside his beloved native Italy.

The honored name he bears traces back nearly six centuries. His family was established by Giacomuzzo Attendolo, who was born in the Romagna in 1369. Kidnaped by adventurers, he became their commander by the exercise of a genius for leadership, was commissioned constable of Naples under Joanna II and created a count by Pope Martin V. Sforza, signifying strong or forceful, originally was a sobriquet, adopted on the field of battle. The first to render it famous set an example of valor in which his descendants take pride. By 1447 the family ruled Milan, building great castles and churches there for a court which was distinguished by poets and painters of the highest order.

Among the artists attracted by the generosity of the clan was Bernardino Luini, whose canvases now are treasured beyond price.

Three Sforza dukes left indelible impressions upon history. Francesco, Gian Galeazzo and Ludovico il Moro dealt with emperors and kings on approximately equal terms. Their fortunes rose and fell and, possibly on that very account, their legend never has faded. Count Carlo, the incumbent Foreign Minister of the Italian Republic, belongs to a collateral branch of the tribe but his own experiences follow the standard pattern of Sforza tradition. Himself a scholar, he appreciates the points of resemblance. In Washington especially he is close to the family. The National Gallery has many relics of its Renaissance grandeur—white marble bas-reliefs of Il Moro and Gian Galeazzo and portraits of Francesco, Ginevra, and Bianca Maria among the number.

These Dis-United Nations—A Historical Parallel

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 5 (legislative day of Friday, March 18), 1949

Mr. WILEY. Mr. President, yesterday many of us witnessed the signing of the momentous North Atlantic Pact which will so crucially affect the future of our Nation and of the world.

This morning I received a copy of the distinguished international magazine, United Nations World. In its April issue, there has been published an article which I prepared some time ago on the subject of these Dis-United Nations—a historical parallel.

The purpose of the article was to invite a comparison between the skepticism which prevailed 150 years ago when the infant United States of America, consisting of 13 divided colonies, was beginning to grope its way toward a meaningful union—invite a comparison between those times and the present times.

I feel that there is every reason for expecting that the miracle which came to pass in the uniting of the disunited States may yet come to pass in the uniting of the Dis-United Nations.

I ask unanimous consent therefore that the text of my article in the United Nations World be reprinted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DIS-UNITED NATIONS—IF UNION REQUIRES A MIRACLE, LET'S HAVE A MIRACLE

(By ALEXANDER WILEY, United States Senator from Wisconsin)

"The United Nations is just a talk marathon."

"They ought to name that organization the 'Dis-United Nations.'"

"The only thing the United Nations seem to agree on is to disagree."

"They ought to quit talking and get on to having their third world war."

These are some of the sour notes on the United Nations which one hears these days. From every side rise the voices of discontent, the prophets of disaster, the groaners of gloom. This pessimism, this absence of faith in the ultimate ability of the world organization to establish a just and lasting peace is perhaps one of the most dangerous elements in the world today. So long as there is faith in the UN, so long as the common people of the world believe that somehow, in some way, a lasting alternative to war can be worked out, then the dead of World Wars I and II will not have made the supreme sacrifice in vain.

Usually the discontented base their disapproval on the premise that, since World War II has been over for 3½ years, the problems of the world should have been cleared up. They seem to assume that the millenium was to have been ushered in automatically, once the guns stopped firing. From the over-optimism of August 1945 the pendulum of opinion has swung to the deep pessimism of 1949. Crises in Palestine, in Korea, in China, in Berlin and elsewhere have precipitated a disbelief in the potentialties of the UN for growth and evolution into an organization that will spare future generations the horrors of war.

Many criticis simply do not understand the necessity for thorough debate in the UN. But as one Senator once said about the apparently endless talking in the United States Senate, "I would rather see debate, if necessary, without action, than action without debate."

If you believe that it would be a miracle for peace to come through the UN's efforts, then I say that it was by no greater miracle that peace and unity came to the United States, despite the countless feuds of 13 jealous, suspicious colonies, a century and a half ago. The utterly chaotic conditions that prevailed among the feuding principalities east of the Alleghenys in the latter part of the eighteenth century is a facsimile parallel to the seeming chaos that prevails in much of Europe and Asia today.

I think that I can appreciate somewhat the problems of trying to get principalities to agree, for I remember some of the skeptical reactions here and abroad when I introduced a mere policy declaration resolution in the Eightieth Congress which would have placed the United States on record as favoring the formation of a United Democratic States of Europe. I did not and do not believe that the unification of all the states on the European Continent is desirable or possible at the present moment because, to place Russia and her satellites in such a union would be akin to trying to merge some heterogeneous South American dictatorships into the American Union of 48 States. I do believe that a United Democratic States of Europe could work, and I for one will continue to bend my efforts toward that objective.

NO NEED TO FEAR THE UNITED STATES SENATE

A United Democratic States of Europe would be the sort of regional federation envisioned under the United Nations' charter. It would function with the very closest of cooperation with the United States in all international discussions and in membership on the various unaffiliated organizations of the UN.

Of course, there will be considerable pioneering necessary in the field of international law in settling in written form agreements between, for example, the United States and the United Democratic States of Europe. It will take the finest experts experienced in world jurisprudence to work out these relationships.

We have seen the Benelux economic entente. We have seen how the western European nations can work together for the preparation of joint estimates on financial needs under the Marshall plan. What we need now is for the nations to establish a strong basis for cooperation for purposes other than merely obtaining financial aid. There is every indication that the United States Senate would look with great favor upon voluntary federation such as I have above suggested and would be eager to define United States relationships with such a union.

The basis of the union of the western powers should not, of course, only be fear of posssible military aggression. On the contrary, these powers should unite on the basis of recognition of the intrinsic advantages which can be secured under such a union.

There is a tremendous amount of potential good will among the people of the United States which will spontaneously manifest itself when once our people see these western powers coming together sincerely and conscientiously for union. We of the 48 States on this North American Continent who have known the blessings of union will take to our hearts a movement abroad for a similar union. We recognize, of course, the tremendous complexities involved, the tremendous administrative problems, the deep factor of national pride in individual heritages, but we know that union, far from being impossible, is a definite possibility if the western European nations have the statesmanship—the will, intent, and purpose—to accomplish it.

The 16 western European nations have been slowly gravitating toward union. In fact, the painfully slow progress, although discouraging, is hardly fatal. Some of us who are so prone to cast stones at others' unbuilt glass houses should remember that, even after the United States established a union, we had to consolidate that Union with the blood of hundreds of thousands at Gettysburg, Vicksburg, Bull Run; and we had to watch the smoldering embers of hatred burning in our own Nation for decades thereafter. Why, then, should we be so impatient with the continuing feuds of European nations in the UN?

THE UNITED STATES PATTERN OF WRITTEN COMPACTS

The history of America shows that miracles can happen. The situation in the world today, therefore, requires neither pessimism nor optimism, but hopeful realism.

At the time our own Constitution was written, no other nation had ever previously operated under a written compact. No other nation had ever sprung into existence as did the United States. Why then should men be discouraged by the fact that there has never been a successful governing body to unite the nations of the world?

Do we, with 150 years of experience as a Government, lack wisdom and leadership and maturity to help save the world for peace? Do we question the ability of Europe's statesmen? Our Constitution was written by men who were mere youths by today's standards. Four men elected to the Constitutional Convention were in their twenties. Eighteen men were in their thirties. Twenty men were in their forties. Only 13 men were 50 years or older.

In fact, the few older statesmen who were present, such as Washington, Franklin, Robert Morris, John Dickinson, and George Wythe, as a rule, sat silently. It was the new and young generation that debated the fierce issues of the time, and finally drew up that great document, the United States Constitution. Hamilton was only 30 years old. Madison 36—two of the outstanding leaders for the cause of a united states.

Nor were all of the signers of the Constitution exactly suited to their task. Madison, for example, was a well-to-do bookish scholar and student, taken to theorizing and philosophizing, rather than to the practical matter of earning his daily bread. Yet he helped to form one of the most practical and pragmatic documents of world history, which has withstood the test of guiding our great country for a critical century and a half.

THE UNITED STATES PATTERN OF EARLY SKEPTICISM

Obstacles? Yes; the framers of the Constitution had plenty of problems waiting to strangle their efforts. As we all know, the signing of the Constitution (like the signing of the UN Charter) was not the end of the fight for unity, but the beginning.

Many leading statesmen of the times seemed firmly persuaded that the cradle of the Constitution would be the grave of republican liberty.

Five men elected to attend the Constitutional Convention, including that great patriot, Patrick Henry, refused to attend. They were fiercely opposed to the Convention, the Constitution, and its ratification.

Four men attending the Convention became so dissatisfied with the form the Constitution was taking that they left before it adjourned.

Three of the 42 men present at adjournment of the Convention refused to sign the Constitution because they objected to it.

Nor were the leading statesmen of the time the only enemies of the Constitution who firmly believed it was bad for the country. Many of the citizens themselves were against it. As early as the election of 1792, the South made a threat to secede. The frequency with which the word "secession" appeared in Congress appalls a contemporary observer. From 1804 to 1815, leaders in New England made no less than four aggressive attempts to destroy the Constitution, to separate the Northern and Eastern States from the Federal Union, and to organize a New England Confederacy.

"Can it be supposed that this vast country, including the Western Territory, will, 150 years hence, remain one nation?"

That was a question put before the Constitutional Convention by Nathaniel Gorham, a delegate from Massachusetts. He was referring not to the expanse which Americans of today understand by that description, but merely the land extending westward from the Appalachians to the Mississippi River.

Today the century and a half has expired, and not only has the territory east of the Mississippi been incorporated into what is apparently an indissoluble Union, but additions have been made which, in Mr. Gorham's eyes, would have seemed, indeed, a miracle.

Yes, the people back in 1790 lacked faith in the Constitution, just as many of us are inclined to lack faith in the UN. Only the fact that Washington was to be the first President, it was said, made the adoption of the Constitution possible. It was predicted that the whole thing would go into discard when he retired. Moreover, it was believed that Washington would go down in history as a great man—but also as a great failure—because of what was felt to be the temporary nature of the Constitution and the United States Government. Even as late as 1812, it was commonly declared that James Madison would be the last President of the United States under the Constitution.

So doubtful was the ratification of the Constitution that it took an emotional incident of the heart, such as an insult to the integrity of the beloved Washington, to help turn the tide for ratification. At a critical hour, a reckless opponent of the Constitution in a Philadelphia newspaper denounced Washington as a born fool, and a tyrant wishing to subvert the liberties of the people. The reaction to this charge among those who differed from Washington in opinion but could not endure such an attack upon him, persuaded a majority of the anticonstitutionists to his side, and aided to complete his victory in obtaining ratification of the Constitution.

IT'S A MATTER OF PERSPECTIVE

Compared to the hard fight that had to be put up before the Constitution became accepted, it might almost be said that the United Nations is having easy going of it. For one thing, work is well under way in constructing the home for the United Nations. But, the Supreme Court, which is the protector of our Constitution, was held in such little esteem that when the new Capital City was established in Washington, D. C., in 1800, but a decade and a half after the Constitution had been ratified, no building and no chambers were provided for the judicial branch of Government.

Up until the time that John Marshall became Chief Justice of the Supreme Court, that now revered position was looked down on as being of little importance. Such great men as Patrick Henry, Charles Cotesworth Pinckney, Robert Hanson Harrison. Alexander Hamilton, all declined the honor.

In fact, until Marshall breathed life into the judicial arm of Government it was considered the most helpless and harmless of all the Government's organs.

These are but a few of the obstacles that the Constitution of the United States had to overcome. It took a miracle to make it work, but today the United States Constitution is indeed a success. In the 160 years which have passed since its adoption, virtually the only institution to remain unchanged is the Constitution itself. America, the youngest of the great nations, is at the same time the oldest government.

It may very well take a miracle to make the UN the strong, effective instrument for peace for which the peoples of the world have been praying, but that miracle can be achieved. The once disunited 13 Colonies, now the greatest Nation in the world, are the inspiring pattern for the disunited nations which in turn can be the fulfillment of the dream of centuries for a world organization that will forever banish the catastrophe of war from human affairs.

Need for Development of Natural Resources in the 11 Western States To Serve New Population Increases; Los Angeles Area Shows Greatest Gain

REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. McDONOUGH. Mr. Speaker, I wish to call the attention of the Members of the House to the development in the eleven Western States so that they may fully understand that those of us who represent that section of the country are not asking for more than our share of what we are entitled to in the development of the natural resources and the other facilities with which the Government assists its population in various parts of the country.

Since 1940 the population in the 11 Western States has increased from 13,900,000 to 18,650,000 in 1948, which is more than 10 percent of the entire population of the Nation. The war years brought many, many millions of people there to make a livelihood, which requires the development of our natural resources, our hydroelectric power, our reclamation projects, our transportation facilities. I trust that when we come before you, you will understand that we are seeking only to serve the people whom we represent.

Gains that are counted, in 11 Pacific and Mountain States, show the vast difference between the new West and the old.

In people, these 11 Western States have registered a bigger gain than any other United States region. Population jumped from 13,900,000 in 1940 to 18,650,000 in 1948. A 22,000,000 total may appear by 1955. California, Washington, and Oregon suddenly have become a bigger market, in terms of people, than all of Canada.

But more than one-third of the people in the Western States are crowded into two metropolitan districts—Los Angeles and San Francisco. There still are vast areas throughout the West where there are few people or none. The current problems of caring for the new people who arrived with the boom are being complicated by the pin-point crowding that has occurred.

California is forced to consider the first billion-dollar budget in the State's history, largely because the need for new city facilities cannot be avoided any longer. The State needs $325,000,000 worth of new schools as fast as they can be constructed. New mental-care institutions are needed at the rate of one each 18 months. Several hundred youthful lawbreakers are in San Quentin prison because the State lacks enough reformatory space.

Other States face the same kinds of trouble on a smaller scale. Oregon needs $120,000,000 worth of emergency school facilities. Washington educators want $500,000,000 worth of new schools in the next 10 years.

All the new improvements and additions, as they are made, will change western cities, make them more like the crowded centers of the East. Texas will rise. California already has a 2½-percent sales tax and more than 100 other California cities have local sales levies on top of that. Increased pensions just voted for aged persons will, if not changed, add more than $100,000,000 to State costs in the first year of the higher payments. Officials fear, too, that the generous new pensions may attract hordes of older people from other States. Only young and vigorous workers are really wanted.

New industry is another guide to the transformation of the West. Manufacturing plants gradually are removing the old dependence on the East. A few examples of gains already made and those in prospect:

Los Angeles is second to Detroit in number of cars and trucks assembled. A total of 159,000 units was turned out there in 1940, about 700,000 in 1948, and 1,000,000 units are predicted for 1955.

The West makes 40 percent of its machine tools and mining and construction equipment. Its factories turn out one-sixth of the area's farm implements. Production is increasing.

Steelmaking capacity has been doubled. Electric-power generating capacity rose from 6,470,000 kilowatt-hours in 1940 to 9,545,000 in 1948, and it will reach 17,000,000 by 1954.

All told, more than 3,000 new plants were built in the West during the war and postwar boom—shipyards, aircraft

factories, atomic-energy installations, aluminum, magnesium, and chemical works, fabricating plants of all kinds. Cement production is expected to be double that of 1940 within the next few years.

Manufacturing employment more than doubled between 1940 and 1947 in California. Washington and Oregon factories employ one-third more workers than they did in 1940.

Western-made products are sold on a Nation-wide basis. A list of nationally sold goods would include such diverse products as material-handling machinery, oil-well equipment, auto and truck trailers, lumber, plywood, fresh and preserved foodstuffs, refractory brick, gas furnaces, linoleum, paper products, outboard motors and flatirons. Westerners are hoping they can move still farther into the national market. But they are hampered by high operating costs at home and freight rates that work out to the western shippers' disadvantage.

It costs $1.60, for example, to ship a case of fruits or vegetables from the Northwest to New York. Wisconsin shippers pay only 79 cents per case to reach that major market.

Foreign wines can be landed in eastern ports for less cost than California wines. That partly explains why there is a slump in the consumption of California wines.

From the East, a Sparrows Point, Md., steel plant can land steel products in Northwest Pacific ports for the same prices that the nearest western competitor charges, even though the western plant is located at San Francisco. The major west-coast steel producer just cut prices—up to $39 a ton in some cases. That is a tip-off that the fight for the western steel market is beginning.

The freight-rate disadvantage is so great that some western concerns are opening eastern plants so they can continue to compete for national markets. That means a loss of potential industry, from the standpoint of the West. Canners have bought eastern canneries, and a linoleum manufacturer opened a plant in New Jersey because of the freight problem.

As competition increases, freight-cost differentials will make it harder for western manufacturers to meet price cuts by competitors in other regions. Recent freight-rate increases have widened the gap between West and East freight costs, to the West's disadvantage.

Growth of capital, the funds to finance expansion in the future, is a significant milestone in western development. Bank assets totaled $7,087,000,000 in 1940. By 1948 the total was up to $21,091,000,000. A modest increase to $23,000,000,000 by 1955 is considered a conservative estimate.

With more funds of their own to spend, western investors talk less about the colonial status of their region. Bankers feel they have adequate resources of their own now to finance any sound new projects. Nationally known companies are beginning to locate their head offices in the area. Insurance companies are investing in western enterprises the money they get from western insurance business. These trends increase general confidence about the future. Total income is expected to drop during the next few years, then resume its upward trend. Income was at the $8,500,000,000 level in 1940. The total was more than $27,135,000,000 in 1947.

That is a picture of progress the West has made in less than a decade.

For the future the West is pinning its hopes on certain great resources. But not all the outlook is rosy.

Favorable factors include an expanding labor supply, cheap power, the promise of vast new mineral resources.

Cheap power explains the West's great attraction for metal and chemical industries. Only one-fifth of the Columbia River Basin's power capacity has been tapped so far, though more than 200 hydroelectric plants already are drawing on the rivers there. By 1960 power output probably will be three times present output. Power generated by the Colorado River plants will be doubled in the same period and so will power production in the Central Valley area of California.

Power rates at the big public power projects run about 2.5 mills per kilowatthour in the Pacific Northwest. Power rates along the east coast usually are much higher. The West, in fact, has oversold its power attractions for the time being. It is claimed that hundreds of companies seeking to locate in Washington and Oregon have been told to come back later, when more power is available. Power is expected to be insufficient there for several years at least. Northern California is meeting its power needs more promptly.

Mineral resources will be a big drawing card for industry and capital. Oil-shale deposits in Colorado, Utah, and Wyoming offer, prospectively, more oil than all United States natural-oil deposits put together. The largest phosphate-rock deposits in the United States are located in the West. A great new fertilizer industry is expected to exploit that resource. An infant steel industry at Geneva, Utah, and in California, is growing up on the West's coal and iron deposits.

But the West lacks one resource—water. And water is the key to further development in more and more places.

Water scarcity is partly due to the hasty, unexpected growth of recent years. Southern California, Arizona, and New Mexico suffer most from lack of water, but it is a problem even in San Francisco, for example. Some parts of all the western States are parched most of the year. That explains why only 16 percent of all western land is cropland.

Farmers in southern California for 40 years have been taking out ground water for irrigation faster than nature puts it back. In some areas, wells go more than half a mile deep and dry wells are becoming common. Ground-water levels have dropped 100 feet or more in spots. Around Los Angeles the fresh-water table often falls below sea level so that salt water seeps into wells. Pumping costs are becoming prohibitive.

During last summer's drought about 300,000 acres of land that had been irrigated had to be abandoned for lack of water. In Arizona an estimated one-third of the arable land may be returned to desert soon if new sources of water are not discovered.

Yet irrigation farming is the foundation for much of the West's prosperity. Farming operations have been broadening out, tying in with industrial development, too. Cotton, for example, is becoming a big crop. Western growers produced 868,000 bales of cotton in 1940. By 1955 the crop may be up to the 2,000,000-bale level. California's first textile plant is going up this year, attracted by the home-grown cotton.

Unless more water is found farming operations will have to be curtailed rather than expanded. Many industrial concerns have vetoed a move to the West after they found that water costs would be prohibitive, or that no sure supply could be found. Western Senators are demanding Federal research on ways to purify sea water. At the same time the Federal Government is pouring several billions of dollars into irrigation projects. The vast river developments are aimed at getting every benefit possible from all the water the West can find.

In months ahead, to sum up the prospects, most observers of trends in the West anticipate a little recession in the great boom. By 1951, however, they expect another upward spurt in population and new industry. It could happen even sooner in this expanding region.

A Sea-Level Panama Canal

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. BLAND. Mr. Speaker, on March 29, I extended in the Appendix of the RECORD an article contained in the March 1949 issue of the Pacific Marine Review entitled "A Sea-Level Panama Canal." This was the second of a series appearing in this magazine and I now ask permission to extend the first of this series which appeared in the February 1949 issue of the Pacific Marine Review. The subject dealt with is so very important that I have considered it desirable to etxend the article in the CONGRESSIONAL RECORD.

It is as follows:

A SEA-LEVEL PANAMA CANAL

(EDITOR'S NOTE.—Interest in the project for a sea level canal is becoming so widespread, and the maritime services are so importantly affected, we shall publish a series of articles on various phases of the enterprise. They will deal with engineering, construction, traffic, tolls, and national defense. The first, dealing with dredging, follows.)

THE DREDGING PROBLEM

The proposal for a sea level canal at Panama to replace the present lock structure, now far advanced in engineering discussions and technical society meeting, has reached the point where the practical phases of construction and operation will occupy the public mind. A certain amount of demagogic thinking will be, and is being, encountered

both for and against. Such comprehensive generalities as "the present Canal was conceived by engineers and built by engineers, and the men who have to get the ships through were never consulted," a statement made in Congress last month, is hardly a convincing argument one way or another. Such a statement lessens the force of the whole contention of the speaker, but since there may be those who will be influenced by it, some other points he makes should be deflated.

For instance, an argument is presented in favor of calling on the engineers who built the present Canal to participate in present discussions, for who should know better than they the problems of construction? This proposal is followed by the kind of planning which might be expected from them in this quotation:

"No engineers who had anything to do with building the Canal regards the sea-level idea with anything but consternation. These gentlemen ask how we are going to construct dredges to excavate under water at depths up to 147 feet. None believes the present estimates of cost and of 5 to 10 years for building are anything but a rough minimum, with the present Canal out of operation so long no one knows what the economic, political, and strategic effects might be."

This is hardly an up-to-date engineering opinion, for deep dredging has been developed to a degree that is apparently far beyond the speaker's knowledge. The Yuba Manufacturing Co. of San Francisco has recently completed a contract with the Panama Canal for development designs for bucket-ladder dredges, one of which is to dredge to a depth of 145 feet.

An extensive engineering study carried on by the Yuba Manufacturing Co. has proved the bucket-ladder-type dredge is practical for excavating the materials to be found in the proposed new sea-level Panama Canal, providing the hard formation will be suitably broken up by blasting. A special project has been carried on in the hard formations of the Panama Canal providing the rock formation can be broken up economically to desired sizes for dredging.

Two dredgers are proposed, both having buckets of 54 cubic feet capacity each, one digging to a depth of 90 feet below water level and the other digging to a depth of 145 feet below water level. These dredges as designed embody the experience of the harbor-type bucket-ladder dredge and the placer-mining-type bucket-ladder dredge, with the units being modernized with proved designs.

In an authoritative paper which Charles M. Romanowitz, director of sales for Yuba Manufacturing Co., presented before the American Society of Civil Engineers last year, the history of dredging, dredge efficiency and digging depths are dealt with, and his outline of the proposed bucket-ladder dredge is presented herewith:

PROPOSED BUCKET-LADDER DREDGES

Yuba Manufacturing Company has designed two bucket-ladder dredges which are recommended for the proposed excavation of the blasted rock on the proposed sea-level Panama Canal project.

One of these dredges will be capable of digging to a depth of 90 feet below water level and will cut its own clearance, although it will require a depth of at least 40 feet of water to start operations. The second dredge will be capable of digging to a maximum depth of 145 feet below water level with the ladder at an angle of 48 degrees with the horizontal. This dredge will not cut its own clearance, but this is not required in its proposed operations.

After a prolonged study, the Yuba Manufacturing Co. has recommended the use of buckets having a capacity of 54 cubic feet each. This capacity bucket has been used on harbor bucket-ladder dredges and the study shows to go beyond this size presents many difficult problems in the various units making up the dredge. It was therefore decided to develop the designs for the 54-cubic-foot bucket capacity.

The dredge to dig 90 feet below water level will have the units interchangeable with the deep-digging dredge. Therefore, the description of the various units will be confined to the deep-digging dredge.

The general information of the dredge to dig 90 feet below water level is as follows:

Hull size: 244 feet 8 inches length; 100 feet beam; 15 feet 1 inch depth.

Bucket capacity: 54 cubic feet; bucket pitch, 6 feet; bucket width at base, 60½ inches; bucket width at lips, 74 inches; bucket height, 86½ inches.

Number of buckets: 62.

Ladder length: 163 feet 6 inches center to center of tumblers.

Horsepower: Installed horsepower, 4,900. Estimated average operating horsepower requirement, approximately 2,200.

Generating plant: Three 1,600-horsepower Diesels each direct-connected to a 1,250-kilovolt-ampere, 2,300-volt generator.

Rock disposal: From buckets into main hopper to a tilting apron to divert materials either to port or starboard; then to manganese steel apron feeder to chute into barges on either side of dredge.

Total estimated weight of dredge (light): 5,895 tons.

The general information on the dredge to dig 145 feet below water level is as follows:

Hull size: 370 feet 8 inches length; 100 feet beam; 13 feet 1 inch depth.

Bucket capacity: 54 cubic feet. Bucket dimensions, same as shown in preceding table.

Number of buckets: 88.

Ladder length: 239 feet center to center of tumblers.

Horsepower: Installed horsepower, 5,294. Estimated average operating horsepower requirement, approximately 2,400.

Generating plant: Four 1,600-horsepower Diesels each direct-connected to a 1,250-kilovolt-ampere 2,300-volt generator.

Rock disposal: Same as shown in preceding table and described below.

Total estimated weight of dredge (light): 7,220 tons.

In the design of these dredges, the manufacturers of the various units or parts on which they have specialized were consulted and gave excellent cooperation and assistance. While some items are larger than furnished before by these concerns, we were given assurance in each case that the final design of the parts will be within the scope of their experience and manufacture, even though some would require special machinery or setups to perform the work.

In designing these dredges, one factor that was given special consideration was that of ease in making replacements, and I am confident that the various parts can be replaced quickly. This will assist in keeping the running time as high as possible.

The following is a description of the important units on the deep digging dredge.

The hull, superstructure and gantries present no problems. The hull is of conventional design with many bulkheads to provide watertight compartments, assuring maximum safety. The hull extends across the bow. The well hole thus enclosed will permit the ladder being raised clear of the deck. This well hole will be 24 feet 5 inches wide for a distance of approximately 130 feet from the forward end to enable the ladder system being raised with the bucket line off the lower tumbler and supported on the lower hanger bars. This is being done to enable the bucket line being put back in position in the shortest time possible, in case it is forced off the lower tumbler. The remaining portion of the well hole has been reduced to 11 feet 4 inches in width.

The proposed buckets were designed by the American Manganese Steel Co. in cooperation with the Yuba Manufacturing Co.'s engineering department. The Taylor-Wharton Iron & Steel Co. also can furnish buckets of this size of their own design. The buckets are of the rock type, well proportionad. A rock 4' x 4' x 3½' will fit inside the bucket, but no determination has been made as to the maximum-size boulders that can be handled. The experimental blasting project carried on recently in the Panama Canal demonstrated that blasting can be done economically, to keep the size of boulders within the capacity of these buckets. Therefore no difficulty is anticipated.

The digging ladder will present no difficult problem in manufacturing. On the underside of the ladder will be placed a Perry type bucket idler supporting the bucket line and located in a manner to develop the best catenary; also to maintain alinement of the bucket line with the lower tumbler. This idler will prolong the life of the bucket pins and keep to a minimum the chances of the bucket line coming off the lower tumbler.

The lower tumbler will be made up of two castings on a shaft, with replaceable manganese-steel wearing plates bolted in place. The lower tumbler, as well as the ladder roller bearings, will be lubricated by means of an automatic lubrication system.

The ladder suspension will be of the double type, that is, a complete set of suspension bars and hoisting blocks located on each side of the digging ladder. Each set of hoist lines and suspension bars will have sufficient strength to hoist the ladder in case of failure in one of the suspension units. The front hanger bars will be provided with a safety device placed on the forward side, which will be connected with an indicator in the winch room, to stop the bucket line in case some obstruction has come against the bar. It is believed this system is flexible enough and of sufficient size to give long and useful service.

The main drive, part of which is the upper tumbler, is designed for long life and for quick replacement. The Falk Corporation cooperated in the design of this unit. The main drive is made up of a double train of gears connected to the ends of the upper tumbler shaft through flexible couplings, which reduces the shock from the bucket line. The upper tumbler can be replaced easily as a unit by disconnecting the couplings, making it unnecessary to move the bull gears. Power will be furnished the main drive either by one extended shaft 2,500-horsepower synchronous alternating current motor, direct-connected on each side to the gearing through reduction gear sets with flexible couplings and magnetic couplings, or by two 1,250-horsepower direct-connected motors with Ward-Leonard control. The upper tumbler will have a maximum of 2,583 revolutions per minute, which is equal to a maximum bucket line speed of 93 feet per minute or 15.5 buckets per minute.

The winches will consist of two ladder-hoist winches, each driven by a 600-horsepower motor; two bowline winches; two stern-line winches; two headline winches; one stern haul-back winch; two spare-line winches for repair and other work on the dredge; one spud-hoist winch; two winches for rock-spill chute to barges. The ladder-hoist winch will be equipped with Lilly control safety unit to limit the lowering speed and also limit the maximum height and depth to which the ladder may be raised or lowered.

The dredge will be held in its digging position by either a set of dual headlines 2½-inch diameter and stern haul-back line 2-inch diameter, or a spud, when in its digging position, will be on an angle with the horizontal and fastened to the stern of the dredge.

The maneuvering of the dredge will be by 2-inch-diameter wire ropes from the four corners of the hull.

The disposal system will provide for the materials being dumped into the main hopper to pass directly to an apron approximately 8 feet wide and 14 feet long, capable of tilting to permit the materials being passed either to port or starboard. From the tilting apron, the materials will go to either side to a short fixed apron or chute and then to an apron feeder approximately 8 feet wide and 32 feet long. This feeder will be a heavy-duty, self-contained, manganese-steel, feeder type, which has been in use in various sizes in mines and quarries throughout the world for the last 20 years. From this feeder the materials will drop into a chute which is adjustable vertically and is used to deliver the materials into the barges alongside the dredge.

All units of the dredge will be serviced either through a suitable crane, or trolley beams with chain blocks. All units will have adequate safety protection.

There will be placed, in the stern of the dredge, the Diesel generating system in a housing that will be soundproof and air-conditioned. This power plant consists of four 1,600-horsepower Diesel engines, each direct-connected to one 1,250-kilovolt ampere, 2,400-volt, 3-phase, 60-cycle, synchronous generator with double-shaft extension. To each of these generators is connected a 75-kilowatt, 720-revolutions-per-minute, 250-volt, direct-current, variable-voltage generator to supply power to the bow- and stern-line winches, and on top of this direct-current generator is mounted a 10-kilowatt, 125-volt, 1,750-revolutions-per-minute, v-belt-driven exciter. This plant is also equipped with a 100-kilowatt, alternating-current, emergency Diesel electric set to generate electric energy to operate all the auxiliary equipment aboard the dredge in case of emergency, when the main Diesel electric units are not operating.

The electrical equipment is an alternating-current drive with an alternate employing the Ward-Leonard direct-current system on the main drive and all the principal winches.

ALTERNATING-CURRENT SYSTEM

The main drive is powered with a synchronous motor driving through two eddy-current couplings to provide smooth acceleration, variable operating speed, and cushioning to the main drive.

The control is arranged with automatic excitation of the couplings to provide predetermined value of torque limit under all operating speeds.

The ladder hoist winch is powered by two alternating-current, variable-speed, wound-rotor, induction motors. The control circuit provides full protection to both the motors and mechanical equipment during hoisting, plugging, and lowering cycles.

The two head line winches and the stern haul-back winch are powered by alternating-current, variable-speed, wound-rotor, induction motors. The equipment is arranged with reversing control and several speed points in each direction. The operation of the brakes is automatic and is interlocked with the control circuit to provide maximum protection.

The bow- and stern-line winches are powered by direct-current motors and are arranged to operate on Ward-Leonard control. Each winch is equipped with automatically operated brakes. The remaining equipment, such as pumps, ventilating system, and tools, is all driven by standard alternating-current motors.

WARD-LEONARD DIRECT-CURRENT SYSTEM

The main drive will be powered by two 1,250 horse-power direct-current motors operating on variable voltage. The control for this drive will consist of the latest development in the Ward-Leonard system to provide automatic torque limit, variable-speed operation, and smooth acceleration.

The ladder hoist winches, head-line winches, stern haul-back winch, bow-line and stern-line winches, are each driven by direct-current motors operating on variable voltage.

The direct-current power is furnished by synchronous motor generator sets employing the latest development in the Ward-Leonard system.

ESTIMATED OPERATING DATA

Due to the affiliation of Yuba Manufacturing Co. with Yuba Consolidated Gold Fields, the operators of many placer dredges with experience dating back over 40 years, it was possible to obtain the assistance of their engineering department. As in the design of the dredge, the calculations as to estimated yardages and costs were figured on a conservative basis. Experience has shown, as mentioned above, that the deep digging dredge will dig less yardage than the dredge to dig 90 feet. In determining the yardages and costs, only those dredges operated by Yuba Consolidated Gold Fields, with experience in deep and hard digging, were considered.

The maximum speed of the bucket line as mentioned above, is 15.5 buckets per minute; however, in the yardage calculations, a speed of 12 buckets per minute was used. These calculations show the following:

Theoretical output of the dredge: Annual output equals C x S x M x D when C equals capacity of bucket level full in cubic yards; S equals speed of bucket line in buckets per minute; M equals minutes per day; D equals days per year on 6 days per week basis, with no holidays; 2 x 12 x 1,440 x 313 equals 10,817,280 cubic yards.

Estimated actual output equals 10,817,280 x 40 percent operating efficiency for the deep digging dredge equals 4,327,000 cubic yards and 10,817,280 x 50 percent operating efficiency for the 90-foot digging depth dredge equals 5,408,600 cubic yards.

In determining the operating efficiency, the following was taken into consideration:

1. All lost time due to servicing and repairs, both operating and major.
2. All lost time due to maneuvering the dredge in its cut.
3. Loss in output due to buckets not being completely filled at all times when dredge is actually digging.
4. Loss in output due to bucket line running with empty buckets when raising ladder or overswinging.

These yardages are about the same as obtained with the 18-cubic-foot dredges in placer mining. The main reason for the apparent lower yardage for the labor bucket capacity is the bucket speeds are about one-half as fast as that for the dredges used in placer mining. Further, the dredge efficiencies used in the calculations are much lower than those obtained in placer mining.

For the calculations of the estimated costs per cubic yard for these proposed dredges, the following cost items were taken into consideration:

1. Operating labor.
2. Operating supplies.
3. Power.
4. Repair labor.
5. Repair material and replacement parts.

In the labor costs were included all salaries, wages, and subsistence of the operating crews, with rates in force in the Canal Zone as per schedule of July 1946, and included a sick leave of 20 percent. As shown above in the make-up of the formula used in determining the annual theoretical yardage, a work week of 6 days was used, but if the dredges are operated on a split shift, 7-day basis, the cost will indicate a lower cost.

The power cost is computed on a basis of 2 cents per kilowatt-hour as eventually all power will be delivered from the shore and this rate was considered conservative.

The costs of operating supplies, repair, and replacement materials were made up from experience in placer mining dredges with liberal allowance for the conditions to be found in Panama operations and should adequately take care of the requirements.

On this basis, the estimated unit operating cost, covering the five items mentioned above, was slightly over 20 cents per cubic yard for the deep digging dredge and slightly over 15 cents per cubic yard for the dredge to dig 90 feet below water level.

Selecting Our Future Citizens

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the full text of an address by Hon. Herve J. L'Heureux, Chief, Visa Division, Department of State, at the annual conference of National Council of Naturalization and Citizenship held at the Astor Hotel, New York City, on March 25, 1949. I desire to draw the attention of the Members of Congress to the fact that the responsible representative of the Department of State clearly indicated the necessity of providing for a more selective system of immigration than the system under which we are now operating. I have introduced H. R. 3001 which, if enacted, should meet the needs of American economy and of the defense of our country. I do hope that we will be able to schedule my bill, H. R. 3001, for early consideration.

SELECTING OUR FUTURE CITIZENS

There are two basic theories or fundamental systems for the control of immigration into any country. One is that no alien shall be permitted to enter the national territory of a country unless there is some specific provision of the law of the country concerned, which authorizes the admission of the individual alien or the particular class of aliens to which he belongs. In other words, under this theory the national law of the particular country bars all aliens from admission into the national territory, except in such cases or classes of cases as the law may specifically provide for the admission of aliens.

The other basic concept of immigration control is predicated upon the theory that all aliens may have the privilege of entering the national territory of a country, so far as the fundamental law of the country is concerned, unless there is some particular provision in the national law which specifically provides for the exclusion of an alien in an individual case, according to the excluded class of aliens to which he belongs. This is the fundamental concept of immigration control which is followed by the United States, although most countries of the world follow the first basic principle I have mentioned.

You can appreciate the reason why our immigration laws are based upon the second theoretical concept. It is simply a matter of our historical development as a nation of immigrant people. In the early days of our history we welcomed and encouraged all immigrants who wanted to come here. We needed manpower to develop the vast wilderness which has become what we know today as the United States of America. We were looking for men and women who wanted to start a new life in this new world of rugged

individual and collective opportunity—men and women who loved human freedom and who cherished political and religious liberty. We wanted immigrants who would leave their old-world problems and controversies behind them and come here to establish upon the continent of North America, a new nation of people from many lands—a new nation based upon new political and economic concepts of national life. That we have succeeded so well is in itself a tribute to the sturdy character of our early immigrants.

We want to keep the doors open for worthy immigrants and yet preserve our heritage. We do not wish to see our favorable position in the world frittered away by a lackadaisical immigration policy which would permit a vast influx of people from other countries of the world who would create insurmountable problems for those who are already here.

This is a time of great and far-reaching achievement in the fields of science and invention. In these modern days of global-flight aircraft, radio, radar, television, and other electronic as well as mass-production developments, not to mention atomic energy, we are living in a much smaller world. It is also a more highly developed civilization from many points of view. There is, therefore, sound basis for a new concept of immigration control. We need to have a more selective immigration policy in the interests of our own people, and yet we would not close the door to immigrants who, for their own benefit alone, may desire to come to this country.

In a more technical sense, it has been our practice in past years to follow the first-come-first-served rule in granting the privilege of immigration into the United States. This was necessary because of the fact that we have imposed numerical as well as qualitative restrictions upon the entry of immigrants into this country. In other words, when you have more applicants for permission to enter than there are seats in the hall it is customary for people to line up at the entrance. Those first in line may be admitted, but the hall may be filled before the last person in line is reached.

In enacting our quota immigration laws Congress has provided that we may take certain imr igrants out of line and move them ahead of others. This we call granting a preference. But Congress has stipulated precisely in the law the classes which may be granted such a preference over others, whom we call nonpreference immigrants. We are therefore precluded from taking other persons out of their normal order and, in effect, granting to them an unauthorized preference, or a preference not provided by law.

The only occupational preference authorized by law is for aliens having skill in agriculture above that of an ordinary farm laborer, but the law provides that this shall not apply to applicants who are chargeable to quotas of less than 300 annually, and it is, of course, in the quotas smaller than 300 annually that preference may mean the difference between coming to the United States or not being able to come at all because of the heavy demand for visas on the part of aliens who are the close relatives of citizens or residents and who are entitled to preference as such in acordance with the law.

Our experience of a quarter of a century in the work of controlling immigration into the United States primarily at the foreign source, through the visa or double-check system shows that there is sound basis for an amendment of the law which will enable us to penetrate further into the field of selective immigration. We have been obliged to tell American industrial, commercial and scientific institutions and firms that they may not bring to the United States as immigrants out of the regular turn on a quota waiting list, a highly skilled and greatly needed technician or scientist. In some such cases it may be many years before the aliens they may desire to bring to this country can be reached on the waiting list.

This situation, in my opinion, is one that would justify early remedial legislation, not for the purpose of assisting for his own sake, an immigrant who wants to come here as soon as possible, but for the purpose of enabling the important Amercan interests involved to fill an urgent need, which in turn will provide for greater activity and expansion of our business and industry and provide more and greater employment for our citizens and residents. In other words, a sovereign nation should have the power to select and bring immigrants into its territory whenever it is in the national interest to do so, instead of filling up the quotas year in and year out with immigrants who, for their own sakes, desire to enter, regardless of whether they may be able to make any appreciable contribution to the national welfare.

The Future of Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. MULTER. Mr. Speaker, the following address, delivered by the Ambassador of the State of Israel to the United States, His Excellency Eliahu Elath, before the Economic Club of Detroit, Mich., on February 28, 1949, I am sure will prove of considerable interest to the Congress. It will go far toward dispelling much of the misinformation prevalent about the new State of Israel:

THE FUTURE OF ISRAEL

Two generations ago our early settlers in the Holy Land were faced with three major tasks: to colonize an arid and half-empty country; to establish a modern, progressive society; and to rebuild a national community in the ancient homeland of the Jewish people.

For 400 years the Ottoman Turks had ruled Palestine. The Ottoman Turks were not colonizers but military conquerors, who did very little indeed to develop agriculture and industry. Trade was largely left to foreigners, and public services and communications were badly neglected. This applied in particular to provinces, such as Palestine, which were poor in natural resources and remote from Constantinople, the capital of the empire.

This policy, especially since the decine of the Turkish Empire in the sixteenth century, had a disastrous effect on economic life in Palestine. The desert encroached on cultivated land and Bedouin chieftains ruled large parts of the country, robbing farmers, attacking trade caravans, and paralyzing the economy in the towns. Following the example of earlier conquerors, the Turks and Arabs systematically deforested the country. The coastal zone and the valley of Esdraelon, today the most fertile parts of Israel, were covered by swamps. Malaria, together with the general insecurity, depopulated the countryside. Many peasants fled into towns, but there too arts and crafts declined, particularly since the eighteenth century when cheap manufactured goods were imported from Europe at an increasing pace. The general decline of the country caused large-scale emigration. Before World War I many thousands of Arabs left Palestine every year on their way to the Western Hemisphere and other happier and more prosperous lands.

At that time a new and dynamic factor entered the scene. In the second half of the nineteenth century the Jewish communities in eastern Europe were aroused by the ideal of return to Zion. Individual Jews had been immigrating into Palestine for many centuries. But the 1880's saw the beginning of organized Jewish colonization in Palestine.

Many parallels can be drawn between the colonization of the United States and the work of our settlers. Draining swamps, building roads, and establishing settlements in the wilderness, our pioneers led a typically frontier life which, with its adventures and satisfactions, attracted the most vigorous and devoted youth of the Jewish people.

The Chalutzim, or pioneers, became one of the most respected elements in Palestine's Jewish community. Our pioneers, like the early American settlers, learned the elementary facts of adjustment to climate and local conditions from the native population. But they brought about fundamental changes through the introduction of western methods and scientific knowledge.

On the other hand, there exist great differences between the colonization of this country and the upbuilding of Israel. Your forefathers took their land by the right of settlement; we had to buy it, mostly at exorbitant prices. Your settlers enjoyed the protection of the colonial administration and later an independent American Government. We lived, until last May, under foreign governments which—with the short exception of the early period of the mandate—were either hostile or, at least, not very encouraging.

EARLY ZIONISM

Jewish colonization in Palestine was carried out simultaneously in different ways. At first, villages on the European pattern were established in the coastal zone, in Galilee and near Jerusalem with the majority of workers being hired Arab laborers. These settlements were not too successful because of the hostility of the Ottoman government, the general insecurity in the country, and the inexperience of the Jewish settlers. They were saved from complete economic collapse only by large subventions from Jewish philanthropists such as Baron Hirsch and Baron Rothschild.

A new phase began early in this century following the establishment of the World Zionist Organization in 1897. The second wave of immigration in the beginning of this century brought to Palestine highly idealistic youth who tried to blend their national and social ideals in a unique synthesis. They found it impossible to compete with cheap Arab labor on Jewish farms without giving up a minimum standard of civilization. They, therefore, organized themselves in independent groups which were given land acquired by the Jewish national fund and supplied with capital by Zionist Funds. According to Biblical law, land was leased to them for 49 years at a nominal fee, and they were allowed to repay the capital they received over a long period of years. The Zionist organization which planned their colonization efforts stressed national, not material considerations alone, and established settlements not mainly in places where it was most profitable for the settlers, but where new villages would strengthen the foothold of the Jewish community in the country. Thus, compact blocks of settlements emerged and their security was safeguarded by the settlers' own watchman organization which became the nucleus of the Haganah and so, indirectly, the forerunner of our present defense army of Israel.

These new settlements also showed more foresight from an economic point of view. The older colonies were largely based on

monoculture of citrus which in good years assured large profits but in years of crop failure or limited exports presaged disaster. The new settlements, on the other hand, engaged in many varied fields of agricultural production, thus gradually lessening the dependence of the Jewish consumers on imports. This economic policy was strikingly vindicated during the last world war when imports from abroad were cut and in the recent war with the Arabs when no supplies from the neighboring countries were available.

Beside the usual type of privately owned farms, many of our settlements are of the communal type. In all of them the land, as said before, is national property. In the Kibbutzim, or communal settlements, the houses, agricultural machinery, and all other belongings are the property of the settlement of which all members are coowners. The first settlement of this kind, Deganyah, was founded in 1909. Complete individual freedom is enjoyed by members of these settlements, who may join and leave of their own free will. The settlers have large autonomy and even today, after our state has been established, the settlements are run by their members without government intervention. Their administration is highly democratic. All important decisions are made by the General Assembly of the settlers in which all members, men and women over 18, have equal vote.

Another type is the Moshav Ovdim, or cooperative settlement, where only the major agricultural machinery and the central institutions belong to the settlement, while all other property is privately owned. The farmers are pledged to large-scale mutual help and do all their selling and buying jointly through cooperatives.

These settlements, the communal and the cooperative settlements, of which there are today over 300 spread all over the country, became important schools of democracy for our people. It is not surprising, therefore, that many leading figures in politics, administration, the army, and the cultural life of Israel hail from these settlements.

The strong feeling of independence and self-reliance of our settlers had a vital effect on our security. In Haganah days all members of the settlements were militarily trained to withstand Arab attacks. In the recent war every settlement was turned into a small fortress, able to defend itself until regular army units arrived on the scene. To mention only one example: In Deganyah, the colony mentioned before, south of Lake Tiberias, the settlers threw back a full assault of the Syrian Army backed by tanks, planes, and heavy artillery, though they had only small arms and their courageous spirit.

Side by side with these settlements, villages based on private ownership developed rapidly. The old colonies grew into townships. New villages were founded, particularly by settlers, refugees of Nazi persecution from central Europe, after 1933. A striking example is the transplanting of a whole Jewish village community from southwest Germany to the Mediterranean coast north of Acre.

Visitors to Israel are surprised to meet in all these settlements a large number of intellectuals and university graduates. This is the result of a deep Zionist conviction that the building of a new nation has to begin from the very basis of a healthy social and cultural structure. We did not want to become another Levantine community which leaves manual work to others. This return to the land and to labor was a necessary reaction to the abnormal structure of Jewish society in many countries of the dispersion.

TWO HUNDRED AND FIFTY THOUSAND IMMIGRANTS A YEAR

Though we attach greatest importance to agricultural development, we are fully aware that in this way alone we cannot absorb large numbers of immigrants. In 1948 about 100,000 Jews found refuge in Israel, as many as President Truman in 1945 unsuccessfully asked the British Government to let into Palestine—an intervention the Jewish people will never forget. This year we hope to welcome a quarter of a million Jewish immigrants to our shores. The greatest possible expansion of our economic resources is therefore a most urgent task to which we shall devote all our efforts as soon as peace is restored.

Our industries have considerably expanded during the last decade. It is true that Israel is relatively poor in raw materials. But we are fortunate to be able to make up, at least partially, for this deficiency by our many specialists and skilled workers. As Dr. Weizmann, our President, has frequently pointed out, we hope to be able to emulate Switzerland, the important industries of which are based on highly skilled labor. Our diamond, optical, and chemical industries are a beginning in this direction.

Since Israel's territory is very limited, we look to the sea and the air for further development. In recent months we have energetically begun to build up a merchant marine and we hope that boats under Israel's flag will carry a considerable percentage of our immigrants and tourists in the future. Deep sea fishing, especially in Elath on the Red Sea, will also be promoted. Israel lies at the crossroads of the world, near the junction of three continents. Before the last war Lydda became one of the major airports in the Middle East and we are determined to put forth every effort to make it an even more important center of air communications.

All these development schemes will be accelerated with the help of the $100,000,000 loan granted by the United States Export-Import Bank to our new state. We trust that, in addition, private capital will be invested in Israel at a growing pace. The Government of Israel welcomes such investment and is willing to extend every facility and advantage to private foreign investors.

With the help of international loans, private capital and contributions of Jewish individuals and organizations all over the world, we hope to enlarge Israel's productivity to the utmost and to make of our new state one of the most prosperous and progressive countries in the Middle East.

THE NEW STATE OF ISRAEL

A year and a half ago, the United Nations passed an historic resolution to establish a Jewish state in Palestine. If the United Nations had had the power and the means to implement this decision peaceably through international machinery, the Jews would have been glad to accede. But the ink had barely dried on the resolution passed on November 29, 1947, when a policy of open sabotage was started in many capitals of the world in an attempt to nullify this resolution and to obstruct its fulfillment by every possible means.

In Palestine itself the mandatory government had shown no desire to cooperate with the decision of the United Nations. On the contrary, every effort had been made to encourage the Arabs in their belief that it is by them and not by the United Nations that the destiny of Palestine will be decided, and that the Jews, faced with bitter reality, would have to surrender their hopes and rights for Jewish statehood and independence.

But neither the mandatory administration nor the Arabs understood the real meaning of the November 29 resolution, which was only a recognition of the 2,000-year struggle by the Jewish people for their redemption.

Countless generations of our people have prayed for a Jewish state. Century after century. Messianic dreamers attempted short cuts to it.

As I already mentioned, 70 years ago, a new type of practical idealists began to work for it. They went back to the land. They built a new Jewish society, the future State of Israel, from its very foundations. Their efforts laid the groundwork. The Balfour Declaration gave this effort both recognition and fresh impetus. The gigantic tragedy of our people during the Second World War intensified its urgency.

In that war, Jewish Palestine fought as a distinct, national unit. Statehood ceased to be a mere historic ideal. It became an immediate political objective.

The emancipation of the entire Arab Middle East made the denial of statehood to Jewish Palestine an anomaly. As the collapse of the mandatory regime became imminent, independence came within the grasp of the Jewish people. Basing itself upon its natural right to independence, the Jewish people in Palestine, through its elected representatives proclaimed the State of Israel on May 14, 1948, a few hours before the British mandate came to an end.

The future historian will undoubtedly recognize that it was not November 29, 1947, but May 14, 1948, that was the decisive event and turning point in the fight for a Jewish state.

On that very day, the invasion of Palestine by Arab forces from the outside began under the eyes of the British Army.

WAR OF INDEPENDENCE

We now can say with full confidence and satisfaction that in the final analysis, it was better for us that we had to defend our State alone, rather than to have it defended by American or Russian soldiers. Future generations will be proud of that fact. It made our independence more secure and more stable, both morally and politically.

It was their courage and their faith which enabled the Jewish people in Israel to lift themselves out of subjections into solid nationhood, and to withstand the hostile intent of nations many times their number and far richer in the resources of war.

The Jewish people everywhere, and we in Israel in particular, can be satisfied with the achievements of this year. Throughout these crucial months, our people have been engaged not only in fighting and creating a modern army, but in building up the new state, with the utmost energy and devotion.

More than 60 new settlements have been established in different parts of the country. At present, almost 25,000 immigrants reach the shores of Israel every month, where they joyfully join their brothers and sisters, sharing their happiness and grief, as well as their responsibilities. Israel heals their wounds, gives them new hope and renewed confidence in themselves, and makes of them useful and constructive citizens of the new state.

On the ruins of the mandatory administration, a democratic self-government has risen in Israel. It functions with devotion, efficiency, and foresight.

When our young men and women so gallantly rose to the defense of our infant state, they were fighting not only for the existence of that state, but for the survival of those spiritual and moral values that the Jews first gave to humanity and which we believed had been accepted as a basis of conduct for the whole civilized world.

In this war, it was primarily not the material weapons of modern warfare which gave our soldiers the courage and spirit to defeat a superior force, but the ideals of our ancestors and the genuine democratic convictions of the Jewish society in Israel.

It is common knowledge that the Arab soldiers, though better armed and better equipped, were not moved by equally strong emotions and deep convictions, nor were they able to face the moral superiority of our

pioneers. The Jewish victory over the Arabs was in reality a victory of a socially and economically progressive community over a stagnant and decaying feudalism.

Our war for liberty and independence in Israel has been a costly war. We have sacrificed thousands of our best boys and girls. Many settlements have been damaged or destroyed. The Jewish commuity of Jerusalem has suffered beyond words. But there was no sacrifice too dear or too great for the fulfillment of the dream of countless generations; to make the Jewish people in Israel free, to give the remnants of European Jewry a home, and to assure the existence of Israel as an independent nation.

Our armistice agreement with Egypt at Rhodes is an important landmark in the relations of Israel with the United Nations and with the Arab world. We now look forward hopefully to successful armistice negotiations with the other Arab states and to the early transformation of the armistice into a final peace settlement by agreement between us and our neighbors. We are gratified by the historical achievement which this agreement represents for the United Nations, which by the wise and moderate exercise of its authority has demonstrated its capacity to contribute to peace and understanding between the peoples of the world.

When admitted to the United Nations we shall endeavor to contribute our share to the peace and security of the world and to the constructive cooperation between nations.

May I assure you, however, ladies and gentlemen, that we dare not exaggerate our present victory over the Arabs, and assume that the rout of their armies on the battlefield alone will be enough to assure our security in the coming years.

While strengthening Israel is the main guarantee for our survival, we shall simultaneously launch on a far-sighted and statesmanlike policy of rapprochement and understanding with our neighbors, in trying to build bridges and not walls between us. We shall not spare any effort to look for closer relations and cooperation with the Arabs and the other peoples in the Middle East.

THE MIDDLE EAST

While we preserve and continue to develop the western features of our civilization, of which we are so proud, and which has contributed so much to the success of our cause, we must remember that our destiny will depend in many respects on what will happen in the Middle East. Nothing would be more dangerous, therefore, than to follow a policy of isolation or indifference to what is happening in that part of the world: The Arab countries, Turkey, Iran, and even India. We shall have to assign our best people to cultural, political, economic, and diplomatic activities on that vital front in our foreign relations.

A new dynamic and democratic Jewish society is now being established in the heart of the Middle East. The neighboring Arab countries are still struggling to rid themselves of their semifeudal social structure, their backward economy, their diseases and illiteracy, and their resulting political instability. There is no doubt that in the world of today there can be no security without social and economic stability.

Israel can be, and we will endeavor to make her, an example for these countries to follow.

Israel wants Arab economic and social progress in her own interest. The economies of Israel and its neighboring countries are complementary. We have to import the majority of our food and our raw materials, much of which used to come from the Arab countries. For instance, Transjordan before the last war sent to Palestine over 90 percent of its exports, the major portion of which went to the Jewish community. On the other hand, the products of our industries normally have a large market in the Arab states.

Future development schemes in that part of the world such as the Jordan Valley Authority, will benefit both Israel and its neighbors. We sincerely hope that after the Arab states are reconciled to the existence of an independent Israel, the common economic interests will come into the foreground. Economic cooperation will pave the way to other forms of cooperation between Israel and its neighbors in the Middle East.

The great potentialities of that part of the world may contribute much, if properly organized and managed, to the welfare, progress, and security of the entire world.

Israel is inspired by the desire to add its share to this noble and important task and to the better understanding and cooperation of peoples everywhere.

Not Just Digits in a Budget

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. DAVIS of Georgia. Mr. Speaker, under leave previously granted, I insert herewith an article by Doris Lockerman, associate editor of the Atlanta Constitution, which appeared in the Atlanta Constitution on March 27, 1949:

NOT JUST DIGITS IN A BUDGET

(By Doris Lockerman)

It must be ironic to people on relief to read the accounts of the running political joust between the county commissioners and the board of the Fulton County Welfare Department, given dignity by such respected bodies as the grand jury and the taxpayers, and to understand that they are simply considered as statistics in the over-all scheme of things. I have a feeling that the most blunted and degraded human being on the dole, unconsciously considers himself a person, crippled, deserted, ill, unlucky, down-at-the-heels, hungry or homeless, but never, even in the depths of greatest despair, as simply a figure in the budget.

Fulton County has been witnessing, in the last 10 days or so, a pushing and shoving for power and prestige, in the fine old name of balancing the budget. Without reading the intent beyond apparent facts, the situation is this:

Fulton County Welfare Department requested an appropriation of $965,000 from the county board of commissioners for the coming year. This was to be added to State and Federal funds that last year added up to $3,533,809.10 as their part in the care of our old, helpless young, unemployable.

The estimate was a little higher than last year's budget, because 1,600 more persons have been added to the rolls, and, in addition, there was an item of $36,000 to operate Oak Hill Homes, the fine new institution planned for protection of dependent children, just completed and not yet put into use. There were also modest plans for an improved program.

After discussion between the County Manager, A. E. Fuller, and the commissioners, the request shrunk to $883,000 with the elimination of a contingency fund, and the commissioners then asked Manager Fuller, Welfare Director Welborn Ellis and Welfare board chairman Ivan Allen to go before the grand jury to ask for approval of a two-mill tax levy for welfare.

Now the word "millage" has fallen into disrepute long ago, because it can be misinterpreted with the addition or subtraction of a word. In 1940, the grand jury recommended and the commissioners ordered a levy of 2¾ mills for welfare; in 1941, 1942 and 1944, 2½ mills. The grand jury has never recommended less than 2½ mills, as a matter of fact.

This year the welfare board asked for 2 mills * * * not extra mills, but 2 mills, provided the over-all tax levy should not be increased. It hoped such a levy would not only hold the relief lines, but would finance an improved program of rehabilitation.

There are differences of interpretation, but the grand jury failed to recommend the 2-mill levy. They referred to it as a 2-mill extra levy, and in a mood of reckless economy, they voted it down.

The county commissioners instructed their manager to adopt a working budget of $820,000 and a legal budget of $710,000, earmarked for public welfare. A matter of $20,000 rent has since been allowed the welfare budget.

The result was the announcement of a curtailed program. Several private agencies were told they could no longer participate in the public funds, and it was declared that rolls would be "frozen" to meet restrictions.

Anguished howls were heard from private agencies who have good voices, but no sound has been forthcoming from the unemployables who make up 722 of the 11,747 cases on Fulton County's relief rolls, nor the 1,776 children directly involved, nor the 400 youngsters who receive protective care. They have never had much of a lobby.

Now all of this is confusing to citizens as well as "reliefers."

At a peak, or certainly just a few minutes past the peak, of the greatest earnings in our history, why is Fulton County so poor it cannot tax itself 2 mills, not extra, but include 2 mills in its allotment for the indigent and helpless? If it is so financially insecure, what of the future when heralded disinflation will take its toll in incomes?

And how do we figure a community can protest bureaucracy and decry Federal paternalism, holding out for self-rule, local option, and State's rights, when we say we cannot take care of our own unemployable? It is simply asking for a return of the Federal dole.

For people are not going to be permitted to drop on the streets and die of hunger. We will pay the taxes to care for them, eventually, one way or another.

In case this sounds like maudlin sentimentality, it is a matter of record that the average person on direct relief in Fulton County receives $18.44 a month. If that allowance can be dropped lower with humane consideration, I cannot see how it can be done. Of course, the cynics who always discover the ladies living in mink coats on charity, will point to an isolated instance or two where that money is being squandered by some undeserving mother who neglects her children and shows other evidences of ingratitude. But, by and large, you don't get far into orgies with $18.21 per person per month.

Actually, all this is rhetorical because at best our public-relief system is only a stopgap. It is as outmoded as the man trying to shield his family from mortar fire by holding a silk umbrella loyally over their heads during a battle. If he had sense enough to hold the umbrella, he should have thought of trying to wipe out the source of the mortar fire.

What every planner knows, is that we should take every cent of money we can spare and rehabilitate families, especially where there are children still in the formative stages, so they will not wind up undernourished and failing in school, ill, and dependent at Grady Hospital, delinquent and criminals in jail, eventually married and deserted and

back on charity with a second or third crop of "reliefers."

We should try to get deserting fathers back into responsibility, provide food and shelter for children, bolster health, housing, and recreation, with all we can spare, using every private and public agency available in a great onslaught against underprivilege and human failure.

It would cost money. But we are careful to repair holes in our streets, lest they get big enough to swallow us up.

The least we can do for our heirs is to take care of our own sociological diseases, so that they can manage better with their own poor—that we have with us always.

We don't have to establish a hierarchy of poverty to leave them for a legacy.

Analysis of H. R. 2516

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 30, 1949

Mrs. DOUGLAS. Mr. Speaker, on February 8, 1949, I introduced H. R. 2516, a bill to amend the Housing Act of 1948. Under permission to extend my remarks in the RECORD, I wish to include an analysis of H. R. 2516.

ANALYSIS OF H. R. 2516

This bill supplements existing aids by a program of direct Federal loans at lower interest rates to meet the housing needs of lower income families whose needs have been neglected until now. The purpose of such housing is to fill the gap between families above the level eligible for public housing and those below the level of income where they can obtain privately financed housing (even with the proposed liberalized financing amendments). The housing provided through direct Federal loans is limited to families who cannot afford to obtain housing under the mortgage-insurance system and other existing aids to private housing.

Within the Housing and Home Finance Agency, a Housing Loan Administration has been established as a constituent unit with a commissioner at the head of it. The job to be done among lower-middle-income families is so large that there is clearly the need for a separate constituent agency to handle that job without the diversion of other present programs. Moreover, the tool of direct lending for private construction is one which appropriately belongs to a separate constituent.

Loans for the development or acquisition of housing for families of lower income is made to mutual ownership or cooperative housing corporations undertaking projects which are restricted in occupancy to members of such corporation; also to other nonprofit corporations. In addition, loans are made to limited dividend corporations or other corporations restricted by law, regulations, or contract so as to conform to the requirements of the Commissioner as to rents, rate of return, and methods of operation.

The loans bear interest at not less than the going Federal rate of interest, plus one-half of 1 percent toward covering the cost of administration. The program involves no subsidy as such, but makes money available to nonprofit and limited-dividend operations on a basis representing the cost of the money to the Government. The loans are repayable within a period representing the estimated useful life of the property but not to exceed 60 years.

On the basis of a 60-year loan at 3 percent (based upon the going Federal rate of 2½ percent plus one-half of 1 percent) the carrying charges applicable to a mortgage loan of $8,000 on a dwelling are $24 a month. This compares with the present carrying charges almost double that amount on the present financing basis of a 25-year mortgage, with 4½ percent interest plus one-half of 1 percent premium. Actually, the monthly saving and financing cost amounts to about $22 as compared with the financing cost on an $8,000 mortgage on a home purchased under the present FHA insurance system on newly constructed homes.

There is a monthly reduction of cost of about $16 per month under the new program as compared with a 608 rental housing project, with present financing over a period of 32 years, 7 months at 4 percent interest plus one-half of 1 percent insurance premium (based upon an $8,000 mortgage).

These savings of $16 to $22 per month make it possible to reach a substantially lower group in the income scale and meet the needs of a large proportion of moderate-income veterans of World War II as well as other citizens who are presently unable to rent or buy housing within their means.

The Commissioner is authorized to issue $1,000,000,000 of notes initially for the purpose of making these loans. This limit is increased by an equal amount in each of the years 1950, 1951, and 1952. The notes are purchased by the Secretary of the Treasury who charges the current average rate on outstanding obligations of the United States. The notes and obligations issued to the Secretary of the Treasury are secured by the obligation of the borrowers from the Housing Loan Administration and repaid from the proceeds of such loans. The loan authorization makes it possible to build about 120,000 units per year during each of the next 4 years. This housing is available solely for lower income families who cannot now be served with privately financed housing.

Hour of Decision

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. RODINO. Mr. Speaker, some people not too well acquainted with the character of America must have questioned some years back, whether America was capable of fulfilling the role of world leader. Undoubtedly, there is no room for questioning now. For America has paved the way toward the creation of a new world—and nations once demoralized and seemingly hopeless as the result of the last war, have taken a new lease on life. And their peoples, having felt the spring of democracy have renewed their determination to rebuild. In so doing they join hands with us in a common purpose—against a common enemy. Undoubtedly the pace being set is indeed a furious one in history. There are many questions yet to be resolved and America must point the way still further. The following editorial which appeared in the Il Progresso Italo-Americano on April 3 is very timely since it points out the effect which our role has had on Italy, who only recently recoiled from communistic domination, and how it continues to look to America for a just determination of its territorial problems:

HOUR OF DECISION

Today, the Marshall plan is 1 year old. Within 24 hours, the foreign ministers of the leading democratic nations of Europe will gather in Washington to sign the Atlantic Pact. On Tuesday, the General Assembly of the United Nations will convene at Lake Success. What a furious pace of history. How crowded are these days with events vital to the fate of whole peoples, of all mankind.

As we shift history's spotlight from Washington to New York and as we ponder the enormity of the problems confronting the statesmen of the free nations, we can only pray for their best judgment and success. Their decisions will affect every living person everywhere, for peace and war, prosperity and chaos, freedom and slavery skip none of us. The humblest and the mightiest cannot escape the consequences of the alternatives before humanity.

As Americans we are glad and proud that our country has shown such increasing and evermore effective initiative in international affairs. More and more can the world rest secure that America will meet its heavy international responsibilities in a truly progressive manner. What we have done through the Marshall plan in raising the hopes and faith as well as the production capacities of millions of freedom-loving peoples is an act of unparalleled generosity and humanitarianism. And the very spirit and substance of the Atlantic Pact represent an endeavor to assure international cooperation and peace on a scale unmatched in human history.

THE ITALIAN ARENA

As Americans of Italian origin we also rejoice in the role played by Italy in these great developments. In no western country has the road to recovery been beset by greater difficulties and the conflict between the forces of freedom and depotism been more acute. Thanks to the aid of the American people and thanks to the indomitable spirit and hard work of the Italian people, Italy can today boast marked achievements in economic restoration and inspiring and significant victories over Communist totalitarianism and other brands of reaction.

But in emphasizing these historic forward steps we do not lose sight of errors made, of mistakes to be corrected, of difficulties to be overcome, and of tasks yet to be fulfilled. Ours is a great country, a very great country. But we are only human. We have erred and we shall err. Our nation has the vitality and the greatness and the courage to face the errors of yesterday, to correct them today, and to avoid their recurrence tomorrow. It is in this spirit that we hope Congress will not heed the pleas of the advocates of false economy who propose to cut the European recovery program appropriations for the coming year. It is in this same light that we hope our government will move to give life to the Atlantic Pact by losing no time in unshackling itself from the remaining chains forged in the days of appeasement of Communist Russian aggression.

Again Italy will be the test. The Atlantic alliance, to be worthy of its name, must be an alliance of equals. The Atlantic Pact, to be a living force and not a worthless (though expensive) scrap of paper must bring justice and strength to the signatory nations. There can be no first- or second-class nations in the Atlantic union of free peoples. It must be a one-class affair all the way—and first class only. In the Atlantic alliance there can be no room for pawns, puppets, and big-power politics. Otherwise, the Communist demagogs, the Bolshevik totalitarian termites

will break through the edifice now being set up with so much care and concern.

BEGIN WITH A CLEAN SLATE

From this viewpoint and from this viewpoint only and on the basis of the actual conditions and challenge of the spring of 1949 and not the fall of 1939 must the problems of the day be met. Hence, there is no African problem as such which can be isolated from the rest, from Europe, America, or Asia. There is no Adriatic question which can be put into a test tube and filed away for examination at some future date by a scholar or historian in splended isolation.

The Italian people have, in the short period of years since they have overthrown the dictatorship, rendered the most superb services to the cause of human and international reconstruction and security. Italy is the one land where there has occurred a truly democratic revolution—after Nazi-Fascist totalitarianism was defeated on the field of battle. It is in Italy where the Communists have been dealt the heaviest blows by the ranks of democracy. The fury with which the Communists have fought in Italy and the fabulous finances placed by the Kremlin at their disposal emphasize not only the import of their defeats but also the significance of the triumph of the democratic ranks. No nation in western Europe can show a more energetic and fruitful effort to assure economic rehabilitation.

Furthermore, no country in Europe has been more articulate, active, and effective in promoting the progress of continental cooperation, unity in life, between nations and neighbors. This is the real meaning of the customs union between Italy and France. This is the stirring and dynamic spirit of the foreign policy represented by the illustrious fighter and renowned world statesman, Count Carlo Sforza.

Indeed, it is on this firm and unchallengeable ground that we strongly urge our Government to move for the United Nations granting Italy the trusteeship over her African territories. If Italy is worthy of being our ally in peace and for peace, then she is worthy of such a United Nations trusteeship. What we say about the colonies also calls for immediate American recognition of Trieste as under Italian sovereignty. Let America lead and the other democracies will join. Let these hours be not only hours of decision but above all hours of right and just and sound decisions. Give the new Italy a fair deal.

Aid to Education

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted by the City Council of the City of Central Falls, R. I., endorsing a bill which would set aside the proceeds of the tideland oil reserves as a trust fund to be used as Federal aid to education. The resolution follows:

Resolution endorsing Federal aid to education

Be it resolved by the City Council of the City of Central Falls as follows:

SECTION 1. That the City Council of the City of Central Falls unanimously endorses the bill now pending in Congress which would create a trust fund from the proceeds of the tideland oil reserves, which trust fund would be used for the sole purpose of providing Federal aid to education; and be it further

Resolved, That copies of this resolution be sent to Senators GREEN and MCGRATH and Representatives FORAND and FOGARTY in Washington, D. C.

Passed in concurrence March 7, 1949.

A true copy.

Attest:

FRANCIS KEEFE, *City Clerk.*

Two American Soldiers, Members of the Occupying Forces in the United States Army in Germany, Have Wrongfully, Ruthlessly, and Unjustly Been Tried and Convicted and Are Now Held as Prisoners in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. GOLDEN. Mr. Speaker, the people of the United States were greatly shocked a few days ago to learn that two young American soldiers, who were serving our country as recruits in the United States Army in Germany, had been captured by one of the Red satellite nations of Russia, namely Czechoslovakia, hauled off into that country, forced into a secret trial, and convicted. The only news that the American people so far have been able to get is to the effect that these two young American men, members of our Army, had wondered off near to the international boundary line between the American zone in Germany and Czechoslovakia.

These soldiers were not allowed to communicate with the American consul before trial. They were tried in secret and, insofar as can be ascertained, they had no counsel to defend them, and one of these young soldiers, George R. Jones, comes from the great State of Kentucky, my State. This man was sentenced to 10 years at hard labor.

The other American soldier, who was tried and convicted without representation, is Clarence R. Hill, of the great State of Mississippi, and this young soldier was given 12 years in prison at hard labor.

This situation where two American soldiers, who were serving their country in an honorable way, are now behind the iron curtain and possibly suffering great humiliation and possibly physical mistreatment. This confronts the American people with a very serious situation. No one wants war, and everybody is striving toward peace. At the same time this great Nation cannot suffer the indignities imposed upon our armed forces by this ruthless example of the cruelty and injustice of the Red regime in this satellite country of Russia.

The great State of Kentucky, through a concurrent resolution of its senate and house of representatives, has made a vigorous protest of this conduct on the part of Czechoslovakia, which I wish to have spread at large in the CONGRESSIONAL RECORD so that the people of America and the people of the world shall know that Kentucky and all of her resources are pledged to accomplish by any peaceful means the immediate release of these two honorable young men that are members of our occupying forces in Germany.

I feel that the great State of Mississippi, and all of its people, feel the same as the people in Kentucky.

We wish to call upon the President of the United States and our State Department to do everything that is necessary to bring about the release of these two soldiers, and immediate steps should be taken through our American consul to determine just where these two soldiers are and how they are being treated, and an intensive effort should be made to bring this to the attention of the proper authorities, and every protection should be given these soldiers, and the Czechoslovakian Government should be immediately notified that unless these men are released that the entire resources of this great country will be pledged to their protection.

From the meager information, it appears that these young men were just picked up by a large number of Czechoslovakian soldiers when they were near the international boundary line and had committed no crime and their secret trial and conviction is more in the nature of an insult and reprisal than anything else. This conduct must be stopped and even if there were only one man involved, it is the duty of our State Department and our military authorities, if necessary, to see to it that he will not be abused or required to serve unjustly at the brutal hands of the Communist-dominated Red regime in Czechoslovakia. We hope and believe that our State Department and our armed forces will immediately take all steps necessary to right this wrong and restore the freedom of these two young soldiers.

A concurrent resolution condemning the trial and conviction of George R. Jones, of Owensboro, Ky., and Clarence R. Hill, of Jackson, Miss., and calling upon the President of the United States, the Secretary of State of the United States of America, to use all of the means at their command, including the full power and resources of our National Government and economy, to effect their immediate release

Whereas shocking news has been received that George R. Jones, of Owensboro, Ky., and Clarence R. Hill, of Jackson, Miss., recruits in the United States Army, were tried in secrecy by the Czechoslovak Government, and without regard for the rights of the accused or without the protection of the normal safeguards provided by free and independent governments for the protection of those accused of law violations, were sentenced to 10 and 12 years, respectively, in prison at hard labor; and

Whereas the youth of the Commonwealth of Kentucky and from every other State of the Union had given their lives and of their safety, security, and fortunes in order to establish orderly procedure and due process of law all over the world, and for which a terribly horrible and shocking war had just been fought; and

Whereas the safety and welfare of our form of government demands the full and complete protection of the members of our armed

forces, wherever they may be or whatever duty they may be given, so that we at home and those other freedom-loving people throughout the world may be able to enjoy the blessings of life, liberty, and the pursuit of happiness: Be it

Resolved by the Senate of the General Assembly of the Commonwealth of Kentucky (the house of representatives concurring therein):

1. That the Commonwealth of Kentucky, as a free and sovereign State, but as a part of the Union of States comprising the United States of America, does hereby condemn as vicious, cruel, inhuman, and unjust the a. 'est, secret trial, conviction, and sentences of Recruits George R. Jones, of Owensboro, Ky., and Clarence R. Hill, of Jackson, Miss., by the Czechoslovak Government;

2. That it is necessary in order to insure the welfare and security of our form of government and the maintenance of the armed forces thereof that the security of our citizens and especially those members of our armed forces who have been sent abroad be protected and secured at all costs;

3. That the President of the United States and the Secretary of State of the United States are hereby called upon to use all of the means at their command and at the command of the National Government to effect the immediate and unconditional release of these two members of our armed forces, and to this end, and by this resolution, the Commonwealth of Kentucky pledges its aid, assistance, power, and resources.

4. That the clerk of this house of representatives certify sufficient copies of this resolution and that he forward same, via United States registered mail, air-mail special delivery, to the President of the United States, the Secretary of State of the United States, to each Member representing Kentucky in the Congress of the United States, to the family of each of the men affected, and that suitable copies be furnished the press with the request that same be published to the end that all free-thinking and freedom-loving people may be informed hereof.

A Stabilized Currency and World Peace

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert part of an editorial by David Lawrence in the April 1, 1949, issue of United States News and World Report:

TOWARD A NORMAL WORLD

(By David Lawrence)

Everybody hopes that someday we will live in a normal world.

Few of the people alive today really know what normality is like.

The concept of peace, of course, is not difficult to imagine, but financial and economic stability in the world has not been experienced for 20 years.

Even those persons old enough to remember have probably forgotten that there was a time when world trade could be carried on with currencies stabilized in terms of each nation's price levels and when the common standard of the world was gold.

Most people today have forgotten, too, that there was a time when a paper dollar could be converted into gold coin at any bank in the United States and when currencies abroad could be redeemed for gold or silver in values that fluctuated hardly more than a fraction of a point.

True enough a paper dollar is theoretically backed today by a substantial amount of gold locked up in Fort Knox. Presumably this is enough to create confidence that what we use for currency has a gold value. But this is not the main reason why currencies are made redeemable in gold. It is not just to instill confidence inside a country. It is to provide a common denominator that all peoples everywhere can use as a means of exchange.

Until the world is able to use one standard of exchange again, whether it be in gold alone or in gold and silver related to one another in specific proportions, there can be no economic stability in the United States or elsewhere.

Disclosure of Multi-Million-Dollar Discrepancies in Accounts of Commodity Credit Corporation

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. BOGGS of Delaware. Mr. Speaker, several days ago on the floor of the Senate the distinguished senior Senator from Delaware [Mr. WILLIAMS] disclosed that there are startling discrepancies in the accounts of the Commodity Credit Corporation amounting to several hundred million dollars.

A few days after this disclosure of such large discrepancies in this Government corporation's financial accounts, Senator WILLIAMS' earlier statements were fully confirmed when he directed the Senate's attention to a letter in his possession from the General Accounting Office acknowledging fully the existence of these discrepancies.

Mr. Speaker, as a part of my remarks I hereby include an editorial entitled "Guilty as Charged," which appeared in the March 31, 1949, issue of the Wilmington (Del.) Journal Every Evening:

GUILTY AS CHARGED

The accusations of multi-million-dollar shortages which Senator WILLIAMS, of Delaware, leveled last week against the Commodity Credit Corporation have now been supported in full in a report by Lindsay C. Warren, Comptroller General of the United States. These are the charges which Senator LUCAS, majority leader, described as pure politics and sought to keep from consideration by the Senate. If Mr. LUCAS is now of the same mind as before he is shockingly indifferent to the need of elementary efficiency in the conduct of the Government.

The record, as Mr. Warren reveals it, is one of incredible carelessness in the distribution of the taxpayers' money, of a waste of fixed assets, and of clear favoritism in the award of contracts. There may not have been actual fraud but the invitation to fraud was always present. In any event, says the Comptroller General, the accounting deficiencies encountered were "so substantial and the inaccuracies so material" that he cannot express any opinion whether the financial statements prepared by the Corporation present fairly its financial position.

This indictment of the wartime operations of one of President Roosevelt's pet agencies shows again the length to which the Harry Hopkins' doctrine of spend and spend, elect and elect, was carried. Senator WILLIAMS is entitled to the utmost credit for bringing the sordid facts to light and the Senate itself should speedily adopt the Comptroller General's recommendation for a further investigation into the whole situation. The American public, for its part, should be interested in finding out just how its money was thrown around by the New Dealers.

The Government Housing Program for 1949

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. RABAUT. Mr. Speaker, under permission of unanimous consent to extend my remarks I include in the Appendix of the RECORD an address by the Honorable Raymond M. Foley, Administrator of the Housing and Home Finance Agency, delivered before the assembly of the Mortgage Bankers Association in the city of New York on Monday, April 4, 1949, wherein Mr. Foley endeavored to acquaint that group with their responsibilities as a part of the home-building industry and their obligation to the public in cooperation with the Government housing program for 1949.

ADDRESS BY RAYMOND M. FOLEY, HOUSING AND HOME FINANCE ADMINISTRATOR

Once more I am in your debt for this opportunity to talk directly to members of the Mortgage Bankers Association, who have so large a part to play in making good housing available to the American people.

Your committee has suggested that I discuss today "The Government Housing Program for 1949." If by that is meant the aim in housing being set forth by the Administration and the legislative steps toward accomplishment of the aim which it is recommending, I am glad to respond. In addition there is a program in housing that can more properly be called our common-action program, since it is an active application of authorities already voted into law by Congress—and I would like to tell you of that also.

In the first place, the Government has no aim or objective in housing that has not been spelled out pretty clearly by the American public in a broad public forum over decades of discussion. In my opinion, that objective has been well stated in the outline of national housing policy set forth in Senate bill 1070, now pending in Congress. The same legislation covers the broad fields of low-income families with publicly aided housing, slum clearance, broadened research, and farm housing aids. We are supporting all of them. In S. 712 are found the proposals we have thus far developed for further aid to private enterprise, particularly in the field of middle-income needs.

Other problems which may result in further legislative requests are under study. As I stated to the American Bankers Association very recently, we are likely, in the midst of controversy over housing, to overlook the fact that there is a continuing job to do, and continuing progress goes on. All we have been able to accomplish in housing the

people of America during the past generation has been done while we carried on discussions as to how better we might do it. Successively we have adopted new measures and plans and have gone forward—but always to progressive change in our approaches and methods.

However, there has been no fundamental change in our basic concepts. In my opinion, none of the legislative proposals now under debate as part of the President's program, would actually mark any fundamental change in those basic concepts. One is that American families have a right to a reasonable opportunity to attain a decent home in a proper environment—either as purchasers or tenants. Another is that they have a right to expect the American system to work in such fashion that it will develop that opportunity so that they, with reasonable industry and frugality, can avail themselves of it. Another is that under the American system the great bulk of the housing task can and ought to be done by private enterprise. There is nothing new in any of those statements—nothing changing, and it seems to me nothing really debatable.

But when we examine them as against the degree of accomplishment of the total task we begin to reach the regions of controversy. Much of the debate has become stereotyped and static. It concerns itself with a few moot points: What is the estimate of need? What is decent housing? When, in terms of years, can we expect to meet the housing need? By what standards can we measure progress and so conclude whether we are doing the job—privately or otherwise? What really is this private enterprise of which we hear so much? What part should Government play in housing American families?

I do not intend to discuss all these matters today, but I have sketched quickly the background of great public interest and debate—because as I told the bankers' association, everyone who has any part in the provision of housing today carries it on in the atmosphere created by that situation and he may not hope to escape influence from it, either in the actual results of what he does, or in the reception his action receives. None of us who has a function performed publicly in connection with housing can hope to escape such evaluation. You, as mortgage lenders, are a part of the home-building industry and your part is performed publicly.

I would like to tell you some more of the things I said to the bankers and some of the things I did not say. I said there may have been a day when residential mortgage lending policy was narrowly concerned with real-estate security and rate of return and that both remain basically important, but there is no place in America today where a mortgage banker can properly determine his lending policy on those factors alone and remain an adequately functioning part of free enterprise or of his community. That says, and was meant to say, that within the framework of soundness and proper return, there are other constructive factors with special reference to housing to be considered in building a balanced mortgage portfolio. That does not say and was not meant to say that it is necessary or advisable to ignore soundness and forego a reasonable return, in such lending.

One of the indispensable uses of the accumulated savings of a community entrusted to a mortgage banking institution through one or another channel, is improvement of housing opportunity in that community. Consequently, the problem of whether, or how, or when, to lend on residential mortgage security cannot be settled solely by a comparison of yields and ratio of security currently offered in various investment fields. There remain the fundamental requirements of a community for shelter for its people and good environment for its children. Residential lending on a basis calculated to further those objectives soundly in a continuing program seems to me an inescapable part of the responsibility of a mortgage banker and the word "soundly" there used means lending soundly, as well as building soundly. Were it otherwise, mortgage lending would be an easier business. It is the compelling necessities of maintaining a currently sufficient supply of housing and a stable and adequately functioning housing industry, through times of ease and stress, that complicate the problem.

This is one of the times of stress. We are confronted this year by a situation calling for the most thorough statesmanship in government, in business, and especially in your part of business, if we are to make the degree and kind of housing progress the nation needs. Such statesmanship, in the lending business, will exert itself to be sure that savings of the community do their proper part in the housing development of the community, over the range of its needs so far as is soundly practicable.

In the midst of a postwar era of high employment, high average income, and unprecedented total national income, we have millions of families badly housed. We have an industry which has made a remarkable recovery in producing capacity; we have materials and men sufficient for a record-breaking production and yet we have housing priced out of the reach of the mass of the people. It is easy to overstress some of the possible interpretations of that statement. It does not mean building has stopped. It does not mean no one can buy, is buying, or should buy. But it does mean that housing costs too much to fit the purse of the average family—the family in most of the range of income that we call middle—and it is true that the longer that remains a fact, the more will we face a decline in volume of production.

Bringing down the cost of housing is a prime necessity.

It won't be brought down just by talking about it. And it should not be brought down by the devastating process of depression. It can be brought down gradually and to a very helpful degree by concerted effort throughout the industry to effectuate economies in cost without reducing standards of construction or of livability. No one part of the industry can do that alone. That is why we have taken a leading part in developing the industry-wide, Nation-wide economy housing program now going on. There has been some misunderstanding of what we seek in that effort. It is not designed just to produce a flood of little houses. It is not intended to produce any jerry-built, substandard houses at all. It is intended to encourage cost cutting through economies—individually small, perhaps, but many—that will reduce the cost and price of housing through the whole range. But it is true that we hope also to focus attention upon the mass market need in the middle-income range, and thus produce the most immediate effect of economies in that area. It is not a case of lowering price by cheapening the house; rather of lowering price for the same house; or of designing good new houses that can be produced at less cost.

We are encouraged by the progress made thus far. Nearly 75,000 persons active in one or another phase of the industry have attended community meetings so far held, discussed the problem in its local aspects, set up continuing advisory committees, and have undertaken to try to do something about it. We don't expect results to flow in specific cost cuts from one meeting. But we do expect a continuing effort to produce them. The tendency of costs in the residential field already is slightly down, as revealed by FHA monthly cost-study reports.

The mortgage lenders of this country—you in each of your communities—have a very great stake in this undertaking, as you have in the whole of the housing scene. It is not just an opportunity to make some loans. It is not just a chance to participate in some meetings. Rather, it is an opportunity to demonstrate the active, effective, constructive part the lending institution can play in a progressive, cooperative community movement toward better housing. Your stake, indeed, is more than one of money. It is also one of public relations in a particularly vital way.

There is today a mass consciousness of the importance of good housing that did not exist on anything like the same scale a dozen years ago. There is with it a keen awareness of the responsibilities of private business and of Government, local and Federal, in this field. We are all on trial to a degree, in the effort now going forward, to find means whereby decent, livable housing can be made available for all American families.

And to the public, in this new consciousness of the social, economic, and even spiritual importance of good housing, "all families" means just that.

It means those of low income, those of middle income, as well as the more fortunately situated; it means those who live in rural and suburban areas, as well as in cities; and it means the slum-dwelling families and the Negro and other minority groups who have even more difficult situations with which to contend.

The challenge before industry and Government today is not that we provide housing for everyone at once, but that we have a plan and a program that can be expected to move forward progressively to the end that it is made available through new production and existing inventory, by design, rather than by accident, fortuitous development, and sole reliance on trickle-down to serve the problem areas.

Development of such a plan calls for maximum use of all the resources of Government and industry. I think it calls for a thorough-going adoption of the idea that private enterprise in the housing field consists of four main factors—management, labor, finance, and Government—each with a vital part to play. The maximum value of the part of each can be had only if there is a coordinated effort among them all.

Its development calls for maximum use of all the resources of industry, all the efficiency and skill of labor, all the resources and special authority available to governmental agencies—local and Federal; and it calls for the availability of funds in three broad stages of housing production—developmental finance, construction or production finance, and consumer finance. As we move further in formulation of plans for treating the housing needs as a whole on a long-range basis, developmental finance will increase in importance. If we are to bring down housing cost, the development of sites, communities, and facilities precedent to good housing must have an adequate and economical method of ready financing. As we develop further, even in the programs we have, availability and terms of construction finance grow increasingly important. We are told that its scarcity and its cost are becoming stumbling blocks in many areas. Pending legislation may do much to ease this situation. It will not be a cure unless there is an active recognition of a responsibility in that direction among the custodians of private lending funds.

Consumer finance, in the form of long-term mortgage funds, has had more attention, resulting in a range of liberal, Government-supported devices, than any other division of residential financing. Senate bill 712, which is part of the administration's legislative program, would carry this program under mortgage insurance, further in an effort to put major emphasis on low-priced homes—but in a range of accommodations up to four-bedroom houses for sale.

It makes a considerable and important revision of title II of the National Housing Act, and proposes a broadening of the FNMA secondary market and some direct lending for cooperatives where private funds are unavailable. It would extend the present mortgage-insurance provisions for rental housing, and we are studying various other adaptations of that idea. As you know, Congress has already voted an interim 90-day extension of section 608 in the rent-control bill.

But whether you as lenders use the insured-mortgage system of FHA, the guaranties of the Veterans' Administration, or your own system of conventional lending, is not the important matter. The real question is whether you are seeing to it that loanable funds in the care of your institution are doing their share of work in building a practicable housing opportunity for your citizens. If you are, then you will be taking a very active interest in Federal and State housing legislation, to see that you get maximum effectiveness from it. You will be trying to find ways to make your funds help to resolve the housing dilemma of the Negroes or other minorities of your city. You will not dismiss the subject of housing cooperatives as unimportant. It is important and may be very useful in urban housing—and a challenging field for you as lenders to explore. You will be looking very carefully into rental housing needs and lending opportunity in small, as well as large, projects.

You will not be dismissing prefabrication as an illusion. It is bound to have a definite place in housing, and it ought not be prevented from exercising its influence on cost and supply by unfounded prejudice in your institution or in your community.

You will not be refusing to consider sound loans for veterans or ruling out modest home loans because they, or the houses they produce, are small. You will be finding that you can do much in all of these fields, without disregarding soundness or sacrificing fair return.

There are a great many ways in which you can put your influence, and the funds you control, soundly and constructively to work in this field. I urge you to review the whole matter. I am happy to offer you the full cooperation of the Housing and Home Finance Agency in your application of your resources to the job.

Lime, Phosphate, and Cover Crops

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. BURNSIDE. Mr. Speaker, I would like to point out to the House the pressing need for more lime and phosphate for West Virginia and especially for the area along the Ohio river.

Nearly 90 percent of the soils of West Virginia are of nonlimestone origin. Furthermore, in regions of plentiful rainfall such as West Virginia there is a heavy loss of lime through leaching. Such leaching steadily removes the lime already in the soil or added to it by the application of fertilizer, and results in the development of soil acidity. Erosion takes its toll also, washing away the topsoil with all its minerals. In 1926 the West Virginia Agricultural Experiment Station reported that 95 percent of the cropland of West Virginia was deficient in lime, and a study in 1935 revealed that 85 percent of our pasture lands were deficient. Since then, soils have tended to become more acid since not enough lime was applied to meet current maintenance needs.

Lime is not the only need. What has been said about lime can be applied also to phosphates.

Failure to maintain soil fertility, coupled with the expansion of populations, has brought the downfall of formerly prosperous nations in Europe and Asia. We have allowed that same process to start in the United States. By years of neglect and abuse we have encouraged our soils to prematurely age.

We must not allow that process to continue. Continuing prosperity of the economy as a whole requires that we maintain prosperous, productive farmlands. Without food to feed our workers, our great industrial plants would be useless.

The lime and phosphate program has done much to retard the loss of our soils, but the program must be continued and strengthened. Instead of being increased, however, the amount of fertilizer allotted to West Virginia has been reduced since 1943.

Here are the figures covering 1937 to 1947:

	Tons
1937	153,000
1938	226,000
1939	272,000
1940	344,000
1941	361,000
1942	442,000
1943	560,000
1944	520,000
1945	409,000
1946	529,000
1947	413,000

I have been informed that the figure for 1948 is even lower—about one-half the 1947 amount.

And this reduction comes in the face of the fact that the soils of West Virginia need an average application of 555,000 tons of lime each year to maintain their fertility.

I wish to urge the Members of this House to vote to correct the mistakes of the last 2 years. Return to the farmers—the backbone of our Nation—a decent amount of lime and phosphate, for it was through this program that the farmers were able to feed much of the world and to save it from the ravages of the different isms.

Forest Research

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. CARNAHAN. Mr. Speaker, while we in Missouri are gratified that the agricultural appropriation bill carries approximately the same amount for forest research for fiscal 1950 as is available for 1949, we fail to understand and are disappointed that appropriations for forest- and range-management investigations were not increased by amounts commensurate with the needs. We of Missouri have been very happy to have had the nucleus of a forest-research center in our State this year. Our people have received this new activity in a very cooperative spirit and have provided facilities to further the work. We had hoped to see steady growth of this activity in accordance with the needs. So far as our Ozark research center is concerned, these needs for research arise not only in our own State but also from problems in adjoining portions of four other States. These problems also are handled from our Ozark research center. The Congress has already recognized that forest research is a Federal responsibility in the McSweeney-McNary Act of 1928.

The Department of Agriculture appropriation bill for 1950 recommends a total of about $51,000,000 for Forest Service activities. This is a very large sum of money, but I believe that not many people realize that this is only one side of the financial picture of Forest Service activities. I should like to point out that in fiscal year 1948 receipts from the management of national forest properties amounted to nearly $25,000,000 and for the current fiscal year are estimated to be about $30,000,000. Actually, so far as the taxpayers are concerned therefore, the actual cost of our Federal forest-conservation activities is less than half of the amounts appropriated. It seems to me that this fact should be kept in mind, and that in view of the importance of the work, the Congress can afford to be a little more generous in expanding justifiable projects than might otherwise be the case.

Talking Books for the Physically Incapacitated Who Cannot Read

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. KEATING. Mr. Speaker, through an annual appropriation, provision is made for the Library of Congress to furnish books, published in raised characters or on sound reproduction recordings, to the blind. By this modest expenditure of public funds, life acquires a new meaning for those afflicted in this manner.

It has recently come to my attention that there is a group which, although undoubtedly small in numbers, is equally deserving of our sympathetic consideration. I doubt that their inclusion in this program would require any increase in the allotted funds. This group is composed of those who are so physically incapacitated, as established by competent medical evidence, that they are unable to read in any normal manner. I have in mind a former teacher who, because of injury or disease, has been placed in

a cast and is compelled to lie face down practically all the time. Naturally, although her eyes are normal, she cannot read in this position. It impresses me that, equally with the blind, she belongs to a class of citizens who, because of their misfortune, have a legitimate claim to special treatment. I have, therefore, today introduced a bill to broaden the scope of title II, section 135 (a), of the United States Code to extend its provisions to this limited class of physically incapacitated, as well as the blind.

I feel sure that such a measure would receive hearty response from those Members whose experience has brought them in contact with any unfortunates thus afflicted, whose enjoyment of a necessarily drab life would be so greatly enhanced by the passage of such legislation.

Jewish War Veterans of the United States

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. JAVITS. Mr. Speaker, there is appended hereto a poetic tribute to this great organization on its fifty-fourth birthday. Members will be interested in the names and records of our distinguished soldiers and sailors of the Jewish faith who have served our country from the first days of its struggle for independence, and for the success of the noblest effort in self-government known to civilized man—our constitutional democracy:

THE FIGHTING JEW
(By Harry H. Schlacht)

Today we hail the Jewish War Veterans of the United States on its fifty-fourth birthday.

Today we salute the JWV with great respect and admiration, for they tell the story of gallant men and women who have fought and died that this Nation may continue to be the land of the free.

An anniversary dinner tribute will be celebrated Army Day eve, Tuesday, April 5, at the Waldorf-Astoria Hotel. The ceremonies will be staged in a cavalcade of patriotic splendor. The guest of honor will be Gen. Omar Bradley, United States Chief of Staff, who will receive the medal of honor, the highest decoration of this famous organization.

JWV posts throughout the country will commemorate the historic event with patriotic services.

Myer Dorfman, World War I hero, is national president. Ben Kaufman, Congressional Medal of Honor hero, is executive director.

The Jewish War Veterans are pledged to maintain true allegiance to the United States of America, to foster and perpetuate the principles of Americanism, to combat bigotry and instill the love of God and country, to honor the memory of patriotic service of men of Jewish faith, to inculcate the doctrines of liberty, equal rights, and justice to all.

O, fighters for freedom—
Unfurl your banner for all the world to see
Your gallant record in the service of humanity.

What a halo of proud glory surrounds your names.

O, let us today, unfold the scroll of the fighting Jews for America.

We see them in all the wars of the Republic. We see them win the highest commendation from every President of our Nation.

We see them among the soldiers at Valley Forge when the spirit of the American people hung low and only the stout of heart stood constant by Gen. George Washington.

Of the 3,000 Jews in all the colonies, 4 of them were lieutenant colonels, 3 majors, 6 captains, and many in the ranks.

Lt. Col. Isaac Frank was aide-de-camp to Washington.

Haym Salomon dedicated his entire fortune of $640,000 to the young Republic and later died impoverished.

We see them in the War of 1812.

Uriah P. Levy, Commander of the brig-o-war *Argus*, ran the British blockade and destroyed 21 British merchantmen.

With pen and tongue Commander Levy succeeded in effecting the abolition of bodily punishment in the United States Navy, and died a commodore, then the Navy's highest rank.

We see them in the Mexican War, the fight for Texas and the Seminole wars.

We see the fighting Jew in action.

We see the healing Jew, in the person of Surg. Gen. David Deleon.

We see them rallying under the inspiration of Abraham Lincoln during the Civil War.

Of the 200,000 Jews then in the United States, 10,000 saw active military service and 7 received the Congressional Medal of Honor. There were a number of high-ranking officers in the Army. Lincoln named Leopold Newman, of New York, a brigadier general while he lay dying of battle wounds received at Chancellorsville.

We see them with William McKinley striking the shackles of bondage from a neighboring people and bringing forth an island Republic.

America accepted the challenge of Spanish tyranny.

"Remember the *Maine*."—Fifteen Jews were on that ill-fated battleship, and Sgt. Maurice Joost, of California, was the first to fall in the attack on Manila.

Five thousand intrepid Jewish volunteers gladly answered the call of their President.

We see these gallant warriors with Woodrow Wilson fighting to make the world safe for democracy. Two hundred and fifty thousand Jews were in uniform, constituting 5 percent of the fighting forces. Ten thousand Jews held commissioned rank, and 1,100 Jews were cited for valor in action.

The greatest epic of courage ever to come out of that war, the exploits of the Lost Battalion, was a demonstration of conspicuous bravery.

We see them with Franklin D. Roosevelt—fighting to make democracy safe for the world.

First American penetration of German soil was made by the Third Armored Division, commanded by Maj. Gen. Maurice Rose, of Denver, who gave his life for his country.

First American assault boat to hit the shores of France on D-day was commanded by Lt. Abe Condiotti, of Brooklyn.

First Japanese battleship sunk in the war was the *Haruna*, sent to the bottom by a plane piloted by Capt. Colin Kelly, whose bombardier was Sgt. Meyer Levin.

First American officer killed in the Philippines was Lt. Henry D. Mark, of Los Angeles.

First four-medal winner in the American Army in World War II was Lt. Morris Berenson, of Garfield, N. J.

And there are scores of Americans of Jewish faith whose names will live forever in the archives of our Government.

The fighting Jews of America have sustained their shield of honor with courage and loyalty, with devotion and respect to God and country.

The record of the fighting Jews is now cast in monumental mold.

They have received the highest decorations. They have received the acclaim of civilization. They have helped write "liberty" in the sky over all nations.

Travel where you may, through American cemeteries on a thousand battlefields—

Travel where the delicate poppies carpet the earth with rich red blossoms or in the glistening white stones rising above flower-strewn mounds—

There you will see, side by side, one beneath the Cross of Christianity and one beneath the Star of David, Jew and Christian pillowed in eternal glory.

They have fought, bled, worshipped, and died together, so that we may all live together for the glory of God and country.

VFW Golden Jubilee

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. JAVITS. Mr. Speaker, I join in hailing the golden jubilee of this great national organization of which I have the honor to be a member, and append the foreword to the Golden Jubilee Book of the VFW by National Commander Lyall T. Beggs who states eloquently the tradition and purposes of this great national organization of the veterans of overseas service. I insert this foreword in the RECORD as a tribute to my comrade of Fort Tryon Post, VFW, No. 3037, and to the VFW Fred Myer, D. S. C., Post, No. 403, and in which I have many friends:

FOREWORD

During the past 50 years many factors have contributed to the recognition that the Veterans of Foreign Wars of the United States enjoys today as a great force for good in America.

No résumé of the story of the Veterans of Foreign Wars would be complete if it failed to give due credit to the patriotic citizens and public officials, in every community where our organization is established, for their help and encouragement; to the newspapers large and small, throughout the Nation, that have given so generously of their educational support and cooperation to our aims and purposes; to the radio industry, from coast to coast, for its cordial acceptance of the public-interest values of our activities.

Thus this story—inspired by the golden jubilee anniversary of the founding of our organization in 1899—is simultaneously an expression of gratitude to our fellow citizens.

We are celebrating our golden jubilee anniversary at a period in American history when the last surviving veterans of the War Between the States are responding to their final roll call. As we voice a farewell salute to the surviving members of the Grand Army of the Republic and the United Confederate Veterans, the Veterans of Foreign Wars inherits the proud distinction of being the Nation's oldest, active major veteran association in existence.

Under the charter granted to us by the Congress of the United States, the ranks of the Veterans of Foreign Wars remain open to the overseas veterans in any war in which America may be engaged. By virtue of this

characteristic, the VFW is destined to retain the honor of being America's oldest veteran fraternity as long as the nations of the world shall see fit to employ war as an instrument of international policy—and the United States is forced to send its armed forces beyond it own borders to defend its national security.

In appreciation of this heritage, we proudly assume our responsibilities as members of an organization that stands pledged to maintain, strengthen, and defend the institutions of American liberty.

LYALL T. BEGGS,
Commander in Chief.

Monopoly of the Labor Market

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1949

Mr. SMITH of Kansas. Mr. Speaker, if the administration and its congressional leaders succeed in their avowed intent to repeal entirely the Labor-Management Relations Act, 1947, and replace it with the Labor Relations Act of 1949, every working man and woman in America would face the prospect of paying tribute to a union official in order to get or hold a job. In other words, the administration is trying to make the workers themselves put up the money to buy the support of the union bosses.

Union treasuries were opened wide in the Presidential campaign last fall in support of the administration now in power. Union officials are laying even more expensive political campaign plans for the future. The administration, through its proposed Labor Relations Act, would give the unions the opportunity and privilege of replenishing their funds and fattening their treasuries at the expense of America's workers.

This could happen here because the administration proposes to give union officials a monopoly on the American labor market by removing all restraints and restrictions from union organizing activities and contract demands made upon employers under any circumstance.

Compulsory unionism is a principal jeopardy to freedom inherent in the administration's Labor Relations Act of 1949, now pending in Congress.

Not content with restoring the Wagner Act, and thereby legalizing contracts making union membership compulsory, the administration's bill would seek to invalidate all State laws and constitutional provisions imposing restrictions on compulsory union membership—something the Wagner Act never did and never intended to do.

The effect of this provision of the bill is to invalidate, insofar as they apply to any industry affecting interstate commerce—and that includes virtually all industry today—all State laws and constitutional provisions imposing any restrictions whatever on contracts making union membership a condition of employment, whether the contract is one for a closed shop, union shop, or maintenance of membership.

Thus the laws of some 17 States, adopted in response to overwhelming public demand, would be nullified by the Democrat administration's bill. Moreover in several States, notably Arizona, the voters of the State have approved such restrictions by the adoption of constitutional amendment or by ratifying legislation in a referendum, or both.

This particular "improvement" in the original Wagner Act would not only interfere with the exercise of the police powers of the States, but would in addition place the power and prestige of the Federal Government behind compulsory membership of employees in unions, whether the employees desire it or not. The Wagner Act never did any such thing.

The inevitable effect of this provision of the bill, particularly when the difference between this provision and that in the present law is considered, will be to give every worker in this country the definite impression that his Government is committed to a policy of forcing him to join a union in order to work. A more cynical betrayal of individual freedom and disregard of the guaranty to employees of a free choice in joining unions set forth in section 7 of the Wagner Act would be difficult to imagine.

It is worthy of note that, paradoxically, proponents of the bill refuse even to consider the existing provision of the Labor-Management Relations Act which makes coercion of employees by unions an unfair labor practice, primarily on the ground that such coercion should be left to the States to handle. But at the same time they propose to deny the States any authority to police the abuses growing out of compulsory union membership.

ABUSES OF THE CLOSED SHOP

No other provision of the Taft-Hartley Act when it was passed in 1947 has such universal support, even among union members, as evidenced by numerous public-opinion polls, as did the provisions doing away with the abuses of the closed shop and protecting the individual's right to work under union-shop contracts. Members of the House and Senate committees in the Eightieth Congress received hundreds of letters from individual workers, most of them union members, urging support of this provision of the law.

For obvious reasons, the writers of such letters asked that their names be not published because of fear of reprisal. But their stories were often pitiful, detailing how heads of families had been expelled arbitrarily from unions and the employer forced to discharge them and deprive them of a means of livelihood on such flimsy pretexts as twisting a request for a financial accounting from union officers into a charge of conduct prejudicial to the union, or a refusal in one case of a veteran to buy lottery tickets in a lottery run by the business agent. In another case, a veteran who was employed in radio communications was expelled from the Communist-tinged Communication Workers, CIO, simply because he refused to contribute his dollar to CIO-PAC. Such instances reported by the victims to Members of Congress could be multiplied by hundreds.

It is true that such abuses of compulsory-membership provisions occurred in a minority of the tens of thousands of local unions which had such contracts in this country. But it is the essence of democratic government to protect the rights of minorities. One of the most flagrant kinds of abuse of closed-shop powers occurred shortly after the act became law. A union in New York, local 65, Wholesale and Retail Workers, CIO, which had numerous closed-shop contracts with employers, levied an assessment against its members to raise funds to oppose the Taft-Hartley Act and agitate for its repeal. Many members of the union objected to the assessment and refused to pay it. The union thereupon expelled the recalcitrant members and directed the employers to discharge them, and the employers were required to do so under the closed-shop contracts. The leadership of this same union was notoriously Communist and later on called an extended strike against a New York employer who refused to fire a number of clerks who had been expelled from the union because they led a movement to get rid of the Communist leadership.

In addition to the illiberal deprivation of the individual's right to work and earn a living which occurred in consequence of abuses of the closed shop, another evil was the notorious tendency of such unions to become closed unions, often restricting membership to sons or relatives of members. Even the International Typographical Union, which in many of its locals is a model of democratic union procedure, was disclosed in the 1949 Senate hearings to have indulged in this practice of limiting membership.

Although the union witnesses in the 1949 hearings insisted that abuses of the closed shop were too minor to merit legislative attention, such administration witnesses as William Leiserson, William H. Davis, and others who testified in the Senate hearings, all of whom have had long experience in labor relations, did not take that view. Leiserson opposed any form of compulsory membership and the others either wanted the closed shop prohibited or else agreed that if it were permitted it would have to be policed in order to protect individuals against arbitrary expulsion from the union and loss of their jobs.

The Taft-Hartley Act makes provision for union security under a union shop, if the union is authorized to negotiate it by a majority of all employees affected in a secret ballot conducted by the National Labor Relations Board. These elections have been a major focus of attack by the unions. The elections are claimed to be unnecessary since the great majority of them have been won by the unions. The Republican minority recognizes merit in this contention and proposes to recommend that the requirements for such elections be eliminated from the law.

However, the Taft-Hartley Act contains other safeguards on individual rights which are essential, whether the shop be a closed shop or merely a union

shop, which are omitted entirely from the administration's bill, H. R. 2032. Thus under the act it is an unfair practice for a union to demand the discharge of an employee who has been denied membership in or expelled from the union for any reason other than nonpayment of dues and initiation fees. Under this provision the union retains complete control over its own membership but it cannot expel a member for arbitrary or capricious reasons and then force the employer to discharge him. Republican Members propose to recommend that additional reasons for expulsion and discharge be included in the law.

Confronted with the wealth of evidence on the abuses of individual and minority rights under closed-shop contracts, the framers of the Taft-Hartley Act faced the dilemma of either prohibiting the closed shop and protecting individual rights under other forms of compulsory membership in unions, such as the union shop, or else writing an elaborate statute protecting the rights of individual members of unions against arbitrary or capricious expulsion. The solution of the dilemma was to reject the idea of having the Federal Government interfere and police the internal activities of unions. Instead, unions were left free to run their internal affairs as they saw fit, but the Government steps in only to protect the individual's right to work against arbitrary or capricious action by the union. Some solution of this dilemma confronts any legislator facing the problems growing out of compulsory membership in unions. The Taft-Hartley Act seeks to solve it in one way. Unfortunately, administration forces have, for reasons of political obligation, completely dodged the issue of protecting the individual, for their bill contains no safeguards for the individual's right to work.

The Soviet Union, Not Russia

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 5, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I ask permission to place side by side the analysis made in the New York Times, September 20, 1947, about the correct terminology with respect to the Soviet Union and the interesting column of Mrs. Anne O'Hare McCormick which was published in the New York Times on April 2, 1949. Anyone who studies these two pieces will see at once that Dr. Joseph F. Thorning, associate editor of The Americas and World Affairs, was more than 2 years ahead of most of the newspaper editors and reporters in this country, if not in the world. What is now described as "the new emphasis on the people of Russia" is exactly what Dr. Thorning emphasized years ago in the conviction that the people of the Soviet Union, in contrast to the men in the Kremlin, were our best potential allies in our struggle for freedom, representative government, and democracy. The two statements follow:

[Dr. Joseph F. Thorning in the New York Times, September 20, 1947]

When an educator like Dr. George D. Stoddard, president of the University of Illinois (the New York Times, September 7, 1947), in an otherwise excellent article uses an admittedly incorrect term, "Russia," four times in succession, readers have a right to inquire about the reasons which motivate such phraseology. The question is important, because all democratic, freedom-loving peoples have an obligation not to identify the Russians with their totalitarian masters.
